Property Geology (Scale 1:2500)

## **Introduction**

The property is host to a copper/silver showing (zone C – McIntyre Mines, 1962) in the north-central part of the western claim. A second zone of silver mineralization (zone B – McIntyre Mines, 1962) lies near the central portion of the western boundary of the property. This zone represents a strong airborne electromagnetic feature as seen on OGS Map #60 036. Of greater significance is a ‘feldspathic unit’ that merges with the east end of the Lunny Lake Porphyry in the southern part of the eastern claim. **Drilling by Hemlo Gold in 1996 encountered 1 meter of 37.4 g/t Au approx. 200 meters southeast of the Musher Lake claims. A second drill hole, 200 meters further east, encountered 3 meters of 3.9 g/t Au, including 1 meter of 10.6 g/t Au.** The Lunny Lake Porphyry and the feldspathic unit both represent excellent targets for additional gold mineralization.

The property has seen several operators since the discovery of base metal mineralization in the area in 1962 by C. Von Klein. McIntyre Porcupine Mines examined the property in 1962, Caravelle Mines in 1964 and then Falconbridge optioned the property from Caravelle in 1966. There was an exploration lull until the discovery of the Hemlo ore body in 1982, at which time Pryme Energy staked the area. Noranda Exploration (and their predecessors Hemlo Gold and Battle Mountain) held the property under option from 1982 onwards and did extensive work including trenching and drilling prior to relinquishing their option in 2002.

The ‘north limb’ represents one of few areas in the Hemlo belt outside of the mine horizon where there has been gold intersected in drilling. The Lunny Lake Porphyry strikes across the full length of the Musher Lake property (2.5 km). Alteration within the porphyry consists of quartz-eye sericite schist with weak feldspathic alteration and minor pyrite mineralization. Similarities to the Moose Lake Porphyry at Hemlo are evident. Strong gold-in-soil anomalies (Hemlo Gold, 1995) lie just south of the central portion of the western claim. It is possible they represent gold mineralization in bedrock up-ice on the property.

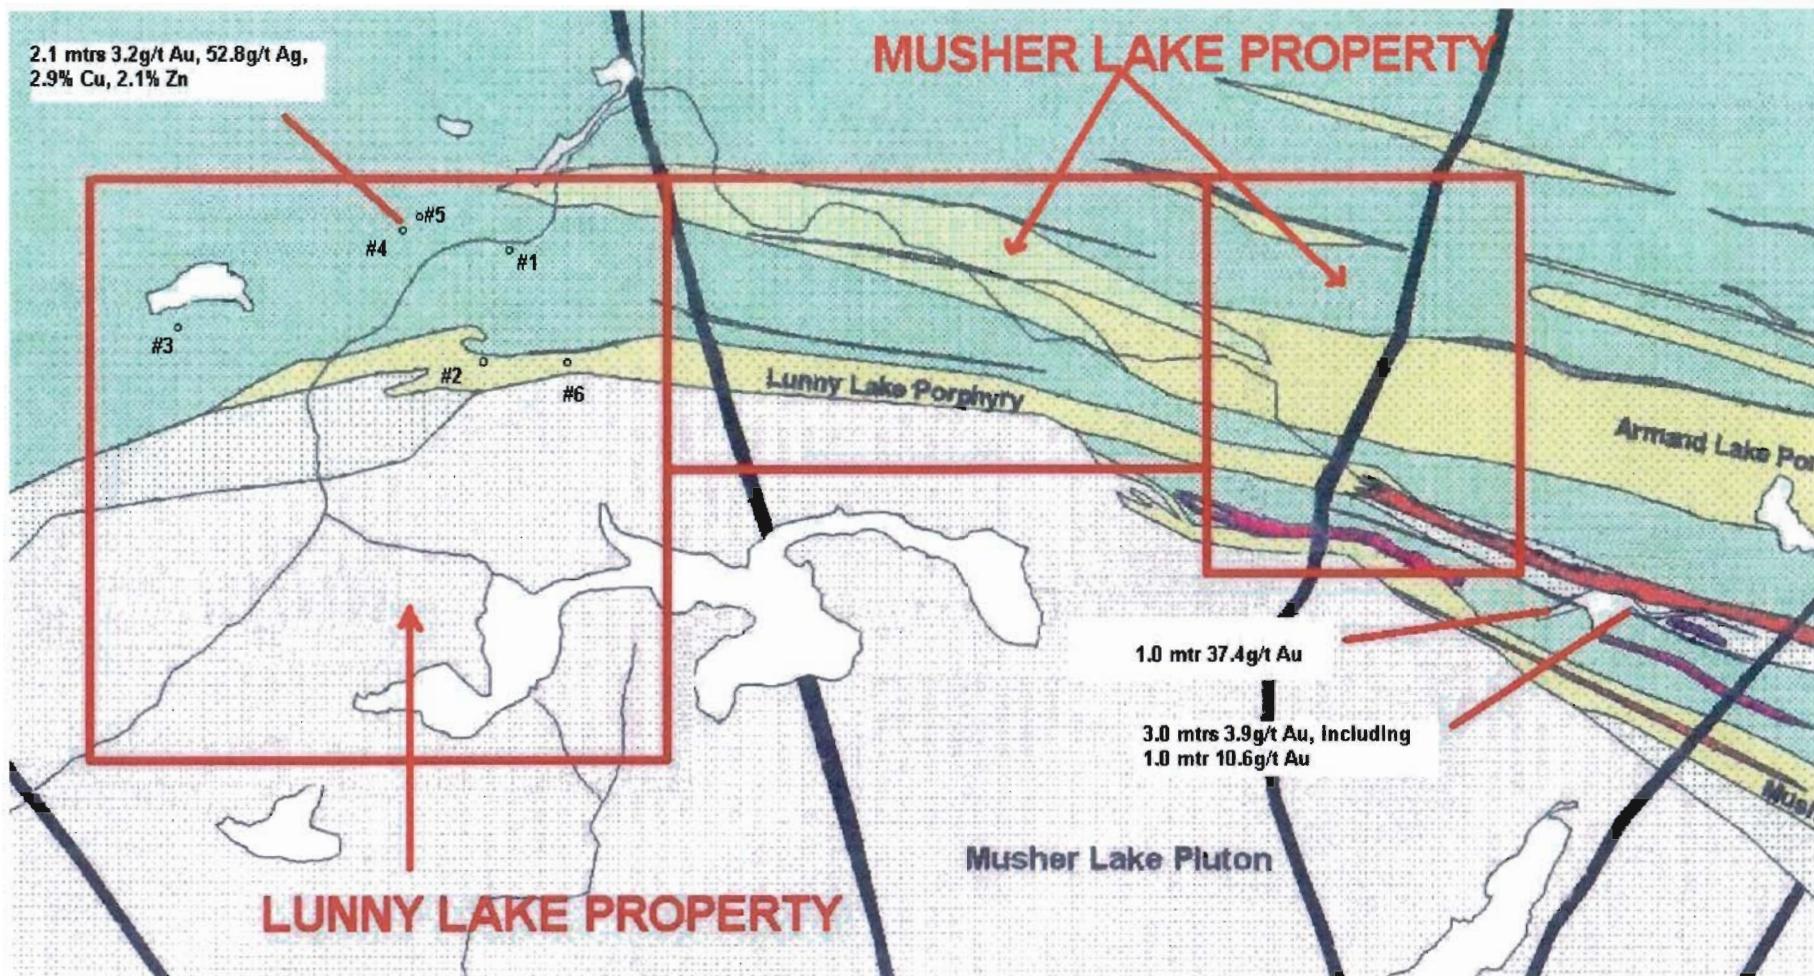

## **Location and Access**

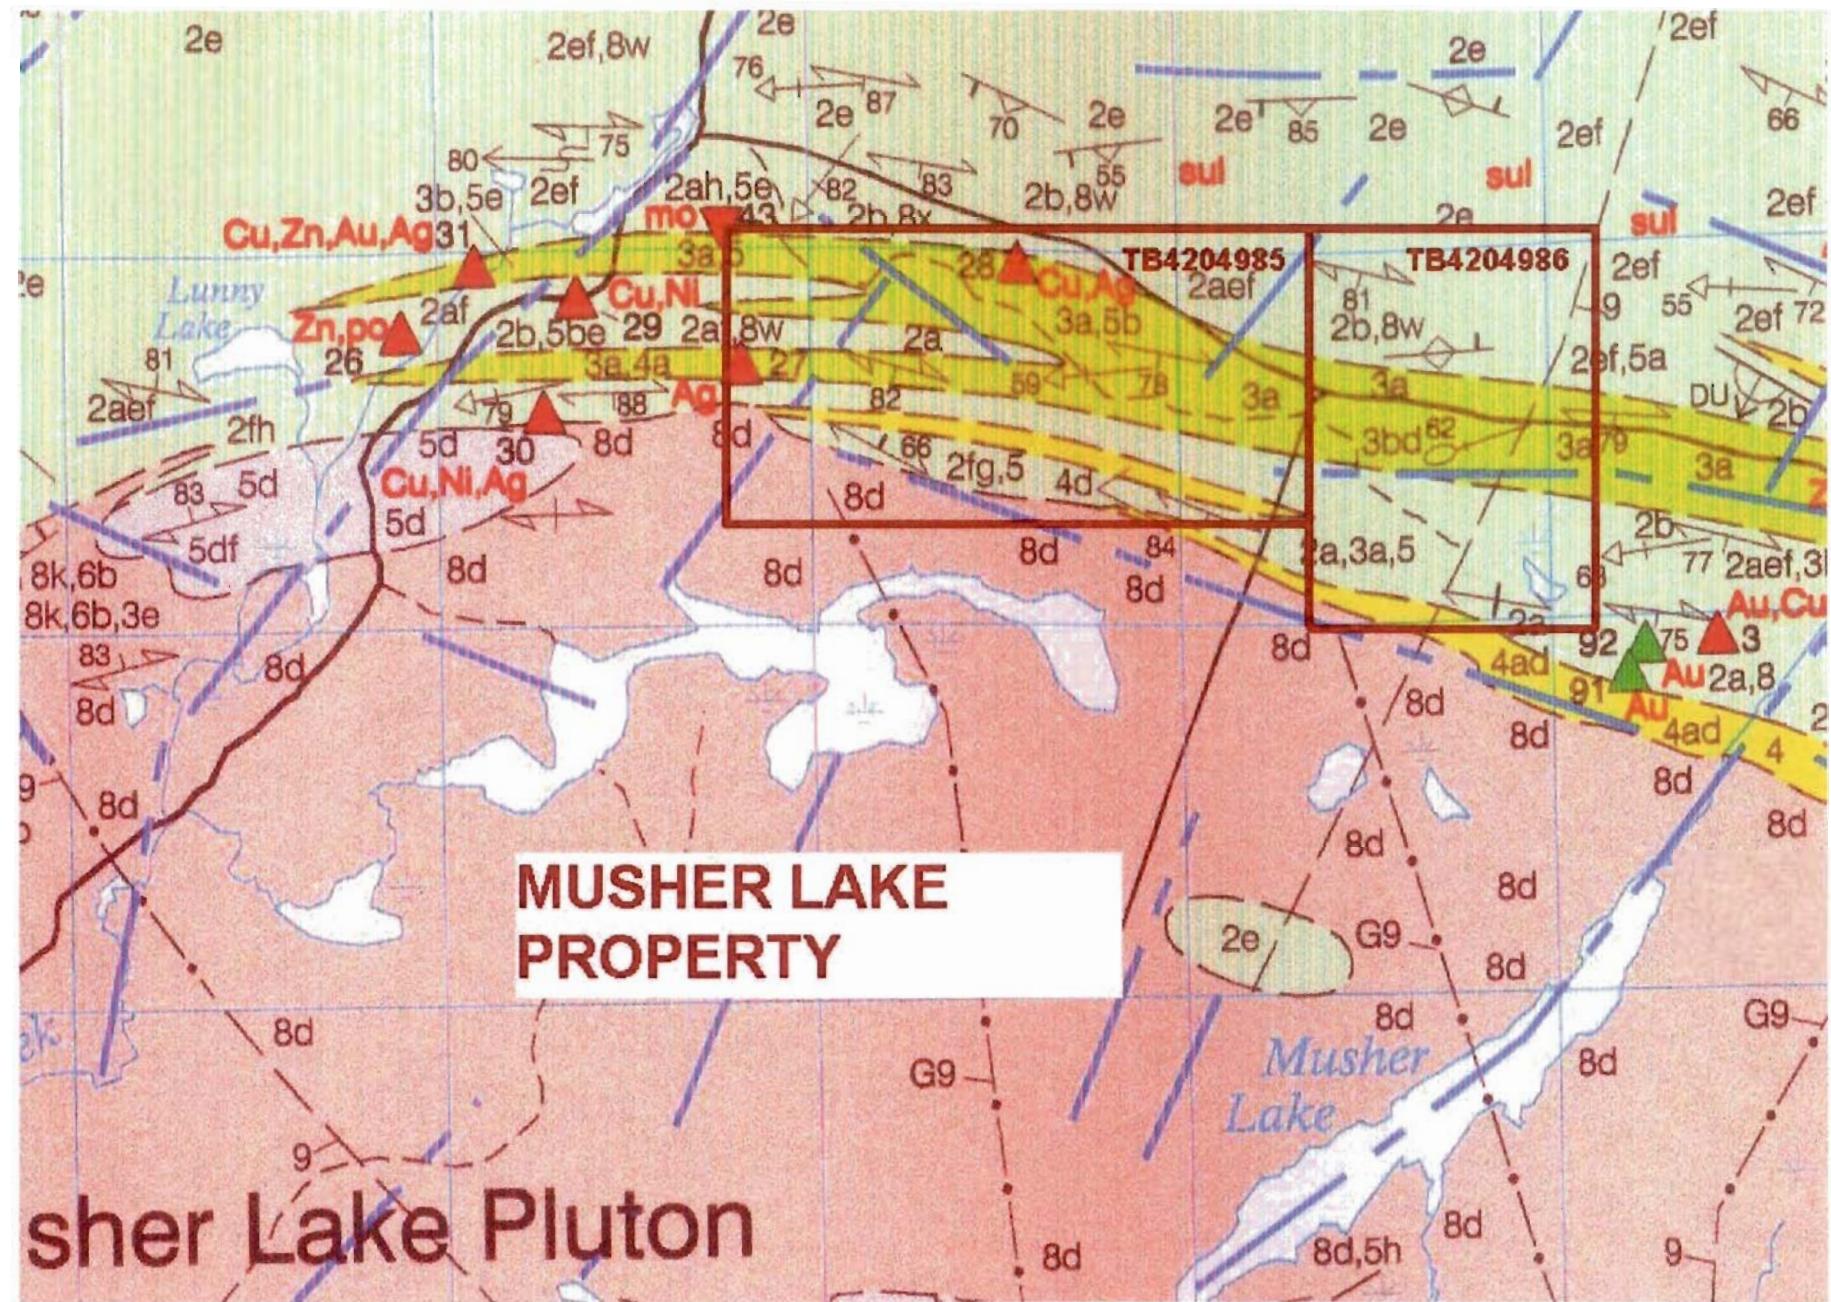

Claims T.B. 4204985 and T.B. 4204986

Wabikoba Lake Area (G-0620), Schreiber - Hemlo District, Thunder Bay Mining Division

NTS 42C/13SW, UTM 5410000N, 588000E

The Musher Lake property consists of 14 claim units located in the Wabikoba Lake Area of the Thunder Bay Mining District, approximately 17 km northeast of the three producing Hemlo Gold Mines. The property can be accessed by a logging road (Dotted Lake road) thirteen kilometers north of Highway 17, for about 3 kilometers east to the Twist Lake road, then east along the Twist Lake road for another 3 kilometers. At this point a logging road heading south towards Musher Lake cuts southward into the southern portion of the property.

## **Geology**

The Musher Lake property is located within the Archean Schreiber-Hemlo Greenstone Belt that is part of the Abitibi-Wawa-Shebandowan Subprovince of the Superior Province. The property is situated on the northern portion of the Hemlo synform and dominated by east-west striking sequences of metavolcanic and metasedimentary rocks bounded to the south by the Musher Lake Pluton. The supracrustal rocks consist principally of tholeiitic basaltic flows and subordinate turfs, intercalated with epiclastic arkosic wacke and siltstone. Feldspar porphyry dykes and sills intrude both volcanics and sediments.

## **Work Done**

Line cutting was contracted to Danny Thibeault of Rouyn-Noranda, Quebec. A total of 5.5 kilometers of grid was cut. A mag survey over 5.45 kilometres of the grid was contracted to Ray Bernatchez, Consulting Geologist, Atikokan, Ontario.

Three days were spent prospecting the grid by the author and my helper, Brian Fowler of Marathon, Ontario between August 20<sup>th</sup> and September 17<sup>th</sup>. A total of twenty three (23) samples were collected from the property and sent to Chemex Labs in Thunder Bay for assay.

## **Prospecting Daily Log**

<b><u>Date</u></b>	<b><u>Work Performed</u></b>
Aug-20	- traversed the area of Zone C on L14, L15 and L16 between 5+00N and the road. Found numerous old pits and took 4 samples.
Sep-11	- traversed L9E, 10E, 11E, 12E and L13E and collected 9 samples.
Sep-17	- traversed L13E, and L14E, L15E and L16E from south of 5+00N to 0+00 and collected 10 samples.

### Project Expenditures

<u>Date</u>	<u>Recipient of Payment</u>	<u>Explanation</u>	<u>Amount</u>
Jun-19	Danny Thibeault	line cutting	\$2571.86
Aug-19	Ray Bernatchez	mag survey & geological mapping	\$1826.70
Sep-3	Chemex Labs	assays (4 samples)	\$ 138.67
Sep-06	Chaltrek	flagging tape, bags & hoe handles	\$ 87.98
Sep-06	Greyhound	Chaltrek order	\$ 19.37
Sep-12	Greyhound	shipment of rock samples	\$ 13.28
Sep-17	Greyhound	shipment of rock samples	\$ 13.28
Sep-18	Brian Fowler	3 days prospecting	\$ 600.00
Sep-18	Food	3 days x \$20/day/ea	\$ 120.00
Sep-18	Travel	3 trips x 120km/day x 40c/km	\$ 144.00
Sept-26	Chemex Labs	assays (9 samples)	\$ 307.90
Sept-28	Chemex Labs	assays (10 samples)	\$ 338.41
		Total:	<b>\$6,181.45</b>
		Grant:	\$6,000.00

**Sample Locations and Descriptions**

<b>Sample #</b>	<b>Location</b>	<b>Rock Type</b>	<b>Mineralization</b>	<b>Comments</b>
L1	10 mtrs west of L16E at 5+30N	iron formation	2-3% py, minor cpy	rusty, strongly magnetic, banding
L2	pit along road 50 mtrs west of L16E	quartz vein	1% py	sheared gossan, non-magnetic, pyrite has a silvery look, strongly sericitic,
L3	same location as L2	quartz vein	1% py	non-magnetic, minor sericite
L4	pit along road 25 mtrs west of L16E	mafic volcanic	1% py	minor qtz veining, weakly magnetic
L19	L9+00E at 2+65N	quartz vein	5-7% py/po	strongly magnetic
L20	L9+00E at 2+65N	int. volcanic	3-5% py	rusty, garnets, strongly magnetic
L21	10+85E on BL2+00N	int. volcanic	2% diss. py	rusty, bleached look, altered
L22	10+85E on BL2+00N	int. volcanic	2-3% diss. py	similar to L21, green mica
L23	10+85E on BL2+00N	int. volcanic	2% py	
L24	11+35E & 5+50N (trench)	int. volcanic	2-3% py	
L25	11+35E & 5+47N (trench)	int. volcanic	2-3% py	biotite
L26	L12+00E & 2+25N	int. volcanic	5% py/po	strongly magnetic
L27	L12+00E & 2+25N	porphyry	minor py	qtz eyes, kspar, iron oxide stain

**Sample Locations and Descriptions (cont.)**

Sample #	Location	Rock Type	Mineralization	Comments
L28	16+20E & 3+90N	East grid int. volcanic	2% pyrite	rusty
L29	15+85E & 3+18N	East grid quartz vein	1-2% pyrite	
L30	15+85E & 3+18N	East grid int. volcanic	2-3% pyrite	rusty, siliceous
L31	16+07E & 1+70N	East grid mafic volcanic	10-15% pyrite	rusty, gossan
L32	16+10E & 2+08N	East grid int. volcanic	10-15% pyrite	rusty, siliceous
L33	16+08E & 1+95N	East grid int. volcanic	5-7% pyrite	siliceous
L34	16+25E & 0+60N (trench)	East grid porphyry	2-3% pyrite	rusty, qtz eyes, bleached appearance
L35	15+05E & 1+30N	East grid porphyry	1% pyrite	mod. sericitic, green quartz in veins
L36	15+05E & 1+30N	East grid porphyry	1-2% pyrite	rusty, sericitic, iron oxide stain
L37	14+93E & BL2+00N	East grid int. volcanic	3-5% py/po	rusty, biotite, strongly magnetic

### Results and Recommendations

A total of 23 rock samples were taken from the Musher Lake property within or near the grid area (western half of Claim TB 4204985). Several areas of mineralization were discovered throughout the grid. McIntyre Porcupine Zones' B and C were located and sampled.

L1 from Zone C returned 0.09 g/t Au, 1.5 g/t Ag, 0.06% Zn, 0.04% Cu and 0.01% Ni. Sample L3 taken from a pit along the side of the Twist Lake Road about 50 metres north of Zone C returned 0.13% Zn. Zone B was sampled across a 200 metre strike length (from L9E to L11E) but returned only anomalous zinc (0.02% Zn).

Sampling just east of L16E at the BL2+00N located a zone of rusty, siliceous intermediate volcanics with 10-15% pyrite. The results here were disappointing. About 125 metres south of this sampling is a trench that crosses the grid line. A sample was taken from the bottom end of the trench in a mineralized porphyry. The porphyry contains anomalous molybdenum (20ppm).

Finally, an old trench was located just east of the north end of L11E. A sample from the south end of the trench returned 0.16 g/t Au and 0.02% Zn in intermediate volcanics.

The mag highs on L10E north of the baseline could not be checked due to lack of outcrop. However, a north-south running trench (Trench 202E, Noranda Exploration, 1985) assumed to be about 70 metres west of L9E (near the claim boundary with the Lunny Lake Property) would likely expose any possible mineralization associated with these mag highs. It is important to note that a moly occurrence is located in or near the trench at roughly our grid co-ordinate 5+00N. Neither the trench nor the moly occurrence were located in this program.

The relief south of the baseline is generally quite low lying and hence outcrop exposure is very poor. This proved to be a detriment, as the Lunny Lake Porphyry was a high priority target for the OEC grant and few samples could be gathered from it, since it lies in the southern portion of the grid.

Further work on the property should concentrate on the potential of the Lunny Lake Porphyry on the remaining 1.5 kilometre strike length across the property to the east boundary. At a point about 1.2 kilometers east of L16E the Lunny Lake Porphyry grades into a feldspathic sedimentary horizon and contains a zone of gold mineralization. Drilling by Hemlo Gold in 1996 encountered 1 meter of 37.4 g/t Au approx. 200 meters southeast of the Musher Lake claims. A second drill hole, 200 meters further east, encountered 3 meters of 3.9 g/t Au, including 1 meter of 10.6 g/t Au. The Lunny Lake Porphyry and the feldspathic unit both represent excellent targets for additional gold mineralization. A grid should be put down in the southern part of claim TB 4204986 to see if this gold mineralization persists across this section of the property.

In addition, the moly occurrence in the trench west of L9E should be located and evaluated for its gold potential as well.

Yours truly,

Harold Griggs
