## **2006 Exploration Program**

### **1.1 Summary of Program**

A total of 1718 meters in seven completed holes and one hole abandoned were drilled on this project during 2006. These eight holes are currently being submitted for assessment credit.

### **1.2 Mining Land, Location and Access**

The project area is located about 29 km southwest of the Dome Mine, South Porcupine, Ontario. The property consists of 36 contiguous mineral claims for a total of 63 units. The area is accessible using paved provincial Highways 101 & 144. Highway 144 crosses the property in a north-south direction. Numerous historic drill roads provide ample access to various parts of the property.

Diamond drill hole HY06-01 was drilled on mining claim P.1189887 (65.5 m) & P1189764 (188.5 m).

Diamond drill hole HY06-02 was drilled on mining claim P1189764 (176.5 m) & P1159633 (92.5 m).

Diamond drill holes HY06-03 & HY06-03A were drilled on mining claim P998383.

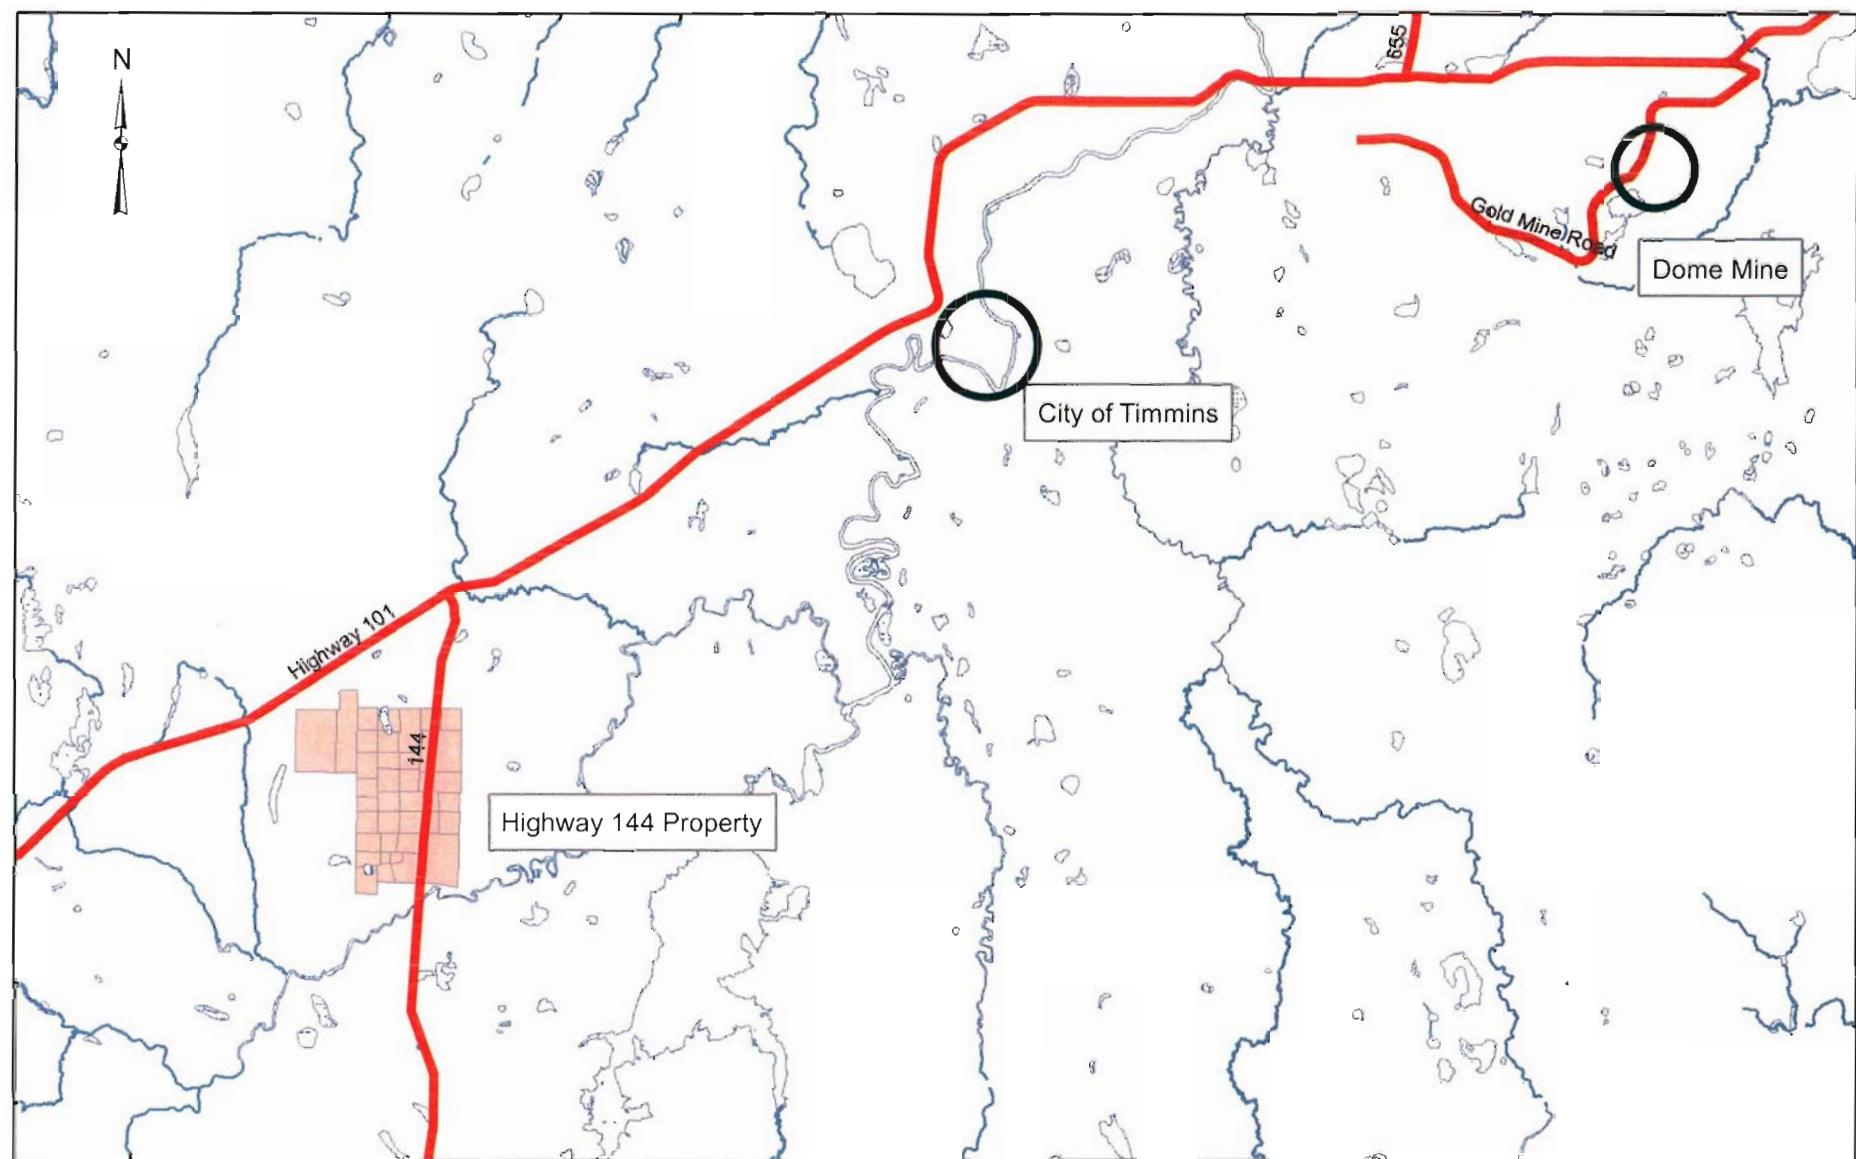

Diamond drill hole HY06-04 was drilled on mining claim P1177821.

Diamond drill hole HY06-05 was drilled on mining claim P1177826 (185.5 m) & P1177827 (11.5 m).

Diamond drill hole HY06-06 was drilled on mining claim P1177821 (86 m) & P649963 (76 m).

Diamond drill hole HY06-07 was drilled on mining claim P1159642.

Band-Ore Resources Inc. is the recorded holder of these claims and the Porcupine Joint Venture (Goldcorp Canada Inc. (51%) and Kinross Gold Corporation (49%)) has beneficial interest in the claims under an option agreement with Band-Ore.

##### Personnel

The work was supervised by Paul Brown, an exploration geologist with the Porcupine Joint Venture. All drill core was logged by Paul Brown. Sampling of the drill core was carried out by Clyde Wakeford & Dan Gagnon under the supervision of Paul Brown.

#### 1.5

##### Previous Work

The following is a brief summary of exploration activity in the immediate vicinity of the Highway 144 Option. Figure 2 depicts the approximate locations of this exploration activity.

Exploration activity in the area dates back to 1911 with the discovery of the Holmer deposit located approximately three kilometres north of the Highway 144 property. Between 1938 and 1984 approximately 28,000 metres were sunk on the Holmer property. Significant renewed interest in the property by Lake Shore in 2003 and 2004 has resulted in the drilling of 31,5864.8 metres in 86 holes and wedges. Diamond drilling continued during 2005 & is continuing during 2006.

Lake Shore has published an indicated resource of 1,369.000 tonnes @ 16.45 g/t uncut for the Holmer deposit. The bulk of the gold mineralization is hosted in the Ultramafic Zone, which consists both of quartz tourmaline veins and strongly disseminated sulphide mineralization marginal to the veins. This Ultramafic Zone is hosted by a complex multiphase ultramafic intrusive located in a tight fold nose. Drilling to date has indicated the continuity and gold grade of the mineralized zones to a depth in excess of 700 metres

On the current Thorne property, controlled by Band Ore Resources, Esso Minerals Canada drilled approximately 55 holes totalling 10,856 metres between 1985 and 1988 on the Kapika zone. Band-Ore Resources between 1995 and 2002 drilled approximately 2870 metres on the Kapika zone and 93,086 metres on the Golden River zones. Between 2003 and 2004 Band-Ore Resources drilled approximately 20,266 m on various exploration targets on the Thorne property. A mineral inventory of 4,000,000 tonnes grading 3.00 gpt has been outlined in the Thorne east and west deposits by Band-Ore.

The Cripple Creek property is located immediately southwest of the Highway 144 property. Here various companies have conducted exploration work since the early 1990's. Several mineral zones have been identified, however grades have been low and narrow, with better values being in the 5 to

6gpt over 2 to 3 metres. Gold is associated with altered mafic volcanic bands within a carbonatized ultramafic horizon.

The Thunder Creek property is located immediately northeast of the optioned property. This property is currently under option to Lake Shore Gold who is actively exploring the property. Historic values from the Rusk zone (pyritic syenite at mafic/ultramafic contact) are up to 3.04 gpt/1.5m in drill core.

## **Statement of Qualifications**

I hereby certify that at the writing of this report "Report on the 2006 Exploration Program – Highway 144 Option" dated September 15<sup>th</sup>, 2006

- 1) I am currently employed as an exploration geologist by Goldcorp Inc. for the Porcupine Joint Venture.
- 2) I am a member of the Association of Professional Geoscientists of Ontario # 0727.
- 3) I have graduated from Memorial University of Newfoundland with the degree BSc in 1974.
- 4) I have practised my profession continuously since 1974.
- 5) I have no interest, direct or indirect in the mining claims comprising the property described in this report nor do I expect to receive any.
  
- 6) The sampling of diamond drill core for assaying purposes was completed by Clyde Wakeford & Mike Gagnon and under the supervision of Paul Brown.

Dated this 15<sup>th</sup>, day of September 2006

Timmins, Ontario

A handwritten signature in black ink that reads "Paul Brown". The signature is fluid and cursive, with "Paul" on top and "Brown" below it, both starting with a capital letter.

## DIAMOND DRILL LOG HY06-01

Hole Location: UTM NAD 27 Zone 17 455381 E 5356105 N

0.00	40.00	CAS				109.05	110.05	1.00	E432001	Y	0.006		10				Talc cl altered ultramafic. Brecciated qz-cb vein at low angle to fol. No sulphides in vein or in UM.
40.00	58.75	UM,M,TC,CL	45	0	F/g very dk gn to black, non magnetic Sc, cb & cl alt UM. 30% core loss in interval. Interval is a fault zone. No veining or sulphides noted.	110.05	110.55	0.50	E432002	Y	0.0025						Two qz-ca veins 5 cm & 9 cm both sub parallel to fol. No py in vein or mafic volc. Possible minor black tourmaline in vein.
58.75	60.70	UM,M,CL		0	F/g olive green brecciated & altered , soft UM. UC in qz-cb vein, LC at 40 dca. Unit is non magnetic & massive. No veining or sulphides noted.	110.55	111.55	1.00	E432003	Y	0.0025						Cl altered f/g mafic volcanic. Tr diss py.
60.70	70.45	UM,M,TC,CL		0	F/g very dk green to black, altered and non magnetic UM. Fol developed locally at 40 to 45 dca. No veining or sulphides noted.	111.55	112.55	1.00	E432004	Y	0.0025						F/g dark green cl mafic volc. Tr diss py.
70.45	73.40	UM,TC,CL	40	0	F/g olive green massive & altered UM. No veining or sulphides. Entire interval is a fault zone with fol 40 to 60 dca. Lc with a mafic dyke at 30 dca.	112.55	113.55	1.00	E432005	Y	0.009						F/g dark green cl altered mafic volcanic . A 6 mm qz-ca vein ll fol, no py in vein. Tr diss py in volcanic.
73.40	76.60	MPI,M,CL		20	Very f/g dark green to black massive & non magnetic mafic dyke?. Contacts are sharp with UM at 45 dca. No veining or sulphides noted.	113.55	113.90	0.35	E432006	Y	0.017						Cl altered f/g mafic volcanic.
76.60	82.80	UM,TC,CL	45	0	F/g dk green talc & cl altered UM. Unit is a fault zone. Fault is at #5 dca. No veining or sulphides in fault. From 80 to 83m 60% core recovery.	113.90	114.50	0.60	E432007	Y	0.0025						A 2 cm pink qz-ca vein at 10 dca & perpendicular to very weak fol. Tr diss py in vein selvage.
82.80	110.05	UM,M,TC,CL	45	40	F/g very dk green to black, massive talc, cl & cb altered UM. Unit is weakly magnetic. Minor calcite veinlets No sulphides associated. Core is now relatively complete. no fault zones.	114.50	114.90	0.40	E432008	Y	0.008						F/g dark green cl altered mafic volcanic. Minor diss py in volcanic.

FROM	TO	ROCK-TYPE	C.A.	RQD	REMARKS	FROM	TO	WIDTH	SAMPLE #	QC?	AU G/T	% QTZ	% QS	% Py	% Po	% Aspy	Remarks
110.05	114.90	VM,UM,M,CL	50	20	M/g dark green chloritic & non magnetic, very weakly fol, Mafic Volcanic flow. Uc in a qz-ca vein & LC in broken core. Only three qz-ca veins, void of py in flow. Only tr diss py noted in basalt.	122.00	123.00	1.00	E432009	Y	0.0025						Talc & se altered Um. About 2% qz str's , no py assoc.
						123.00	124.00	1.00	E432010	Y	0.0025						Talc & se altered UM, no py associated.
114.90	119.00	UM,SFX,TC,CL	40		F/g dark green talc , cb & cl altered non magnetic ultramafic. Spinifex noted at 115.5 m Minor barren qz-ca stringers both ll & perp to fol. No py in str's or in UM.	124.00	125.00	1.00	E432011	Y	0.0025						Talc & se altered UM, no py associated. Two 3 to 5 mm qz veins at 10 dca. no py assoc.
119.00	128.12	UM,FP10,M,TC,SE	40	60	F/g pale green talc, cb & se altered, non magnetic UM. A 22 cm felsite dyke with 5% m/g cubic py occurs at 126.35m at 40 dca. Se alt strongest adjacent to dyke. Minor qz-ca str's no py assoc.	125.00	125.80	0.80	E432012	Y	0.0025						Talc & se altered UM, no py associated. Minor qz str's, no py assoc.
128.12	129.80	VM,UM,M,CL,BI	40	50	F/g Grey green cl & bi altered well foliated mafic volcanic. A 25 cm & 12 cm qz-tour veins both ll fol With 2 to 10% py in veins & selvages.	125.80	126.35	0.55	E432013	Y	0.061						Talc & se altered UM. Tr py at contact with felsite dyke.
129.80	132.05	UM,VM,M,TC	40	80	M/g grey green talc & chlorite altered massive UM. Unit is non magnetic. A 9 cm qz-to vein ll fol. No py in vein selvage. A 1 cm qz vein 10 dca. No py associated. No py in massive UM.	126.35	126.57	0.22	E432014	Y	0.547						A 22 cm l/g grey felsite dyke with 5% m/g diss cubic py.
132.05	135.20	VM,UM,M,CL,AB	40	65	F/g grey green cl, si & ab altered VM. UC & LC in broken core. Volc is well fol at 40 dca. Unit has several significant qz-to veins with py. Contacts with UM appear silicified.	126.57	127.57	1.00	E432015	Y	0.009						Talc & se altered Um with 3% qz & qz-cb str's. No py assoc. About 3% qz str's as 1 to 3 mm veinlets. No py assoc.
135.20	138.60	UM,M,TC,SE	40	80	M/g olive green Se, cb & tc altered UM. Unit is non magnetic. There are several late barren qz veins both ll & perp to fol. No py in Um. Lc is gradational in to TC altered UM.	127.57	128.12	0.55	E432016	Y	0.0025						Talc chlorite UM with about 2.5 cm's of qz-ca veining sub parallel to fol. No sulphides in veins or selvages.
138.60	149.10	UM,M,TC	40	85	M/g grey green massive & foliated TC altered UM. There are minor to 2% late qz & qz-cb veins & str's both ll & perp to fol. Occ py noted in veins and or in the vein selvage. No py in the UM.	128.12	128.62	0.50	E432018	Y	0.336						A 25 cm qz-to vein ll fol with 25% inac volc inclusions & about 5% py in vein & vein selvage. Vin is se & cl altered.
149.10	166.90	UM,M,TC	40	90	M/g grey green TC altered UM to basaltic Komatiite. Foliation is very weak at 40 dca. There are only 1 to 2 mm of qz-cb stringers per m in the UM. There are no qz veining & only a few py cubes present in the UM.	128.62	129.12	0.50	E432019	Y	0.05						A barren 10 cm qz-to vein ll fol. No py in vein. Tr to minor py in vein selvage & in VM.
						129.12	129.80	0.68	E432020	Y	0.014						About 7 cm's of veining in six 7 mm to 2 cm veins. Most are ll fol & one perpendicular to fol. No py in veins. Tr py in vein selvage.

FROM	TO	ROCK-TYPE	C.A.	RQD	REMARKS	FROM	TO	WIDTH	SAMPLE #	QC?	AU G/T	% QTZ	% QS	% Py	% Po	% Aspy	Remarks
166.90	177.00	UM,M,TC	40	90	M/g grey green TC altered UM. Only tr qz-cb str's both    & perpendicular to foliation. Fol is very weak at 40 dca. Only occ tr diss py noted in selvage to qz-cb stringer.	129.80	130.70	0.90	E432021	Y	0.0025						Talc chlorite altered UM. No veining or sulphides.
177.00	179.00	LC				130.70	131.20	0.50	E432022	Y	0.0025						A 9 cm qz-to vein subparallel to fol & 1 cm qz-cb vein perp to fol. 9 cm vein is in a MV inclusion in the UM. No py associated.
179.00	181.20	UM,M,TC,CL		95	F/g medium to dark green non magnetic TC & cl altered Basaltic Komatiite to UM. No qz-cb veining & no py.												
181.20	208.25	UM,M,TC	40	95	M/g to F/g dark green TC altered Um. Short intervals are slightly less talcy. Contacts between less & more talcy sections are gradational. Only minor qz-ca & cb stringers. No py assoc. Only occ py cube in UM.	131.20	132.05	0.85	E432023	Y	0.006						M/g grey green TC altered UM. No veining or pyrite noted.
208.25	209.12	MP7,M,CL		100	F/g black mafic dyke with sharp contacts & narrow chilled margins. No veining and tr c/g py in dyke.	132.05	132.50	0.45	E432024	Y	0.701						A late barren 3.5 cm qz vein perp to fol & five 5 mm to 1 cm qz veins    fol. No py in veins but 2 to 5% diss py in vol.
209.12	211.00	UM,M,TC	40	95	M/g to f/g dark green TC altered Um. No veining and/or sulphides noted.	132.50	132.90	0.40	E432025	Y	0.721						A 7 cm qz-to vein 40 dca &    fol. Tr py in vein & 5% to locally 10% py in vein selvage.
211.00	211.68	MP7,M,CL		90	F/g mafic dyke as above, with chilled margins & contacts sharp at 70 dca. Tr qz-ca str's & tr py.	132.90	133.40	0.50	E432026	Y	0.563						A 2 cm qz-to vein    fol & a 1 cm barren late vein perpendicular to fol. 2% to 4% diss py in selvage to vein.
211.68	212.87	UM,TC	40	90	F/g to m/g dk green TC altered UM. Sharp contacts with Mafic dykes at either end. A 2 cm pink calcite vein at lower contact. Tr py in vein selvage.												
212.87	213.75	MP7,M,CL		80	F/g black mafic dyke with a calcite vein at UC. LC sharp at 60 dca. Tr diss py in dyke.	133.40	134.00	0.60	E432027	Y	0.012						Si, cl altered mafic volcanic. Tr 1 mm qz str's & tr diss py in VM.

0.00	13.20	CAS				17.00	18.00	1.00	E432101	G	0.0025						M/g dk green massive, silicified basalt flow with occ tr py.
13.20	19.92	VM,FP,M,EP,CL	40	80	F/g to m/g dark green ep & cl altered weakly magnetic silicified massive very weakly foliated basalt. Ep alt predominant on fractures. VM has one carb vein & tr diss py.	18.00	19.00	1.00	E432102	G	0.0025						F/g dk green ep altered, silicified massive non magnetic basalt with tr diss py.
19.92	24.90	VM,M,EP,CL		95	M/g dk green ep, carb & cl altered massive strongly magnetic mafic volc flow. Magnetite occurs throughout as stringers & diss. About 2% diss py & tr po in unit. Fol very weak to non-foliated.	19.00	19.92	0.92	E432103	G	0.0025						F/g dk green ep altered & silicified massive basalt flow. Tr diss py.
24.90	34.63	VM,CL			F/g dk green cl altered volc.	19.92	20.90	0.98	E432104	G	0.0025		2	0.01			F/g dk green magnetic massive ep, cl & si altered basalt. About 2% diss py & 2% magnetite & minor po.
34.63	38.45	VM,M,CL,SI	50	90	M/g to f/g dk green cl & si altered mafic volc. Unit has minor qz-carb veins ll fol at 45 dca & 3 to 5% f/g diss py. Unit is moderately to weakly magnetic. LC with dyke in qz vein at 50 dca.	20.90	21.90	1.00	E432105	G	0.0025						VM as above with diss magnetite upto 2% py and 20 cm of strong ep alt with 1 cm carb vein down core axis for 20 cms.
38.45	40.14	FP14,M,HE,CB		90	F/g dark reddish brown moderately hematized porphyry. Unit has 10 to 15% 3 mm calcite blebs in a f/g ground mass. Unit has 2-3% f/g diss py throughout. LC sharp at 60 dca.	21.90	22.90	1.00	E432106	G	0.0025						VM as above with minor diss py.
40.14	41.51	VM,M,HE,SI		90	F/g dk green to reddish brown He & Si altered basalt. Lc of alteration is sharp at 50 dca. Unit has 1-3% f/g diss py. No veining but number of <1mm to 4 mm qz str's at various angles to ca.	22.90	23.90	1.00	E432107	G	0.0025						A 3 cm qz-ca vein at 45 dca. Good py & magnetite in vein selvage for 1 cm.
41.51	42.81	VM,M,SI,HE		90	Similar to above but with only weak to nil He alt. Unit has 1 cm qz vein at 40 dca. There is 3-4% f/g diss py in basalt.	23.90	24.90	1.00	E432108	G	0.0025						VM as above with carb stringers & 1% to 2% f/g diss py.

FROM	TO	ROCK-TYPE	C.A.	RQD	REMARKS	FROM	TO	WIDTH	SAMPLE #	QC?	AU G/T	% QTZ	% QS	% Py	% Po	% Aspy	Remarks
42.81	50.21	VM,M,CL	45	90	F/g dk green cl altered & magnetic massive basalt flow. Number of qz-ca str's at various angles to ca. Only tr diss py in basalt, except 45.5m to 47m which has 2% str py assoc with a carb str's at low angle to ca.	34.63	35.63	1.00	E432109	G	0.0025			1			A 1 cm qz-ca barren vein at 30 dca. About 1% f/g diss py in basalt.
50.21	52.25	FP12,POR,CB		90	MM to cm scale white partly absorbed feldspar laths in a carb altered f/g non-fol reddish brown matrix. LC sharp at 60 dca. Dyke has a 1.5 cm qz vein at 40 dca near UC. Tr py assoc. Occ tr py in porphyry.	35.63	36.20	0.57	E432110	G	0.009			4			Cl & si altered basalt with 3-5% f/g diss py.
52.25	114.26	VM,PIL,M,CL,SI	45	95	F/g dk green cl,si & weak ep altered, non magnetic, pillow to massive basalt flow. Fol is weak @ 45 dca to not developed. Ep is weak along a few fractures. 74.5 to 77.5 section of breccia carbonate veins, no py assoc. occ tr diss py in basalt.	36.20	36.80	0.60	E432111	G	0.012			1			A 10 cm qz-ca vein at 45 dca. No py in vein. 1-2% f/g diss py in basalt.
114.26	116.82	VM,M,CL		100	M/g dk green cl altered non magnetic, silicified massive basalt flow. No significant epidote alteration along fractures. Unit is massive with very few fractures or qz & qz-cb str's. No veining & only a few specks of py noted.	36.80	37.80	1.00	E432112	G	0.0025			4			Cl & si altered basalt with carb stringer at 10 dca with tr Cp & Mo. About 3-5% f/g diss py in basalt.
116.82	165.15	VM,CL,SI		90	F/g dk green cl,si & ep altered non magnetic pillow basalt. Ep found as selvages to numerous fractures. Minor to locally 2% carb str's & veins. Tr diss py in basalt at best. 149.12m 10 cm he alt f/g reddish brown dyke at 40 dca.	37.80	38.45	0.65	E432113	G	0.0025			1			Cl & si altered f/g massive basalt. 1-2% f/g diss py in basalt.
165.15	167.15	FP12,M,HE,CB		90	Fp with 1mm to 1cm white feld cry in a f/g carb & he alt matrix. 30% feld xls. Dyke is weakly magnetic & has sharp UC & LC at 75 to 80 dca. Dyke cut by a 17 cm pink granite gneiss looking dyke. No veining or str's & tr diss py.	38.45	39.25	0.80	E432114	G	0.0025			2			He & carb altered porphyry? with 2-3% f/g diss py.
167.15	192.27	VM,MP1,PIL,CL,EP	45	90	F/g dk green cl & ep altered pillow basalt. Unit is non magnetic, has minor carb str's & tr diss py. Basalt cut by a 1.15 m unit of c/g gabbro looking unit @ 183.05m. Gabbro is massive, weakly magnetic, UC 50 dca. Tr diss py in gabbro.	39.25	40.14	0.89	E432115	G	0.0025			2			He & carb altered porphyry? No qz-veining & 2-3% f/g diss py.
192.27	194.55	FP5,M,HE		95	A f/g amphibole-feldspar syenite porphyry. He alt on fractures. Dyke is dark reddish brown & non magnetic. Minor carb str's with he staining on selvages. Only tr diss py in dyke.	40.14	40.80	0.66	E432116	G	0.0025			2			F/g dk green to reddish brown hematitized basalt with 1-2% f/g diss py.
						40.80	41.51	0.71	E432117	G	0.0025			2			A 1 cm qz vein at 45 dca. About 2% f/g diss py in basalt.
						41.51	42.00	0.49	E432118	G	0.0025			4			A 1 cm qz vein 40 dca. No py in vein. Basalt has 3-4% f/g diss py.
						42.00	42.81	0.81	E432119	G	0.0025			4			F/g dk green cl altered basalt with 3-4% f/g diss py.
						42.81	44.00	1.19	E432121	Y	0.0025						F/g dk green cl altered massive basalt, with tr diss py.
						44.00	45.50	1.50	E432122	Y	0.0025						F/g dk green cl altered massive basalt with tr diss py.
