TABLE OF CONTENTS

TABLE OF CONTENTS (continued)
PLANS AND CROSS SECTIONS (continued)

INTRODUCTION

During 2008, Delta Uranium Inc. completed 40 diamond drill holes totally 5552.56m on its Kenora project. The holes were drilled to test granite-pegmatite uranium-bearing zones of historical showings and airborne radiometric anomalies. The project was targeted at magmatic uranium mineralization of the type that is present in the numerous showings found in the area. Recent developments in Namibia and recent increases in the price of uranium have made large tonnage, low grade magmatic uranium deposits a viable target for exploration.

The area hosts numerous uranium showings, which commonly occur along the outer portions of granite and pegmatite intrusions. The geology of the area is comprised of a series of Early Precambrian, east-west-trending, steeply dipping volcanic and sedimentary rocks which intruded by felsic intrusive rocks ranging from granite to syenite. The youngest intrusive are a series of late-stage pegmatitic sills and dykes, which host the majority of the uranium occurrences in the area.

PROPERTY LOCATION, ACCESS, DESCRIPTION

The property is located approximately 30km east of the city of Kenora and 50km west of the town of Dryden in northwestern Ontario (Fig. 1). The Kenora Project currently consists of 2624 units making up 219 claims and covering 41,984 hectares (Appendix A, Fig. 2). Some of the claims are in the name of 4316282 Canada Inc., which is a wholly owned subsidiary of Delta Uranium Inc., and some of the claims are held in trust for Delta Uranium Inc. by Dan Patrie Exploration.

(metres)

Coordinate system: UTM - Datum NAD83 - Zone 15N

Access to the property is by way of the Trans Canada Highway, bush roads and all terrain vehicle (ATV). The Trans Canada Pipeline and the Canadian Pacific Railway both lie parallel to the Trans Canada Highway for the majority of the property.

A maximum relief of 90m is found between the Eagle Lake area and the Cobble Lake area. The topography is mildly rugged with local relief rarely exceeding 46m. The watersheds flow into Lake of the Woods, the Winnipeg River and the Wabigoon River.

HISTORY AND PREVIOUS WORK

Many of the drill holes were conducted on historical showings located in the Kenora property, including Nixon Lake, Ely Lake, Richard Lake, Wilson Lake and Bee Lake. These showings also appear as anomalies on the airborne radiometric survey reported by Palmer (2007).

Uranium was first discovered in the Kenora area in 1949 near the shore of Willard Lake. This was followed by the discovery of the high-grade Richard Lake deposit by Campbell and McFarland in the early 1950's and numerous other occurrences, including Hawk Lake, Bee Lake, Kenoratomic, Quebec Ascot, and Viceroy. Falling uranium prices in the 1950's lead to little exploration in the area until the 1970's when the Ontario Geological Survey (OGS) mapped west of Richard Lake and found numerous additional showings (Pryslak, 1976).

The only recorded deposit in the area and the only area which saw mining development, is the Richard Lake deposit. The Richard Lake deposit resource model was estimated at 590,000 tonnes of 0.10% U_3O_8 over a 3m by 210m by 300m area (Palmer, 2007).

GEOLOGY

The rocks of the Kenora area are Archean in age and are found within the Wabigoon Subprovince of the Superior Province. The area borders to the north with the Winnipeg River Subprovince and the Dryberry Batholith to the south.

The geology of the Kenora area consists of volcanic and sedimentary rocks intercalated with each other and then intruded by felsic intrusions (Fig. 3). Volcanic rocks, consisting of flows and pyroclastics, form an east-trending belt through the Kenora property, ranging in widths of 0.8 km to 2.8 km. The sedimentary portion to the south of the volcanic belt is also east-trending and consists of sandstones, siltstones and argillites. The sedimentary rocks are intruded by gabbro sills and pegmatite dikes. Rocks are regionally metamorphosed to lower amphibolite to upper greenschist facies.

ECONOMIC GEOLOGY

Numerous occurrences of uranium and base metal mineralization are found within the area. Uranium occurrences are often found associated with granite/pegmatite dykes and sills, while base metal mineralization is found within volcanic rocks.

Mineralization consists of fine-grained uraninite (and probably uranothorite), while on surface one can often observe yellow, powdery secondary uranium minerals (probably mostly uranophane). Also associated with the high uranium concentrations are biotite, magnetite and sometimes muscovite.

There is a cluster of gold-base metal occurrences in the eastern part of the Kenora property in the area underlain by clastic metasedimentary rocks around Game Lake. Companies such as, Noranda, Tri Origin Exploration Limited, Rio Algom Exploration Limited and Emerald Fields Resource Corporation are the more recent companies that explored for base metals, including copper and zinc.

2008 DIAMOND DRILLING PROGRAM

Forty diamond drill holes totaling 5,552.56 metres were drilled on six separate targets at Bee Lake, Richard Lake, Feist Lake, Wilson Lake, Ely Lake and Nixon Lake. Drill holes numbers are preceded by initials to indicate which area they were in. Drilling was commenced by Salo Drilling of Timmins, and was continued after April by DHB Contracting (2003) of Sparwood, BC. Initially, BQ core was recovered, but this was changed to NQ after September (Nixon Lake and Feist Lake holes).

Core was initially processed in a core shack at Stewart lake, and after June, 2008 the operation was moved to Delta's office premises in Kenora, where all the core is now stored. Logging was done by several different geologists: Doug Bryan, Rick Bonner, Riku Metsaranta, Marilyn Rousseau and Amy Shute.

Core exhibiting anomalous radioactivity was split using a hydraulic core splitter. Up to April, split core samples were sent to Accurassay in Thunder Bay for 30-element ICP-OES (inductively coupled plasma - optical emission spectroscopy) analysis (including uranium). At that point it was determined that ICP analysis is unreliable for uranium when certain other elements are present that cause interference. There was also concern that multi-acid digestion, which is the standard procedure for getting material into solution for ICP analysis, might not be capturing uranium from refractory minerals.

A series of tests were run at Activation Laboratories using DNC (delayed neutron counting), INAA (instrumental neutron activation analysis) and XRF (X-Ray fluorescence). All three of these methods analyse material in the solid state, and therefore do not depend on getting material in solution and keeping it in solution (which are actually two different potential problems with "wet" analysis). Repeat ICP analyses were performed on selected samples. The conclusions from this test work, which was initiated as part of a QA/QC program were as follows:

(1) ICP analyses for uranium reproduce poorly with relative variations of 50% or more

(2) DNC, INAA and XRF analyses for uranium are reproducible with relative variations of a few percent at worst, and also correlate extremely well between the three methods.

(3) Comparative analysis on several hundred samples indicates that DNC (the final chosen method) analyses for uranium are on average 20% higher than ICP analyses, for the rock types and mineralization encountered on the Kenora project.

Thereafter, all samples were sent to ActLabs for assay of uranium by DNC as well as multi-element INAA analysis. During the summer, it was determined that the multi-element data were not generating sufficient useful information to justify the cost, and INAA was discontinued.

Assays have not yet been received for the Feist Lake (FL) drill holes.

Data Presentation:

Table 1 lists all the 2008 diamond drill holes with collar locations, azimuths, dips, depths and start/finish dates.

Appendix B presents lithological logs for all the holes. Loggers are identified by initials.

Appendix C presents drill hole sampling data and INAA multi-element analyses with comparative uranium values by DNC, ICP and XRF.

Appendix D presents ICP analytical data for the earlier holes.

Appendix E presents only drill hole sample information and U_3O_8 values, to provide a concise summary of results in a single table. Where only ICP analyses were available (i.e. where the original pulps and rejects had been disposed of or lost) the ICP uranium values was multiplied by 1.20 to approximate the expected DNC value. Uranium contents are displayed as ppm of U_3O_8, to conform to what appears to be a developing convention for low-grade magmatic uranium mineralization.

Plans and sections showing drill holes in each of the six areas tested, are appended to this report. Uranium assay data are indicated on the sections in histogram format.

Summary of Results:

All uranium mineralization encountered in the drilling program appears to be of the primary magmatic type, and occurs in granite/pegmatite sills, dykes or irregular bodies. Historical descriptions typically refer to “pegmatite dykes” but classic pegmatite dykes appear to be rare in the project area. Most of the mineralized intrusives are heterogeneous in respect of their grain size, and would more properly be

described as granites with pegmatitic patches and segregations. The term granite/pegmatite is used in this report.

There are three mineral associations that may have a bearing on the genesis of the mineralization. The most strongly radioactive sections are often associated with concentrations of biotite or magnetite, sometimes both. Also, muscovite-bearing bodies appear to be preferentially enriched in uranium, although there is no point-to-point association with uranium enrichment as there is with biotite and magnetite.

The granite-pegmatite bodies hosting uranium mineralization typically occur at or close to the margins of the large granitoid batholiths that intrude the metavolcanic and metasedimentary rocks of the area. They are usually arranged tangentially with respect to the batholiths and more or less conformable to the layering in the supracrustal rocks. Thus they are most properly described as sills, although a few are sufficiently discordant to be classed as dykes. Others are somewhat irregular in shape.

Table 2 summarizes the most significant mineralized intersections from the 2008 program.

The drill results comprise a spectrum from narrower zones of higher grade mineralization (e.g. 1005 ppm U_3O_8 over 1.65 metres in BL08-001) to much wider zones of lower grade material such as 56.00 metres of 72 ppm U_3O_8 in EL08-004. This latter intersection has the second-highest grade-width product of any intersections in this program, after that in EL08-001 which cut 312 ppm U_3O_8 over 15.50 metres.

The most promising drill hole in the 2008 program, in terms of its economic potential for uranium, is NL08-003, which cut 29.40 metres of 135 ppm U_3O_8.

As mentioned above, analytical results from the Feist lake drill holes have not yet been received.

One interesting and unexpected result of the program was the sulphide zone that was cut in three holes at Wilson Lake. It is hosted in clastic metasedimentary rocks that may, in part, have a pyroclastic origin. Table 3 presents the results of gold (fire assay) and ICP analyses of core from these holes. The metal contents, although low, should be viewed in the context of the numerous gold, zinc and copper occurrences in the Game Lake area, which are more or less co-extensive with the mapped metasedimentary belt (grey on figure 3) which has been mapped in Bridges and Docker Townships. The possibility has been raised that these metasediments may have a substantial felsic pyroclastic component and may host a gold-rich VMS system.

SUMMARY AND CONCLUSIONS

The 2008 diamond drilling program has more or less closed off the mineralization at Richard Lake, where the last five holes, designed to test downward and lateral extensions of the zones encountered in the 2007 program, did not return any significant uranium values. However, the geometry of the Richard Lake deposit is very poorly understood, and it would be premature to dismiss it until the structure has been resolved, and the orientation of the mineralized granite/pegmatite bodies is better defined.

Drilling at Ely Lake and Nixon Lake has returned intersections that show the potential for wide zones of low-grade uranium mineralization. Both of these areas warrant further work.

Drilling at Bee Lake has resulted in one intersection of significantly higher grade uranium mineralization (1005 ppm U_3O_8) over a narrow width (1.65 metres). The 10.5 metres of 146 ppm U_3O_8 in BL08-016 suggests that this area may also have the potential for wide zones of low-grade uranium, dependant on better target definition by geological mapping.

Wilson Lake was disappointing in its uranium results, but did show some potential for Zn-Cu-Ag-Au mineralization of possible VMS affinity.

Drilling at Feist lake did cut radioactive granite/pegmatite sills, but analytical results are not yet forthcoming.

RECOMMENDATIONS

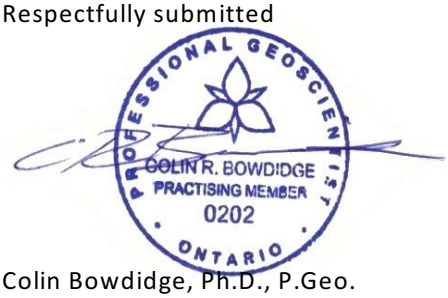
Further diamond drilling is recommended at Ely Lake and Nixon Lake, after these areas have been geologically mapped so that drill targets can be defined as part of a systematic program.

Bee lake and Richard Lake should also be geologically mapped, and further drilling at these locations should be withheld until and unless the mapping indicates further drill targets.

Wilson Lake should be viewed as part of a large base-precious metals system. Further work should be dependent on a full compilation of historical data for the whole area, plus a detailed lake-sediment geochemical survey. If these exercises result in definition of drill targets, a further program might be justified, focused primarily on base and precious metals.

Feist Lake should be reviewed once assay results have been received.

Respectfully submitted



Colin Bowdidge, Ph.D., P.Geo.

Amy Shute, HBSc

Meters From	Meters To	Rock type	Description (Colour, grain size, texture, minerals, alteration, etc.)	Planar Feature Angle	Ref Sample No.	Geochem Sample No.	Sample Interval (m) From	Sample Interval (m) To	Length (m)	Assays
0	1.50	Casing								
1.50	5.80	Metasediments	Feldspar / quartz / biotite schist, accessory muscovite, probable greywacke, grey green mottled black, So and foliation defined by biotite alignment, moderate pervasive chlorite alteration, Quartz veinlets common along bedding planes, veinlets on mm scale and parallel bedding at 60° to core axis, random quartz boudins with biotite selvages, sequence comprised of broken core, Fe stain			487217	5.30	5.80	0.50	
5.80	8.55	Pegmatite	Pegmatite grading to granite, sill, conformable, cream to white / grey mottled pink, 2% mafics (biotite / chlorite), non magnetic, contacts generally conformable, minor irregularities			487218 487219	5.80 7.00	7.00 8.55	1.20 1.55	
8.55	21.28	Metasediments	Schist / greywacke as 1.50 -5.80, minor pegmatite / granite component as generally narrow <0.10 m sills. Sequence fines to base from a medium grained greywacke to a very fine grained siltstone, quartz partings are common throughout but more with the coarser grained sequence 8.55 – 9.60 medium grained, biotite dominant, bedding at 60° to core axis, Quartz boudins 9.60 – 10.70 pegmatite sill, cream / pink 11.20 – 11.40 pegmatite sill, white massive, trace mafics (biotite) 12.46 – 12.67 pegmatite sill, coarser grained biotite selvages 13.00 – 18.05 very fine grained metasediments, 5% very fine Quartz partings parallel bedding at 75 to 80° to core axis 18.05 – 21.28 very fine grained massive chloritic schist, 2% Quartz partings, coarse biotite rims			487220 487221	8.55 20.70	9.05 21.28	0.50 0.58	
21.28	22.30	Pegmatite	Sill, non magnetic, pink grey, moderate foliation, biotite parallel to host bedding, moderate pervasive epidote alteration. 3 – 4% fine to medium grained biotite (minor chlorite alteration)			487222	21.28	22.30	1.02	
22.30	23.30	Metasediments	Very fine grained,, grey, massive, 2 pegmatite sills 15 and 10 cm, parallel bedding at 90° to c.a			487223	22.30	23.30	1.00	
23.30	29.50	Pegmatite	Coarse grained pink to salmon colour, 5% mafics as biotite aggregates, minor chlorite / epidote alteration, pegmatite is weakly brecciated and healed by very fine grained siliceous veinlets, minor rafts of gneissic metasediment 23.30 – 24.00 massive, pink, potassium feldspar dominant, trace pyrite			487224 487225	23.30 24.00	24.00 24.95	0.70 0.95	

Meters From	Meters To	Rock type	Description (Colour, grain size, texture, minerals, alteration, etc.)	Planar Feature Angle	Ref Sample No.	Geochem Sample No.	Sample Interval (m) From	Sample Interval (m) To	Length (m)	Assays
			24.00 – 24.95 as above, biotite clots to 2 cm, chlorite / epidote alteration, trace pyrite							
23.30	29.50 cont'd	Pegmatite	24.95 – 25.60 Lit par lit texture, pink potassium rich pegmatite, mix of narrow (cm) scale pegmatite sills within a biotite rich gneissic host, biotite grains to 2 – 3 mm, banding 80° c.a. 25.60 – 27.00 Potassium feldspar, pink / salmon colour, 8% mafics (biotite / chlorite), minor epidote alteration, biotite as aggregates 27.00 – 28.00 as above, slight fining of grain size, increase in plagioclase, grading to granite 28.00 – 29.50 pegmatite, pink with 25% biotite gneiss, sill			487226 487227 487228 487229	24.95 25.60 27.00 28.00	25.60 27.00 28.00 29.50	0.65 1.40 1.00 1.50	
29.50	76.00	Metasediment	Biotite gneiss / schist, feldspar / quartz / biotite (chlorite, epidote) medium grained, very well foliated, white speckled grey to black, consistent banding / bedding at 80° to core axis, sequence cut by numerous granite to pegmatite sills, with occasional, lesser dykes, sills on cm scale to 1.0 m in width 29.50 – 30.50 lit par lit texture, minor pegmatite 30.50 – 31.68 gneiss, 3% pegmatite sills to 5 mm in width 31.68 – 32.10 granite sill, pink, massive, 80° to core axis 32.10 – 33.05 pegmatite: gneiss mix, 85%: 15% 33.05 – 34.50 gneiss, 10% pegmatite sills to 1 to 2 cm 34.50 – 36.70 granite, pink, massive, sill 36.70 – 38.85 gneiss, medium grained, minor pegmatite 38.95 – 39.60 pegmatite, white mottled pink plagioclase> potassium, 5% biotite, sharp upper conformable contact, diffuse, gradational lower contact 39.60 – 41.20 gneiss 41.20 – 41.40 pegmatite sill 41.40 – 41.80 gneiss 41,80 – 42.75 pegmatite sill grading to granite at base 42.75 – 44.05 gneiss, fine grained, 15% narrow pegmatite sills 44.05 – 45.90 granite, pink, pink, fine to medium grained, fines to base, lower contact is very gradational 45.90 – 46.95 gneiss, 35% granite / granodiorite / pegmatite sills to 15 cm 46.95 – 47.85 pegmatite sill, pink, non magnetic, 6 – 7% biotite as grains / aggregates 47.85 – 50.53 gneiss, silicified / granitized, banding / bedding 80° to core axis, 10 to 15% granite / pegmatite sills to 3 to 5 mm, occasional to 25 cm 50.53 – 51.13 pegmatite sill, pink, potassium dominant, 5% fine biotite 51.13 – 52.55 gneiss 25% pegmatite / granite as narrow sills 52.55 – 53.10 pegmatite sill, pink, 4 – 5% biotite 53.10 – 54.00 gneiss			487230 487231 487232 487233 487234 487235 487236 487237	29.50 34.00 34.50 35.50 36.70 46.95 50.53 52.55	30.50 34.50 35.50 36.70 37.30 47.85 51.13 53.10	1.00 0.50 1.00 1.20 0.60 0.90 0.60 .055	

			54.00 – 54.30 granite sill, pink fine grained massive 54.30 – 55.20 gneiss 55.20 – 56.05 pegmatite / metasediment mix, plagioclase pegmatite with strongly altered

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
0.00	0.87	casing								
0.87	2.05	Granite		white, more like a gronodiorite to tonalite, fine to medium-grained, massive/weakly foliated, very fine-grained specks of biotite thorughout						
2.05	3.20	Metasediment		fine-grained greywacke, grey, bedding and foliation at 70 degrees to core axis						
3.20	8.09	Granite		pale pink to white, massive, fine to medium-grained, unaltered, basal contact is conformable						
8.09	27.82	Metasediment		greywacke, fine-grained, layering at 65 degrees to core axis, trace pyrite sporadically throughout, minor quartz veining, contains numerous granite sills 1cm to 1m in thickness. 10.95-11.22 odd greenish coloured quartz vein 18.70-19.40 bedding parallel blebs of pyrite/pyrrhotite 1% of core 19.70-20.67 granite 21.38-24.85 more granite dominated section with subordinate metagreywacke 26.45-26.85 odd green quartz vein, trace pyrite						
27.82	35.33	Granite		white, granodioritic to tonalitic as 0.87 to 2.05, 1-5% biotite, medium-grained, minor biotite-rich metasedimentary xenoliths, contacts conformable with metasediments on either side 33-33.20 quartz vein						
35.33	111.35	Metasediment		Mixture of fine-grained greywacke and coarser migmatitic material with irregular to foliation parallel tonalitic zones, bedding and foliation are at 65 degrees to core axis, trace pyrite in places. From 48 to 78.18 metres contains less granitic material and rock becomes more coarse-grained, better foliated biotitic gneiss. From 78.18-111.35 unit is finer grained greywacke with minor pegmatite dikes/sills, minor bedding parallel pyritic zones. 70.55-71 pegmatite, 2% biotite, very quartz-rich 75.80-78.18 mix of granite and granite pegmatite, white colour, sparse mafic material 97.85-98 granite sill 98.73-99.20 granite sill 101.82-102.30 granite sill 110.65-111.35 granite pegmatite sill, quite coarse-grained						
111.35	129.18	Metasediment		Gneissic, coarse-grained, grey-green colour, fabric is at 60 to 80 degrees to core axis. 122.27-122.62 granite pegmatite, foliation parallel contacts						
129.18	130.05	Granite		leucocratic, coarse-grained, light pink colour, 1-2% biotite, some slightly magnetic sections.						
130.05	134.35	Metasediment		Greywacke, fine-grained, biotitic, minor green coloured sections otherwise grey, minor thin pegmatite intrusions, foliation varies from 10-25 degrees to core axis						
134.35	136.00	Granite		Pink, medium-grained, 10-15% fine-grained biotite, bottom contact with underlying unit not sharp						
136.00	139.98	Mafic metavolcanic		Medium-grained, dark green, gabbroic texture, foliated at 45 degrees to core axis, minor folding						
139.98	141.82	Granite		As from 134.35-136, top contact is 90 degrees to core axis, bottom 45 degrees to core axis, pegmatitic near middle of unit

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
141.82	151.77	Metasediment		Greywacke, grey, fine-grained, foliation 60-70 degrees to core axis, coarsens a bit downhole, several pink fine to coarse-grained granite and also granite pegmatite sills. Minor greenish coloured finer grained sections.						
151.77	152.97	Granite		Fine to medium-grained, pink to white, massive, contains a few dark green mafic volcanic xenoliths						
152.97	154.80	Mafic metavolcanic		Green, medium-grained, gabbroic, weak foliation						
154.80	155.43	Granite		White, leucocratic, coarse-grained, top contact 10 degrees to core axis, bottom 45 degrees to core axis						
155.43	159.95	Metasediment		Grey, foliation and bedding at 55-60 degrees to core axis, some distinct thinnly bedded sections						
159.95	162.82	Granite to Granite pegmatite		Pink to white colour, about 5 % biotite, distinct contacts between granite and granite pegmatite phases						
162.82	165.45	Metasediment		Grey, fine to medium-grained, trace pyrite and pyrrhotite (164.85-165 has prominent sulfides), foliation at 70 degrees to core axis, minor granite intrusions, several thin folaition parallel quartz-feldspar segregations some of which are ptygmatically folded						
165.45	166.75	Granite		White, coarse-grained, up to 15% biotite, amphibole-rich inclusions of metasediment throughout, lower contact is gradational						
166.75	180.35	Metavolcanic? Gabbro?		medium-grained, consists of green porphyroblasts (?) up to 1cm about 40% of core, set in felsic matrix, moderately foliated at 45 degrees to core axis, crystalline, non-magnetic, mafic components are chloritize biotite and amphibole, several pegmatitic intrusions with most prominent one at 170.46-171.45 177-179 lost core						
180.35	183.43	Granite		pink, medium-grained, 10% very fine-grained specks of biotite						
183.43	186.97	Metasediment		very fine-grained greywacke to 185.07 then more coarse-grained with gneissic texture, non-magnetic, some sections with trace pyrite-pyrrhotite, foliation at 50 degrees to core axis						
186.97	188.60	Granite		as above from 180.35-183.43						
188.60	189.20	Metasediment		grey, weakly foliation to massive						
189.20	194.00	Granite		medium to coarse-grained, pink to white, massive, minor metasedimentary inclusions, maybe 5% biotite, last 2 m are quite mafic rich						
194.00				end of hole

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
0.00	2.05	Casing								
2.05	18.98	Metasediments		Grey, homogeneous, foliation and bedding 60 to 70 degrees to core axis. Cut by thin granite pegmatite dikes/sills. No significant radioactivity. Minor sections of greener colour metasediment (11.35-12.12). Medium to thick bedded.						
18.98	20.72	Granite Pegmatite		Pink, varies from coarse-grained granite to pegmatite (1-2cm crystals). Slightly elevated radioactivity particularly near the lower contact with metasediments. 0-2% biotite. Finer-grained towards base.						
20.72	68.21	Metasediments		Grey, homogeneous, pretty well as above but more thinnly bedded, foliation and bedding are generally at 70-75 degrees to core axis. Trace pyrite in isolated sections. Pink K-spar? With epidote alteration at 25.26-25.43. Contains thin, 1-15cm granite pegmatite and granite sills/dikes throughout forming about 2% of core						
68.21	69.20	Granite to Granite Pegmatite		0.5 to 1% biotite, lesser muscovite, up to 170cps in places. Contains 1cm magnetite crystals near top contact. Whole interval has weakly altered appearance.			475994	68.00	69.00	1.00
69.20	70.00	Metasediments		As above section from 20.72-68.21			475995	69.00	70.00	1.00
70.00	70.47	Granite to Granite Pegmatite		as above section from 68.21-69.20			475996	70.00	71.00	1.00
70.47	70.70	Metasediments		as above						
70.70	71.00	Granite		as above but not pegmatitic						
71.00	74.02	Metasediments		as above, Foliation 70 degrees to core axis, 73.40-74.02 coarser-grained more gneissic textured						
74.02	78.58	Granite Pegmatite with metasediments		pink to white granite pegmatite, pretty homogeneous, non-magnetitic, contains several sections of grey, metasediment as above. Metasedimentary intervals occur at: 74.10-74.18, 74.23-74.46, 74.72-74.84, 75.60-76.35, 76.93-78.17. Contacts between granite and metasediment are conformable to foliation which is 65 to 70 degrees to core axis						
78.58	84.20	Metasediments		Grey, foliation and bedding at 70 degrees to core axis, intruded by several 1-20cm granite sills, minor quartz-feldspar segregations						
84.20	85.75	Granite		homogenous, pink, medium-grained, contacts at 70 degrees to core axis, minor pyrite near lower contact, 1-2%biotite						
85.75	87.47	Metasediments		as from 78.58-84.20						
87.47	88.32	Granite		As from 84.20-85.75 but more white colour, looks more like a tonalite						
88.32	88.94	Metasediments		As above						
88.94	89.25	Granite		As above						
89.25	89.78	Metasediments		As above but with thin bedding at 70 degrees to core axis						
89.78	89.95	Granite		odd greenish colour, higher proportion of biotite, up to 220cps			475997	89.50	90.00	0.50
89.95	92.15	Metasediments		As above, cut by minor quart-rich pegmatite veins, pyritic quartz vein at 91.28-91.38						
92.15	92.62	Granite		Contains several amphibolized metasedimentary xenoliths						
92.62	96.92	Metasediments		Fine-grained, quite massive, thickly bedded, bedding and foliation are at 65 to 70 degrees to core axis, minor pyritic veins, a few						
96.92	100.10	Granite		Minor pegmatitic patches, typically fine to medium-grained, several amphibolized fine-grained grey metasedimentary xenoliths, minor thin chloritic veins, pale green pyrite-rich alteration at base.

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
100.10	119.90	Metasediments		Grey, fairly homogeneous, fine-grained. 104.30-104.93 granite 100.10-113.40 fine-grained, foliation 45-60 degrees to core axis, minor stringers and veins of pyrite and pyrrhotite throughout forming 0.5 to 2% of core, thin dark chloritic veins sporadically throughout, siliceous in places. 113.30-119.90 coarser-grained, greener coluration, foliation 60-70 degrees to core axis.						
119.90	120.40	Granite Pegmatite		Mafic-rich, 40-50% biotite, with lesser muscovite and magnetite, remainder is quartz and amphibolized metasedimentary inclusions, minor brownish smoky quartz						
120.40	138.00	Metasediments with minor granite		about 60:40 mix of grey, medium-grained, metasediment, bedding/foliation avg 65 degrees to core axis and white coloured, fresh, medium-grained biotite granite, granite contacts are typically foliation parallel.						
138.00	143.25	Metasediments		Fine-grained, some distinct thinnly bedded section, rest is medium to thickly bedded, prominent foliation parallel stringers/veins of pyrite up to 1cm in thickness. Bedding and foliation are at 50 degrees to core axis. Purple-green granite pegmatite sills at 140.08-140.37 and 140.62-140.71			475998	140.00	141.00	1.00
143.25	150.13	Metasediments		More coarsely-grained, greener more mafic composition in places, more gneissic textures than the normal greywacke-type metasediments above, between 149.40-150.12 looks almost gabbroc and could be mafic metavolcanic, bedding and foliation are at 50 degrees to core axis.						
150.13	152.05	Granite Pegmatite		Very coarse-grained, purple quartz, pale red K-spar alteration, 1-2% biotite, trace magnetite. Very coarsely crystalline biotite at 152.60 500cps. Gabbroic inclusion at 150.88-151.10 irregular contacts			475999	150.00	151.00	1.00
152.05	175.00	Metasediments		Grey, homogeneous, medium-grained, minor granite pegmatite intrusions, general trend to finer grain-size downhole, bedding and foliation are on average 65-70 degrees to core axis 174.40-174.60 trace pyrite stringers			476000	151.00	152.00	1.00
175.00	182.55	Mafic Tuff?		Dark green, about 50% medium-grained round mafic clasts? In a plagioclase-rich matrix, overal quite homogeneous						
182.55	183.35	Granite to Granite Pegmatite		Pink to white coloured, massive, trace biotite,						
183.35	185.43	Metasediments		Medium-grained, minor folds in places, isolated quartz-rich pegmatite veins						
185.43	189.65	Granite		Pale pink colour, minor biotite (maybe 5%), partially assimilated mafic xenoliths						
189.65	197.00	mafic volcanic		Strongly foliated, medium-grained, consists of 50/50 mxture of mafic porphyroblasts and white plagioclase rich matrix, several thin quartz feldspar segregation throughout						
197.00				end of hole

Meters From	Meters To	Rock type	Description (Colour, grain size, texture, minerals, alteration, etc.)	Planar Feature Angle	Ref Sample No.	Geochem Sample No.	Sample Interval (m) From	Sample Interval (m) To	Length (m)	Assays
0	2.75	Overburden								
2.10	4.30	Metasediment	Quartz biotite schist, semi pelite, dark grey to black very fine grained and thin bedded, no strong compositional layering, blocky core numerous breaks parallel to bedding at 90 tca 3.20 – 3.25 granite sill, pink, coarse grained, low biotite, <3.0%.	So 90 at 2.50						
4.30	6.75	Pegmatite / Granite	Pink, massive pegmatite to coarse grained granite, fining to base, locally weakly hematized,, numerous random breaks at 80 to 90 tca, weak limonite along breaks, potassic, low biotite <4.0 % to 10 mm in length 6.48 – 6.75 granite fine grained, probable chill margin							
6.75	13.08	Metasediment	Biotite quartz schist, very fine grained, grey to dark grey, fining upward sequence. Good compositional layering on mm to cm scale, weak localized chlorite alteration 7.60 – 8.20 broken core, fractures 45 and 90 tca Sequence has appearance of siltstone to very fine grained psammite, dark grey p green to pale green. Sequence may have a intermediate to felsic exhalite / tuffite component, some minor sections are extremely fine grained and siliceous, low biotite, high quartz, minor very fine grained pyrite 8.45 – 8.46 approx 1.0% pyrite wisps	So 85 at 10.90 So 70 at 12.0 So 65 at 13.0						
13.08	19.90	Pegmatite / Granite	Pegmatite to medium grained granite, pink to red / pink, patchy hematite alteration, mottled white, black, massive, low biotite overall <5.0 % locally (10.0 cm) to 8 – 10% as 1.0 cm grains. Minor smoky grey quartz segregations, most apparent 13.30 – 14.20, contains 1 – 3.0% vein cubic pyrite. 15.50 – 16.50 random breaks, blocky core, weak limonite on breaks, high angles to core axis 18.60 – 18.80 broken core, limonite Lower contact very irregular 20 to 90 tca, 4.0 mm biotite selvage below contact							
19.90	22.10	Gabbro / Diorite	Medium grained, dark green to black, weak foliation, biotite, altered plagioclase (green) , weak chlorite alteration, possible leucoxene, variable lineation 0 to 70 tca							
22.10	33.08	Pegmatite / Granite	Pink, mottled black, quartz, potassium feldspar, plagioclase, biotite 8.0 – 12.0 % as laths, veinlets and aggregates, weak patchy hematite alteration Two phases present – Pegmatite, pink, grey black, coarse biotite and fine to very fine grained

Footage		Rock Type	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)						From (m)	To (m)	
0.00	1.60	Overburden	Overburden						
1.60	13.00	Gneissic Metasediments	Mostly sediments with short patches of granitic material. (Granitic material from: 2.33-3.38m, 7.00-8.22m). Dark-grey to light grey with faint banding from metasediments. Biotite and chlorite is prominent in these bands.						
13.00	16.10	Granite	Granite is coarse-grained with areas that are almost pegmatite. Granite was 250-350CPS consistently and was sampled. Pink in colour. Not magnetic. About 3-5% biotite with some areas hosting larger amounts.		U_3O_8	192827	13.00	14.00	1.00
					U3O8	192828	14.00	15.00	1.00
					U3O8	192829	15.00	16.00	1.00
16.10	18.16	Gneissic Metasediments	Distinct banding between white quartz-rich layers and dark biotite-rich layers. Local areas of pyrrhotite (magnetite, brassy coloured) with chalcopyrite mixed in with it.		Au+ICP30	192765	16.43	16.78	0.35
18.16	20.40	Granite	Medium-grained, grey to light pink in colour, 5-10% biotite						
20.40	33.50	Gneissic Metasediments	Banded metasediments with areas of granite (20.86-22.70, 25.95-26.50, 28.62-29.56). Areas of very high biotite, coarse and fine-grained. One area of Au-Cu interest sampled. Black, banded, non-magnetic, green clusters (chlorite?), 2.0cm long on average, with chalcopyrite present around the green clusters.		U3O8 + ICP30	192830	21.00	22.00	1.00
					Au + ICP30, Cu	192766	31.55	32.00	0.45
33.50	35.55	Granite	Light pink in colour, medium-grained, ~200-250cps, fine-grained biotite throughout		U3O8	192832	33.50	34.50	1.00
					U3O8	192833	34.50	35.50	1.00
35.55	55.71	Gneissic Metasediments	Banded sediments, very dark in colour with a lot of green chlorite in smaller chinks and larger chunks as well. (~5mm and 2cm, respectively)		Au+ICP30	192767	46.37	46.64	0.27
					Au+ICP30	192768	51.73	52.16	0.43
					Au+ICP30	192769	56.50	57.00	0.50
					Au+ICP30	192770	55.21	55.71	0.50
55.71	110.34	Granite	Light pink in colour with 10% hornblende, pegmatitic in areas with pink feldspar, white feldspar, white quartz			192835	61.00	62.00	1.00
						192836	62.00	63.00	1.00

Meters From	Meters To	Rock type	Description (Colour, grain size, texture, minerals, alteration, etc.)	Planar Feature Angle	Ref Sample No.	Geochem Sample No.	Sample Interval (m) From	Sample Interval (m) To	Length (m)	Assays		
0	1.57	Overburden										
1.57	5.88	Granite	Medium grained to locally pegmatitic, pink to cream / white, massive, core broken, fractured, evidence of blocky core – re-drilling, weak limonite stains on some joint planes / breaks generally at low angles to core axis, very minor metasedimentary rafts 1.57 – 2.13 medium grained, massive, broken, trace biotite 2.13 – 4.96 coarse grained to pegmatitic, white, biotite <1.0% 4.96 – 5.88 fine grained, massive very fine grained biotite 5%, lower contact 80 tca									
5.88	11.40	Metasediment	Metasediment <5% granite sills (low potassic) Biotite quartz schist – meta / semi pelite, very fine to fine grained, grey / black, bedding on cm scale, minor psammitic beds <5.0 cm, biotite – minimal alteration. Granite sills < 5.0 % to 5.0 cm, commonly display narrow (mm) biotite rich selvages. Sections of metasediment (8.0 – 10.0 cm) are strongly silicified “granitized” strong network of micro sills Much of core is blocky, 7.20 – 8.22 broken core, minor open folding Section contains a finely disseminated and very fine grained grey metallic - possibly specular hematite	So 45 at 6.80 So 60 at 10.80								
11.40	13.34	Granite	White mottled grey black,, fine grained, massive, possible granodiorite, low potassium, low biotite, narrow (to 10.0 cm) coarser grained sections 13.08 – 13.15 metasediment raft, coarser biotite selvages Upper contact 45 – 75 tca, lower contact 45 tca									
13.34	14.06	Metasediment	As 5.08 – 11.40, slight increase in biotite, minor localized chlorite / epidote alteration 13.55 – 13.61 pegmatite at 75 tca	So 80 at 13.55								
14.06	14.47	Pegmatite	Granite, white to pale pink, <3.0 % biotite, 2.0 – 4.0 biotite rich selvages at contact 70 tca									
14.47	16.32	Metasediment	Biotite quartz schist, grey / green very fine grained, silicified, minor quartz and granite segregations – deformed, weak boudinaged, possible trace disseminated specular hematite

From	To						From	To				
27.42	29.45	Granite / Pegmatite	Pink, mottled grey, <2.0 % biotite, massive			193618 193619 193620	27.46 28.00 29.00	28.00 29.00 29.45	0.55 1.00 0.45			
29.45	37.66	Metasediment	Biotite quartz schist, compositional bedding, defined by biotite content, on mm to cm scale, minor granite segregations, again on cm scale, granite sills, deformed and broken, weak boudins. Granite sills have very narrow biotite rich selvages. Biotite schist and some granite sills have weak epidote / chlorite alteration, possible fine metamorphic knots	So 50 – 60 at 35.00		193621	29.45	30.00	0.55			
37.66	38.71	Granite	Granite, pink potassic, coarse grained grading to fine grained to base of section, slight drop in potassium feldspar to base with an increase in biotite to 5 – 8.0%, upper contact broken, lower contact 70 tca									
38.71	65.27	Metasediment	Biotite quartz schist, meta / semipelite, lesser medium grained granite sills < 0.40 m, narrower granite sills broken and deformed, boudinaged and weakly to moderately epidotized Prominent granite sills 40.16 – 40.86, 42.10 – 42.22, 42.76 – 42.96, 43.65 – 43.88, 44.81 – 45.26, 50.55 – 50.91, sills parallel to bedding 50 – 60 tca Approximately 10 – 15% of section is very fine granite sills on sub mm to mm scale 51.0 – 53.95 biotite quartz schist, higher and slightly coarser grained biotite, sporadic disseminate pyrrhotite, section, including granite sills, is deformed and folded. Pyrrhotite blebs at 52.13 irregular 10 mm by 2 – 4 mm, also at 53.33, seem to be associated with contorted and weakly epidotized narrow granite sills 56.80 – 58.88 granite sill, pink, medium grained, <5% biotite, upper contact irregular 0 to 60 tca, lower contact 50 tca, narrow biotite selvages 59.64 – 59.77 granite sill, 50 tca, grey to white, narrow biotite selvages 61.35 – 61.40 numerous very narrow granite sills, silicified, epidotized, deformed and boudinaged 64.25 – 64.42 granite sill contact 50 – 55 tca, 5.0 mm wide biotite selvages									
65.27	69.72	Granite	Granite, pink to pale pink / white, low fine grained biotite <4.0% 65.27 – 66.14 fine grained, tan to white, massive 66.14 – 69.56 coarse grained, massive, biotite flakes 4%, to 1.0 cm 69.56 – 69.72 fine grained, 5.0 mm biotite selvage in adjacent metasediment, lower contact 57 tca									
69.72	77.38	Metasediment / Granite	Mix - biotite quartz schist with granite sills, mm to 18.0 cm. Metasediments have compositional banding defined by increase / decrease in biotite grain size and content, Metasediments fine to medium grained, black to grey. Granite sills white fine grained, low biotite but typically with a mm sized biotite rich selvage, sills often broken Significant granite sills 70.37 – 70.51 (upper contact 45 tca, lower contact broken), 71.94 – 72.21 (upper contact 50 tca, lower contact 45 tca, contains 6.0 cm coarse grained schist)

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
0.00	0.20	casing		no overburden recovered						
0.20	47.30	Granite		Medium-grained, redish- pink colour, foliated at 40 to 50 degrees to core axis. Minor coarse-grained patches sporatically throughout that are 15 cm or less in length. These patches are slightly hematitized and have potassic alteration, changing the plagioclase to a dark pink colour. Green epidote veins, 1-4 mm, at various angles to core axis, cutting the foliation (commonly 10-15 degrees to core axis, but are also seen at other angles). 34.10-34.60 - Fine-grained, grey, possible metasediment inclusion/xenolith, with thin epidote veins parallel to foliation with red potassic alteration.						
47.30	49.50	Mafic Volcanic		Grey-green colour, fine to medium-grained, foliated at 40 degrees to core axis. Small light grey to white 'tuff' sized crystalls or grains seen throughout unit. Top contact and bottom contacts are altered, schistose with chlorite and potassic alteration.						
49.50	50.20	Granite Pegmatite		Pink , coarse-grained, biotite at top of unit. Foliated 40-50 degrees to core axis.						
50.20	50.96	Mafic Volcanic		Same as above 47.30-49.50 m unit of Mafic Volcanic. Also has the same schistose contacts.						
50.96	51.52	Granite Pegmatite		Pink to white, coarse-grained, schistose rock at both contacts, foliated at 50 degrees to core axis.						
51.52	52.00	Mafic Volcanic		Same as above Mafic Volcanic units with schistose contacts.						
52.00	55.37	Granite pegmatite		Pink, coarse-grained, foliation 50 degrees to core axis, epidote and potassic alteration in veins and massive sections of about 5 cm. Som						
55.37	62.00	Mafic Volcanic		Green grey, medium-grained with 'tuff' sized grains, foliated 50 degrees to core axis. There are thin quartz veinlets. 59.20-59.45 - Pegmatite, pink, coarse-grained, chloritic alteration at contact and in seems of epidote/chlorite. 59.80-60.20 - Pegmatite, same as above subunit.						
62.00	64.31	Granite to Granite pegmatite		Pink, foliated granite at 50 degrees to core axis. Pegmatite is more massive. Calcite veins 1-5 mm wide. Contacts are parallel to foliation.						
64.31	77.08	Mafic Volcanic, (leuco-gabbro)		Layered, foliated at 50-60 degrees to core axis. Homegeneous, fine to medium-grained, green to white with grey. Folded quartz/feldspar veins. 66.40-66.80 - Red, altered, Pegmatite. 74.75-75.80 - Pink, medium-grained granite						
77.08	79.80	Granite pegmatite		Pink, coarse-grained, cloudy potassic alteration, minor biotite.

UTM: NAD83 **Zone:** 15U **Easting:** **Northing:**	**Azimuth:** 160º **Dip:** 55° **Total depth: 298.00**m	**Date:** **Logger:** RM	**Hole No.:** RL08-021	

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
79.80	130.19	Metasediment		Fine-grained, grey-green colour. Thinly bedded atmainly at 60 degrees to core axis.. Moderate to weak epidote alteration in patches. Minor folds where the foliation varies from 1-60 degrees to core axis. Less than 20cm granite pegmatite veins throughout, mafic poor. Purple altered quartz seen in areas. 81.90-82.17 - thin granite sill, medium-grained with pyrite, rounded blobs up to 2 cm wide. From 123.00 m onwards unit becomes strongly foliated, very gniessic. 93.40-94.21 - Pegmatite with purple altered quartz. 119.20-120.75 - Fine to medium grained granite sill, weakly altered. 126.37-127.00 - medium-grained granite, pink-white. 128.30-129.22 - pink pegmatite, fresh - non-altered.						
130.19	134.15	Granite Pegmatite		massive with purple quartz, graphitic textures and intergrowth textures, about 5 % biotite.						
134.15	254.76	Metasediment		Medium-grained, gniessic textured. Well foliated at 40 degrees to core axis, green to light grey, some beds are altered a pale green colour (epidote?). Thinly bedded, many white quartz beds, minor folds, green chloritic/amphibole veins and blobs throughout. Trace pyrite associated with these areas/blobs. After 180.00 to 210.00 m the metasediments are very altered. After 226.00 m there is moderate epidote alteration to the smaller granitic pegmatite and quartz veins. Unit becomes fine-grained near bottom. Quartz eyes are seen randomly (1 cm). 144.18-145.18 - fine-grained pink granite. 150.66-151.90 - fine-grained pink granite, 2 % biotite. 161.62-162.80 - Granite pegmatite, fresh with purple quartz, muscovite/biotite near base. 165.00-165.20 - granite pegmatite. 172.65-174.22 - coarse-grained granite, minor epidote alteration. 181.00-185.50 - weak pervasive epidote, sericite and potassic alteration, minor cross-faults with mm-scale displacements. 189.05-189.55 - pink pegmatite, weak sericite alteration. 191.00-191.56 - pink sericite, medium-grained.						
				193.40-193.62 - pink granite, medium-grained.						
				195.20-196.10 - granite with epidote alteration and sericite.						
				196.10-199.80 - metasediment, altered, medium to coarse-grained, epidote veins and potassic alteration, leucocratic.						
				199.80-200.66 - granite pegmatite, light green, chloritic breccia in middle of section, moderate potassic and sericite alteration and weak epidote alteration throughout.						
				200.96-201.30 - pegmatite with minor epidote alteration.						
				201.30-205.18 - metasediments with prominent epidote veins and moderate potassic alteration, many thin 1-10 cm pegmatite dikes, 50 degrees to core axis.						
				205.18-205.90 - granite pegmatite.						
				207.74-208.77 - granite pegmatite with inclusions of metasediments veins 2-15 cm

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
				211.21-212.30 - pegmatite grainte.						
				234.20-234.57 - granite, medium-grained.						
				237.54-235.02 - pegmatite with weak chlorite alteration.						
				252.33-252.95 - medium-grained granite.						
				254.00-254.25 - weak epidote alteration.						
254.76	263.40	Granite		Fine to medium-grained, pink to light pink. 255.60-257.12 - coarse-grained pegmatite. 259.85-260.50 - metasediment. 263.00-263.40 - altered, polished, hard.						
263.40	289.31	Metasediment		Green-grey to light grey, green rounded chloritic porphroblasts, foliated about 55 degrees to core axis., non-magnetic, trace pyrite disseminated, mainly fine-grained, porphyric. After 277.70 m unit becomes leucocratic, banded, medium-grained . After 282.00 becomes more fine-grained again and not as banded. Minor epidote/sericite alteration to all fractures.						
289.31	298.00	Granite to Granite Pegmatite		Medium- grained granite with coarse-grained pegmatite sections. Pink to pink-grey, 20 to 30 degrees to core axis. Mafics in granite, only a few percentage in the pegmatite sections.						
298.00				End of Hole.

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
0.00	0.15	casing								
0.15	5.00	Granite		pink, biotite granite, homogeneous, medium-grained, weakly foliated						
5.00	15.95	Metasediment?		Grey-grey coloured, thinnly laminated appearance, well foliated at 65-70 degrees to core axis, medium-grained, compositionally about half amphibole half plagioclase with minor biotite and chlorite, top section down to 7.5m contains powdery epidote-rich fractures with streaks of orange goethite/limonite, isolated thin quartz-rich pegmatite intrusions						
15.95	17.85	Granite		pink, about 20% biotite, medium-grained, epidote alteration near contacts, isolated thin red coloured patches/veins of potassic? alteration.						
17.85	19.58	Metasediment?		As above, amphibolitic, well foliated, chloritic and friable with epidote in 10cm in base contact						
19.58	20.50	Granite		moderate biotite, medium-grained, as above						
20.50	25.70	Metasediment?		As above						
25.70	26.80	Granite		As above						
26.80	28.40	Metasediment?		As above, minor rusty fractures						
28.40	33.02	Granite		As, above, medium-grained, moderately biotitic, pink, massive						
33.02	36.58	Metasediment?		As above, foliated at 65-70 degrees to core axis, minor epidote coated fractures, minor granitic patches						
36.58	38.13	Granite pegmatite		pink, moderate biotite as coarse-grained distinct "books", minor thin potassium? altered pink veins throughout, contacts are foliation parallel at top and bottom						
38.13	40.05	Metasediment?		As above						
40.05	40.60	Granite		Medium to coarse-grained, moderately biotitic, homogeneous, blocky near contact						
40.60	43.40	Metasediment?		As above, odd chlorite/epidote veining at 43.10 to bottom						
43.40	44.10	Granite pegmatite		minor biotite, weak fracturing, folkiation parallel bottom and top contacts						
44.10	54.66	Metasediment?		As above units, minor zones of pale green chlorite/epidote alteration, a few minor pegmatite intrusions, foliation still 60-70 degrees to core axis, becomes finer grained towards base.						
54.66	55.18	Granite Pegmatite		quite coarse-grained, minor biotite, unaltered						
55.18	76.04	Metasediment		Greywacke, fine-grained, grey, distinct from the more amphibolitic metasediment above, thinnly bedded to massive, minor <30cm pink pegmatitic intrusions (62.95-63.24, 64.30-64.55, 69.68-69.77), bedding/foliation at 70 degrees to core axis, minor folding near base. 71.34-71.50 granite						
76.04	78.68	Granite pegmatite		pink to purple, minor fracturing, coarsely crystalline biotite sporadically throughout but particularly over top 75cm, no strong radioactivity but spots are up to 300cps with RS125, top and bottom contacts are foliation parallel

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
78.68	80.80	Metasediment		Different from both the amphibolitic metasediment at top of hole and greywacke unit above. Strongly foliated, more crystalline, foliation/gneissosity at 60 degrees to core axis, layering conisists of, 1cm intebanded mafic and lighter grey bands						
80.80	82.45	Granite		pink to red coloured, minor fine-grained biotite, some epidote veining, contacts foliation parallel						
82.45	99.02	Metasediment		Grey, minor light green coloured sections, distinctly cm-scale layering (combination of bedding and foliation) at 50 degrees to core axis, thin granite pegmatite/granite sills at 87.30-87.68, 88.55-89.15, 89.92-90.04, 91.40-92.38						
99.02	104.15	Granite		pink to red, typically medium-grained but contains a few pegmatitic sections, also a few metasedimentary xenoliths, pegmatitic sections have purple quartz, minor fine-grained biotite, non-magnetic						
104.15	106.12	Metasediment		Greywacke, greenish grey colour, fine-grained, well bedded/foliated at 70 degrees to core axis, cm-scale						
106.12	107.85	Granite pegmatite		white to purple coloured, mainly quartz and pink to white potassium feldspar, minor fracturing and alteration						
107.85	167.00	Metasediment		Altered metagreywacke, unaltered rock is a grey homogeneous moderately foliated greywacke, altered sections have weak to moderate epidote-chlorite-carbonate alteration, minor reddish potassium feldspar or hematite? Foliation is 10-40 degrees to core axis near top distinct from metasediment above granite, then gradually shifts back to 60-65 degrees to core axis around 150. Granite pegmatite or granite intrusions sporadically throughout these occur at: 120.10-120.90, 123.10-123.45, 133.40-133.80 fine-grained granite, 134.22-134.32, 139.11-139.45, 139.85-140 granite, 154.50-154.80 red, altered, minor epidote veining, 155.08-156.30 altered red pegmatite Alteration zones are pervasive to semi pervasive with thin cross-fractures/faults at high angles to core axis as follows: 108.40-118 about 50% pervasive pale green epidote alteration with streaks of red hematite in places, non-pervaisively altered sections have thin foliation parallel epidote cross fractures 118-142 less strongly altered 10-15% foliation parallel epidote alteration bands, minor reddish potassic or hematitic alteration, otherwise unaltered greywacke, 130.75 thin fault plane at 60 degrees to core axis cuts across other cross fractures 142-167 moderate to strong, pervasive to vein-like epidote with reddish hematitic or potassic alteration, prominent hairline epidote veins foliation both parallel and cross-cutting, alteration weakens over last 10m. 145.10 black possibly graphitic vein, 149.80 10cm breccia with red average 1-2cm angular clasts

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
0.00	0.20	casing								
0.20	28.40	Metasediment		Metagreywacke, grey, fine-grained, not distinclty bedded, most sections appear weakly foliated, bedding and foliation appear to be at about 45 degrees to core axis, minor pink potassium feldspar, quartz, biotite granite pegmatite intrusions with weak epidote alteration these occur at 2.88-3.50, 6.67-6.89, 11.27-11.50, 15.30-15.65, 18.60-19.10, 20.12-20.65, 25.90-26.15. MOderately blocky to 4m.						
28.40	32.75	Granite pegmatite		top and base contacts foliation parallel, typically potassium feldspar and quartz with minor plagioclase and biotite, non-magnetic, mino dark purple quartz, some fractures with reddish or salmon coloured bleaching						
32.75	60.72	Metasediment		Metagreywacke, in general fine-grained, dark grey, possibly some meavolcanic horizons, trace pyrite blebs, foliation is at 50-55 degree to core axis, folds at 41-47m, 2cm pyrite-rich band granite of granite pegmatite intrsuions, typically sills, occur at: 33.36-33.52 medium-grained pink granite, 33.76-34.70 coars-grained pink granite, 35.70-36.28 pale pink granite to granite pegmatite, 37.48-37.65 granite pegmatite, 51.48-51.57 granite pegmatite, 54.76-54.90 granite pegmatite, 56.70-57.10 thin pegmatitic intrusions with epidote alteration, 58.02-58.62 pegmatite, reddish with green epidote/chlorite alteration up to 400cps, not sampled						
60.72	62.80	Granite pegmatite		red coloured, moderately fractured, purple quartz, cross-cuts foliation of host rocks, not radiaoctive						
62.80	97.00	Metasediment		as above but more distinctly layered, foliation 60-65 degrees to core axis, minor epidote, sericite alteration near top, after 70m becomes homogeeous well bedded on cm-sclae at 65 degrees to core axis Granite pegmatites, moderately altered at: 65.15-65.62, 67.77-68, 68.85-68.99, 69.90-70.08, 70.80-71.05, 90.30-90.40, 90.87-91, 91.37-91.75, 93.45-94.27 medium-grained granite with minor epidote						
97.00	100.50	Granite pegmatite		pink, fine to medium-grained, lots of pale green chlorite altered sections (vein to pervasive), some sections of very blocky core, also minor salmon coloured potassic alteraion, becomes pegmatitic towards base 98-100 pervasively altered metasediment which looks like fine-grained granite because of pink alteration						
100.50	118.65	Metasediment		as above, 10-15% pink to white pegmatitic granite sills, minor to moderate epidote-chlorite-potassium feldspar/sericite alteration, looks silicified from 116 to end						
118.65	136.10	Mixed granite and metasediment		Mixture of fine-grained aplitic granite and reddish coloured altered metasediment Typically pale reddish colour, cut by vein netwroks of epidote and chlorite, some veins with an argillaceous look, moderately blocky						
136.10	150.60	Metasediment		As above, grey, moderately foliated/bedded, minor zones of epidote, a few isolated granite pegmatite intrusion 144.80-146 pink medium-grained granite						
150.60				End of Hole

Footage		Rock Type	Graphic	Description (Colour, Grain Size, Texture, Minerals, Alteration, etc.)	Recovery	Ref. Sample No.	Geochem Sample No.	Sample Footage		Sample Length (m)
From (m)	To (m)							From (m)	To (m)	
3.57	4.32	Granite		**Granite** - m.g.-c.g, pink kspar, quartz, biotite, some white fspar as well						
4.32	9.83	Metasediments		**Metasediments** - dark grey in colour, f.g., bedded (80-90° t.c.a.). Graded bedding can be observed in some areas. Some areas are a mix of metasediments and pink granite (refer to 3.57-4.32m).						
9.83	11.80	Pegmatite		**Pegmatite** - salmon red kspar (hematite), smokey quartz, minor biotite. Some epidotization of fspar has taken place. Short sections of interbedded f.g.-m.g. red granite. Some v.c.g. magnetite between 11.72-11.80m						
11.80	12.31	Metasediments		**Metasediments** - same as 4.32-9.83m. Some coarser grained white fspar.						
12.31	13.90	Pegmatite		**Pegmatite** - same as 9.83-11.80m, w/ diss. f.g.-c.g. magnetite crystals						
13.90	24.17	Metasediments		**Metasediments** - same as 4.32-9.83m. Some granite veins/dykes cutting through it, some gneissic granite segments. White fspar content increases from beginning of the section to the end. Several dark bands are magnetic. Some sulphides.						
				14.45-14.54m, 23.22-24.17m : gneissic granite, short segments						
				15.88-16.7m : very minor v.f.g cubic py diss along bedding planes, presence of magnetite. At 15.88m, f.g. Po and Cpy along bedding plane (0.5-1mm wide).						
				16.71-17.51m : granite, m.g., pink and greenish cream, also minor white and reddish fspar, quartz, minor f.g. biotite, f.g.-v.c.g. magnetite crystals. Contact 65° t.c.a.						
				17.66-17.87m : granite, c.g., pinkish and cream fspar, slightly smokey quartz, m.g. biotite, f.g.-m.g. magnetite. Contact 45° t.c.a						
				17.87-22.87m : minor Py along bedding planes, f.g., cubic, from 0.1-2 mm wide						
				18.96-19.08m : v.c.g. smokey quartz (~80%), m.g. white and greenish fspar, m.g. biotite.						
24.17	26.26	Pegmatite		**Pegmatite** - same as 9.83-11.80m, w/ very minor f.g.-m.g. diss. Magnetite			192796	25.00	26.00	1.00
26.26	26.99	Gn. Granite		**Gneissic Granite** - f.g.-m.g., pink fspar, smokey quartz, very rich in biotite, banding ~70° t.c.a						
26.99	32.43	Pegmatite		**Pegmatite** - Red fspar (hematite), very smokey quartz in most areas, some short segments of gneissic pegmatite (65-70° t.c.a.), some diss. m.g. magnetite.			192797	29.00	29.98	0.98
32.43	34.14	Gn. Granite		**Gneissic Granite** - f.g.-m.g., pink fspar, smokey quartz, very rich in biotite			192798	29.98	30.95	0.97
34.14	39.09	Pegmatite		**Pegmatite** - same as 26.99-32.43m			192799	30.95	32.00	1.05
39.09	42.55	Gn. Granite		**Gneissic Granite** - f.g., pink fspar, smokey quartz, very rich in biotite			192800	35.00	36.00	1.00
42.55	45.59	Pegmatite		**Pegmatite** - same as 26.99-32.43m, but w/ only minor m.g. magnetite.			192801	36.00	37.02	1.02
45.59	45.84	Metasediments		**Metasediments** - same as 4.32-9.83m.						
45.84	47.06	Pegmatite		**Pegmatite** - same as 26.99-32.43m, but w/out magnetite						
47.06	47.88	Metasediments		**Metasediments** - dark grey in colour, f.g., bedded (70-75° t.c.a.). Graded bedding can be observed in some areas.						
47.88	50.72	Pegmatite		**Pegmatite** - Red fspar (hematite), very smokey quartz in most areas, some short segments of gneissic pegmatite (65-70° t.c.a.), minor m.g. r						
50.72	51.06	Metasediments		**Metasediments** - dark grey in colour, f.g., bedded (70-75° t.c.a.). Graded bedding can be observed in some areas.

From (m)	To (m)						From (m)	To (m)	
4.59	4.72	Granite		**Granite** - f.g., white fspar, quartz and biotite.					
4.72	10.80	Metasediments		**Metasediments** - Very dark grey in colour, banded 85-90°, f.g., very rich in mica, presence of dissiminated f.g. cubic pyrite.	Gold and Base Metals	192751	9.60	10.13	0.53
				4.72-8.36m : very minor f.g. diss. py along bedding planes	Gold and Base Metals	192752	11.41	11.91	0.50
				5.75-6.10m : pegmatite dyke. Salmon red kspar, smokey quartz, c.g. magnetite, small amount of pinkish fspar.	Gold and Base Metals	192753	11.91	12.40	0.49
				7.1-7.6m : pegmatite dyke. Finer grained than above w/ more epidote alteration.	Gold and Base Metals	192754	12.40	12.90	0.50
				7.6-8.37m : v.c.g pink granite mixed with metasediments, very large magnetite crystals.	Gold and Base Metals	192755	12.90	13.41	0.51
				9.6-9.9m, 10.55-11.45m, 14.35-15.42m : minor (<1%) f.g. Py along bedding planes mostly but also diss. randomly and interstitia	Gold and Base Metals	192756	13.41	13.83	0.42
				9.9-9.98m : massive Py and Po (>70%), magnetic					
				10.15-10.35m, 10.8-12.05m : Granite, m.g., pink and white fspar, smokey quartz, biotite.					
				11.45-12.5m : Po + Py, f.g., interstitial and along bedding planes. Semi-massive to massive (~20%)					
				12.5-14.35m : Po + Py along bedding planes, some peds of Py, 2-3%					
				12.98-13.03m : garnet crystals, 2-4mm wide.					
14.20	15.33	Gneissic Metasediments		**Gneissic Metasediments (Gn.Metaseds) -** banded, 75-80° t.c.a., biotite, white fspar and clear quartz. Diss. f.g. cubic Py	Uranium	192776	15.43	16.47	1.04
15.50	16.53	Pegmatite		**Pegmatite** - Salmon red kspar (hematite), pinkish white irridescent fspar, smokey quartz, very large up to 3cm magnetite crystals.					
16.53	18.54	Gn.Metaseds		**Gneissic Metasediments** - banded, 85-90° t.c.a., rich in smokey quartz, with biotite and white fspar.					
18.54	20.23	Pegmatite		**Pegmatite** - Salmon red kspar (hematite), smokey quartz, some biotite, non magnetic. Fspar crystals are very altered (epidotization and orangish-brown Fe alteration). The iron alteration is soft and could be a carbonate or an oxide.					
20.23	21.00	Metasediments		**Metasediments** - refer to description above (4.72-10.80m). Gradual contact with Granite between 20.80-21.00m					
21.00	21.27	Granite		**Granite - m.g.-c.g., salmon red kspar (hematite), smokey quartz, biotite, non magnetic.**					
21.27	25.17	Pegmatite		**Pegmatite - some very dark red fspar crystals (hematite), pink fspar, smokey quartz, biotite**					
25.17	25.25	Granite		**Granite** - refer to 21-21.27m					
25.25	27.47	Gn.Metaseds		**Gneissic metasediments** - refer to 16.53-18.54m. This rock type is also observed in short segments at 25.75-25.81m and 27.25-27.32m.					
27.47	28.53	Pegmatite		**Pegmatite** - refer to 21.27-25.17m for description					
28.53	28.72	Gn.Metaseds		**Gneissic metasediments** - refer to 16.53-18.54m.					
28.72	29.02	Pegmatite		**Pegmatite** - refer to 21.27-25.17m for description					
29.02	30.69	Gn.Metaseds		**Gneissic metasediments** - refer to 16.53-18.54m.					
30.69	31.00	Pegmatite		**Pegmatite** - refer to 21.27-25.17m for description					
31.00	32.77	Gn.Metaseds		**Gneissic metasediments** - refer to 16.53-18.54m.					
32.77	33.07	Pegmatite		**Pegmatite** - refer to 21.27-25.17m for description

From (m)	To (m)							From (m)	To (m)	
87.42	87.61	Pegmatite		**Pegmatite Dyke** - Mostly white fspar, some salmon pink crystals and hematite red staining, minor biotite. V.c.g. magnetite grain (3.5 x 2)cm. It is possible to observe the cracks created by the growth of the crystal in the rock. Several magnetite crystals in this short segment (f.g.-v.c.g.). Some minor f.g. Py also visible						
87.61	87.73	Metasediments		**Metasediments** - m.g., very dark grey, banded 55-60° t.c.a., rich in biotite and white fspar						
87.73	89.86	Pegmatite		**Pegmatite** - salmon pink kspar, some hematite red staining and crystals, smokey quartz, biotite, f.g. to c.g. magnetite						
				Graphic texture : 88.02-88.20m						
89.86	94.56	Gn. Metaseds		**Gneissic Metasediments** - m.g.-c.g., rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
94.56	115.94	Pegmatite		**Pegmatite** - salmon pink kspar, some hematite red staining and crystals, white fspar, smokey quartz, biotite, f.g.-c.g. magnetite diss. all throughout the pegmatite. Some short segments of f.g.-m.g. granite and gneissic granite in the pegmatite			192825	94.91	95.86	0.95
115.94	117.29	Gn. Metaseds		**Gneissic Metasediments** - f.g.-m.g., rich in biotite, quartz and white fspar. Banded 65-70° t.c.a			192826	112.05	113.00	0.95
117.29	124.25	Pegmatite		**Pegmatite** - medium salmon pink kspar, some red staining, white fspar, slightly smokey quartz, minor or no biotite in areas, no magnetite. Several fspar crystals are greenish cream btw 119.86-120.63m						
124.25	124.63	Gn. Metaseds		**Gneissic Metasediments** - f.g.-m.g., rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
124.63	125.63	Pegmatite		**Pegmatite** - medium salmon pink kspar, some red staining, white fspar, slightly smokey quartz, minor or no biotite in areas, no magnetite.						
125.63	125.86	Gn. Metaseds		**Gneissic Metasediments** - f.g.-m.g., rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
125.86	126.30	Pegmatite		**Pegmatite** - medium salmon pink kspar, some red staining, white fspar, slightly smokey quartz, biotite, no magnetite.						
126.30	127.86	Gn. Metaseds		**Gneissic Metasediments** - m.g-c.g., rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
127.86	128.15	Pegmatite		**Pegmatite** - medium salmon pink kspar, some red staining, white fspar, slightly smokey quartz, biotite, no magnetite.						
128.15	130.52	Gn. Metaseds		**Gneissic Metasediments** - m.g, rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
130.52	131.16	Gn. Granite		**Gneissic Granite** - m.g., salmon pink, white and some hematite red fspar, slightly smokey quartz, lots of biotite.						
131.16	131.96	Gn. Metaseds		**Gneissic Metasediments** - m.g, rich in biotite, quartz and white fspar. Banded 65-70° t.c.a						
131.96	133.02	Pegmatite		**Pegmatite** - white fspar, salmon pink kspar, some red hematite staining, biotite, slightly smokey quartz.						
133.02	133.85	Metasediments		**Metasediments** - f.g., very dark grey, banded 55-60° t.c.a., rich in biotite and white fspar, 2 short segments of pinkish white pegmatite, weakly magnetic						
133.85	135.20	Pegmatite		**Pegmatite** - same as 131.96-133.02m, but richer in biotite. Some very short segments of metasediments interbedded w/ the pegmatite						
135.20	136.20	Gn. Granite		**Gneissic Granite** - m.g.-c.g., mainly white fspar, red staining, some salmon pink kspar as well, smokey qzt, bedded (65-70 t.c.a.)						
136.20	136.75	Metasediments		**Metasediments** - f.g., very dark grey, banded 55-60° t.c.a., rich in biotite and white fspar, weakly magnetic						
136.75	139.90	Gn. Granite		**Gneissic Granite** - same as 135.20-136.20m, some very short segments of f.g. metasediments interbedded with the gn. granite.						
139.90	140.31	Metasediments		**Metasediments** - f.g., very dark grey, banded 80-90° t.c.a., rich in biotite and white fspar, weakly magnetic

APPENDIX E

DIAMOND DRILL HOLE ASSAY DATA

These data are primarily DNC assays for uranium, converted to ppm of U3O8.

Where only ICP analyses are available, they have been adjusted by a factor of 1.20 based on comparative data.

Hole No.	ICP Rept.	DNC Rept.	Tag No.	From	To	Length	U3O8 ppm

Quality Analysis ... *Innovative Technologies*

Date Submitted: 22-May-08
Invoice No.: A08-2553
Invoice Date: 23-Jul-08
Your Reference:

Delta Uranium
56 Temperance st
10th Floor
Toronto Ontario M5H3V5
Canada

ATTN: Rick Bonner

CERTIFICATE OF ANALYSIS

301 Rock samples were submitted for analysis.

The following analytical packages were requested:
Code 1A2 Au - Fire Assay AA
Code 1D Enh INAA(INAAGEO)
Code 5D-U-Total DNC

REPORT **A08-2553**

Notes:
For values exceeding the upper limits we recommend assays.
If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

ATTN: Rick Bonner

CERTIFICATE OF ANALYSIS

60 Pulp samples were submitted for analysis.

The following analytical packages were requested:

Code 1D Enh INAA(INAAGEO)
Code 4C1** (Press Pellet) XRF Pressed Pellet
Code 5D-U-Total DNC
Code U3O8 Assay XRF

REPORT **A08-2846**

Notes:
For values exceeding the upper limits we recommend assays.
Values which exceed the upper limit should be assayed.

CERTIFIED BY :

Eric Hoffman, Ph.D.
President/General Manager

Date Submitted: 16-Jun-08
Invoice No.: A08-3256 (i)
Invoice Date: 22-Jul-08
Your Reference: Kenora

Delta Uranium
10th Floor, 56 Temperance Street
Toronto ON M5H 3V5
Canada

ATTN: Colin Bowdidge

CERTIFICATE OF ANALYSIS

1297 Pulp samples were submitted for analysis.

The following analytical packages were requested: Code 1D Enh INAA(INAAGEO)
Code 5D-U-Total DNC

REPORT **A08-3256 (i)**

Notes:
For values exceeding the upper limits we recommend assays.

Delta Uranium
10th Floor, 56 Temperance Street
Toronto ON M5H 3V5
Canada

ATTN: Colin Bowdidge

CERTIFICATE OF ANALYSIS

398 Rock samples were submitted for analysis.

The following analytical packages were requested:
Code 5D-U-Total DNC
Code 1D Enh INAA(INAAGEO)
Code 1C-Exp ICPOES Fire Assay ICPOES

REPORT **A08-3477**

Notes:
For values exceeding the upper limits we recommend assays.

Quality Analysis ... *Innovative Technologies*

Date Submitted: 01-Aug-08
Invoice No.: A08-4674
Invoice Date: 26-Aug-08
Your Reference: Kenora

Delta Uranium
10th Floor, 56 Temperance Street
Toronto ON M5H 3V5
Canada

ATTN: Colin Bowdidge

CERTIFICATE OF ANALYSIS

51 Rock samples were submitted for analysis.

The following analytical packages were requested: Code 1D Enh INAA(INAAGEO)
Code 5D-U-Total DNC

REPORT **A08-4674**

Notes:
For values exceeding the upper limits we recommend assays.

CERTIFIED BY :

Elitsa Hrischeva, Ph.D.

Quality Analysis ... *Innovative Technologies*

Date Submitted: 05-Sep-08
Invoice No.: A08-5893
Invoice Date: 01-Oct-08
Your Reference: Wilson Lake-Kenora

Delta Uranium
10th Floor, 56 Temperance Street
Toronto ON M5H 3V5
Canada

ATTN: Colin Bowdidge

CERTIFICATE OF ANALYSIS

166 Rock samples were submitted for analysis.

The following analytical package was requested: Code 5D-U-Total DNC

REPORT **A08-5893**

CERTIFICATE OF ANALYSIS

7 Rock samples were submitted for analysis.

The following analytical packages were requested:

REPORT **A08-6099 (i)**

Code 1A3 Au - Fire Assay Gravimetric
Code 1A2-Tbay Au - Fire Assay AA
Code 5D-U-Total DNC
Code 1E3 Aqua Regia ICP(AQUAGEO)

Notes:
If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3
Values which exceed the upper limit should be assayed for accurate numbers.
