Metalex Ventures Ltd. – Drill Hole T-1-b Summary Report for Assessment

In the spring of 2005, Metalex Ventures Ltd. of Kelowna, B.C. endeavored to drill several regional targets defined by a previous airborne geophysical survey. Target T-1, on mineral claim 3015701, Porcupine Mining Division, was proven to be a kimberlite by initial drill hole T-1-a. A second hole was drilled to confirm the hit, further explore the body and to acquire more kimberlite material for analysis. Hole T-1-b was drilled between May 2 and May 22, 2005 to a depth of 605 feet, ending in kimberlite. The work was performed by Metalex employees: driller- Walter Bodnar, and helper- Richard Gaida, both of near Winnipeg, Manitoba. The Project was supervised by Arnold Bauslaugh of Kelowna, B.C., also a Metalex employee. Analytical work was carried out at C.F. Mineral Research in Kelowna, B.C.

Drill hole T-1-b was collared at UTM (Nad83, Zone 16U) coordinate 632735E and 5844980N in the South of Missisa River BMA (G-3853) on claim 3015701. The area is extremely remote. The drilling equipment was brought in across land using a pair of Lamtrack tractors and day to day service of the drill was accomplished using helicopters. A regional exploration camp set up by Metalex was used during the program. The camp was 10 kilometers away from the T-1 site. Initial access was overland using Lamtrack tracked vehicles and snowmobiles. Upon break-up, a helicopter was used to complete the work.

This report was penned by Brian K. Polk of Polk Geological Services in Timmins, Ontario between Mar 10 and Mar 18th, 2007, the date of report completion.

No ground work was done in this vicinity prior to this drilling and no references for this area were found.

The Limestone portion of the drill hole are stored at the site of the drill hole while the kimberlitic portion of the hole were all shipped to C.F. Mineral Research in Kelowna, B.C. for crushing and indicator mineral analysis. The whole of the kimberlite drill hole core was used in this process and no core now exists. Fractions, separates and grains are all housed at C.F. Mineral Research.

The process for grain extraction is included in the report. Results are used to characterize the body statistically in regards to other kimberlites in the region and globally. Ultimately, the outcome of this work is proprietary. The data provided can be used to typify relative grain counts for the body.

2 plans are provided for this report 1) a digital plan (Metalex drawn) showing the relationship of the drill hole to the geophysically defined extents of the kimberlite, and 2) a scaled, MNDM claim map derived plan (Polk Geological Services) for assessment purposes.

The total cost for the drilling and support is \$88,667 or \$146.56/foot drilled

SAMPLE PREPARATION, ANALYSES AND SECURITY

At the C.F. Mineral Research laboratory, the samples underwent wet sieving, dry sieving, heavy liquids separation and electromagnetic separation to concentrate heavy minerals. Heavy mineral fractions of -20+80HIL and -20+80HPYCRD were examined under binocular microscopes and any potential diamond indicators were carefully extracted.

To maintain quality control, each heavy mineral sample was examined by at least two laboratory personnel: a first-pass picking by a laboratory technician and a second-pass picking/checking by a senior laboratory technician. Work by the senior technicians were also checked routinely. Any missed indicator grains were recorded, added to the picking results and included for subsequent analyses.

The picked grains were encapsulated in epoxy mounts and scanned qualitatively using a Scanning Electron Microscope (SEM). Based on the scans, potential diamond indicators were selected for quantitative analyses utilising a CAMECA SX-50 electron microprobe.

Before starting a microprobe run, a number of mineral standards were analysed to verify the consistency and reliability of the instrument. Results of the standards were compared to known values obtained previously at C.F. Mineral Research and at various laboratories world-wide. Any unsatisfactory results in the standards were corrected immediately by calibration or verification of spectrometer positions, and the standards were rerun.

Once the standard results were satisfactory, an analytical run would be set up consisting of standards and the relevant samples. Standards were analysed at the beginning and the end of each run, and at intervals of every 100 to 120 analyses. When an analysis run was completed, the results were classified by a proprietary computer program to identify and rank diamond indicators.

CERTIFICATE PW05FA34000283

This certificate refers to a report of 787 full electron microprobe analyses (and associated work) carried out within C.F. Mineral Research batches 05-2853(1). The report was completed on the 31 January 2006.

All results apply to samples/fractions/grains as submitted and are considered to be the confidential property of the Client and supersede any preliminary report with this certificate number.

The certificate gives Peter Gregory full access to all cited results.

Title	Description
WO	Work Order
Batch	Batch number of sample
Sample Name	Name of sample
Sample Weight	Weight of sample as received at laboratory
Fraction	Refers to the size (ie -16 +32 mesh), density (H = heavy) and magnetic fraction (IL = ilmenite, PY = pyrope)
Weight	Total weight of the fraction
Unit	Units of measure for Weight
Pck wt	Picked weight in grams
PP	Purple pyropes
OR	Orange garnets
CD	Chrome diopsides
Olv/Opx	Olivines and orthopyroxenes
Blks	Blacks including ilmenites and chromites

Legend for Electron Microprobe Results

Column	Description
Name	Sample name
Fraction	The size (ie -32 +60 mesh, density (H is heavy) and magnetic properties (PY is pyrope, IL is ilmenite) of the fraction in which the indicator was picked
Mount	The number of the mount in which the grain is contained
Cell	The cell on the mount in which the grain is contained
Grain	The location within the cell in which the grain is contained
CFM	Mineral species (CR = chromite, IL = ilmenite, PP = pyrope garnet, OLV = olivine
SiO ₂ to K ₂ O	Weight % of the respective oxides
Total	Total weight % of all of the analyzed oxides for the given grain
Flag	The "#" symbol indicates that the analysis falls beyond the acceptable range of 98.5 to 101.0%. Indicates a suspect analysis.
