Red Ridge Deposit
Claims #: 3015296, 3019504, 3017343
Fallon Township
Porcupine Mining Division
Prepared By: Victor W.A. Warford
May 14 2008

Property Location and Access.

The property is located in the north-west portion of Fallon twp.. Access to the property is by way of the Langmir logging road beginning in South Porcupine and proceeding south 34 km to Carman road, and another 3.5 km east down Carman Road to post #1 of claim #3015296 and post #2 of claim 301954. Refer to Location Map and Survey Map.

Property Geology

The property is located on a ridge of Gowganda Formation sediments (Huronian Supergroup) consisting of argillite, quartzite and conglomerate. The layering of the sediments is quite consistent and exhibits very little deformation. The layers are horizontal with a slight dip to the east of a few degrees.

Previous work

Previous work was to expose a portion of the Argillite layering so that a relative thickness by colour of the layers could be determined. The site was located on the northern slope of the ridge that was steep and had little overburden. A strip line was determined and all rock faces along the line were cleared of underbrush and debris and mechanically cleaned. A visual survey of the layers was conducted and location determined using a string line and compass.

Work Performed

The purpose of this work was to map out the layers Argillite according to colour and composition. The work consisted of locating and following the layers by exposing the bedrock at favorable locations noting location with GPS and taking samples.

Conclusions

The work performed determined the location and outline of the layering of the Argillite by colour and consistency. This has greatly improved the knowledge of the topographic nature of the property so that ideal locations for further work can be determined. Future work is planned to take a unweathered sample and determine its physical properties and workability of the Argillite.

Daily Log

All work done by Victor W.A. Warford

Oct 1, 2007

7:00 - 8:00 Traveled to claims

8:00 - 4:00 Started servay at A, the location of the previous strip, and proceeded to location B . Traveled along the green Argellite layer in a NW direction exposing the bed rock and took notes and gatherd samples at noted locations.

4:00 - 5:00 Traveled to town

Oct 2, 2007

7:00 - 8:00 Traveled to claims

8:00 - 4:30 Started servay at location C and sampled along green Argilite to location B. There was a lot of overberden along this line.

4:30 - 5:30 Traveled to town

Oct 3, 2007

8:00 - 9:00 Traveled to claims

9:00 - 4:00 Started servay at location D and sampled along brown Argilite to location DD. The was a consistnate layer of overburden averaging 50cm in depth.

4:30 - 5:30 Traveled to town

Oct 4, 2007

7:00 - 8:00 Traveled to claims

8:00 - 6:00 Started servay at location E and sampled along red sandstone EE. This terane is very rough and steep and had a hard time.

6:00 - 7:00 Traveled to town

Oct 5, 2007

8:00 - 4:00 Prepared samples by cleaning and marking.

May 14,2008

8:00 - 16:00 Made report.
