

ASSESSMENT REPORT

for CLAIMS # 4218107 & 4257206

[Smitham's Assiniboia Amethyst Mines]

Thunder Bay Mining Division

PROPERTY DESCRIPTION/LOCATION & ACCESS:

These mines are located in the SW 1/4, NE 1/4 and SE 1/4, NE 1/4 of Section 4, Concession 3 of McTavish Township, Thunder Bay Division 40. The UTMs for the 6 corner posts is attached.

The Mining Claim Abstracts are attached along with a map showing the topography and the access road A logging/tote road was created in 2008-09 to clear this area and adjacent areas. [4 pages]

PREVIOUS EXPLORATION:

It was reported from other prospectors and miners that several people have travelled through this area in search of amethyst veins. They cited a lack of sightings of any veins. The logging done in 2008-08 uncovered a vein that was believed to be part of the Blue Points Amethyst Mine owned by Lyndon Swanson. Lyndon subsequently looked at the site and noted that it was <u>not</u> on his property. After some queries, we were told that the area was unclaimed for mineral right. Our claims were submitted on October 4, 2010 and May 5, 2011. [See the picture taken of Paul Smitham standing near this amethyst vein.]

To our knowledge, no mining work has been done previously on these claims.

GENERAL AND PROPERTY GEOLOGY/MINERALIZATION:

The rock is mainly Canadian Shield/Superior Craton granite with veins of quartz lying mainly in a southeasterly pattern; amethyst was noted in three area of claim #1: west of the tote road, east of the tote road, and 'the hill'. [Pictures are attached to note these areas.] The first two areas also have iron, copper, galena, and calcopyrite. The 'hill' is showing some volcanic specimens as well as iron and amethyst. Some quartz in various rocks was mark for potential areas for amethyst. As yet no mudrock is visible.

TRENCHING AND STRIPPING:

The work on areas 1 and 2 was initially done manually to track the veins. During the year, we paid for 4 excavations and 3 blastings in an attempt to remove the granite sides and expose more amethyst. The amethyst in area 1 has a good quality and is 'black' and 'salmon' in colour mainly, although some 'red' crystals are mixed in on some specimens; in area 2, it is mainly 'black' so far.

Area 3 and other parts of the claim to the north were trenched by another prospector/miner believing it to be outside our claim. Using the GPS, we have found it to be within our boundaries. This is showing 2 veins of 'red' amethyst at the southern base of the hill. In addition, we sighted another vein of 'red' amethyst on the top of the hill.

In a part of area 1 [near the road], we dug down about 2 ft. in a 'vug'. The backhoe removed a 'pinnacle of rock' about midway along the trenching. All the rest was just a superficial clearing. Area 2 to the east, was dug deeper by the backhoe to remove the overburden and to expose the baserock.

[See the graphs of VEINS EXPLORED and PROSPECTING TREKS]

No work has been done more easterly on the first claim or on the second claim. Pictures were taken of the tote road leading to the south and of the most easterly border of the second claim.

FUTURE DIRECTIONS AND EXPLORATIONS:

- 1. seek a mobile computer with spreadsheet capability to enhance data collection;
- 2. continue to follow the existing veins in length and depth;
- 3. explore 'The Hill' more---clearing and following the 3 veins sighted;
- 4. do more excavations and blastings as needed;
- do more 'rovings' to see whether the sighted quartz stones materialize into a vein---either quartz only or including amethyst; to explore the possibility of other veins beyond what has been found:
- 6. seek consultations with the Resident Geologist, as needed.

COST OF THE WORK DONE:

See the completed form 'Assessment Work Performed on Mining Lands' and copies of the ledger calculations [receipts maintained]. [9 pages]
