Diamond Drill Assessment Report on the

Hook and Owaissa Projects

for

Auger Resources Ltd.

Sudbury Mining Division, Ontario

April 25, 2010 **Todd Keast, P.Geo**

Summary

Between November 2009 and February 2010, Auger Resources Ltd. completed a diamond drill program on the Hook Property and Owaissa Property. The properties are located within the townships of Strathy and Best, of the Sudbury Mining Division.

Previous exploration programs on the Hook Property identified a prospective surface showing with anomalous copper and zinc values. The horizon is coincident with a prominent airborne geophysical response and was partially tested during a drill program a previous operator. The Owaissa Property hosts an untested high grade cobalt- gold-copper showing. Auger Resources completed linecutting, ground geophysical surveys, mapping and prospecting, in preparation for the drill program.

Project Location and Access

The properties are located approximately 9 kilometers north of the town of Temagami, Ontario in northwestern Strathy Township (**Figure 1**). Access to the grid area is via provincial highway 11 to Red Squirrel Road. Travel west on Red Squirrel Road for approximately 2.5 km crosses the Owassia grid. Further along the Red Squirrel road is a series of bush roads and trails which leads to the northern end of the Hook Grid and provides access to all lines.

LAND TENURE AND OWNERSHIP

The Hook Property consists of 11 claims, situated within Best and Strathy townships (**Figure 2**). The Owaissa Property consists 7 claims located in Best and Strathy townships (**Figure 3**). A listing of claims is included in **Table 1**.

Auger Resource Ltd. Drill Program

In 2009 and 2010 Auger Resources completed a diamond drill program on two projects in the Temagami area. A total of 1,692 m of drilling was completed on the Hook Property, and a total of 1,502 m of drilling was completed on the Owaissa grid. Bradley Bros. Limited was contracted to complete the diamond drilling. Core was transported and logged at a secured facility in Temagami.

A summary of the drilling in included on **Table 2**. Drill logs, assay certificates, sections and location maps are included in **Appendix I**.

Results

On the Hook Property anomalous copper and zinc assay results were returned from in several holes over narrow 1m intervals. Pyrite and pyrrhotit stringers and veins is believed to be the source of the geophysical responses.

On the Owaissa several narrow anomalous cobalt sections were intersected.
