**Assessment Report on the
Canadian Arrow Mines Ltd.
Turtlepond Lake Project
2009-2010 Drilling Program**

Dryden Area, Ontario

Kenora Mining Division, Ontario

NTS 52F/07, 10

Sudbury, Ontario
October 31, 2011

R. Kim Tyler P.Geo

SUMMARY

In 2007-2008, Canadian Arrow Mines Ltd identified exploration targets for nickel, copper and platinum group metals (PGM's) on the Turtlepond Lake Property. The individual exploration targets contained within the greater Turtlepond Project area are identified as "Night Danger", "Double E", "Emmons-Prigg", "Glatz", and "North Glatz" and have had assessment reports previously filed individually by the Company on the 2007-2008 programs.

The subject of this report is the work subsequently completed in the winter of 2009-2010. A drilling program was performed to test the targets delineated by the previous work in 2007-2008. The drilling occurred on claims 4219025, 1247471, 4219030, 1247472, 4219035, 4219039, and 3012581.

INTRODUCTION

Between November 4, 2009 and March 27, 2010, Canadian Arrow Mines Ltd. completed a drilling program consisting of 27 diamond drill holes totalling 3,509.5 m. The following report is prepared for the purpose of fulfilling assessment requirements on the property.

During this period, Canadian Arrow Mines personnel supervising the drill program and performing the geological work were Mr. R. Kim Tyler P. Geo and Mr. Jason Pattison.

Mr. Todd Keast P. Geo, Vice-President of Exploration of Canadian Arrow Mines Ltd, visited the property at different periods between 2009- 2010 in order to set up the drill program and to monitor it for Canadian Arrow Mines Ltd.

The 2009-2010 Canadian Arrow Mines Ltd drill program was conducted to evaluate the mafic and ultramafic rocks favourable for hosting nickel-copper-PGM sulphide mineral.

PROPERTY DESCRIPTION, LOCATION AND ACCESS

The Turtlepond Lake Property is composed of several showings and grids within one larger area, and the entire project is located approximately 31 kilometres south of Dryden Ontario. The center of the property is located at 521285 m east and 5486294 m N, UTM NAD 83 (Zone 15) coordinates. The property is situated on claim map Turtle Pond Lake (G-2595), NTS: 052F/10SE (Figure 1).

The property is accessed by travelling from Dryden south along Highway 502 for approximately 31.8 km. Highway 502 bisects the property from the northwest corner to the southeast corner for approximately 8.2 km, and provides access to the property as well as to various logging roads and ATV trails which access the claims within the property (Figure 2).

The Turtlepond Lake Property includes the Night Danger, Emmons Lake, Prigg, Glatz, North Glatz, and Double E showings. All of these targets or areas were tested by drilling in 2009-2010. This property is situated within the Kenora Mining Division. This report covers 21 contiguous mining claims in the Turtlepond Lake area.

The 2009-2010 Turtlepond Lake Property consists principally of 21 claims covering 256 claim units, situated within the Turtlepond Lake map of the Kenora Mining Division (Figure 2). The claims total an area of 4096 hectares (Table 1). Canadian Arrow Mines Limited currently owns 100% of 21 claims, having fulfilled an option to earn a 100% interest in the 1247471, 1247472, and 3012581 claims in 2010. At the time of the drill program Canadian Arrow Mines Ltd. had an option agreement in place covering claims 1247471, 1247472, and 3012581. In 2010 and 2011 Canadian Arrow Mines Ltd. acquired 100% interest in all three claims. A detailed description of the property with claim numbers, claim size, claim recording date, claim due date, work in reserve, work required, and ownership is included in Table 1.

The area is characterized by moderately abundant bedrock exposures over parts of the area and extensive glacial deposits elsewhere. The topography within the claim group is dominated by flat to gently rolling topography.

Total				\$70,003	256	4,096

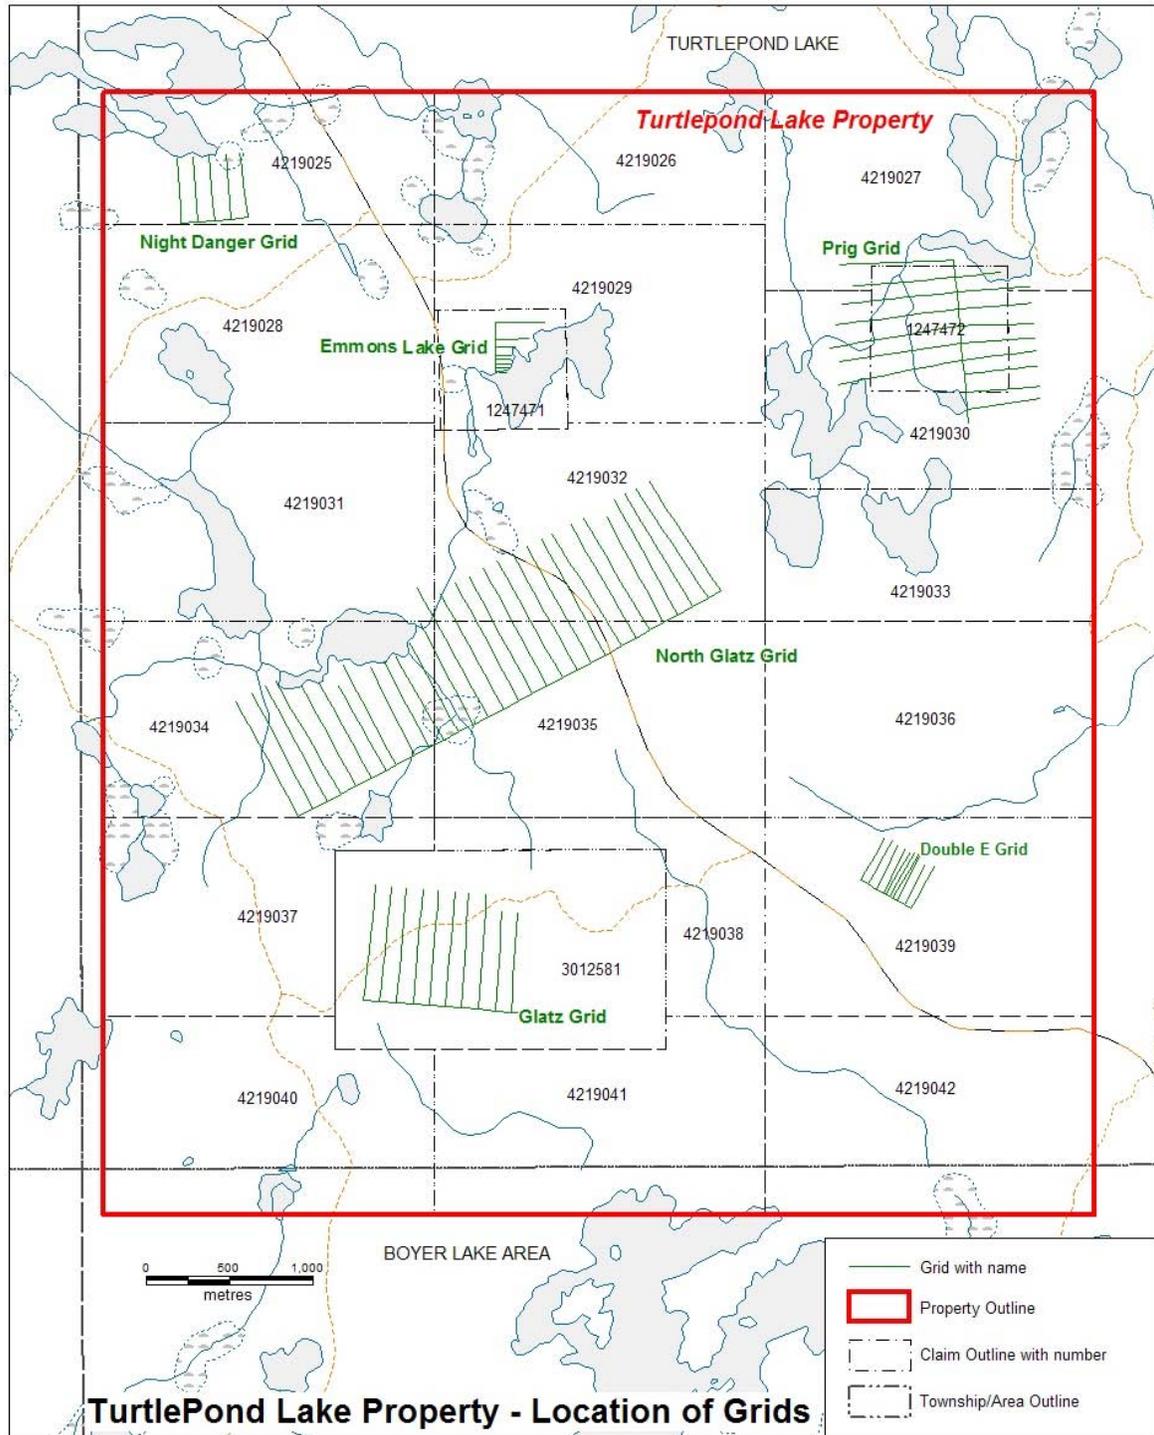

Figure 2: Turtlepond Lake Property Claims - Showings and Grids

PREVIOUS WORK

In 1941, mapping by J. Satterly produced Map No. 50e of the Dryden-Wabigoon Area (Satterly, 1941). The rocks in the Turtlepond property were mapped as unit 4a, diorite and quartz-hornblende diorite of the Algonian Group (Atikwa Batholith). This intrudes the older, basic to intermediate volcanic rocks (basalt) of the Keewatin Group, located 900 meters to the east.

In 1960, geological and geophysical surveys and 10 packsack diamond drill holes (112.5m) were performed by New Consolidated Canadian Exploration Limited on the Lantz Option (Kenora Assessment File 52F/10SW M-1). Geological mapping (scale 1:4,800) shows diorite (host rock) intruded by diorite porphyry and later, northwest trending granite porphyry dykes. Assays from the drilling were:

Hole No.	% Cu	% Ni	Footage (ft)
1	1.02	1.34	17.2
2	0.44	0.26	17.6
5	0.38	0.17	10.0
5	0.37	0.40	5.6
6	0.45	0.26	6.4
9	0.63	0.28	20.0
10	0.65	0.54	17.1

The sulphide mineralization encountered is finely disseminated over core lengths up to 25 feet or so, with some heavier concentration over a few inches, in places. The mineralization occurs in the medium grained diorite and to a lesser extent in the coarse diorite and quartz diorite. Geophysical surveys; electromagnetic and magnetometer, were carried out and detailed induced polarization around the occurrence (Kenora Assessment File 52F/10SW M-1). No conductor was located over the showing while several small sharp magnetic areas were located around the showing. Near the showings, detailed magnetic work defined an east-west magnetic low cutting across magnetic highs. The bulk of the known copper-nickel mineralization lies on the contact of this magnetic low.

In 1962, McIntyre-Porcupine Mines Limited optioned the Lantz Property on Emmons Lake. Four drill holes (307 m) intersected andesite, quartz-hornblende epidiorite, epidiorite, which were intruded by an aplite dyke. A geological cross section of the drilling was included. Copper-nickel was located within the epidiorite zones (see Kenora Assessment Files 52F/10SW L-1).

CANADIAN ARROW 2008 EXPLORATION PROGRAM

Turtlepond Lake Property

During the summer of 2008 Canadian Arrow Mines Limited completed exploration programs on its Turtlepond Lake group of claims. Included within the contiguous claim group are the Emmons, Prigg, Double E, Night Danger, Glatz and North Glatz projects. Geotech Ltd. was contracted to perform a Versatile Time Domain Electromagnetic (VTEM) helicopter-borne geophysical survey which included 1,057 line km of survey covering an area of approximately 77 km². Approximately 28 conductive targets were identified. Five strong anomalies with

short strike extent and associated magnetic responses represent priority exploration targets. In addition a strong magnetic trend 2 km in length with multiple associated conductive targets was identified.

Emmons Lake Showing

Three conductive anomalies and one prominent magnetic feature coincident with the Emmons lake showing were identified in the 2008 VTEM survey. During the winter and the summer of 2008, Canadian Arrow Mines Ltd conducted reconnaissance prospecting, mapping and sampling on the old work area. In January 2008, 21 grab samples were collected in and around the vicinity of the Emmons Lake Showing and 12 more grab samples were taken in the summer of 2008. A grid was established to cover the showings, detailed geological mapping, prospecting and ground geophysics surveys were carried out. The geophysical and geology surveys indicated a northwest orientation to the Emmons lake mineralization. The gabbro-pyroxenite units were identified as preferred host rocks for nickel copper mineralization, however due to remobilization; other host rocks were to be considered. The Emmons lake occurrence has significant nickel copper platinum palladium assay results. The geology, geophysical surveys and historical diamond drill holes indicated a well-defined northern plunge to the mineralization, which is defined along a 250-metre trend. Additional work was recommended including diamond drilling. (See Kenora Assessment Files)

Prigg Showing

Five conductive targets with associated magnetic responses were identified by the 2008 VTEM survey. In the summer of 2008 Canadian Arrow Mines Limited completed line cutting, prospecting, grab sampling and ground geophysical surveys. In August 2008, R.J Meikle & Associates were contracted to perform ground magnetic and induced polarization surveys over the Prigg showings. Three zones of sulphide mineralization were determined. Six trenches were established and sampling performed on the Big Prigg VTEM anomaly. Diamond drilling was recommended on the main Prigg zone.

Double E

During the summer of 2008, Canadian Arrow Mines Ltd completed line cutting, prospecting, grab sampling, and ground geophysical surveys over the Double E Grid. A northeast southwest baseline was established over a newly discovered airborne response. Grid lines were established at 100 meters intervals, with pickets every 25 meters to allow for detailed geological mapping and ground geophysical surveys. A total of 6.7 kilometers of lines were cut on the Double E. During the summer of 2008, 15 grab samples were collected along a 225 m long trend. Of the 15 grab samples several results were considered anomalous in nickel copper platinum and palladium. The work concluded a previously unrecognized prospective pyroxenite body had been identified. Prospecting and grab samples identified sulphide mineralization along a 225m trend. Airborne and ground geophysical surveys identified EM and IP anomalies coincident with the mineralized trend. Diamond drilling was recommended.

Night Danger

During 2008 an east-west baseline was cut on North-South grid lines at 100 meters intervals to allow for detailed geological mapping and ground geophysical surveys. In August 2008, R.J Meikle & Associates was contracted by Canadian Arrow to conduct ground magnetic, and IP surveys over the Night Danger Grid. The surveys were carried out to assist in the

exploration for Ni-Cu-PGM sulphide deposits associated with mafic to ultramafic bodies. Several small outcrops were identified which mark a contact between a gabbro and granite bodies. The geophysical survey identified an airborne electromagnetic anomaly which could not be explained by ground mapping and prospecting. The anomaly is overburden covered but situated in a gabbro body, which is a known host rock for Ni-Cu sulphide mineralization in the area. The work concluded a previously unrecognized prospective pyroxenite body had been identified. Diamond drilling the anomaly was recommended.

Glatz and North Glatz

In the fall of 2007 a grid line was cut and reconnaissance prospecting, geological mapping and sampling were carried out. Eleven conductive targets were identified in the 2008 VTEM survey. The strongest anomaly is 700m in length and was associated with a discrete magnetic feature. In 2008 ground magnetic and IP surveys were conducted on anomalies identified in the 2008 airborne VTEM survey. Two parallel zones of mineralization were identified extending 900 m and 700 m respectively. Widespread blebby and disseminated nickel-copper-iron sulphide mineralization was exposed and channel sampled along both trends. Diamond drilling was recommended.

GEOLOGICAL SETTING

The Turtlepond Lake project area is underlain by Archean Aged rocks of the Superior Province of the Canada Shield and is situated along the western margin of the Dinorwic Lake - Upper Manitou Lake greenstone belt (Figure 3).

Satterly (Vol. L, Part 2, OEM Annual Report, 1941, Map No. 50e, The Dryden-Wabigoon Area) indicates that the present property is underlain by diorites, quartz-hornblende diorites, and some porphyritic biotite granodiorites that comprise the extreme eastern border zones of the very large Atikwa Batholith. Satterly's contact between the felsic to intermediate batholithic rocks, and a very thick pile of north-south striking, slightly metamorphosed, intermediate to mafic volcanic rocks occurs approximately 100 m north of the project area. On Satterly's map gabbroic rocks occur in minor quantities immediately south, however later exploration work indicates that most of the rocks in the area are mafic volcanic medium-grained gabbro, pyroxenite, peridotite and locally aplitic dikes and sills.

The majority of the intrusive rocks which underlay the property can be classified as border phases of the large Atikwa Batholith, which is centered some 30 kilometers to the west. The most recent mapping which covers the area goes back to 1940 (Satterly, 1940). Canadian Arrow Mines Ltd geologists identified the following rock types as underlying the property.

Aplitic dikes and sills

Porphyry dykes and sills are found, varying from a few centimeters to 15 or 30 meters in width. The siliceous porphyry is definitely an intrusive rock. According to the old diamond drill holes, several diorite porphyry and aplitic sills and dikes were intersected on the east portion of the grid and intruded the mafic to the ultramafic rocks.

Gabbro

The gabbro is generally medium to coarse grained, although medium-grained phases with blue quartz eyes are locally developed throughout most of the property. The blue quartz eyes

in the gabbroic rock are evidence of an intrusive origin. The unit is medium to dark green in color.

Pyroxenite

Pyroxenite dikes and plugs containing a number of mineralized showings are the principal target host lithology. Pyroxenite underlies several small areas on the property, especially in the area of the nickel-copper Showing. The two most prominent pyroxenite bodies are located in the western and southern parts of the grid in the vicinity of claim K1247471 and along the Snow Flake Road north of the Emmons Lake Showing. The pyroxenite is commonly very dark green with occasional brown rust staining. It is coarse grained, massive and equigranular. Magnetite is often associated with this rock. All the ultramafic intrusive rocks have been metamorphosed, resulting in the partial replacement of clinopyroxene to talc and magnetite. The pyroxenite is interpreted to be the host rock of the mineralized zone and all the exposures are located on the west or inside of the ore zone.

Mafic Volcanics

The volcanic rocks occupy the eastern and western part of the grid area, with contacts trending north-northeast. The mafic volcanics are medium to dark green color. The rocks are fine-grained and non-magnetic. The volcanic rocks are locally highly carbonatized and silicified.

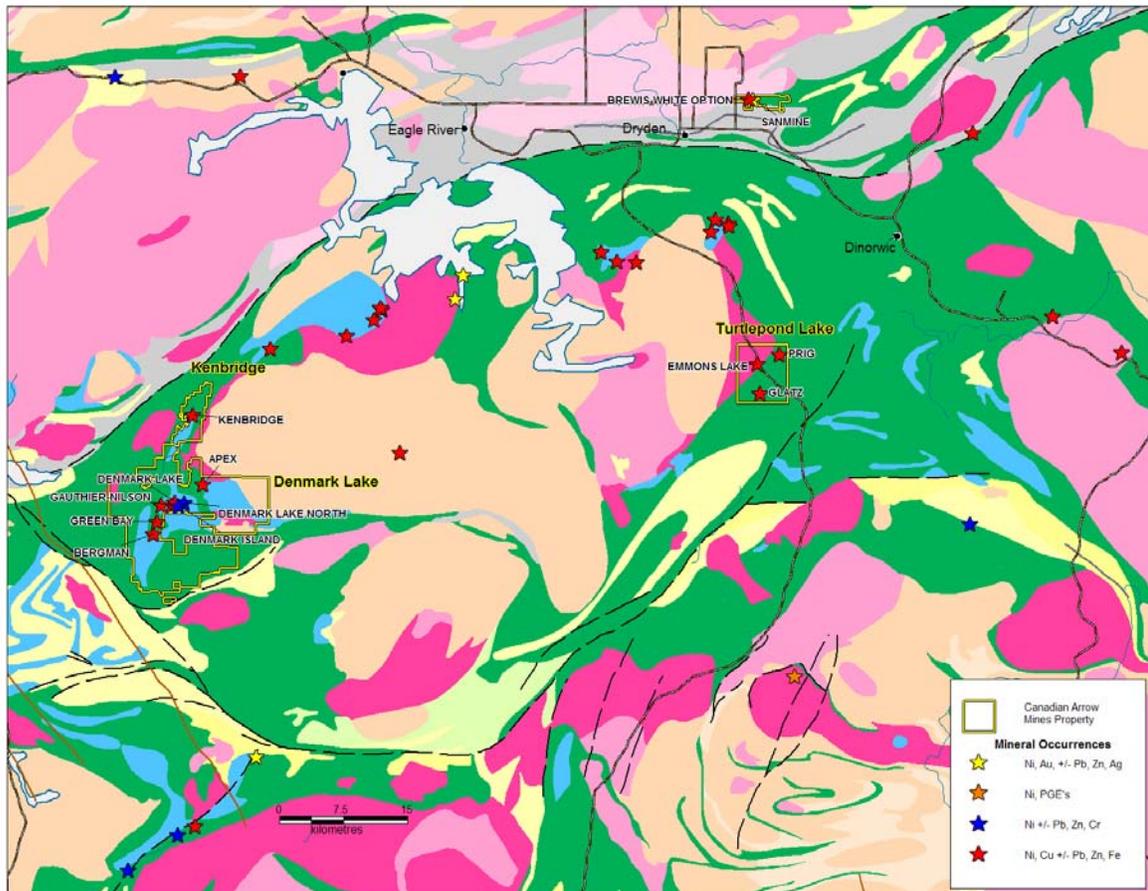

Figure 3: Regional Geology

DRILL PROGRAM

The Turtlepond Lake Diamond drill program commenced November 4th, 2009 and concluded March 14th, 2010. A total of 27 holes comprising 3,509.5 metres were completed on the various targets within the Turtlepond project area (Table 2). Drilling was performed by Morris Drilling of Sudbury, Ontario. Results are discussed below, drill logs are located in Appendix I and Assay Certificates are presented in Appendix II. Sections of all drill holes are located in Appendix III.

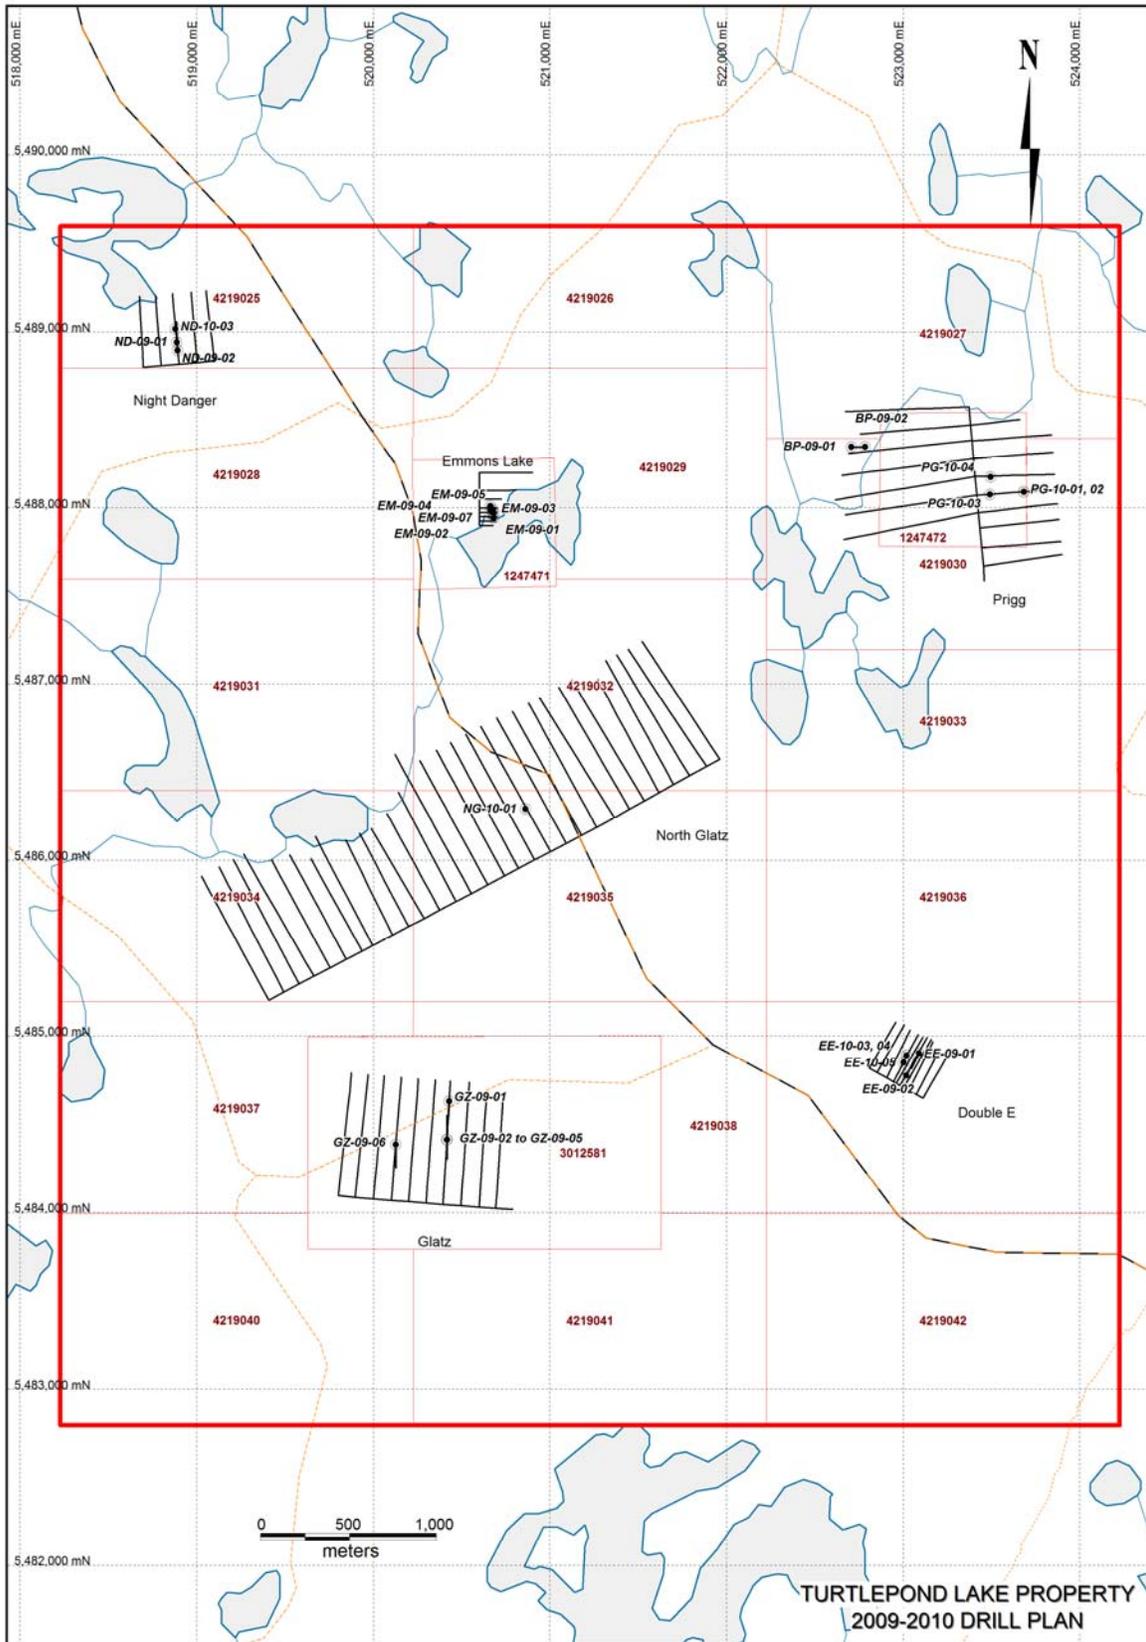

Figure 4: Diamond Drill Plan, Turtlepond Lake

Emmons Lake

Of the six holes drilled on Emmons, three intercepted nickel-copper sulphides as well as significant platinum/palladium/gold (PGM+Au) mineralization. The remaining three holes did not intersect obvious sulphide mineralization. Most significantly drill hole EM-09-04 intercepted 0.21% Ni, 0.62% Cu, 0.62 gpt PGM+Au and 4.4 gpt Ag over a 2.1m interval. Mineralization is hosted within a gabbro-pyroxenite intrusive. The Emmons drill results coincide with significant surface sample assay results previously collected by the Company. Significant results are reported in Table 3 below.

Table 3: Emmons Lake Drillholes - Significant Assay Results

Hole	From (m)	To (m)	Length	Ni%	Cu%	Co%	Pt gpt	Pd gpt	Au gpt	Ag gpt

Includes	0.5	4.8	4.3	0.74	0.56	0.02	0.14	0.09	0.11	2.0

Double E

Five holes totalling 764m were completed to test a new nickel-copper-PGE discovery on the Double E VTEM anomaly identified in 2008. The drilling intersected two, separate upper and lower mineralized zones in holes EE-09-02 and EE-10-04 noted in Table 4 below. Holes EE-09-03 and EE-10-05 did not intersect significant mineralization. Mineralization to depth and along strike remains open. More drilling was recommended.

Table 4: Double E Drillholes - Significant Assay Results

Night Danger

The Night Danger Discovery is the second new drill discovery in addition to the Double E Discovery identified during the Canadian Arrow 2008 VTEM airborne survey. The well pronounced anomaly, detected on two adjacent 100 metre spaced flight lines, is situated in a swampy area with no surface exposure. Diamond drill hole ND-09-1 intersected two separate intervals of sulphide mineralization between 63.4 and 88.0 metres. Narrow sections of up to 1.3% Nickel are contained within the lower sulphide horizon. The Night Danger Discovery is located about 1.5 km north-west of the Double E Discovery.

Night Danger is the second new discovery identified by the Company and has no previous exploration history. The new Night Danger and Double E discoveries are located approximately 70 km east of the Company's flagship Kenbridge nickel/copper project.

Table 5: Night Danger Drillholes - Significant Assay Results

Hole	From (m)	To (m)	Length	Ni%	Cu%	Co%

ND-10-3	86.4	88.0	1.6	0.22	0.10	0.01

Prigg and Big Prigg

Four holes totalling 472m were completed on the main Prigg showing, but did not intersect significant mineralization. Two holes, totalling 232m, were drilled on the Big Prigg geophysical anomaly identified in the 2008 VTEM survey. No significant mineralization was encountered, although grab samples, previously collected in 2008 from surface showings at Prigg, returned PGM+Au values between 0.514 gpt-0.207 gpt. These samples need to be re-investigated.

Glatz

Six holes totalling 1055.4m were completed on the main Glatz project. Only one hole, GZ-09-02 intersected anomalous mineralization noted in Table 6 below.

Table 6: Glatz Drillholes - Significant Assay Results

Hole	From (m)	To (m)	Length	Ni%	Cu%	Co%
GZ-09-2	45.0	50.9	5.9	0.34	0.16	0.02

North Glatz

One hole was completed on the North Glatz geophysical target. The hole intersected barren iron sulphide inter-flow bands and veins within mafic pillowed volcanic flows. No further work was recommended.

SAMPLE COLLECTION, PREPARATION, ANALYSIS AND SECURITY

Selective sampling was carried out where sulphides occurred intermittently. Where the mineralization was more widespread, the entire alteration zone was sampled through. Sampling was done on nominal 1m intervals unless sulphide mineralization was intermittent or of short duration. Narrow intervals of massive or semi-massive sulphide mineralization were sampled to appropriately lesser intervals. Bracket or infill samples that appeared to have little potential had a maximum sample length of 1.5 m.

The drill core was regularly picked up at the drill site at the end of each shift by Canadian Arrow Mines Limited employees and delivered directly to the company core shack and office site near Dryden, Ont. The core was then logged and samples were marked up by the project geologist. The marked core was then split in half with a hydraulic core splitter by a core technician. Half of the core for each sample was then placed in sample bags with the accompanying sample tags. The remaining half of the sample tag was then stapled into the core box at the end of the sample interval. The core samples were then placed into rice bags, sealed and driven directly by Canadian Arrow Mines Limited employees to ALS Chemex Laboratories located in Thunder Bay, Ontario for sample preparation.

Final analyses were performed by ALS Chemex Laboratories in Vancouver, BC. Samples analyzed for base metals (nickel, copper, and cobalt) are digested with a four acid digestion technique with an ICP-AES finish. Precious metals, (platinum, palladium and gold), are fire assayed with an ICP-AES finish. The remaining core boxes were then tagged and cross-piled. Any stored samples were kept within locked premises. All assay certificates are given in Appendix II.

During the logging and sampling process, both standards and blanks were inserted in the sample sequence in every batch of 20 samples, as part of a QA/QC program. Any samples outside of the accepted range were rerun.

INTERPRETATION

Nickel-copper-iron sulphide mineralization, sometimes associated with significant platinum group metals, is manifested as disseminated, blebby and thin massive sulphide lenses occurring within pyroxenite phases of multiple, close spaced (0.5km avg.) ultramafic intrusions in the Turtlepond project area. The mineralized environment at Turtlepond bears a strong resemblance to Canadian Arrow Mines Kenbridge nickel-copper project located in the same belt of volcanic stratigraphy located 70 km to the west. The host pyroxenite lenses or plugs appear to be sub-vertically dipping with limited but weakly determined strike lengths. At times, as in the case of Emmons Lake, there is as an apparent plunge component as well.

In addition to the previously documented Glatz, Emmons and Prigg nickel-copper sulphide occurrences two new nickel-copper-PGE sulphide discoveries have been made on the Double E and Night Danger geophysical anomalies.

CONCLUSION AND RECOMMENDATIONS

Nickel-copper-PGE sulphide mineralization occurring in the Turtlepond Lake group of projects bears resemblance to the Kenbridge nickel-copper deposit along strike to the west. Moreover, although Kenbridge has limited exploration beyond the known single immediate deposit, the Turtlepond Lake area occurs in a cluster of mineralized ultramafic bodies. This lends support for similar multiple occurrences at Kenbridge as it does potential for one or more deposits of similar tenor and size of Kenbridge to be found at Turtlepond Lake. The new discoveries of the Double E and Night Danger occurrences are positive indicators of further potential in the area and, being blind deposits identified through geophysics, are the most intriguing targets for follow-up.

- 1) Further diamond drilling is recommended on Emmons Lake, Night Danger and Double E along strike and to depth below the previous drilling. Borehole geophysics would assist in determining if blind zones of mineralization may occur at depth or along plunge.
- 2) Drilling at Glatz did not strongly support the evidence of mineralization occurring at surface in trenches and pits. Although mineralization is weaker it is spread out over a larger area than Emmons, Night Danger and Double E. Borehole geophysics might be useful here as well but less priority to 1) above.
- 3) No work recommended at Big Prigg or Glatz North at this time.

Finalized Date: 14-DEC-2009
Account: CNARMN

CERTIFICATE TB09139687

Project: Turtle Pond
P.O. No.:
This report is for 15 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 8-DEC-2009.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC	TODD KEAST	KIM TYLER
---------------------------	------------	-----------

SAMPLE PREPARATION	
ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES		
ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP81	ICP Fusion - Ore Grade	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
PGM-ICP23	Pt, Pd, Au 30g FA ICP	ICP-AES

To: CANADIAN ARROW MINES LTD.
ATTN: KIM TYLER
233 BRADY STREET EAST
UNIT 8
SUDBURY ON P3B 4H5

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.

CERTIFICATE TB10038023

Project: Turtle Pond

P.O. No.:

This report is for 67 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 26-MAR-2010.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC

TODD KEAST

KIM TYLER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
SPL-21	Split sample - riffle splitter
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-OG62	Ore Grade Elements - Four Acid	ICP-AES
Zn-OG62	Ore Grade Zn - Four Acid	VARIABLE
Au-AA23	Au 30g FA-AA finish	AAS

Project: Turtle Pond

P.O. No.:

This report is for 5 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 8-DEC-2009.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC

TODD KEAST

KIM TYLER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP81	ICP Fusion - Ore Grade	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
PGM-ICP23	Pt, Pd, Au 30g FA ICP	ICP-AES

To: CANADIAN ARROW MINES LTD.

CERTIFICATE TB09139681

Project: Turtle Pond

P.O. No.:

This report is for 19 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 8-DEC-2009.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC

TODD KEAST

KIM TYLER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP81	ICP Fusion - Ore Grade	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
PGM-ICP23	Pt, Pd, Au 30g FA ICP	ICP-AES

To: CANADIAN ARROW MINES LTD.

CERTIFICATE TB09139685

Project: Turtle Pond

P.O. No.:

This report is for 50 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 8-DEC-2009.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC

TODD KEAST

KIM TYLER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
LOG-23	Pulp Login - Rcvd with Barcode
CRU-QC	Crushing QC Test
SPL-21	Split sample - riffle splitter
PUL-QC	Pulverizing QC Test
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP81	ICP Fusion - Ore Grade	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
PGM-ICP23	Pt, Pd, Au 30g FA ICP	ICP-AES

CERTIFICATE TB09139688

Project: Turtle Pond

P.O. No.:

This report is for 17 Drill Core samples submitted to our lab in Thunder Bay, ON, Canada on 8-DEC-2009.

The following have access to data associated with this certificate:

NTS PAYABLE - ANNA CHARBC

TODD KEAST

KIM TYLER

SAMPLE PREPARATION

ALS CODE	DESCRIPTION
WEI-21	Received Sample Weight
LOG-22	Sample login - Rcd w/o BarCode
CRU-31	Fine crushing - 70% <2mm
CRU-QC	Crushing QC Test
PUL-QC	Pulverizing QC Test
SPL-21	Split sample - riffle splitter
PUL-31	Pulverize split to 85% <75 um

ANALYTICAL PROCEDURES

ALS CODE	DESCRIPTION	INSTRUMENT
ME-ICP81	ICP Fusion - Ore Grade	ICP-AES
Ag-AA62	Ore grade Ag - four acid /AAS	AAS
PGM-ICP23	Pt, Pd, Au 30g FA ICP	ICP-AES

To: CANADIAN ARROW MINES LTD.
ATTN: KIM TYLER
233 BRADY STREET EAST
UNIT 8
SUDBURY ON P3B 4H5

This is the Final Report and supersedes any preliminary report with this certificate number. Results apply to samples as submitted. All pages of this report have been checked and approved for release.
