0,00	**3,00**	3,00	**OB**																	**Casing/Overburden**
3,00	**137,00**	**134,00**											**EP**							**Granite. Equigranular; coarse-grained. Comp.: Quartz (20%); Plagio (30%); Kspar (20%); Hornblende/chlorite (30%)**
																				Pervasive epidote alteration giving the rock a light yellowish-green color.
5,00	5,70													PY	1					Zone with micro-fractures and calcite-hematite-pyrite veinlets. Tr-1% pyrite. TCA: 15
5,70	6,05																			Silica-calcite alteration associated with calcite-chlorite veinlets. TCA: 50
6,45	6,45																			Calcite-pyrite-chlorite veinlets with silica alteration/leaching along the edges (5cm wide). TCA: 40
7,65	7,65																			Micro-fractures with a 1cm-wide leached edges. TCA: 30
9,10	9,35													PY	1					Micro-fractures with a 4cm-wide silicate-pyrite-calcite alteration zone along the edges. TCA: 20. 1% pyrite
9,45	9,60													PY	1					Micro-fractures with a 4cm-wide silicate-pyrite-calcite alteration zone along the edges. TCA: 20. 1% pyrite
11,64	11,65																			A 1cm-thick quartz-chlorite vein + hematite-goethite along micro-fractures; TCA: 60.
12,55	14,60																			Zone with several micro-fractures with calcite-hematite/goethite associated. Average TCA: 20.
14,75	15,00																			Broken cores
15,65	16,18													PY	3					Low-angle quartz-pyrite-chlorite veinlets with a pluri-cm wide leaching/silica alteration zone along the edges; TCA: 15. 2-3% pyrite
16,38	16,53													PY	3					Low-angle quartz-pyrite-chlorite veinlets with a pluri-cm wide leaching/silica alteration zone along the edges; TCA: 15. 2-3% pyrite
17,14	17,20													PY	10					Quartz-pyrite-calcite (pink) vein (2cm-thick) with pyrite-silica alteration zone along the edges (pluri-cm wide); TCA: 20. 10% pyrite
17,75	17,76													PY	5					Quartz-pyrite veinlets with a pluri-cm wide silica-pyrite alteration zone along the edges; TCA: 10. 5% pyrite
18,40	19,60													PY	1					Zone of micro-fractures/calcite veinlets with silica alteration along the edges (2-3 cm-wide). Tr-1% Pyrite. TCA: 25
22,23	22,25													PY	1					Silica alteration zone (2-3 cm-wide) associated with calcite-pyrite veinlets (TCA: 35). 1% pyrite
22,62	22,62													PY	1					Silica alteration zone (2-3 cm-wide) associated with calcite-pyrite veinlets (TCA: 15). 1% pyrite
24,30	24,30													PY	1					Silica alteration zone (2-3 cm-wide) associated with calcite-pyrite veinlets (TCA: 35). 1% pyrite
24,45	24,45													PY	1					Silica alteration zone (2-3 cm-wide) associated with calcite-pyrite veinlets (TCA: 55). 1% pyrite
24,66	24,69													PY	1					Quartz-chlorite-calcite-hematite-(pyrite) vein. TCA: 70. 1% pyrite
27,00	28,90													PY	1					Down-dip micro-fractures with calcite-hematite-chlorite-pyrite-silica-rich alteration zone along the edges (2-3cm-wide). Tr-1% pyrite
29,60	30,70													PY	1					Down-dip micro-fractures with calcite-hematite-chlorite-pyrite-silica-rich alteration zone along the edges (2-3cm-wide). Tr-1% pyrite
30,70	31,40													PY	15					Quartz-pyrite vein with pyrite-calcite-silica pluri-cm wide alteration zone along the edges. 10-15% pyrite.
32,00	33,20													PY	tr					Zone with micro-fractures (~10 per meter) and/or calcite micro-veins with silica-(pyrite) cm-wide alteration zone along the edges. Tr. PY.
33,30	36,30													PY						Almost pervasive silica-calcite-pyrite alteration zone along quartz-calcite-pyrite pluri-mm to cm-thick veins (down-dip)
34,15	34,65													PY	SM					Semi-massive pyrite vein, with quartz. Down-dip.
35,00	36,35													PY						Pervasive silica-calcite-pyrite alteration zone along quartz-calcite-pyrite pluri-mm to cm-thick veins (down-dip)
37,70	39,20													PY	tr					Zone with calcite-hematite alteration along fractures; Average TCA: 40. Tr. PY.
42,25	42,65													PY	tr					Zone with calcite-hematite alteration along fractures; Average TCA: 25. Tr. PY.
45,60	45,60																			Hematite-calcite veinlets with silica alteration on the edges (cm-wide). TCA: 50
46,75	49,10																			Gradational contact with a granite with higher proportion of Kspar (giving the rock a pinkish color) and less epidote
50,95	51,00																			Hematite-calcite veinlets with silica alteration on the edges (cm-wide). TCA: 60
51,80	53,70																			Contact with a granite with higher proportion of Kspar (giving the rock a pinkish color) and less epidote
55,30	55,30																			Calcite veinlets, no significant alteration associated. TCA: 15
57,00	59,60																			Pervasive hematite-calcite alteration (5-10% calcite) giving the rock a dark pink-reddish color.
58,08	58,20																			Calcite down-dip vein
59,60	62,00																			Zone with a weak but pervasive calcite alteration, locally silica
63,00	67,00																			Zone with calcite-hematite veinlets/fractures (2-3 per meter). TCA: from 10 to 45
67,55	67,72																			QFP(?) dyke or large xenolith.
68,45	68,50													PY	1					Pyrite-silica moderate alteration, 1% pyrite
70,25	71,85																			Zone with quartz-(calcite) vein network and/or silica pervasive alteration.
71,85	74,85													PY	15					Pervasive quartz-pyrite-calcite-(carbonate) alteration. 2-3% pyrite (up to 15%)

76,75	79,50																			Down-dip calcite-hematite mm-thick veins
80,90	94,00																			Zone of micro-fractures/veins with hematite-calcite (2-3 per meter; TCA: 10 to 45).
91,92	92,16																			Down-dip rusty calcite vein
94,00	95,40																			Zone of micro-fractures with silica alteration along the edges (1-3 cm-wide). TCA: 70
96,20	96,20																			Quartz vein with a 3cm-wide silica alteration zone along the edges. TCA: 25.
96,75	97,60																			Zone of calcite micro-veins with silica alteration along the edges (1-3 cm-wide). TCA: 40
99,80	100,40																			Pervasive silica alteration associated with calcite veinlet/micro-fractures. TCA: 35
101,25	101,35																			Pervasive silica alteration associated with quartz-chlorite-calcite veinlets. TCA: 50
103,00	104,30																			Kspar-quartz-rich granite with no or only a weak epidotization. Sharp contact (dyke?)
105,80	105,81													CPY	1					1cm-thick quartz-chlorite vein, 2% pyrite; tr-1% Chalcopyrite; TCA: 70
109,13	109,15																			Quartz-calcite vein with a pluri-cm wide silica alteration zone. TCA: 25
110,37	110,38																			Quartz-calcite vein with a pluri-cm wide silica alteration zone. TCA: 75
111,00	120,10																			Zone of micro-fractures (2-4 per meter; TCA: ~60) with 2-3cm-wide silica alteration zones along edges. Locally calcite-hematite associated
123,10	123,55																			Pluri-cm wide silica-(hematite/geothite) alteration zone along a 7cm-thick quartz-calcite-chlorite vein @123,23m; TCA: 70
123,55	124,85																			Down-dip rusty micro-fracture with silica-geothite alteration zone (2cm-wide)
127,05	127,05																			A micro-fracture (TCA: 60) with a 2-3cm-wide silica alteration zones along the edges.
130,00	130,65																			Zone of micro-fractures (TCA: 60) with 2-3cm-wide silica alteration zones along edges.
132,45	132,45																			Quartz veinlet, no significant alteration associated. TCA: 25
132,50	132,50																			Micro-fracture with a 2-3cm-wide silica alteration zone. TCA: 60.
136,55	137,00																			Micro-fractures/calcite veinlets with cm-wide silica alteration zone along edges. TCA: 10)

0,00	**2,50**	**2,50**	**OB**																	**Casing/Overburden**
2,50	**46,70**	**44,20**																		**Granite. Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.**
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				cm to pluri-cm xenoliths occur locally. Local silica-hematite alteration along micro-fractures
8,10	8,10																			A 0.5cm-thick quartz-chlorite vein (TCA: 15); presence of leucoxene (1-2%) suggesting a leached zone along the edges.
11,00	13,00																			Zone of lightly to moderate broken cores
13,30	13,70																			Quartz stringers (network-stockwerk) with minor amount of calcite. No significant alteration associated
14,55	15,15																			Down-dip quartz-calcite stringer
15,55	15,80																			Down-dip quartz-calcite stringer + silica alteration along the edges.
15,80	16,70													PY	tr					Pervasive silica alteration; tr. Pyrite
16,07	16,10																			Quartz -chlorite vein; TCA: 88.
20,80	20,80													PY	1					Calcite-chlorite micro-vein (stringer) with a 6cm-wide silica-(pyrite) alteration zone along the edges; TCA: 75. Tr-1% pyrite
22,25	22,26																			Quartz-calcite vein with a 2cm-wide silica alteration zone along the edges; TCA: 55.
25,00	25,18																			Pervasive silica alteration zone associated with micro-fractures and calcite stringers
27,20	27,48																			Pervasive silica alteration zone associated with micro-fractures and calcite stringers
27,74	27,92																			Pervasive silica alteration zone associated with micro-fractures and calcite stringers
28,44	28,45																			Quartz vein with leached edges (presence of leucoxene). TCA: 25
29,38	29,58													PY	1					Silica-(pyrite) alteration zone associated with calcite stringers and micro-fractures; 1% pyrite
30,34	30,35																			Quartz vein; TCA: 65; No significant alteration associated.
31,22	31,30																			Pervasive silica alteration zone associated with micro-fractures and calcite stringers
31,30	34,20													PY	tr					Zone rich in xenoliths (about 50%), partially digested. Tr. Pyrite
31,65	32,00																			A 2cm-thick down-dip quartz-chlorite-(calcite) vein. No significant alteration except the presence of leucoxene. (Locally Ankerite alt?)
31,90	31,93																			Quartz-chlorite vein; TCA: 88; No significant alteration associated
32,18	32,29													PY	1					Silica alteration zone associated with calcite stringers and micro-fractures; tr-1% pyrite; 1% leucoxene.
34,22	34,32																			Silica alteration zone associated with calcite stringers and micro-fractures
35,00	35,17																			Silica alteration zone associated with calcite-quartz-(hematite) stringers; TCA: 60.
36,16	36,42																			Pervasive silica alteration associated with calcite stringers; TCA: 65).
36,85	37,85																			Down-dip calcite stringers with a cm-wide silica alteration zone along the edges.
38,25	38,25																			Calcite stringers with a 3 cm-thick silica alteration zone along the edges. TCA: 80.
38,97	39,26													PY	1					Silica-(pyrite) pervasive alteration zone associated with calcite-chlorite-(pyrite) veins/stringers (TCA: 35); tr-1% pyrite
39,26	39,55													PY	tr					Silica-sericite/ankerite pervasive alteration associated with a down-dip quartz-(hem) vein. Tr. Pyrite
40,55	40,75																			Silica alteration zone associated with calcite-chlorite-(pyrite) stringers; TCA: 30; presence of leucoxene.
42,85	43,00																			Silica alteration zone associated with calcite-chlorite-(pyrite) stringers; TCA: 40; presence of leucoxene.
43,58	43,60																			Quartz-calcite-chlorite vein; TCA: 75; no significant alteration associated
44,00	44,10																			Silica alteration zone associated with calcite-chlorite-(pyrite) stringers; TCA: 70; presence of leucoxene.
44,10	44,80																			Down-dip quartz-calcite-hematite stringers with no significant alteration associated
46,70	**51,30**																			**Breccia/gabbro**
																				Fine- to medium-grained gabbro (gradational contact with previous unit). Locally brecciated and/or large proportion of xenoliths. Clasts/xenoliths are heterolithic and partially digested (including semi-massive pyrrhotite iron formation and granite).
47,00	47,45																			breccia or xenolith-rich zone
47,69	47,69																			Pluri-mm thick quartz-epidote vein; TCA: 35
47,75	48,75													PY	2					Partially digested xenolith-rich zone. Locally 2% pyrite as coarse euhedral crystals
49,36	49,39																			Quartz-plagio-chlorite vein; TCA: 25
49,80	50,05																			Granite dyke or large xenolith
50,25	50,40													PY	2					Down-dip quartz-(pyrite) vein; 2% pyrite

From	To	COMMENTS
50,40	50,90	Partially digested xenolith-rich zone
51,30	**56,28**	**Felsic volcanic rock/breccia**
		Light grey, fine-grained with pluri-mm quartz eyes or quartz filled voids (bubbles). Brecciated: rounded and partially digested clasts. 1-2% pyrite and pyrrhotite as finely disseminated grains and voids and fractures filling
52,19	52,20	Quartz-calcite-chlorite vein; TCA: 55
54,30	54,31	Quartz-calcite vein; TCA: 30
55,40	55,57	Iron formation xenolith (chert and semi-massive pyrrhotite); tr-1% pyrite; tr-1% chalcopyrite
56,28	**63,90**	**Iron Formation (oxide-sulphide facies)**
		Alternance of cm-thick bands of magnetite and pluri-cm thick bands of pyrrhotite and chert (±actinolite/chlorite). Locally some micro-fracture filled with calcite-pyrite and chalcopyrite. Bedding varies from 10 to 75.
58,50	58,75	Pegmatite (quartz-feldspar)
61,16	61,16	micro-fracture filled with chalcopyrite-calcite; 1% chalcopyrite
61,30	61,30	tr-1% chalcopyrite
63,90	**67,90**	**Gabbro/ brecciated**
		Fine- to medium-grained gabbro (gradational contact with previous unit). Locally brecciated and/or large proportion of xenoliths. Clasts/xenoliths are heterolithic and partially digested. Locally 1-2% pyrite
65,90	66,10	Three calcite veins; TCA: 60
67,40	67,50	Open-space fracture filled with calcite
67,90	**72,55**	**Breccia/Magnetic breccia**
		Large clasts (5 to >10cm) of gabbro floating in a dark black magnetite-pyrrhotite-rich matrix. Presence of late fractures filled with calcite
72,55	**93,35**	**Intermediate to felsic volcanic rock (volcanic breccia)**
		Breccia, some clasts are strongly sericitized. Tr-2% pyrrhotite in the matrix; locally trace of chalcopyrite.
73,74	73,75	Quartz-chlorite vein; TCA: 35; with leucoxene along the edges
77,55	80,65	Zone with 5% pyrrhotite and 1% chalcopyrite disseminated in the matrix and micro-fractures filled with pyrite-chlorite (2% pyrite).
93,35	**140,00**	**Mafic volcanic breccia and/or gabbro**
		Clasts-supported, gabbro composition but chloritized. Locally tr-1% pyrrhotite, tr. Chalcopyrite
109,65	109,85	Zone with 10% pyrrhotite; 2-3% chalcopyrite
111,22	111,23	Quartz vein with leucoxene along the edges; TCA: 25
111,42	111,43	Quartz vein with leucoxene along the edges; TCA: 20
113,30	121,70	Zone with cm-thick quartz-(calcite) veins (~3 veins per meter). No significant alteration associated except leucoxene-chlorite along the edges; TCA: from 20 to 25
123,21	123,22	Quartz vein; TCA: 60; No significant alteration associated
130,56	130,60	Calcite veining; TCA: 80
132,65	133,25	Calcite veining network and/or breccia cement. No mineralization associated
138,40	138,78	Granite dyke; TCA: 60
EOH

0,00	**12,00**	12,00	**OB**																	**Casing/Overburden**
12,00	**93,20**	**81,20**																		**Monzonite. Dark purple-green; medium- to coarse-grained. Partially weathered (voids and cracks) and locally hematized**
																				Composition: Quartz: 5%; Hornblende (chloritized): 25% (up to 40%); Plagio 45%; K-spar (20%), calcite (locally 5%). No specific foliation.
																				Presence of xenolith (few cm to 35cm).
22,50	22,90																			broken cores
34,65	35,00																			Xenolith
50,00	55,00																			Zone with pluri-cm xenoliths (2 to 3 per meter).
63,90	67,80												Ep							Epidote alteration zone
79,85	80,50																			broken cores
92,70	92,70																			Calcite veinlet; TCA:20
93,20	**221,00**	**127,80**																		**Mafic volcanic rock**
																				Dark green; Chlorite rich. Heterogeneous unit: volcanic breccia interbedded with fine-grained massive flow (locally with glaumeroporphyric texture).
																				Cross-cut by few QFP/granite dyke.
93,20	94,90													PY	1					Melanogabbro (or coarse-grained massive flow?). Medium- to coarse-grained, 1% PY.
94,90	97,00													PY	3					2-3% pyrite disseminated as coarse euhedral crystal.
97,00	105,85												Ep	PY	4					Strongly magnetic volcanic breccia with a matrix of magnetite and pyrite (3-4%). Two types of clasts: jigsaw-like fine-grained volcanic clasts and coarse-grained clasts of epidotized gabbro.
99,94	100,07																			Dyke of leucogabbro or pluri-cm clast.
100,60	101,00									X	X									40cm-wide clasts with silicate-sericite/ankerite alteration associated with a chlorite-calcite microvein (TCA: 25).
104,60	104,75																			Down-dip pluri-mm thick quartz veinlets and hematite/geothite filled fractures (TCA: 50)
104,75	104,90																			QFP dyke (pink); TCA: 53
105,85	106,00												CC	PY						Down-dip carbonate-pyrite vein (calcite-ankerite alteration).
107,33	107,75																			broken cores
108,20	108,43																			Ankerite(?)-calcite vein?
108,85	108,88																			Ankerite-calcite vein; TCA:40
109,00	109,06																			Ankerite-calcite vein; TCA:40
109,20	109,80																			broken cores
109,60	109,65																			Ankerite-calcite vein; TCA:40
110,30	112,60													PY	2					Volcanic breccia; clasts composition: essentially epidotized gabbro, 1-2% Pyrite
112,60	114,40													PY	1					QFP? Dark grey, porphyry feldspar with tr-1% of fine disseminated pyrite
114,40	115,30																			QFP, no sulphide; 1cm quartz vein at 114,90m; TCA:75
115,30	118,95													PY	3					Breccia; gabbro composition with disseminated coarse euhedral pyrite grains (2-3%). With pluri-mm calcite veins/filled fractures.
118,95	123,55											X	Ep	PY	2					In situ breccia. Chlorite-epidote-rich zone. Tr-2% Pyrite as coarse grains.
121,00	121,10																			broken cores
122,50	122,50																			Quartz veinlets (<1cm-thick); TCA: 80)
126,30	127,45																			Presence of glaumeroporphyry
127,53	127,60																			QFP dyke, TCA: 70
128,25	128,40																			Down-dip cm-thick plagio-quartz vein
129,00	129,12																			QFP dyke; TCA: 80
129,97	129,97										X									Quartz-chlorite veinlet with sericite alteration along the edges; TCA: 70
131,00	134,20											X	Ep							Chlorite-epidote alteration zone with several pink calcite cm-thick veins (up to 5 per meter) and quartz vein
132,40	133,12																			Zone of high density pink calcite veins. Average TCA: 70
132,55	132,56																			Quartz vein, TCA:45
133,12	133,37													PY	tr					Quartz-calcite-chlorite-(pyrite) vein/alteration zone
138,53	138,53																			Quartz veinlet; TCA: 45

140,41	140,45										X			PY	tr					Quartz-plagio vein; TCA: 50. with sericite alteration: tr. PY.
140,76	140,76																			Quartz veinlet; TCA:85
141,07	141,10													PY						Quartz vein + pyrite alteration (coarse cubes). TCA: 80
141,30	141,30																			Quartz veinlet; TCA: 90
141,69	141,70													PY						Quartz-chlorite vein + pyrite alteration. TCA: 75
142,27	142,32																			Quartz-chlorite vein; TCA: 60
144,55	144,80										X			PY	1					Micro-fracture network with sericite alteration associated; tr-1% fine-grained pyrite
146,30	147,12										X			PY	tr					Zone of sericite/ankerite moderate- to strong alteration, especially along a quartz-chlorite vein (at 146,95 - 146,98) TCA: 60; tr. PY
147,85	149,90										X									Zone of sericite/Ankerite-(pyrite) mod- to strong alteration associated with micro-fractures and local quartz veinlets.
150,00	166,00																			Zone with calcite (pink) and quartz veinlets with no or weak alteration along edges (1-3 veinlets per meter; TCA: 60-70)
171,35	172,00										X			PY	tr					Zone of quartz veinlets with mm-wide sericite alteration zone along the edges (~3 per meter; TCA:45). Tr. PY.
177,05	177,40													PY	1					Disseminated pyrite (no quartz vein nor alteration associated)
181,00	182,15										X			PY	1					Down-dip pyrite-chlorite veinlets with sericite/ankerite alteration along the edges (mm-wide) + pink calcite veinlets
182,80	182,80										X			PY	1					Pyrite-chlorite veinlets with sericite/ankerite alteration along the edges (mm-wide). TCA: 20
184,20	184,85																			broken cores
186,95	187,20												Hem	PY	1					Calcite-pyrite down-dip veinlets with no significant alteration, except a weak hematization.
189,60	190,10												CC	PY	tr					Zone of calcite-quartz veins with ankerite alteration along the edges; tr.PY
191,20	191,30												CC	PY	1					Calcite-quartz-pyrite veinlets with weak ankerite alteration.
195,35	195,35												CC	PY	1					Calcite-chlorite-pyrite veinlet
197,25	197,45												Hem	PY	1					Zone with micro-fractures filled with calcite-pyrite (+ hematite); TCA: 40
199,37	199,39																			Quartz vein (with no significant alteration associated); TCA: 35
200,22	200,24												CC	PY	3					Quartz-hematite vein with moderate pyrite-ankerite alteration; 2-3% pyrite.
200,59	200,60												CC							Quartz vein; with ankerite alteration along the edges; TCA:60.
201,24	201,24																			Calcite veinlet; TCA:40
201,39	201,39																			Calcite veinlet; TCA:60
202,19	202,29													PY	2					Calcite-quartz-chlorite-pyrite vein; 2% pyrite. TCA:80
202,82	202,85												CC	PY	3					Small quartz breccia vein with pyrite-ankerite alteration; 3% pyrite
206,82	206,89												CC							Ankerite alteration zone associated with a 1cm-thick calcite
209,00	211,00																			Zone with small fractures with ankerite alteration along the edges (mm-wide; 3-4 per meter; TCA: 60).
210,70	210,71												CC							Quartz-calcite vein + ankerite alteration along the edges; TCA: 60.
212,95	212,95												CC	PY	1					Calcite veinlets + Ankerite-pyrite alteration (1% PY).
214,45	218,00												CC	PY	10					Zone with down-dip and low-angle pyrite veinlets + ankerite-hematite alteration. Up to 10% pyrite
220,40	220,80												CC	PY	2					Pink calcite-pyrite vein with ankerite-hematite alteration. 1-2% pyrite; TCA: 15
221,00	**221,00**		**EOH**

0,00	1,10	1,10	OB																	Casing/Overburden
1,10	146,00	144,90																		Granite
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Magnetism is absent in the altered zones.
5,50	8,75																			Zone of micro-fractures (3 to 5 per meter; TCA: 15 to 25 and 90+45) with silica alteration zone along their edges (few cm-wide);
5,90	6,05																			Ankerite-silica pervasive alteration with sharp contact giving the impression of a QFP dyke.
11,20	21,30																			Zone of micro-fractures/calcite stringers (2-3 per meter; TCA: 20 and 90+45) with silicification limited to the edges (few mm-wide). A weak epidotization observable on a few cm both sides of the fractures/veins.
21,30	23,30														1					Zone with pervasive epidote alteration (but moderate) with tr-1%of disseminated pyrite (~2 calcite stringers per meter; TCA: 30 and 90+60)
23,30	30,30																			Zone of micro-fractures/calcite stringers (2 per meter; TCA: 35 and 90+55) with silicification limited to the edges (few mm-wide). A weak epidotization is observable on a few cm both sides of the fractures/veins.
30,60	30,80														3					Silica-pyrite alteration zone associated with a calcite-pyrite stringer at 30,70m; 2-3% pyrite; TCA:30
32,34	32,42																			Silica alteration zone associated with three calcite-hematite stringers; TCA: 25
33,26	33,27																			Calcite-epidote vein (TCA: 35); No significant alteration associated
34,35	38,50																			Zone of micro-fractures/calcite stringers (2-3 per meter; TCA: 25 and 90+50) with silicification limited to the edges (few mm-wide). A weak epidotization observablealong fractures/veins (TCA: 90+50).
38,50	43,60																			Unaltered granite, weakly magnetic. Only few zones with silica alteration along fractures (1-2 per meter).
41,47	41,51																			epidote alteration along fracture; TCA: 65
41,75	41,90																			epidote and silica alteration along fracture; TCA: 65
43,74	44,00																			Pervasive silica alteration + presence of leucoxene
45,55	45,95																			Pervasive silica alteration + presence of leucoxene
46,29	46,44																			Pervasive silica alteration + presence of leucoxene
47,50	48,00																			broken cores
48,00	48,95																			Down-dip quartz-chlorite vein + silica-chlorite alteration (or leaching?); presence of leucoxene
50,18	50,18														2					Quartz-calcite-chlorite-pyrite vein (2mm-thick) with silica-epidote alteration; 2% pyrite; TCA: 30
51,00	57,00																			Zone with several calcite stringers/micro-fractures (mm to cm-thick veins). Alteration is only limited to few mm along the edges; TCA: 30-35; 3 to 8 per meter). Granite is weakly magnetic where not altered.
54,00	54,20																			Xenolith of a porphyry intrusive rock
57,00	64,70																			Pervasive epidote/sericite alteration zone, + weak carbonate alteration
58,90	59,75														5					Down-dip calcite-pyrite-chlorite stringers; pyrite is present as blebs in the vein; 5% pyrite
61,70	62,00																			Ankerite-silica alteration zone
63,00	64,70																			Series of pluri-cm wide silica alteration zone along calcite veining; TCA: 40 (2 per meter). Presence of leucoxene in the alteration zone
64,70	66,95																			Weakly magnetic granite (no significant alteration); few fracture-related hematization
66,95	68,15																			Pervasive but moderate epidotization
69,15	69,70																			Reddish granite due to potassic alteration (newly formed Kspar mineral ~ 10%) and calcite (10%). No vein or fractures associated;
69,70	72,35																			Pervasive, but moderate epidote/sericite alteration
72,35	72,90																			Reddish granite due to potassic alteration (newly formed Kspar mineral ~ 10%) and calcite (10%). No vein or fractures associated;
73,60	73,75																			Low-angle calcite stringer (TCA: 15), no significative alteration associated
74,70	74,90														tr					Silica alteration zone associated with narrow calcite stringers; tr. Pyrite
76,35	76,70																			Silica alteration zone associated with narrow calcite veins
78,75	79,70																			Kspar and calcite pervasive alteration; no vein or fractures associated
80,20	80,60																			Silica alteration zone associated with narrow calcite veins

From	To	COMMENTS
80,85	81,00	Silica alteration zone associated with narrow calcite veins
81,50	85,95	Pervasive epidote/sericite alteration zone.
85,95	95,05	Pervasive calcite-Kspar alteration giving the rock a pinkish-orange color
90,00	91,00	Zone with pluri-cm wide silica alteration zone along calcite micro-veins; (5 veins on 1m; TCA: 45)
91,42	91,78	Pervasive and penetrative potassic-(silica?) alteration (Kspar-biotite). Tr-1% pyrite
97,07	97,55	Pervasive and penetrative potassic alteration (Kspar-biotite) associated with mm-thick calcite veins (TCA: 20; biotite along the edges) Tr-1% pyrite
98,30	99,40	Pervasive and penetrative potassic alteration (Kspar-biotite) associated with mm-thick calcite veins (TCA: 30; biotite along the edges) Tr-1% pyrite; presence of leucoxene in the alteration zone.
99,85	100,00	Silica alteration zone along micro-fractures; presence of leucoxene; TCA: 55
100,00	120,00	Pervasive epidote/sericite alteration (weak to mod) with few silica alteration (few mm to cm wide) along calcite stringers (2-4 per meter; TCA: 30-40)
106,28	106,44	Silica alteration associated with a pyrite-calcite vein (5mm-thick); TCA: 20; 1% pyrite
120,00	132,80	Pervasive potassic-carbonate alteration (K-spar and calcite: up to 10-15%). Presence of leucoxene and hematite (specularite); giving the rock a reddish-orange color. No mineralization associated.
123,75	125,00	Series of small fractures with silica alteration; tr. Pyrite (3 per meter; TCA: 60)
129,00	129,55	Aplite dyke, no mineralization associated
130,15	130,90	Silica-carbonate alteration associated with fractures; tr-1% pyrite as disseminated grains
132,60	132,80	5-10% hematite (specularite)
133,50	134,60	Pervasive calcite alteration (strong) and Kspar with up to 5% hematite (specularite)
135,30	138,15	Pervasive calcite alteration zone (5% calcite)
138,15	140,00	Pervasive Kspar, calcite alteration
140,20	140,40	Leached zone and/or silicification; presence of leucoxene
142,00	143,75	Pervasive epidote/sericite alteration
146,00	EOH

0,00	**0,70**	**0,70**																		**Casing/Overburden**
0,70	**116,00**	**115,30**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also present locally affecting preferentially the plagioclase giving the rock a light yellowish-green color. Magnetism is absent in the altered zones.
2,60	3,00													PY	2					Series of three calcite stringers with cm-wide silica-pyrite alteration zone along their edges; TCA: 15 and 30; 1-2% pyrite
4,18	4,18													PY	M					A 4mm-thick massive pyrite vein with a pluri-cm wide silica alteration zone; TCA: 27
5,75	7,15													PY						Pervasive silica alteration zone associated with pyrite-calcite veins
6,30	6,30													PY						A 5mm-thick pyrite-calcite vein with a 2cm-wide carbonate (calcite) alteration zone; TCA: 27
6,84	6,84													PY						A 3mm-thick pyrite-calcite vein with a 2cm-wide carbonate (calcite) alteration zone; TCA: 40
6,94	6,94													PY						A 3mm-thick pyrite-calcite vein with a 2cm-wide carbonate (calcite) alteration zone; TCA: 60
7,07	7,07													PY	1					A 5mm-thick quartz-calcite vein with a 2cm-wide carbonate (calcite) alteration zone; TCA: 45; 1% pyrite
8,30	8,55																			Silica pervasive alteration zone associated with two calcite stringers; TCA: 35
9,36	9,42													PY	2					Silica pervasive alteration zone associated with two calcite stringers; TCA: 10; 2% pyrite in the alteration zone
10,65	10,75													PY	3					Silica-calcite pervasive alteration zone associated with a 2mm-thick calcite-pyrite vein; TCA: 30; 2-3% pyrite
11,55	12,25													PY	1					Series of four calcite-(pyrite) stringers and micro-fractures with a 1cm-wide silica alteration zone along their edges; TCA: 30; tr-1% pyrite
12,85	15,55																			Unaltered granite, weakly magnetic.
17,10	17,90																			Pervasive silica-calcite alteration zone associated with a 5cm-thick quartz vein; TCA: 50. No mineralization associated
18,40	18,70																			Pervasive silica alteration zone. No vein or mineralization associated
21,50	21,58													PY	2					Silica-pyrite alteration zone, no vein associated. 1-2% pyrite
21,70	21,85																			Xenolith
23,15	24,05																			Series of 5 calcite stringers with mm-wide silica-carbonate alteration zone along the edges. TCA: 35-45
24,77	24,85																			Xenolith
28,65	29,65													PY	2					Series of 12 calcite stringers with <1cm-wide silica-(pyrite) alteration zone along the edges; TCA: ~40; tr-2% pyrite
32,08	32,14													PY	1					Silica-calcite-pyrite alteration zone; 1% pyrite. No vein associated
34,90	35,00																			Three calcite stringers with only a few mm-wide silica alteration zone along their edges; TCA: 70
39,40	45,05																			Weakly magnetic granite.
43,10	43,23																			Silica-carbonate alteration associated with a calcite stringer; TCA: 60
43,88	44,00																			Xenolith of a porphyry intrusion
44,45	44,59																			Xenolith of a porphyry intrusion
49,14	50,05													PY	tr					Pervasive silica-carbonate alteration; tr. Pyrite
51,70	52,65													PY	2					Series of 5 calcite-(pyrite) stringers with ~1cm-wide silica-alteration zone; tr-2% pyrite; TCA: 25
53,15	54,00													PY	2					Series of 3 calcite-(pyrite) stringers with ~1cm-wide silica-alteration zone; 1-2% pyrite; TCA: 25
54,65	55,00													PY	3					Pervasive silica-carbonate alteration zone associated with a 4mm-thick quartz-calcite-pyrite vein; TCA: 25; 3% pyrite
55,85	57,90													PY	3					Pervasive silica-carbonate alteration zone associated with a series of pluri-mm-thick calcite-pyrite and calcite-quartz-pyrite veins (8 to 10 per meter; TCA: 20; 2-3% pyrite)
58,15	60,20													PY	2					Pervasive silica-carbonate alteration zone associated with a series of pluri-mm-thick calcite-pyrite and calcite-quartz-pyrite veins (3 to 6 per meter; TCA: 20; 1-2% pyrite)
62,25	62,70													PY	10					Pervasive silica-carbonate alteration zone associated with a 6mm-thick quartz-calcite-pyrite vein; TCA: 25; 10% pyrite
63,50	63,72																			Xenolith of a porphyry intrusion
66,55	66,80																			Pervasive silica-carbonate alteration; no vein or mineralization associated.
68,88	68,89													CPY	tr					Calcite vein with hematite/geothite along the edges; tr-chalcopyrite; TCA: 30.
69,60	70,60																			Pervasive, but weak silica alteration zone associated with few calcite stringers and one quartz vein; TCA: 35
71,33	71,50																			Weak silica alteration zone

0,00	**3,00**	**3,00**	**OB**																	**Casing/Overburden**
3,00	**7,00**	**4,00**																		**QFP**
																				Dark grey, porphyry of plagioclase, weakly sericitized; Foliation developed; TCA: 35
7,00	**81,65**	**74,65**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Locally, it is a Potassic-carbonate alteration (Kspar-calcite) that affects the granite. Magnetism is absent in these altered zones.
7,00	8,00													PY	tr					Pervasive silica-carbonate alteration (due to QFP?). Few calcite stringers associated; TCA: 40; tr. pyrite
8,00	13,30																			Epidote/sericite pervasive alteration affecting the plagioclase (giving the rock a light yellowish-green color). Few pluri-cm wide carbonate alteration/leaching associated with calcite stringers
13,30	20,00																			Unaltered granite; weakly magnetic
13,45	14,00																			Pervasive carbonate alteration zone
13,88	13,90																			Quartz-Kspar (pegmatite) vein; TCA: 80
21,05	21,52																			Pervasive carbonate-(silica) alteration associated with calcite stringers; TCA: 30
22,06	22,47																			Pervasive carbonate-(silica) alteration associated with calcite stringers; TCA: 30
24,50	25,05																			Pervasive carbonate-(silica) alteration associated with calcite stringers; TCA: 15
25,30	28,75																			Pervasive carbonate-(silica) alteration associated with calcite stringers; TCA: 10 to 20; no mineralization associated
31,30	33,30																			Pervasive silica-carbonate alteration associated with calcite stringers; TCA: 20 to 30; no mineralization associated
36,75	37,05													PY	1					Pervasive silica alteration (+leaching) associated with quartz-hematite veins (0,5 cm-thick); TCA: 15; tr-1% pyrite
37,05	39,70																			Silica alteration zone (moderate to strong)
41,00	44,00																			Pervasive silica-calcite alteration zone including two quartz vein (0,5cm-thick) with ankerite alteration along the edges; TCA: 40
46,60	46,85													PY	2					Silica-(pyrite) alteration zone associated with a calcite-(hematite) vein (purple calcite); 1-2% pyrite; TCA: 40
47,40	47,60																			Silica-ankerite(?) alteration zone
48,50	49,50													PY	1					Silica alteration zone (gradational contacts); locally 1% pyrite
49,85	50,80													PY	1					Pervasive silica-sericite/ankerite(?) alteration (caramel color), associated with three quartz veins (1 to 2cm-thick; TCA: 25 and 70); tr-1% pyrite
51,00	51,20													PY	1					Pervasive silica-sericite/ankerite(?) alteration (caramel color), associated with two quartz stringers (TCA: 50); tr-1% pyrite
51,65	51,95													PY	2					Pervasive silica-sericite/ankerite(?) alteration (caramel color), associated with a quartz stringer (TCA: 70); 2% pyrite
53,30	53,52													PY	1					Pervasive silica-sericite(?) alteration associated with a 4cm-thick quartz vein; TCA: 50; tr-1% pyrite in the alteration zone
54,90	56,25																			Pervasive silica alteration/leaching(?) containing a 1cm-thick quartz vein (TCA: 80); tr. of finely disseminated pyrite; presence of leucoxene.
57,10	58,70																			Pervasive silica alteration/leaching(?) containing two quartz vein (<1cm-thick; TCA: 50 and 30); tr. pyrite; locally presence of leucoxene.
60,45	61,24																			Pervasive calcite-Kspar alteration giving the rock a pinkish-orange color
61,40	64,30													PY	tr					Pervasive silica-carbonate alteration zone including very few calcite and quartz stringers (TCA: 45). No mineralization associated. Locally tr. pyrite.
65,25	66,40																			Pervasive carbonate-(silica) alteration zone including a 4cm-thick quartz vein (TCA: 25). No mineralization associated.
68,65	70,20													PY	tr					Pervasive carbonate-(silica) alteration zone including a 10cm-thick quartz vein (TCA: 55). Locally tr. pyrite.
71,45	71,82													PY	tr					Pervasive silica-sericite-carbonate alteration zone containing a 3cm-thick quartz vein; TCA: 60; tr. pyrite
74,00	75,25													PY	1					Pervasive silica-sericite-carbonate alteration zone containing a quartz stringer with 1% pyrite along the edges; TCA: 40;
76,90	79,10													PY	1					Pervasive silica-sericite-carbonate alteration zone containing three quartz veins (1 to 2cm-thick; TCA: 80) tr-1% pyrite as fine disseminated grains
80,90	81,65													PY	1					Strong and pervasive silica-sericite alteration (caramel color) including a 8cm-thick quartz vein (with tr-1% pyrite); TCA: 45
81,65	**104,60**	**22,95**																		**QFP**
																				Dark brownish-green color. Locally with a weak clivage/schistosity developed. Tr pyrite finely disseminated
83,45	84,45													PY	tr					Zone with a clivage developed (TCA: 60). Tr. Pyrite

94,53	94,54													PY	tr					Narrow quartz vein, TCA: 20; tr pyrite
95,32	95,32													PY	1					Pyrite stringer; TCA: 70; (1% pyrite)
102,00	102,00																			Clivage; TCA: 60
103,30	103,30																			Clivage; TCA: 25
104,60	**113,25**																			**Granite**
																				Almost pervasively silicified. Cross-cut by few quartz veins with pyrite along the edges; Uphole contact at TCA: 60; Downhole contact at TCA: 25
106,50	113,25																			Pervasive silica alteration zone
107,55	107,59													PY	1					Quartz-(pyrite) vein; TCA: 50; 1% pyrite
109,76	109,76													PY	1					Quartz vein + pyrite (tr-1%); TCA: 60
111,75	111,80													PY	3					3% pyrite
111,85	111,90													PY	tr					Quartz-chlorite vein; TCA: 60; tr pyrite
112,12	112,15													PY	1					Quartz-chlorite vein; TCA: 70; 1% pyrite
113,25	**129,90**	**16,65**																		**QFP**
																				Dark brownish-green color. Locally with a weak clivage/schistosity developed. Tr pyrite finely disseminated. Locally potassic alteration (Porp of plagioclase coated by Kspar)
113,47	113,60													PY	1					Quartz stringers (black-grey) with 1% pyrite. Ankerite-silica alteration is associated
119,24	119,25													PY	1					Quartz stringers (TCA: 90); with 1% pyrite
119,38	119,39													PY	1					Quartz stringers (TCA: 90); with 1% pyrite
121,00	121,75																			Broken core
128,15	129,90																			Potassic alteration (porphyry of plagioclase coated by Kspar)
128,94	128,95																			Quartz stringers + ankerite(?)-silica alteration along the edges; TCA: 70
129,90	**130,70**	**0,80**																		**Granite**
																				Idem as the granite from 7,00 - 81,65m
130,70	**133,25**	**2,55**																		**QFP**
																				Dark brownish-green color. Locally with a weak clivage/schistosity developed. Tr pyrite finely disseminated
131,00	131,80																			Clivage/schistosity developed; TCA: 35
133,25	**135,10**	**1,85**																		**Granite**
																				Strongly altered into Kspar-calcite-silica giving the rock a dark orange color
135,10	**138,25**	**3,15**																		**QFP**
																				Reddish color due to pervasive hematization. Locally mylonitized(?). Uphole contact TCA: 45; Downhole contact TCA: 30
138,25	**143,72**	**5,47**																		**Granite**
																				Pervasively altered into calcite-hematite (and/or Kspar). Reddish color
142,80	143,72																			Unaltered granite (weak epidote/sericite) alteration
143,72	**145,13**	**1,41**																		**QFP**
																				Dark brownish-green color. Locally with a weak clivage/schistosity developed. Tr pyrite finely disseminated
145,13	**206,00**	**60,87**																		**Granite**
																				Alternance of epidote-sericite alteration zone and calcite-hematite-Kspar(?) alteration zone
145,70	148,15																			Pervasive calcite alteration zone containing few calcite veins; TCA:70
148,65	149,25																			Pervasive calcite-hematite-Kspar alteration zone
152,00	152,37																			Large xenolith
156,18	156,26																			Calcite-hematite alteration associated with a 0,5cm-thick quartz vein; TCA: 50

COMMENTS
Pervasive calcite-hematite-Kspar alteration zone, sharp contact (both downhole and uphole)
Silica-hematite alteration zone associated with a calcite-hematite stringer: TCA: 50
Silica-carbonate-(Ank?) alteration zone associated with a 5cm-thick quartz-calcite-chlorite vein; TCA: 60
Pervasive silica-calcite alteration zone containing local pyrite along calcite stringers
Pyrite alteration zone (1% pyrite)
Pyrite alteration zone (1% pyrite) associated with a pink calcite-(quartz) stringers; TCA: 15
Pervasive silica-hematite alteration containing few quartz-pyrite and calcite-pyrite stringers; 1-2 per meter, TCA: 15 and 35. Locally 1% pyrite.
Strong and pervasive silica-(calcite) alteration (+leaching). Few quartz and calcite stringers associated; TCA: ~50
Broken core
Pyrite stringers associated with hematite-silica alteration along the edges;TCA: 20; 5% pyrite

										Alteration Intensit			CODE	Sulphide			Veins			
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	COMMENTS
0,00	12,00	12,00																		Casing/Overburden
12,00	122,00	110,00																		Granite
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also present locally affecting preferentially the plagioclase giving the rock a light yellowish-green color. Magnetism is absent in the altered zones.
12,00	39,60																			Weakly magnetic granite containing few dm-wide zones of epidote/sericite alteration (not magnetic). Presence of few calcite stringers with only a weak alteration associated
26,55	27,70																			Calcite-(±potassic) alteration (gradational downhole and uphole contacts)
32,64	32,82																			Zone of leaching/silica-carbonate alteration associated with calcite stringers; TCA: 40; presence of leucoxene
37,00	37,50																			Series of calcite stringers with silica alteration along their edges; TCA: 35 and 90+50
39,84	39,86																			Chlorite-quartz vein; TCA: 55; no significant alteration associated
46,35	46,80																			Series of calcite stringers with silica alteration along their edges; TCA: 50
46,90	46,92																			Quartz-chlorite vein; no significant alteration associated; TCA: 35
51,05	51,25																			Quartz-carbonate stringers network associated with a pervasive leaching. No mineralization associated
54,83	54,97																			Silica-carbonate alteration associated with a 5mm-thick quartz-calcite vein; TCA: 40
56,30	60,00																			Zone with a series of down-dip and low-angle calcite stringers with hematite/geothite along their edges (2-3 per meter)
63,50	66,00													PY	tr					Pervasive carbonate-silica alteration (and/or leaching) associated with few calcite/quartz stringers; TCA: 15; tr. Pyrite
70,95	71,05													PY	1					Down-dip calcite veins + carbonate alteration; 1% pyrite
71,40	71,55													PY	2					Down-dip calcite veins + carbonate alteration; 2% pyrite
77,15	78,50													PY	1					Pervasive silica-carbonate alteration zone associated with few narrow calcite veins; TCA: 80; tr-1% pyrite
81,50	81,70																			Calcite-hematite stringers; TCA: 15; weak hematization associated
82,20	83,60													PY	1					Pervasive leached zone (+ hematization); presence of leucoxene; tr.-1% pyrite
82,95	83,05																			Calcite vein (late?; open-space filled fracture)
84,15	94,00																			Series of calcite stringers with a cm-wide silica alteration zone along the edges (2 to 5 per meter; TCA: 45 to 60)
89,85	91,35																			Unaltered granite, weakly magnetic
94,75	95,40																			Weakly leached zone (+ hematization); presence of leucoxene
98,00	98,60																			Series of 5 calcite stringers with a cm-wide zone along the edges; TCA: 55
98,75	100,15																			Unaltered granite, weakly magnetic
101,50	101,85																			Silica pervasive alteration zone associated with several calcite stringers; TCA: 40
102,00	103,20																			Series of calcite stringers with silica alteration zone (cm-wide) along their edges; 5 per meter; TCA: 55
103,80	103,95																			Pervasive carbonate-(silica) alteration; presence of leucoxene
108,00	110,00																			Unaltered granite, weakly magnetic
112,85	115,60																			Unaltered granite, weakly magnetic
116,14	116,21																			Carbonate-silica alteration zone associated with a calcite stringers; TCA: 40
117,00	117,20																			Carbonate alteration zone
118,45	120,55																			Unaltered granite, weakly magnetic
122,00	EOH

0,00	**3,00**	3,00	**OB**																	**Casing/Overburden**
3,00	**116,40**	**113,40**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Magnetism is absent in the altered zones.
3,00	19,80													PY	5					A series of quartz-pyrite veins/stringers (3 to 5 per meter; TCA: 15) with a 1cm-thick silica alteration/leaching zone along the edges; locally 3-5% pyrite
19,80	31,65																			Unaltered granite; weakly magnetic. Few zones are weakly altered into epidote/sericite and silica along the edges of calcite stringers. Magnetism is abs in these zones
28,97	29,06													PY	tr					Silica alteration zone, tr. Pyrite
29,84	29,94													PY	1					1% pyrite associated with 2 quartz-calcite stringers; TCA: 45
30,55	30,80													PY	tr					Aplite dyke; tr. Pyrite
31,00	31,12																			Strongly leached zone (presence of leucoxene) associated with a calcite vein (TCA: 15).
31,65	36,45																			Zone of pervasive, but weak epidote/sericite alteration affecting the plagioclase giving the rock a light yellowish-green color. Presence of few calcite-(quartz) stringers with silica alteration along their edges (1 per meter; TCA: 45)
38,40	38,90													PY	2					Down-dip calcite-chlorite vein with silica-pyrite alteration zone along the edges. 1-2% pyrite
39,10	39,30													PY	2					Down-dip quartz-pyrite stringer + silica alteration; 1-2% pyrite
40,30	40,70													PY	2					Down-dip quartz-pyrite stringer + silica alteration; 1-2% pyrite
41,10	41,80													PY	2					Down-dip quartz-calcite-pyrite stringer + silica alteration; 1-2% pyrite
42,70	43,00													PY	1					Series of three calcite stringers with a cm-wide silica alteration zone along the edges; tr-1% pyrite
45,30	45,80													PY	2					Down-dip quartz-pyrite stringer + silica alteration; 1-2% pyrite
51,45	51,52													PY	3					Pyrite stringers with silica alteration zone along the edges; TCA: 40; 2-3% pyrite
54,30	116,40																			Pervasive epidote/sericite alteration
54,30	54,85													PY	2					Series of three pyrite-calcite stringers with a pluri-mm wide silica-pyrite alteration zone along the edges; 2% pyrite; TCA: 15
55,05	55,70													PY	2					Almost pervasive silica alteration zone with 2% disseminated pyrite
56,36	56,40													PY	1					Silica-pyrite alteration zone; tr-1% pyrite
56,93	56,94																			Quartz vein, no alteration associated; TCA: 40
58,65	58,85													PY	2					Almost pervasive silica alteration zone with 2% disseminated pyrite
59,60	63,70																			Zone with calcite-hematite stringers with no or weak silica (locally pyrite) alteration along the edges (~2 per meter; TCA: 45)
63,75	63,88													PY	3					Pyrite-calcite vein with a pluri-cm wide silica-(pyrite) alteration zone along the edges; 3% pyrite; TCA: 45
64,45	64,70													PY	2					Pervasive silica-(pyrite) alteration zone associated with calcite-chlorite-(pyrite) stringers; 1-2% pyrite; TCA: 45
65,55	65,85													PY	2					Pervasive silica-(pyrite) alteration zone associated with calcite-chlorite-(pyrite) stringers; 1-2% pyrite; TCA: 30
67,16	68,00													PY	3					Pervasive silica-(pyrite) alteration zone associated with calcite-chlorite-(pyrite) stringers; 2-3% pyrite; TCA: 20 and 0.
68,10	68,50													PY	2					Down-dip calcite-pyrite stringers with pluri-mm wide silica-(pyrite) alteration along the edges; 1-2% pyrite
71,20	72,90													PY	3					Pervasive silica-pyrite alteration zone associated with down-dip quartz-pyrite and calcite stringers; 3% pyrite
75,25	75,55													PY	2					Pervasive silica-pyrite alteration zone associated with calcite-pyrite stringers (TCA: 15); 2% pyrite
75,67	75,93													PY	2					Pervasive silica-pyrite alteration zone associated with calcite-pyrite stringers (TCA: 15); 2% pyrite
77,00	77,14													PY	1					Pervasive silica-pyrite alteration zone associated with calcite-pyrite stringers (TCA: 15); 1% pyrite
79,43	79,52																			Quartz vein (±carbonate) with a cm-wide silica alteration zone along the edges. No pyrite
81,42	81,51													PY	2					Pervasive silica-(pyrite) alteration zone; 1-2% pyrite
82,16	82,19													PY	2					Pervasive silica-(pyrite) alteration zone; 1-2% pyrite
82,36	82,43													PY	2					Pervasive silica-(pyrite) alteration zone; 1-2% pyrite
84,46	84,60													PY	tr					Pervasive silica alteration associated with a calcite-hematite stringers; tr. Pyrite; TCA: 25
85,00	88,00																			Zone with calcite stringers (3 per meter; TCA: 25) with only a mm-wide silica alteration zone. Granite is pink, relatively unaltered
91,20	92,00																			Zone with hematite-goethite alteration along micro-fractures (5 per meter; TCA: various) giving the rock a light orange-red color.

92,70	93,20																			Zone with carbonate-hematite pervasive alteration giving the rock a rusty red-pink color (+ open-space filled fractures). TCA: 20. No mineralization associated.
94,24	94,31													PY	tr					Quartz vein + silica-calcite-ankerite(?) alteration zone along the edges; tr. Pyrite; TCA: 30
97,17	97,47																			Xenolith of banded iron formation (magnetite bands in alternance with massive to semi-massive pyrite pluri-cm bands; chert-chlorite-actinolite beds are also present).
97,59	97,68																			Xenolith of fine-grained mafic volcanic rock
98,85	101,00													PY	3					Down-dip quartz-(pyrite) vein (1cm-thick) with a pervasive silica-pyrite alteration zone along the edges; 2-3% pyrite
102,00	103,75																			Series of small fractures with a pluri-mm wide silica alteration zone along the edges (7-8 per meter; TCA: ~20)
103,75	104,60													PY	2					Calcite-pyrite small vein (TCA:10) with a 3cm-wide silica alteration zone along the edges; 2% pyrite
104,60	107,40																			Zone of calcite stringers and micro-fractures with a mm-wide altered edges (~5 per meter; TCA: 25-30)
107,40	109,10													PY	3					Series of down-dip calcite-(pyrite)-(quartz) stringers with a pluri-cm wide silica-calcite-(pyrite) alteration zone along their edges; micro-faulted over few mm. 1-3% pyrite
109,10	111,75													PY	10					Pervasive calcite alteration; 5-10% calcite; Cross-cut by few micro-fractures with pluri-mm wide silica alteration zone along their edges. Various TCA
111,75	112,50													PY	4					A 1cm-thick down-dip quartz-pyrite vein with a pluri-cm wide silica-pyrite-calcite alteration zone along the edges; 3-4% pyrite
112,50	113,13													PY	2					Down-dip 1mm-thick chlorite-calcite-pyrite vein with a pluri-mm wide silica-pyrite-calcite alteration zone along the edges; 2% pyrite
114,40	115,45													PY	3					Series of down-dip mm-thick chlorite-calcite-pyrite vein with a pluri-mm wide silica-pyrite-calcite alteration zone along the edges; 3% pyrite
115,72	116,08																			Xenolith of volcanic rock
116,40	**122,20**	**5,80**																		**Gabbro/breccia**
																				Fine- to medium-grained gabbro (gradational contact with previous unit). Locally brecciated and/or large proportion of xenoliths. Clasts/xenoliths are monogenic and partially digested .
116,40	116,80													PY	5					Down-dip quartz-calcite-pyrite 1cm-thick vein with pyrite alteration (5% pyrite)
122,20	**148,00**																			**Mafic volcanic rock**
																				Very fine-grained. Dark green. Cross-cut by several calcite filled fractures. Locally altered into chlorite. Several quartz vein (pluri-cm thick) occur containing pyrite-pyrrhotite-chalcopyrite and locally visible gold.
127,58	127,60													PY	2					Quartz-(calcite) vein + pyrite (2%); TCA: 65
127,50	128,00																			broken cores
128,37	128,45													PY	3					Quartz vein with pyrite along the edges, 3% pyrite; TCA: 55
128,63	128,70													PY	3					Quartz vein with pyrite along the edges, 3% pyrite; TCA: 55
130,25	130,95													CPY	1					Zone with pyrite-(chalcopyrite) stringers and pyrite-quartz stringers with various orientations (TCA: 0 to 90). 5% pyrite; tr-1% Chalcopyrite
130,95	132,25													CPY	2					Down-dip quartz vein containing 2-3% pyrrhotite; 5% pyrite; 1-2% chalcopyrite in the vein and along the edges
132,39	132,42													VG	tr					Quartz-pyrite vein (semi-massive pyrite) containing visible gold (2 grains). TCA: 40
132,79	132,84																			Quartz-calcite vein; TCA: 80
136,07	136,17													PY	1					Calcite-quartz-(pyrite) vein; tr-1% pyrite; TCA: 25
147,10	148,00																			broken cores

7 HOLE DESCRIPTION		HOLE LOCATION		HOLE ORIENTATION	
PROJECT:	Carscallen	NORTHING:	5358338 N, NAD83	AZIMUTH:	90
HOLE NO:	CAR-15-2009	EASTING:	451404 E, NAD83	INCLINATION:	-50
LOGGED BY:	Eric Hebert	ELEVATION:		FINAL DEPTH:	161m
START DATE:	July 18th 2009	Line 7+00; Station 4+625N		CORE SIZE:	NQ
FINISH DATE:	July 19th 2009				

Depth			Rock Type					Structure		ALTERATION Alteration Intensity			CODE	Mineralisation Sulphide			Veins			COMMENTS
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	
0,00	4,50	4,50	OB																	Casing/Overburden
4,50	161,00	156,50																		Granite
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Locally, it is a Potassic-carbonate alteration (Kspar-calcite) that affects the granite. Magnetism is absent in these altered zones.
4,50	11,75																			Unaltered granite, weakly magnetic; containing few fractures/calcite stringers with silica alteration on the edges
12,00	12,90																			Series of 6 calcite stringers with leaching/silica-carbonate alteration along their edges; TCA: 25
17,65	17,90																			QFP dyke with silica alteration on each sides (and leaching: presence of leucoxene); TCA: 25
19,00	21,05																			Series of low-angle calcite stringers with silica-carbonate alteration/leaching zone along their edges; (2 or 3 per meter; TCA: 15)
25,40	26,80																			Pervasive carbonate alteration + leaching associated with several calcite fine stringers; TCA: 10 and 90+70
28,55	28,85													PY	tr					Pervasive carbonate alteration (ankerite?) associated with a calcite down-dip vein (TCA: 15); tr-1% pyrite as a fine stringer)
29,30	29,65																			Series of three calcite stringers with silica alteration zones along their edges; TCA: 70
30,00	35,00																			Zone with few calcite stringers + silica alteration (1 or 2 per meter; TCA: 60)
35,00	35,50																			Pervasive leaching and/or carbonate alteration. No mineralization associated
38,55	42,50																			Zone with few calcite stringers + silica alteration (2-3 per meter; TCA: 45)
42,80	44,00																			Down-dip calcite stringers with silica alteration zone along the edges (<1cm-wide)
44,60	47,00																			Down-dip calcite stringers with silica alteration zone along the edges (<1cm-wide)
49,70	49,90																			Xenolith of a porphyry intrusion
49,75	51,65																			Strong and pervasive silica alteration zone
51,65	53,60													CPY	tr					Strong and pervasive silica-sericite alteration; tr. Pyrite; tr. Chalcopyrite
53,60	53,85													PY	10					Quartz-pyrite veins; TCA: 30; 10% pyrite
53,85	54,64													PY	tr					Strong and pervasive silica-sericite alteration; tr. Pyrite.
55,00	56,40																			Pervasive silica alteration zone associated with few calcite stringers; TCA: 70
56,40	64,00																			Unaltered granite, weakly magnetic; containing few epidote/sericite and/or silica alteration zones along calcite stringers.
58,47	58,75																			Pervasive calcite alteration (+Kspar?) associated with a quartz-chlorite vein; TCA: 50
65,90	68,00																			Pervasive, but weak to moderate carbonate alteration/leaching. Locally calcite crystals occurs between grains
73,10	74,20																			Pervasive, but moderate carbonate alteration (calcite) associated with few calcite stringers; TCA: 0 and 45
74,55	75,00													PY	1					Series of four calcite stringers with cm-wide silica-carbonate alteration zone along their edges; TCA: 30; tr-1% pyrite
77,10	78,25													PY	1					Series of calcite stringers (>10 over a meter) with cm-wide silica-carbonate alteration zone along their edges; TCA: 30 to 45; tr-1% pyrite; goethite is present as weathering?
79,60	80,65													PY	tr					Pervasive silica-carbonate alteration associated with calcite stringers and one quartz vein (1cm-thick); TCA: 60; tr. Pyrite
89,85	91,90																			Unaltered granite, weakly magnetic
91,90	99,00																			Zone with few calcite stringers (~1 per meter) with a cm-wide carbonate-(silica) alteration zone along the edges; TCA: ~50
99,35	99,65																			Pervasive carbonate alteration associated with few calcite stringers; TCA: 20
100,28	100,50																			Pervasive carbonate alteration associated with few calcite stringers; TCA: 21
100,90	101,60																			Series of five calcite stringers with pluri-cm wide carbonate-(silica) alteration zone along the edges
105,40	106,75																			Pervasive carbonate alteration zone associated with calcite stringers with various orientations
107,50	108,05																			Pervasive carbonate alteration zone associated with calcite stringers with various orientations
108,00	125,00																			Alternance of unaltered granite (weakly magnetic) and epidote/sercite alteration zones. Local silica alteration along the edges of calcite stringers (1 or 2 per meter; TCA: various)
113,54	113,55																			Quartz vein; no alteration associated, no mineralization; TCA: 30
125,00	125,95													PY	tr					Pervasive calcite-silica alteration zone associated with calcite stringers; tr. Pyrite
128,00	128,55																			Silica-carbonate alteration zone associated with calcite stringers; TCA: 25 and 40

0,00	**1,50**	**1,50**	**OB**																	**Casing/Overburden**
1,50	**134,00**	**132,50**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Locally, it is a Potassic-carbonate alteration (Kspar-calcite) that affects the granite. Magnetism is absent in these altered zones.
1,50	7,50																			Pervasive carbonate (calcite) alteration zone giving the rock a light grey color. Contains few calcite stringers (Down-dip)
9,85	10,80																			Pervasive carbonate (calcite) alteration zone giving the rock a light grey color. Contains few calcite stringers; TCA: 30
17,27	18,25													PY	tr					Silica-carbonate alteration zone containing one quartz stringers and few calcite stringers; TCA: 70; tr pyrite
18,25	31,00																			Epidotized granite with few calcite stringers (1 to 3 per meter; TCA: 35 to 60) with ~1cm-wide silica alteration zone along their edges. No mineralization associated
33,30	33,45																			Series of two quartz-chlorite-calcite veins associated with a silica pervasive alteration zone; TCA: 60
34,10	34,45													PY	tr					Quartz-chlorite vein + ankerite-silica alteration along the edges; TCA: 10; tr pyrite
35,95	36,05																			Quartz stringers; no mineralization associated
43,00	43,01																			Calcite stringer; TCA: 40
44,00	44,45																			Pervasive silica alteration zone containing fine calcite stringers; TCA: 20
45,00	54,90													PY	1					Pervasive silica alteration zone giving the rock a dark medium grey color. Few quartz stringers associated. Tr-1% pyrite finely disseminated
45,90	46,00													PY	5					5% pyrite as alteration around a quartz stringer; TCA: 45
50,30	50,50																			Aplite dyke, xenolith?
55,90	63,55													PY	1					Pervasive silica alteration zone giving the rock a dark medium grey color. Few quartz stringers associated. Tr-1% pyrite finely disseminated
57,65	57,90													PY	1					Calcite-pyrite vein; TCA: 15; 1% pyrite
58,50	59,15													PY	10					Zone with up to 10% pyrite associated with a quartz-calcite vein; TCA: 20
63,55	73,10																			Strong and pervasive epidote-sericite alteration affecting the plagioclase. Few calcite and/or quartz veins/stringers with silicified edges (~1 per 2 meters; TCA: ~60). No mineralization associated
73,10	81,80													PY	1					Pervasive silica alteration zone giving the rock a dark medium grey color. Few quartz stringers associated. Tr-1% pyrite finely disseminated. Locally se massive pyrite vein (+quartz)
74,00	75,40													PY	10					QFP dyke, silicified(?) with 5-10% pyrite as stringers (parallel to the main clivage); TCA: 60
78,85	78,90													PY	SM					Down-dip semi-massive pyrite vein
79,95	80,27													PY	SM					Semi-massive pyrite vein (+quartz); TCA: 10
81,80	94,00																			Epidotized granite cross-cut by several calcite stringers with a ~10cm-wide silica alteration zone (2-3 per meter; TCA: 20 and 60. No significant mineralization associated
94,00	96,55																			Pervasive silica alteration zone (tr pyrite finely disseminated). Few calcite stringers associated; TCA: 70
98,87	99,60													PY	2					Down-dip pyrite-calcite stringer with local silica alteration along the edges; 1-2% pyrite
103,10	103,50																			Pervasive silica alteration zone including a 1cm-thick quartz vein (+calcite)
104,80	106,10													PY	2					Down-dip pyrite-calcite stringer with local silica alteration along the edges; 1-2% pyrite
110,40	114,70													PY	tr					Pervasive carbonate alteration zone (calcite) giving the rock a light grey color; tr pyrite
115,95	116,47													PY	1					Pervasive silica-carbonate alteration zone including two quartz-chlorite veins (1cm-thick) at 116,19m and 116,23m; TCA: 70; tr-1% pyrite
122,00	123,70													PY	tr					Silica-carbonate alteration zone including a 1cm-thick quartz vein; TCA: 70; tr pyrite
127,23	127,34																			Silica-carbonate alteration zone including a 0,5cm-thick quartz vein; TCA: 55;
131,00	134,00													PY	1					Pervasive silica-carbonate alteration zone; locally 1% pyrite
134,00	EOH

0,00	**3,00**	3,00	**OB**																	**Casing/Overburden**
3,00	**158,00**	**155,00**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Magnetism is absent in the altered zones.
6,55	9,15																			Series of calcite stringers with cm-wide silica alteration zone along edges (~3 stringers per meter; TCA: 50)
9,30	9,50																			Silica alteration zone; no vein associated
9,50	28,45																			Weakly magnetic granite; no alteration associated
15,70	16,45																			Pervasive silica alteration; presence of leucoxene
17,30	17,80																			Down-dip micro-fractures with epidote/sericite alteration zone along the edges
19,10	19,20																			Silica alteration zone along fractures; TCA: 45
23,45	23,55																			Silica alteration zone along a 1 cm-thick calcite-chlorite veins; TCA: 60
28,45	40,90																			Granite, not magnetic; pervasive but weak epidote/sericite alteration affecting the plagioclase
33,80	33,90													PY	1					Silica-pyrite alteration zone associated with a 1cm-thick calcite vein; TCA: 85; 1% pyrite
34,00	34,40													PY	2					Silica-pyrite alteration zone associated with a 1cm-thick calcite vein; TCA: 40; 1-2% pyrite
35,05	35,80													PY	3					Series of 4 calcite stringers with a 1cm-wide silica alteration zone; locally pyrite is associated in a proportion of 3%; TCA: 25
38,30	40,00																			Series of calcite stringers with a 1cm-wide silica alteration (3 to 5 per meter; TCA: 35)
42,34	42,55												K	PY	10					Potassic alteration zone (Kspar-biotite) associated with 10% pyrite; foliation is developed. Pyrite parallel to foliation; TCA: 40
42,55	43,25													PY	3					Leaching area (or weak silicification) presence of leucoxene; 2-3% pyrite finely disseminated; 1%Chalcopyrite
43,25	50,30																			Calcite-(Kspar) pervasive alteration
46,30	47,00													CPY	1					Silica/leaching alteration zone; presence of leucoxene. 1% Chalcopyrite; 1% pyrite
50,30	68,60																			Strong and pervasive potassic (Kspar)-calcite-hematite(?) alteration giving the rock a dark purple-orange color. Gradational uphole and downhole contacts
63,25	63,85																			White Kspar alteration zone
69,10	69,80													PY	10					Foliation well-developed; Kspar-biotite and silica-pyrite alteration; 10% pyrite (locally 15%); developed parallel to foliation
69,90	70,40													PY	1					Down-dip quartz-calcite vein; 1% pyrite along the edges
72,10	72,80																			Down-dip calcite vein; no alteration associated
76,00	84,60																			Pervasive, but weak epidote/sericite alteration (affecting plagioclase)
76,15	76,75													PY	tr					Down-dip calcite stringers; silica alteration; tr. Pyrite
80,60	82,10													PY	1					Series of calcite stringers (3 per meter; TCA: 60) with cm-wide silica alteration zone (1% pyrite)
82,25	82,90													CPY	1					Pervasive silica alteration zone; 2% pyrite; tr-1% chalcopyrite as disseminated grains
83,60	83,62																			Calcite-quartz vein; TCA: 20; no alteration associated
83,90	83,91																			Quartz vein; no alteration associated; TCA: 60
84,60	85,25																			Series of calcite stringers (8 on 1 meter; TCA: 50) with a pluri-mm wide silica alteration; zone along the edges
88,00	101,30																			Pervasive, but weak epidote/sericite alteration (affecting plagioclase)
88,15	88,40																			Silica-pyrite pervasive alteration associated with a 2cm-thick calcite vein; TCA: 60; 2% pyrite
89,85	90,00													PY	2					Silica-pyrite alteration zone 2% pyrite
90,65	90,85													PY	10					Pervasive pyrite-silica alteration zone including quartz-pyrite vein; TCA:60; 10% pyrite up to 15%.
94,20	94,50													PY	1					4cm-thick quartz vein (TCA: 10) with pyrite-chalcopyrite (tr-1% pyrite; tr. Chalcopyrite).
94,50	94,95													PY	tr					Pervasive silica-carbonate alteration associated with calcite stringers; TCA: 45; tr. Pyrite
96,70	98,00																			Series of calcite stringers (2 per meter; TCA: 60) with 1cm-wide silica alteration zone along the edges
98,00	98,35													PY	1					Pervasive silica-(pyrite) alteration associated with calcite stringers (TCA: 40); 1% pyrite finely disseminated
98,47	98,56													PY	1					Pervasive silica-(pyrite) alteration associated with calcite stringers (TCA: 55); 1% pyrite finely disseminated
98,62	98,70													PY	1					Pervasive silica-(pyrite) alteration associated with calcite stringers (TCA: 60); 1% pyrite finely disseminated

COMMENTS
Series of calcite stringers (5 per meter; TCA: 40-60) with (cm-wide silica-alteration zone along the edges)
Series of 8 calcite micro-veins with a pluri-mm to cm-wide silica alteration zone along the edges; TCA: 70
Pervasive, but weak epidote/sericite alteration
Pervasive silica alteration zone; associated with a calcite-biotite-chlorite vein; TCA: 35
Pervasive silica alteration (with gradational contacts: uphole and downhole)
Presence of pyrite as stringers and alteration (5% locally up to 10% pyrite) associated with three 1cm-thick quartz veins and calcite stringers TCA: 70
Silica-pyrite alteration zone along a calcite stringers (TCA: 70); 2% pyrite
Silica-(pyrite) alteration zone associated with down-dip calcite stringers (TCA: 70); 1% pyrite
Silica pervasive alteration; no mineralisation associated
Series of calcite stringers and micro-fractures with local silica alteration associated along the edges; TCA: various
Pervasive silica alteration zone; tr. Pyrite associated with a series of calcite stringers; TCA: 55
Pervasive silica alteration zone; tr. Pyrite associated with a series of calcite stringers; TCA: 55
Pervasive silica alteration (with gradational contacts: uphole and downhole)
Presence of pyrite as stringers and alteration (5% pyrite) associated with a series of quartz veins, locally semi-massive pyrite @ 120,75; TCA: 70
Pervasive epidote-sericite weak alteration affecting plagioclase
Hematite (specularite)-calcite vein (5mm-thick); TCA: 25; no alteration associated
Pervasive silica alteration; presence of leucoxene
1cm-thick quartz vein, no mineralisation associated; TCA: 45
Specularite vein or open-space filled fracture, calcite and voids associated; TCA: 40
Silica pervasive alteration associated with a 1cm-thick quartz-chlorite vein; presence of leucoxene; TCA:35
Silica pervasive alteration associated with a calcite-chlorite vein; TCA:30; tr. Pyrite
Magnetic granite, not altered
Silica alteration zone associated with a 2cm-thick quartz-hematite vein; TCA: 55
Silica alteration zone associated with a series of quartz-muscovite-hematite stringers; TCA: 50
Silica alteration zone associated with a series of quartz-muscovite-hematite stringers; TCA: 50
Series of silica alteration zone (~15-20cm wide) associated with calcite stringers; TCA: 50; no mineralization associated
Weak silica alteration zone associated with quartz and quartz-chlorite calcite veins; TCA: 15; presence of leucoxene
Potassic-silica alteration; no mineralisation associated
Series of calcite stringers with few mm-wide silica alteration zone along the edges; (~5 per meter); TCA: 60

7 HOLE DESCRIPTION		HOLE LOCATION		HOLE ORIENTATION	
PROJECT:	Carscallen	NORTHING:	5358490 N, NAD83	AZIMUTH:	245
HOLE NO:	CAR-18-2009	EASTING:	451650 E, NAD83	INCLINATION:	-60
LOGGED BY:	Eric Hebert	ELEVATION:		FINAL DEPTH:	237m
START DATE:	July 27th 2009	Line 7+00; Station 8+50N		CORE SIZE:	NQ
FINISH DATE:	July 28th 2009				

Depth			Rock Type					Structure		ALTERATION				Mineralisation						
										Alteration Intensit			CODE	Sulphide			Veins			
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	COMMENTS
0,00	**9,00**	**9,00**																		**Casing/Overburden**
9,00	**132,20**	**123,20**																		**Granite**
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				Affected by several alterations including: -epidote/sericite giving the rock a light yellowish color; -potassic(kspar)-carbonate (calcite) giving the rock a dark reddish color; -silicification along veins/stringers/fractures giving the rock a grey color. Weakly magnetic where no alteration affects the granite
9,00	12,90																			Weakly magnetic granite; no alteration except few silica alteration zone along the edges of calcite stringers
12,90	23,30																			Epidote/sericite pervasive alteration
13,50	13,58																			silica alteration zone; presence of leucoxene (due to leaching?)
13,70	13,70																			Calcite vein; TCA: 35
15,10	15,35													PY	1					Weak silica alteration; tr-1% pyrite
18,35	21,65													PY	tr					Weak silica alteration zone (and/or leaching); presence of leucoxene; locally tr. Pyrite
23,30	28,20													PY	tr					Strong silica-carbonate alteration zone (and/or leaching); few calcite narrow stringers; presence of leucoxene; locally tr. Pyrite
28,20	32,10																			Pervasive potassic-carbonate alteration (Kspar-calcite) giving the rock a dark red color. Gradational uphole contact with the silica alteration zone as well as the downhole contact with unaltered granite
34,80	34,95																			Hematite vein/filled fracture; TCA: 15
38,10	38,27																			Leached zone (presence of leucoxene) associated with a 5mm-thick calcite vein
42,30	42,33																			Quartz vein (TCA: 25); no alteration associated
42,90	43,70																			Weak silica alteration zone and/or leaching; presence of leucoxene
44,35	44,65																			Large xenolith of a porphyry intrusion
45,80	48,00												K							Pervasive potassic-carbonate alteration (Kspar-calcite) giving the rock a dark orange color
48,00	106,00												K							Strong and pervasive potassic(?)-carbonate-hematite alteration giving the rock a dark purple color. Abundance of voids and cracks suggest weathering?
69,54	69,62																			Aplite dyke; TCA: 40
94,80	94,81																			Jasper-hematite vein (TCA: 60) associated with a zone of leaching along the edges (pluri-cm wide)
96,50	96,75																			Zone with no hematite alteration (white-beige color); voids and cracks are present
106,00	107,85																			Carbonate (siderite-calcite) pervasive alteration (+ voids and cracks); most likely associated with weathering
107,85	108,70																			Silica alteration zone + leaching (presence of leucoxene); no mineralization associated
109,25	113,00												K							Strong and pervasive potassic(?)-carbonate-hematite alteration giving the rock a dark purple color. Abundance of voids and cracks suggest weathering?
110,05	110,70												K							Aplite dyke (?) with strong potassic alteration
112,05	112,20												K							Aplite dyke (?) with strong potassic alteration
113,00	132,20																			Granite with pervasive carbonate alteration (calcite); local hematization giving the rock a dark purple color
114,80	115,25													PY	2					Pervasive carbonate-silica-pyrite alteration zone (1-2% disseminated pyrite)
126,85	127,30																			xenolith of gabbro
131,80	132,20													PY	2					Contact zone with a mafic unit underneath (gradational); up to 50% of xenolith which contain 2% pyrite as disseminated grains
132,20	**205,65**	**73,45**																		**Gabbro/breccia**
														PY	**2**					**Fine- to medium-grained gabbro (or volc.?) (gradational contact with previous unit). Locally brecciated and/or large proportion of xenoliths. Clasts/xenoliths are monogenic; "snake-skin"-like texture. Locally 1-2% disseminated pyrite grains**
132,55	132,85																			Granite dyke (or xenolith?)
132,85	133,85													PY	1					Very fine-grained gabbro, hematization gives the rock a dark black-green color with some purple-ish reflections; 1% pyrite, locally as stringers along with 1% chalcopyrite
133,85	136,20																			Pegmatite dyke cross-cut by four quartz veins (0,5mm-thick; TCA: 65); locally strong weathering (+ voids). TCA: down-dip?
136,85	137,00																			broken cores
143,10	143,20													PY	tr					Quartz-calcite veins; TCA: 75; tr. Pyrite; no alteration associated
145,60	145,70													PY	7					Clasts of pyrite with hematite (iron fm?); 7% pyrite
146,41	146,43													PY	7					Clasts of pyrite with hematite (iron fm?); 7% pyrite

COMMENTS
A 5cm-thick pegmatite dyke; TCA: 20
A 2cm-thick pegmatite dyke; TCA: 50
Down-dip quartz stringer containing tr-1% chalcopyrite; no alteration associated
Down-dip 3cm-thick pegmatite vein
Dislocated and partially digested xenoliths/clasts of iron formation(?) and/or massive sulphide (pyrite-magnetite/hematite); 10-15% pyrite; sphalerite?
Quartz vein + pyrite (2%); TCA: 60; no alteration associated
Xenolith of iron formation; 10% pyrite; hematite (or massive sulphide?)
Quartz stringer with 1-2% pyrite associated
Quartz-chalcopyrite stringers; TCA: 70; 1% chalcopyrite
Pyrite-quartz vein (almost massive pyrite); TCA: 30
A 0,5cm-thick massive pyrite vein; TCA: 50
Quartz-calcite vein with semi-massive sulphide (pyrite); 25% pyrite; TCA: 35
Silica (?) alteration zone with 2-3% pyrite as stringers
Quartz vein; TCA: 25
Pervasive and strong epidote alteration
Calcite-pyrite stringers; TCA: 40
Two quartz-calcite-(pyrite) veins; (TCA: 15 and 90+25); tr. Chalcopyrite; Kspar alteration along the edges
Series of calcite-(pyrite) stringers; TCA ~45; no alteration associated
Down-dip pegmatite vein
Pervasive silica (?) alteration associated with a 3cm-thick quartz-calcite vein; presence of leucoxene
Mafic volcanic rock
Fine-grained; Dark-green color; locally magnetic. Cross-cut by several calcite vein (open-space fracure filling)
Potassic and/or ankerite alteration; 1-2% pyrite associated
Pyrite bleb
Iron formation (jaspe-chert-pyrite); xenolith?
broken core
broken core
Zone with calcite open-space filled fracture; Kspar alteration associated with pyrite stringers; 1-2% pyrite
Quartz-Kspar vein; no mineralization associated; TCA: 25
Quartz-Kspar vein; tr. Pyrite; TCA: 30
Gabbro
Fine- to medium-grained gabbro (or volc.?) (gradational contact with previous unit). Locally brecciated and/or large proportion of xenoliths. Clasts/xenoliths are monogenic (+ locally iron formation). Magnetic
Xenolith of iron formation (magnetite)
Down-dip calcite-quartz vein (5mm-thick); no alteration associated
Dyke of tonalite

										Alteration Intensit			CODE	Sulphide			Veins			
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	COMMENTS
0,00	1,00	1,00	OB																	Casing/Overburden
1,00	110,00	109,00																		Granite
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Locally, it is a Potassic-carbonate alteration (Kspar-calcite) that affects the granite. Magnetism is absent in these altered zones.
2,85	3,20													PY	5					Two quartz-pyrite vein (~1cm-thick) associated with a pervasive silica alteration zone. Pyrite also occurs as stringers and as alteration; 5% Pyrite; TCA (vein): 55
3,45	4,00													PY	4					Zone with pyrite stringers and quartz-pyrite stringers associated with a pervasive silica-calcite alteration; 3-4% pyrite; TCA: 50-60
7,25	11,30																			Zone with Kspar alteration (moderate to strong)
9,55	9,56																			Quartz vein; no mineralization associated; TCA: 30
11,30	15,00																			Zone with Kspar-calcite pervasive alteration
15,00	15,83																			Pervasive silica-carbonate (ank?) alteration zone. Presence of leucoxene. Tr. Pyrite
17,30	32,60																			Alternance of Kspar-calcite alteration zones and sericite/epidote alteration zone. Very few calcite-quartz-(pyrite) stringers associated
26,35	27,25																			Series of calcite-quartz stringers (2-3 per meter; TCA: 40). Pyrite is associated, in a proportion of 1-2%.
29,00	29,60																			Series of calcite stringers (~15 per meter) with no significant alteration associated.
32,60	36,25																			Unaltered granite (not magnetic)
36,25	39,65																			Pervasive and penetrative silica-carbonate (calcite) alteration giving the rock a light grey color. Pyrite in stringers and veins (~1%)
36,95	36,96													PY	M					Massive pyrite vein (+quartz); 0,5 cm-thick, TCA: 65
37,64	37,66													PY	M					2cm-thick massive pyrite vein; TCA: 65
38,81	38,83													PY	10					Pyrite-quartz stringer; TCA: 55; 10% pyrite
45,05	48,39													PY	tr					Pervasive and penetrative silica-carbonate (calcite) alteration giving the rock a light grey color. Tr. Pyrite. Contacts are gradational
48,39	54,50																			Unaltered granite
50,30	50,55																			Pervasive, but weak calcite alteration
57,25	57,60													PY	3					Pervasive silica alteration zone associated with four pyrite-quartz stringers (TCA: 60); 3% pyrite
57,92	58,04													PY	3					Pervasive silica alteration zone including one pyrite-calcite stringer (TCA: 60); 2-3% pyrite
58,47	58,54													PY	tr					Pervasive silica alteration zone associated with a calcite stringer; TCA: 50. Tr. Pyrite
64,30	65,00																			Calcite-(Kspar) alteration zone; weak to moderate
66,90	67,00																			Pervasive silica-calcite alteration zone associated with a calcite stringer
67,26	67,32																			Pervasive silica-calcite alteration zone associated with a calcite stringer
69,40	71,12													PY	3					Pervasive silica-calcite alteration zone associated with local pyrite and pyrite-quartz stringers; locally 2-3% pyrite
69,70	69,71													PY						Pyrite stringer; TCA: 60
70,60	70,72													PY						Pyrite-quartz stringer; TCA: 60
73,75	74,45													PY						Series of ten calcite-pyrite stringers; TCA: 50-60; silica alteration only along their edges
86,20	86,80																			Calcite-(Kspar) alteration zone
86,80	88,00																			Pervasive, but weak silica-carbonate alteration zone associated with calcite stringers (~7 per meter); TCA: 50
89,85	92,00													PY	1					Pervasive silica-(carbonate) alteration zone; tr-1% pyrite
92,00	92,70													PY	15					Series of cm-thick quartz-pyrite veins (>10); TCA 70 and 30; 10-15% pyrite as massive veins
92,70	94,25													PY	1					Pervasive silica-(carbonate) alteration zone; tr-1% pyrite
98,90	104,25																			Unaltered granite, weakly magnetic
104,40	104,80																			Pervasive silica alteration zone; no mineralization associated
107,30	107,85																			Pervasive leaching(?) giving the rock a light grey color. One stringer/vein associated @ 107,65m; TCA: 70
110,00	EOH

0,00	3,00	3,00	OB																	Casing/Overburden
3,00	116,00	113,00																		Granite
																				Coarse-grained, pinkish and dark green color; comp: qtz (20%); plagio (20%); Kspar (40%); chlorite/biotite (20%)
																				The rock is weakly magnetic due to disseminated magnetite. Silicification occurs along micro-fractures and stringers where present. These silicification zones are usually cm-wide to pluri-cm wide and very locally pervasive. A weak epidotization and/or sericitization is also affecting the rock pervasively affecting preferentially the plagioclase giving the rock a light yellowish-green color. Locally, it is a Potassic-carbonate alteration (Kspar-calcite) that affects the granite. Magnetism is absent in these altered zones.
4,20	4,65																			broken core
4,50	4,80													PY	tr					Series of calcite stringers with silica-carbonate alteration along the edges; TCA: 60; tr. Pyrite
6,58	6,67																			Series of calcite-goethite vein (late fracture filling); TCA: 60
7,30	7,60													PY	1					Series of calcite stringers with silica-carbonate alteration along the edges; TCA: 60; 1% Pyrite
11,90	12,90													PY	1					Down-dip micro-fractures with silica alteration along the edges; locally 1% pyrite
12,94	12,95																			Calcite-chlorite vein with carbonate alteration; TCA: 60
13,75	14,00																			Pervasive carbonate alteration/leaching associated with a down-dip calcite stringer
17,27	17,37													PY	3					Pervasive silica alteration zone associated with pyrite-calcite stringers; TCA: 50; 2-3% pyrite
17,55	17,70													PY	3					Pervasive silica alteration zone associated with pyrite-calcite stringers; TCA: 50; 2-3% pyrite
18,65	19,13													PY	5					Series of seven pyrite-(calcite/quartz) stringers/veins with a silica pervasive alteration associated; TCA: 50; 5% pyrite
19,40	24,10													PY	2					Zone with calcite-(±pyrite)-(±quartz) stringers (4 to 6 per meter; TCA: 40 to 50) with a cm-wide silica alteration zone along their edges. Locally 1-2% pyrite
20,42	20,45													PY	5					A 3cm-thick quartz-pyrite vein with silica alteration zone along the edges; TCA: 50; 5% pyrite
25,84	27,75													PY	3					Zone with calcite (±geothite/hematite) stringers (4 to 5 per meter; TCA: 50) with carbonate alteration along the edges; with local pyrite (2-3%);
30,05	30,20													PY	3					Pervasive silica alteration associated with pyrite stringers (TCA: 45); 3% pyrite
35,90	36,02													PY	5					Pervasive silica alteration zone associated with a 1cm-thick pyrite vein; TCA: 50; 5% pyrite
36,40	36,58													PY	5					Pervasive silica alteration zone associated with a quartz stringer (TCA: 60) and pyrite stringers (TCA: 50); 5% pyrite
37,53	37,68													PY	4					Pervasive silica alteration zone associated with a 2cm-thick quartz vein (TCA: 60) 4% pyrite in the alteration zone
37,83	37,90													PY	3					Pervasive silica alteration zone associated with pyrite stringers; (TCA: 60); 3% pyrite
39,25	39,80													PY	5					Pervasive and strong silica alteration associated with a quartz-pyrite vein @ 39,53-39,62m; TCA: 80; locally 5% pyrite
39,80	42,22													PY	3					Series of calcite-pyrite stringers with local silica alteration along their edges; (4 per meter; TCA: 50); locally 2-3% pyrite
48,28	49,00													PY	1					Pervasive silica-carbonate alteration (calcite); tr-1% pyrite as disseminated grains
50,90	51,50													PY	1					Series of 6 pyrite-calcite stringers with local silica alteration along their edges; TCA: 50; 1% pyrite
51,50	52,35													PY	5					Pervasive and strong silica alteration associated with a quartz-calcite-pyrite veins; TCA: 40 and 90+70; 5% pyrite
53,80	53,83																			Calcite-pyrite vein (1cm-thick) with silica alteration limited to the edges; TCA: 50
53,90	56,00																			Down-dip micro-fractures with a few mm-wide silica alteration zone along the edges
57,00	57,65													PY	2					Silica-(pyrite) alteration zone associated with calcite and calcite-pyrite stringers; TCA: 60; 1-2% pyrite, locally 5%
66,30	67,85																			Pervasive carbonate alteration/leaching associated with calcite filled fractures; TCA: 35. No mineralization associated
71,24	76,85																			Unaltered granite (only few narrow epidote/sericite alteration zones). Not magnetic
74,95	75,50																			Down-dip calcite stringer associated with a geothite alteration/weathering
80,25	81,50																			Pervasive silica-carbonate alteration; containing local pyrite stringers
80,80	81,00													CPY	1					Pyrite stringers and a quartz-pyrite vein (TCA: 40); 5% pyrite; tr-1% Chalcopyrite
82,00	85,70													PY	1					Pervasive silica-carbonate alteration; containing local pyrite stringers; tr-1% pyrite
82,70	83,45													PY	7					Zone with pyrite stringers/veins; TCA: 50; 5-7% pyrite
90,70	92,10																			Down-dip calcite stringer (few cm-wide); silica-carbonate alteration along the edges
97,30	97,50																			Carbonate alteration associated with calcite stringers; TCA: 50
101,30	102,20																			Series of calcite stringers (~10 per meter); with carbonate alteration along the edges (few cm-wide); TCA: 60

0,00	**2,25**	**2,25**																		**Casing/Overburden**
2,25	**119,88**	**117,63**																		**Granite**
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic
11,04	11,33																			Network of calcite-chlorite veinlets + 1cm-thick quartz vein (70 TCA). No pyrite associated
15,20	16,25																			Pervasive silica alteration zone giving the rock a dark grey-brown color. Most likely associated with a down-dip micro-fracture and low-angle quartz-calcite veinlets (~20 TCA)
15,70	15,97																			Quartz-calcite veinlet (0,5cm-thick; 20 TCA)
17,60	18,00																			Pervasive silica alteration zone including tr-1% pyrite as coarse disseminated grains
20,30	20,53																			A 0,5cm-thick quartz vein (15 TCA) with silicified edges. No pyrite associated
21,95	22,30																			Pervasive, but moderate silica alteration including tr pyrite as coarse grains and a <0,5cm-thick quartz-chlorite-calcite veinlets (20 TCA)
24,97	25,10																			A 2cm-thick (25 TCA) quartz vein. No significant alteration or mineralization associated
28,73	28,79																			Series of small stringers + calcite alteration including tr-1% disseminated pyrite
34,35	34,80																			Zone with 1-2% disseminated pyrite grains with no alteration associated except silicification along micro-fractures and calcite veinlets
38,30	39,80																			Pervasive carbonate (calcite) alteration zone
38,60	38,65																			5% pyrite associated with a pervasive carbonate alteration zone
39,48	39,49																			a 1cm-thick quartz-pyrite vein (60 TCA) with chlorite-calcite along edges; 3% pyrite
39,80	41,20																			Pervasive but moderate silica alteration zone including local pyritic zones (up to 2%)
41,20	41,37																			A 10cm-thick quartz-pyrite vein (55 TCA) with calcite-chlorite along the edges
43,20	43,70																			Pervasive calcite alteration zone (~7% calcite)
43,36	43,42																			Small dyke (Kspar-rich) including 1% pyrite; 60 TCA
45,65	45,74																			2-3% pyrite associated with two calcite-chlorite stringers (40 TCA)
50,10	50,30																			Dyke of pegmatite (Kspar-quartz) including tr-1% pyrite; 65 TCA
60,50	60,59																			Series of two quartz-chlorite-epidote veins (~1cm-thick; 60 TCA); with no pyrite or alteration associated
66,75	67,50																			Pervasive but weak calcite-Kspar alteration zone
69,00	69,28																			A 0,5cm-thick down-dip quartz vein; no significant alteration associated
70,50	72,25																			Broken and partially broken core (with weak weathering associated; fault zone?)
76,65	76,76																			A 3cm-thick quartz-chlorite vein (20 TCA)
88,50	90,85																			Pervasive but weak to moderate silicified zone giving the rock a grey-ish color. Including 1-2% of leucoxene (leaching?)
89,45	89,46																			A 1cm-thick quartz-chlorite vein. No pyrite associated. Presence of leucoxene along the edges
93,80	97,70																			Zone with weak carbonate alteration giving the rock a light grey color.
96,65	96,80																			A 1cm-thick calcite-quartz-chlorite vein (25 TCA); including trace pyrite
97,42	97,43																			A 1cm-thick quartz vein (60 TCA) with calcite-chlorite along the edges
97,70	98,60																			Magnetic granite; unaltered
101,16	101,30																			A 2cm-thick quartz vein (25 TCA) with geothite along the edges (weathering)
105,29	105,30																			Quartz-chlorite vein with a silica alteration zone associated (~20 cm-wide)
105,65	108,08																			Pervasive silica-carbonate alteration zone (giving the rock a greyish color). Including few calcite-chlorite-(quartz) veinlets (75 TCA)
116,80	117,40																			Zone with 1-2% disseminated pyrite (with pervasive silica alteration associated); including a 0,5cm-thick quartz-chalcopyrite vein @117,26m (45 TCA)
118,22	118,39																			1-2% pyrite disseminated pyrite + pyrite stringers (15 TCA)
119,28	119,28																			Pyrite stringers with silicified edges; 20 TCA
119,28	**123,48**	**4,20**																		**QFP dyke**
																				Feldspar porphyry; schistosity/clivage well-developed (40 TCA)

121,34	122,52																			Presence of the host-rock; i.e. Granite; including several thin pyrite and/or quartz stringers/filled fractures
123,48	**274,00**	**150,52**																		**Granite**
																				idem as previous granite; including mineralized zones
124,00	124,80																			Series of five calcite-chlorite stringers or carbonate-chlorite altered micro-fractures; including leucoxene and ~1% disseminated pyrite and silica alteration
125,00	125,19																			Series of five calcite-chlorite stringers or carbonate-chlorite altered micro-fractures; including leucoxene and ~1% disseminated pyrite and silica alteration
125,59	125,60																			A 1cm-thick calcite-pyrite veinlets (~5% - 7% pyrite); with ~10cm-wide silica alteration zone associated
128,14	129,66																			Carbonate-silica alteration zone including locally 2-3% disseminated pyrite
128,67	128,71																			A 3cm-thick quartz-pyrite-calcite vein (semi-massive pyrite; 65 TCA)
131,18	132,00																			silica-calcite alteration zone including leucoxene and tr-1% of disseminated pyrite
131,36	131,37																			A 1cm-thick calcite-pyrite-(quartz) vein (with semi-massive pyrite); 60 TCA
131,85	131,88																			A 2cm-thick quartz-pyrite-(calcite) vein including with ~10% pyrite (especially along the edges); 50 TCA
132,60	133,42																			Pervasive calcite-(silica) alteration giving the rock a light grey-ish color (gradational contacts); tr pyrite
132,89	132,92																			A 3cm-thick quartz-chlorite-calcite vein including leucoxene. No pyrite associated
134,20	136,12																			Pervasive silica alteration (giving the rock a dark grey color); including 3-5% disseminated coarse-grained pyrite as alteration
137,75	138,37																			Pervasive silica-calcite alteration including two quartz-pyrite veins
137,92	137,99																			A 4cm-thick quartz-pyrite vein with semi-massive pyrite along the edges; 60 TCA
138,18	138,20																			A 2cm-thick quartz-pyrite vein with pyrite along the edges; 50 TCA
138,78	138,81																			A 2cm-thick quartz-pyrite vein + 5% pyrite along the edges (alteration?); 60 TCA
140,96	141,05																			Zone with 2-3% disseminated pyrite
142,22	142,26																			A 3cm-thick quartz-pyrite vein (5-10% pyrite) + 20cm-wide calcite-silica-(pyrite) alteration zone associated
143,10	144,55																			Pervasive (moderate to strong) silica-calcite alteration zone (tr-1% pyrite); including quartz-pyrite veins
143,30	143,35																			A 4cm-thick quartz-pyrite (55 TCA) including 5% of very coarse-grained pyrite
143,67	143,72																			Two quartz-(calcite) veins with tr. Pyrite (50 TCA and 70 TCA)
143,76	143,82																			Two pyrite-quartz stringers; 5-10% pyrite; 55 TCA
144,96	145,50																			Pervasive (weak to moderate) calcite-silica alteration zone including tr-1% pyrite
145,25	145,26																			A 1 cm-thick quartz-pyrite vein with calcite-chlorite-pyrite alteration along edges; 55 TCA
146,00	146,60																			Pervasive calcite-silica alteration including a series of calcite-pyrite-(±quartz) stringers; 45 to 60 TCA
146,85	147,55																			Pervasive but weak, silica alteration including small stringers of calcite and calcite-(pyrite)
148,46	148,46																			A fine calcite-pyrite-chlorite stringer (60 TCA); with a 5cm-wide silica-calcite alteration zone associated
149,25	150,90																			Pervasive silica-calcite alteration zone (with gradational contacts); 1% pyrite including several micro-fractures/fine stringers of pyrite-calcite
150,76	150,79																			Calcite-pyrite vein/alteration zone(?); 55 TCA. 10% pyrite
151,60	153,20																			Pervasive silica alteration zone (gradational contact)
152,30	152,34																			Series of two pyrite stringers (55 TCA) with a pervasive silica alteration associated
158,72	159,03																			Pervasive silica-pyrite-(calcite) alteration zone; including two quartz-pyrite-(calcite) veins (0,5cm-thick; 55 TCA). 1% pyrite
161,28	161,44																			Felsic dyke (Kspar-rich); including a series of fractures filled with pyrite (2-3% pyrite); 55 TCA
163,25	170,11																			Partial silica alteration zone (~10% of the rock); alteration associated with a micro-fracture network
174,15	174,48																			Felsic dyke (Kspar-biotite); 55 TCA; with a m-wide silica alteration zone associated (with leucoxene)
180,92	181,50																			Calcite-rich alteration zone (+ calcite stringers/filled fractures)
187,78	187,82																			Late calcite-geothite vein (1cm-thick)

191,40	191,95																			Series of calcite micro-fractures/stringers (40 to 50 TCA)
192,07	194,80																			Zone partially altered (silica-carbonate) with presence of leucoxene
194,42	194,43																			A 0,5cm-thick quartz vein; no pyrite associated
197,50	199,25																			Zone partially altered (silica-carbonate) with presence of leucoxene
205,60	210,20																			Pervasive silica alteration zone giving the rock a dark grey color
216,97	217,21																			Pervasive carbonate alteration zone (ankerite?)
217,65	219,40																			Calcite-geothite alteration associated with a dense micro-fracture network (late? Weathering?); giving the rock a reddish-orange color
220,95	221,30																			Pervasive carbonate alteration zone
221,73	222,30																			Pervasive carbonate alteration zone
224,19	224,80																			Pervasive carbonate alteration zone including calcite-(quartz) stringers; no pyrite associated
227,79	228,34																			Pervasive carbonate alteration zone including a down-dip calcite-(quartz) stringers; no pyrite associated
233,80	234,76																			Carbonate alteration along a down-dip (5 to 10 TCA) calcite-(quartz) veinlet; no pyrite associated
236,15	251,15																			Pervasive, but moderate carbonate-silica alteration zone giving the rock a light to medium grey color; locally contains 1-2% pyrite; gradational contacts
237,80	238,40																			zone with ~ 1% pyrite
241,73	241,73																			A small pyrite stringer; 50 TCA
242,90	243,05																			1% pyrite associated with two quartz-calcite veinlets (45 and 60 TCA)
245,85	246,32																			zone with ~ 1% pyrite
246,69	246,73																			A semi-massive pyrite vein; 70 TCA
252,93	253,60																			Pervasive carbonate-(hematite) alteration (dark pinkish color)
255,04	258,00																			Pervasive carbonate-(hematite) alteration (dark pinkish color); gradational contacts
259,78	259,83																			A 4cm-thick felsic dyke (Kspar-rich); 50 TCA
263,70	264,50																			Pervasive but weak to moderate carbonate-(silica) alteration including locally 1% pyrite; gradational contacts
266,07	266,10																			Zone with 1-2% pyrite; no veins/stringers associated
274,00	**289,90**																			**QFP intrusion**
																				Beige color. Locally tr-1% pyrite as blebs/coarse-grains and as fine stringers
274,90	276,85																			Zone with tr-1% pyrite as fine stringers (30 TCA) disrupted by micro-faults (90 + 70 TCA); photo
286,20	286,30																			Quartz veining zone including trace pyrite
286,45	287,45																			Granite xenolith (host rock)
287,63	287,86																			Late brecciated zone; jigsaw-like
289,90	**314,00**																			**Granite**
																				idem as previous granite
294,80	294,84																			Pyrite stringers and calcite veinlets; 1-2% pyrite
309,21	309,25																			Felsic dyke (Kspar-rich); 10 TCA
310,33	310,33																			Pyrite-calcite veinlets (0,5cm-thick; 5-10% pyrite)
314,00	314,00																			EOH

0,00	4,00	4,00																		Casing/Overburden
4,00	158,00	154,00																		Granite
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic
6,97	7,14																			Felsic dyke (Kspar-rich) or xenolith of felsic dyke(?); 35 TCA
14,35	14,38																			Quartz-(chlorite) vein with no pyrite and no alteration associated; 25 TCA
23,50	24,45																			Pervasive silica-(pyrite) alteration zone (locally contains up to 3-4% pyrite and a 4cm-thick quartz vein)
23,82	23,89																			A 4cm-thick quartz-chlorite vein; 37 TCA
24,10	24,10																			Down-dip clivage/schistosity developed (marked by oriented chlorite minerals)
30,33	30,34																			A 0,5cm-thick quartz veins: no alteration associated
35,50	35,53																			Zone with geothite alteration (+ calcite veinlets)
40,54	41,10																			Silica pervasive alteration zone including two quartz-pyrite veins at 40,63m and 40,97m (2cm-thick; 45 TCA); 5% pyrite
43,13	44,37																			Pervasive silica-(pyrite) alteration zone; 1-2% disseminated pyrite
43,95	44,15																			Zone with ~5% of disseminated pyrite and as stringers
51,45	52,04																			Down-dip calcite veinlets + cm-wide silica-carbonate alteration zone along the edges
57,21	57,24																			A 3cm-thick quartz vein, no alteration associated; 50 TCA
60,38	60,39																			A 0,5cm-thick quartz vein; no alteration associated; 25 TCA
60,69	60,70																			A 0,5cm-thick quartz vein; no alteration associated; 25 TCA
72,78	72,79																			A 0,5cm-thick quartz vein; no alteration associated; 25 TCA
77,00	77,49																			Carbonate alteration zone including micro-fractures filled with calcite
78,40	78,92																			Carbonate alteration zone including micro-fractures filled with calcite; tr pyrite
82,35	90,27																			Pervasive silica-(carbonate) alteration giving the rock a dark grey color. Presence of leucoxene suggests leaching; tr pyrite
83,21	83,22																			A 0,5cm-thick quartz vein; 35 TCA. No mineralization associated
85,72	85,87																			Small mafic dyke and/or xenolith; Downhole contact at 15 TCA
99,08	99,10																			A 2cm-thick quartz vein; no significant alteration associated; 40 TCA
101,69	101,70																			A 0,5cm-thick quartz vein + carbonate alteration along edges; 25 TCA
103,58	104,57																			Pervasive and strong calcite-hematite altered zone
115,32	118,20																			Pervasive carbonate alteration zone including calcite filled micro-fractures; gradational contacts
120,20	123,71																			Pervasive carbonate-silica alteration zone; including pyrite and quartz-pyrite stringers/veins
122,50	122,54																			Quartz-pyrite-rich zone; 3-4% pyrite
122,64	122,65																			Pyrite stringer (~5% pyrite)
122,95	123,00																			Pyrite stringers (~5% pyrite)
123,55	123,56																			Pyrite stringer (~5% pyrite)
126,26	127,70																			Pervasive silica alteration zone including pyrite stringers/veins at a 20 to 30cm interval (~50 to 60 TCA)
127,21	127,24																			Semi-massive to massive pyrite vein (3cm-thick; 65 TCA)
133,39	133,39																			Pyrite-calcite stringer; 45 TCA
143,00	143,00																			Pyrite stringer; 50 TCA
143,38	143,48																			A 6cm-thick quartz vein + 10% pyrite along the edges; 55 TCA (+specularite)
151,00	158,00																			Pervasive hematization; no mineralization associated
158,00	158,00																			EOH

0,00	**5,00**	**5,00**																		**Casing/Overburden**
5,00	**76,72**	**71,72**																		**Granite**
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic
5,00	10,50																			Pervasive carbonate-(silica) alteration zone giving the rock a light grey color; presence of leucoxene. Calcite micro-veins
12,44	16,38																			Pervasive carbonate-(silica) alteration zone giving the rock a light grey color; including quartz-pyrite veins
15,88	15,92																			A 3cm-thick quartz-pyrite vein; 70 TCA. 10-15% pyrite
16,14	16,16																			A 2cm-thick quartz-pyrite vein; 75 TCA; 5% pyrite
17,39	17,42																			Pyrite-rich zone; 5% pyrite as stringers
17,64	17,65																			Quartz-pyrite veinlets; 5% pyrite
19,95	20,00																			Series of small quartz-chlorite-calcite veinlets; 1% pyrite; 55-60 TCA
24,20	24,25																			A 5cm-thick quartz-chlorite vein; 55 TCA
25,15	25,84																			Pervasive silica-carbonate alteration zone including few calcite-pyrite stringers; tr-1% pyrite
27,51	27,60																			A 5cm-thick quartz-chlorite-calcite vein (35 TCA) + carbonate (ankerite?) alteration zone along the edges (~10cm-wide)
30,28	30,29																			A 0,5cm-thick quartz-chlorite-calcite vein (60 TCA) + carbonate (ankerite?) alteration zone along the edges (5cm-wide)
36,20	38,00																			Partially altered zone (silica-carbonate); including calcite + calcite-pyrite veinlets (60 TCA); <3% pyrite
41,91	42,57																			A ~10cm-thick felsic dyke (Kspar, plagioclase porphyry); 7 TCA
47,95	50,75																			Pervasive silica alteration zone; including pyrite-quartz veinlets and QFP dykes
48,13	48,16																			Quartz-pyrite veins + ankerite(?) alteration along the edges
48,59	48,92																			QFP dyke including pyrite stringers (+ankerite alteration)
49,57	49,95																			A 1cm-thick; down-dip felsic dyke
52,04	52,59																			Down-dip QFP dyke
53,17	53,34																			Silica-pyrite alteration zone; 2-3% pyrite; tr Chalcopyrite
55,71	55,80																			Pervasive silica alteration zone; including a 1cm-thick quartz-pyrite vein; 80 TCA
56,68	57,55																			Silica alteration zone including quartz-calcite-pyrite stringers/veinlets (70 TCA; few mm to 1cm-thick)
59,80	59,84																			A 3cm-thick calcite-chlorite-(pyrite) vein; 60 TCA
61,78	74,78																			Alternance of silica-altered zones (10cm to 1m-wide) and unaltered granite including few calcite veinlets; tr pyrite
74,78	75,68																			Granite; contact metamorphic.
75,26	75,28																			A 2cm-thick carbonate-pyrite vein; 65 TCA
75,68	76,25																			Very fine-grained felsic dyke; 75 TCA; pyrite along both contacts
76,25	76,72																			Granite; contact metamorphic.
76,72	**93,00**																			**QFP dyke**
																				Light beige color; quartz porphyry (eyes); including 3-5% pyrite as aggregates of grains.
																				Presence of calcite-pyrite-(quartz) stringers/veinlets (30 to 40TCA) at 76,87m; 77,91m; 78,78m; 81,15m; 82,08m; 86m; 88,86m; 90,18m and 90,85m. Narrow styloliths calcite-pyrite also occur locally (80 TCA)
92,42	93,00																			Fine-grained (cooled margin)
93,00	**149,00**																			**Granite**
																				idem as previous granite unit; locally magnetic to weakly magnetic
93,00	93,85																			Contact metamorphic zone
93,85	95,80																			Pervasive silica-carbonate alteration zone
103,03	103,05																			Quartz-pyrite vein, 65 TCA; 3% pyrite
105,12	105,33																			A 4cm-thick felsic dyke (Kspar-rich; porphyric); 35 TCA
105,91	106,33																			Series of disrupted cm-thick felsic dyke/vein
108,42	108,44																			A 2cm-thick quartz-pyrite vein; 60 TCA; 5% pyrite

COMMENTS
Series of small disrupted felsic dykes (down-dip; 1-2cm-thick)
Calcite-pyrite alteration zone; 2-3% pyrite
A 1cm-thick quartz-pyrite vein; 55 TCA; 5% pyrite
Pervasive silica alteration zone giving the rock a dark grey color
Calcite-pyrite stringers; 70 TCA; 3% pyrite
Mafic dyke; magnetic
Felsic dyke; cross-cut the mafic dyke; 25 TCA
Felsic dyke (Kspar-rich); 50 TCA
Felsic dyke (Kspar-rich); 25 TCA; locally disrupted by micro-faults
Pervasive sericite(?) alteration zone including one quartz-pyrite vein at 125,65m (1cm-thick; 75 TCA); gradational contact
Pervasive sericite alteration zone including small pyrite stringers; 1-2% pyrite
Series of three quartz-pyrite-calcite veins/veinlets (at a ~30cm interval; 1-2cm-thick; 75 to 90 TCA)
A 3cm-thick quartz-pyrite vein; 67 TCA; 10% pyrite
A 1cm-thick quartz-calcite vein; 50 TCA; no mineralization associated

0,00	**2,55**	**2,55**																		**Casing/Overburden**
2,55	**178,58**	**176,03**																		**Granite**
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic. Micro-fractures with geothite alteration along the edges in the upperpart of the hole
4,54	4,76																			Pervasive calcite-hematite alteration zone (purple-ish red color); sharp contacts
8,30	8,89																			Pervasive calcite-hematite alteration zone (purple-ish red color); tr pyrite
11,90	11,92																			Small calcite-geothite vein; 30 TCA
19,20	19,26																			Felsic dyke (Kspar-rich); 85 TCA
22,49	22,50																			Quartz-Kspar vein; 65 TCA
25,25	25,26																			A 1cm-thick quartz vein + leaching edges (presence of leucoxene)
30,23	30,25																			A 1cm-thick quartz vein (35 TCA). No alteration associated
30,98	31,02																			A 3cm-thick quartz vein (30 TCA). No alteration associated
31,71	31,76																			A 3cm-thick quartz vein with a silica alteration zone associated; 40 TCA
31,93	32,07																			A 3cm-thick quartz-chlorite-(calcite) vein including 1% pyrite with a silica alteration zone associated; 25 TCA
37,59	37,63																			A 3cm-thick quartz vein; no alteration and no pyrite associated; 50 TCA
48,13	48,15																			Quartz-Kspar vein; 45 TCA
49,30	49,31																			A 1cm-thick quartz vein (30 TCA) disrupted by micro-faults;
55,78	55,87																			A 7cm-thick quartz vein (50 TCA); no pyrite associated
61,35	62,18																			Calcite-hematite alteration zone (purple-ish red color); chlorite-rich; tr pyrite
66,14	70,65																			Pervasive hematite-(calcite) alteration zone; chlorite-rich
73,95	76,15																			Pervasive hematite-(calcite) alteration zone; presence of leucoxene
81,00	81,57																			Pervasive silica-(carbonate) alteration (dark grey color) + chlorite along micro-fractures; tr pyrite
89,50	89,51																			A 1cm-thick quartz vein (40 TCA) associated with a silica alteration zone (~15cm-wide)
92,96	92,97																			A 1cm-thick quartz vein (70 TCA)
100,79	100,83																			A 3cm-thick quartz vein with pyrite and Kspar alteration along edges (80 TCA)
100,89	101,25																			Down-dip calcite vein (0,5cm-thick) + geothite along edges
105,60	105,65																			Series of small quartz veins + geothite alteration (+ presence of leucoxene)
107,87	108,04																			A 7cm-thick quartz vein (25 TCA); no pyrite and alteration associated
108,45	114,80																			Pervasive silica-(calcite) alteration zone (dark grey color); several micro-fractures filled with calcite occur
114,83	114,89																			A 4cm-thick quartz vein (35 TCA); tr pyrite
117,32	117,34																			A 1cm-thick quartz vein (40 TCA). No alteration associated
117,96	117,97																			A 1cm-thick quartz vein; 35 TCA
118,65	119,00																			Pervasive calcite-hematite alteration zone (purple-ish color) including a 1cm-thick quartz-calcite-pyrite veinlets at 118,83m (30TCA); 2% pyrite
121,97	122,04																			A 6cm-thick quartz-calcite-chlorite vein; 50 TCA
128,60	128,68																			A calcite-chlorite-quartz veining zone (60 TCA) + pyrite along edges; 2-3% pyrite
130,34	130,41																			A 7cm-thick chlorite vein (+quartz); 90 TCA
131,36	131,75																			Zone with a weak silica/carbonate alteration including 1-2% pyrite disseminated pyrite; most-likely associated with a dense micro-fracture network filled with calcite
132,10	132,12																			A 1cm-thick quartz-Kspar vein including 2-3% pyrite; 2% chalcopyrite
132,53	132,67																			A 5cm-thick; almost down-dip, quartz-Kspar vein
132,75	141,25																			Zone with 1-3% disseminated pyrite and 1% very fine-grained chalcopyrite; locally associated with a weak silica-hematite alteration. Partially digested xenoliths (few cm) in a proportion of >50%
141,25	146,15																			Zone with high proportion of partially digested xenoliths (few cm; locally >50%) + high proportion of chlorite and hornblende giving the rock a darker color; including local pyrite-chalcopyrite stringers and disseminated grains

151,62	152,40																			Pervasive carbonate-(hematite) alteration including calcite-chlorite filled fractures/veinlets; 60-70 TCA
157,23	157,40																			Silica-hematite alteration associated with a calcite-chlorite veinlet; 30 TCA
160,43	160,56																			Felsic dyke (Kspar-rich); 10cm-thick; 35 TCA; cross-cut by small quartz tension fractures/veinlets
160,84	160,95																			Felsic dyke (Kspar-rich); 10cm-thick; 35 TCA; cross-cut by small quartz tension fractures/veinlets and disrupted by micro-faults
161,33	161,76																			Series of quartz stringers (dense network) calcite and local geothite along edges is associated
162,81	163,49																			Series of quartz stringers (dense network) associated with pervasive carbonate/silica hematite (?) alteration zone; tr-1% pyrite associated
165,60	166,74																			Weak to moderate pervasive carbonate/silica-hematite alteration zone
168,35	169,10																			Partially broken core
174,62	174,71																			A 5cm-thick quartz-Kspar vein; 35 TCA. No alteration associated
178,58	**221,19**	**42,61**																		**Altered granite; Hematite-calcite**
																				Purple-ish red color; locally specularite/hematite; 5-15% calcite. Homogeneous; presence of voids due to calcite dissolution
181,61	183,27																			Zone with calcite alteration, but no strong hematite alteration
200,82	201,20																			Chlorite vein (+calcite)
206,31	206,64																			Geothite alteration associated with a fracture; with chlorite alteration along edges or chlorite-rich vein; 45 TCA
217,05	217,13																			A 5cm-thick felsic dyke (hematite-calcite alteration); 40 TCA
219,74	219,77																			Felsic dyke (also affected by hematite-calcite alteration; 30 TCA
221,19	**356,00**	**134,81**																		**Mafic volcanic rock**
																				Contact at 90 TCA. Chlorite-rich; locally ~ 50% plagioclase (syn-volcanic sill?) Cross-cut by few granite dykes near the contact zone. Several calcite tension fractures occuring; tr-1% disseminated pyrite grains
221,80	222,04																			Granite dyke
224,33	224,78																			Felsic dyke (blury contacts)
227,90	227,91																			Carbonate vein including disseminated hematite and pyrite (1-2%); pillow lava margins?
228,24	229,14																			Down-dip carbonate vein including disseminated hematite and pyrite (1-2%); pillow lava margins?
234,20	234,34																			Series of three quartz-(pyrite) vein (1cm; 1cm and 5cm-thick;60 TCA); locally 1% pyrite
238,05	238,09																			Felsic dyke, sharp contacts
244,00	246,45																			Zone with a series of narrow pyrite stringers (<2% of the rock)
247,56	248,00																			Down-dip quartz-chlorite-(calcite) vein; 2cm-thick
252,65	257,00																			Partially broken core; geothite along late fractures
256,75	257,15																			Strong weathered zone (?); broken core, muddy
257,05	257,12																			Quartz-Kspar vein
257,15	258,65																			Granite intrusion including large mafic volcanic angular xenoliths
262,52	264,87																			Gabbro(?) sill or coarse-grained massive flow; including calcite tension fractures (one at a 5 to 15cm interval)
265,90	266,00																			Kspar and quartz vein; 40 TCA
266,23	266,32																			Kspar and quartz disrupted vein; 40 TCA
266,40	269,60																			Local micro-fractures with bleached edges; tr pyrite
267,32	267,88																			Down-dip quartz-chlorite vein; tr pyrite; tr chalcopyrite
271,00	271,25																			1-2% pyrite as euhedral disseminated grains
275,44	275,44																			Pyrite stringers; 50 TCA
276,10	276,17																			Semi-massive pyrite veins + quartz-pyrite vein with pervasive ankerite alteration associated; 55 TCA
276,92	276,94																			Quartz-pyrite-calcite vein; >10% pyrite; 45 TCA

0,00	1,00	1,00																		Casing/Overburden
1,00	211,88	210,88																		Granite
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic. Micro-fractures with geothite alteration along the edges in the upperpart of the hole
6,92	6,97																			Quartz vein; 37 TCA; no alteration associated
8,22	11,15																			Unaltered granite, weakly magnetic
19,60	21,20																			Pervasive carbonate/silica alteration zone (light medium grey color). Locally contains 1% disseminated pyrite (euhedral grains)
20,16	20,23																			Quartz-calcite-chlorite veins; 75 TCA
26,96	26,98																			A 2cm-thick quartz-chlorite vein; 70 TCA
28,04	28,92																			Weak carbonate alteration zone (light grey) including local chlorite-pyrite stringers (coarse euhedral grains
50,40	50,43																			Quartz vein; 50 TCA
53,80	55,01																			Pervasive silica-carbonate alteration zone (locally ankerite?); including late fracture filled with calcite-geothite
57,63	57,65																			Quartz vein (40 TCA). No alteration associated
59,69	59,69																			Quartz stringer 50 TCA; presence of leucoxene along the edges
69,86	69,95																			A 9cm-thick quartz vein; 65 TCA. No significant alteration associated
72,85	74,50																			Zone of partial silica-carbonate alteration zone (medium-grey color). Few calcite tension fractures associated. Tr pyrite
77,95	77,96																			Quartz vein; 50 TCA
83,60	83,64																			A 2cm-thick quartz-Kspar vein; 40 TCA
83,68	83,72																			A 2cm-thick quartz-Kspar vein; 40 TCA
84,15	84,77																			Silica alteration zone, including two quartz veinlets and one chlorite vein; 60 TCA
85,00	85,10																			A 8cm-thick quartz-Kspar vein + sericite altered edges; 50 TCA
86,40	86,43																			A 2cm-thick quartz vein; 40 TCA. No alteration associated.
87,04	87,05																			A 1cm-thick quartz vein; 25 TCA. No alteration associated.
88,28	88,39																			A 8cm-thick quartz vein; 60 TCA. Sericite associated
88,46	88,55																			A 8cm-thick quartz vein; 60 TCA. Sericite alteration along the edges
90,08	90,10																			A 2cm-thick quartz vein + silica-ankerite alteration along edges; 45 TCA
92,58	92,60																			A 2cm-thick quartz vein + silica-ankerite alteration along edges; 45 TCA
94,97	97,48																			Pervasive silica-carbonate alteration zone (dark grey color). Tr disseminated pyrite
97,99	98,03																			Quartz vein; 50 TCA
106,98	107,02																			A 1cm-thick quartz vein; 35 TCA
112,91	112,97																			Series of two quartz veins (1cm-thick each; 50 TCA)
114,53	114,54																			A 1cm-thick quartz vein; 35 TCA
116,32	116,33																			A 1cm-thick quartz vein; 65 TCA
117,62	117,81																			Silica-carbonate (Ank?) alteration zone, including 2% pyrite as disseminated grains
118,28	118,52																			Silica-carbonate (Ank?) alteration zone, including 2% pyrite as disseminated grains + quartz vein at 118,35m (1cm-thick; 40 TCA)
120,50	121,55																			Partially broken core; geothite along fractures
125,35	125,92																			Partially broken core
127,08	130,12																			Pervasive, weak to moderate silica-carbonate alteration zone; including calcite veinlets. Tr disseminated pyrite
133,16	133,21																			A 4cm-thick quartz vein; 60 TCA. No alteration associated
134,68	134,69																			A 1cm-thick quartz vein; 45 TCA. No alteration associated
136,50	136,55																			A 4cm-thick quartz-Kspar vein; 55 TCA
142,50	142,64																			Geothite alteration zone with 1-2% pyrite. Presence of leucoxene
143,58	143,71																			Carbonate alteration zone including 2% disseminated pyrite

148,55	149,25																			Weak carbonate alteration zone; gradational contacts
151,22	152,45																			Weak carbonate alteration zone; including small calcite filled fractures
158,35	158,35																			A small pyrite stringer; 50 TCA
164,40	166,95																			Weak carbonate alteration zone
167,83	169,06																			Weak silica alteration zone (stronger along micro-fractures); tr-1% pyrite
170,40	170,86																			Weak carbonate-(hematite) alteration zone
175,40	177,10																			Pervasive and strong silica alteration zone associated with a micro-fracture network; including tr-1% pyrite disseminated pyrite
175,95	175,97																			A 2cm-thick quartz-pyrite vein; 10% pyrite; 50 TCA
180,01	180,05																			A 3cm-thick quartz vein; 35 TCA. No alteration associated
186,62	187,50																			Broken and partially broken core
186,82	186,84																			Quartz vein; 60 TCA. No mineralization associated
188,20	188,43																			Series of open-space fracturing; partially filled with calcite and quartz
192,43	192,75																			Broken core
193,30	195,56																			Weak silica alteration zone
195,41	195,44																			Quartz-(chlorite) vein; 70 TCA
196,71	196,72																			Quartz vein; 45 TCA
202,24	204,12																			Silica-carbonate alteration zone
202,86	203,00																			Heavily broken core
204,12	205,82																			Weak to moderate calcite alteration (+hematite)
207,37	207,39																			A 2cm-thick quartz veins; 60 TCA
208,28	209,29																			A 1cm-thick quartz vein; 40 TCA. Presence of leucoxene along edges
211,88	**303,51**																			**Altered granite**
																				Purple-ish red hematite-calcite pervasive and penetrative alteration. Locally chlorite proportion >50% (alteration?). Locally voids (5-10%) due to calcite dissolution. Some voids are filled with specularite hematite
216,10	216,88																			Mafic dyke (?); chlorite-rich
241,72	241,80																			A 7cm-thick Kspar-quartz vein/dyke; 60 TCA
261,40	265,97																			Zone with ~10-15% dissolution voids
274,88	275,78																			Silicified zone superimpose the carbonate-hematite alteration
276,72	288,93																			Carbonate-hematite alteration-free zone
289,75	297,08																			Unaltered granite
303,51	**314,46**																			**Granite**
																				idem as the first granite unit; weak carbonate alteration
314,46	**338,35**																			**Mafic intrusion**
																				Magnetic; fine-grained; chlorite-rich. Dark green to greenish-black color
316,05	318,00																			Magnetic; 1-2% disseminated pyrite
317,50	317,90																			Zone with quartz-Kspar disrupted vein/dyke(?) including tr-1% pyrite
319,20	319,77																			Zone with 2-3% disseminated pyrite
320,00	323,00																			Broken and partially broken core
326,95	327,15																			Disrupted felsic dyke
328,34	328,85																			Felsic dyke
332,00	332,97																			Granite dyke

0,00	**0,55**	**0,55**																		**Casing/Overburden**
0,55	**109,50**	**108,95**																		**Granite**
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic. Micro-fractures with geothite alteration along the edges in the upperpart of the hole
7,85	8,36																			Weak silica-carbonate alteration zone; including a 1cm-thick quartz-calcite vein; 70 TCA
26,12	26,14																			A 2cm-thick quartz vein with a 1cm-wide alteration zone (silica-carbonate-sericite)
42,10	42,76																			Weak carbonate alteration zone
53,05	53,08																			A 2cm-thick quartz-chlorite vein; 30 TCA
65,42	65,45																			A 3cm-thick quartz-chlorite vein; 55 TCA
65,85	67,03																			Partially broken core
66,64	66,68																			A 4cm-thick quartz-chlorite vein
95,69	96,65																			Large disgested xenolith
96,94	96,98																			A 4cm-thick quartz vein; 90 TCA. No alteration associated
98,04	98,11																			Two quartz-chlorite veins (2cm-thick; 55 TCA). Tr pyrite
99,43	99,56																			Pervasive hematite alteration zone
99,83	100,04																			Quartz-chlorite vein; 15cm-thick; 35 TCA
102,22	102,23																			Quartz vein; 70 TCA. No alteration associated
102,50	102,51																			Quartz vein; 60 TCA.
104,22	104,23																			Quartz vein; 65 TCA.
108,09	108,10																			Quartz vein; 25 TCA; tr. Pyrite
109,50	**113,20**	**3,70**																		**QFP Dyke**
																				Local ankerite alteration associated with calcite veinlets. Downhole contact is weathered (broken core and muddy). Tr Pyrite. Contact 45 TCA
113,20	**290,00**	**176,80**																		**Granite**
																				Idem as the previous granite unit
113,20	113,70																			Partially broken core
118,00	120,35																			Partially broken core
121,81	121,83																			a 2cm-thick quartz vein; 20 TCA. No alteration associated
122,00	122,35																			Broken core
122,65	123,52																			Pervasive silica alteration; including tr-1% pyrite within calcite stringers
124,66	124,67																			a 1cm-thick quartz vein; 25 TCA
136,60	137,00																			a 1cm-thick, down-dip (5 TCA) quartz vein.
142,74	142,81																			Hematite/geothite alteration zone associated with a quartz vein; 35 TCA
151,55	152,71																			Pervasive silica alteration zone including local pyrite stringers and a 3cm-thick quartz vein
152,47	152,52																			a 3cm-thick quartz vein (20 TCA); associated with strong ankerite/sericite alteration along the edges
153,29	153,40																			a 4cm-thick quartz vein (15 TCA) + sericite alteration
165,86	165,88																			a 2cm-thick quartz vein; 25 TCA. Tr pyrite
167,70	171,50																			Weak carbonate alteration zone; light grey color
171,25	171,26																			a 1cm-thick quartz vein
175,40	177,45																			Pervasive silica and carbonate alteration zone including 1-2% disseminated pyrite
176,55	176,70																			Zone with 5% pyrite associated with strong silica alteration
181,85	184,25																			Silica-hematite-(carbonate) alteration zone; greyish orange-color
185,53	185,70																			Hematite-silica(?) alteration zone; 1% pyrite

0,00	**7,20**	**7,20**																		**Casing/Overburden**
7,20	**10,00**	**2,80**																		**Granite**
																				Not magnetic; Composition: 20% quartz; 20% biotite/chlorite; 30% Kspar; 30% plagioclase; plagioclase are partially altered into epidote/sericite (giving the rock a light greenish color). Digested xenoliths occur. Cross-cut by few micro-fractures/veinlets with local silica alteration associated along their edges. Locally unaltered, the granite is weakly magnetic. Micro-fractures with geothite alteration along the edges in the upperpart of the hole
8,82	9,35																			Mafic volcanic rock unit
10,00	**41,96**																			**Iron Formation**
																				Sulphide - oxide - chert. Massive beds of pyrrhotite-(pyrite); (1 to 10cm-thick) in alternance with chert beds (~10cm-thick) and 3cm-thick magnetite beds). Beds are down-dip and locally interbedded with mafic volcanic beds (~m-thick)
16,03	16,35																			Granite dyke
16,35	17,00																			Mafic volcanic rock(?) or chlorite-rich zone; 1-2% pyrite
17,00	17,56																			Granite dyke
25,03	25,34																			Granite dyke
31,35	32,89																			Bed of mafic volcanic rock/mafic intrusion; not magnetic
35,06	37,12																			Bed of mafic volcanic rock/mafic intrusion; not magnetic; 1% disseminated pyrite
39,16	41,00																			Interbedded mafic volcanic breccia; matrix contains 2-5% pyrite-pyrrhotite; tr Chalcopyrite; weakly magnetic due to pyrrhotite
41,96	**164,50**																			**Mafic volcanic rock/intrusion**
																				Volcanic breccia and/or intrusion with xenoliths. Local iron formation (xenoliths or interbedded horizons). Pyrrhotite and pyrite also occur locally in the matrix
47,37	55,19																			Zone with >50% of granite dykes/disrupted dykes
55,28	55,60																			Iron formation bed/large xenolith. Oxide facies (magnetite); 1% pyrite-pyrrhotite
57,75	58,65																			Iron formation beds intermixed with mafic volcanic breccia
79,91	79,91																			Pyrrhotite stringers; 35 TCA
80,06	80,07																			Pyrite-pyrrhotite stringer; 30 TCA
86,04	87,23																			Zone with massive blebs of pyrrhotite and locally pyrite (iron formation clasts?)
87,65	88,44																			Zone with massive blebs of pyrrhotite and locally pyrite (iron formation clasts?)
93,50	94,70																			Down-dip granite dyke (1 to 5cm-thick)
96,00	121,50																			Breccia, pillow-breccia with a magnetic matrix; 2-3% pyrite as coarse grains. Dark green color
110,64	110,96																			Pegmatite dyke (Kspar-quartz-biotite)
115,41	115,65																			Granite dyke
117,29	117,46																			Pegmatite dyke (Kspar-quartz-biotite)
118,26	120,88																			Granite dyke (including xenolith of the host rock)
124,25	126,25																			Granite dyke; tr chalcopyrite at 125,04m
125,36	125,42																			A 5cm-thick quartz vein; 55 TCA
127,15	127,40																			Granite dyke
127,40	128,24																			Pillow lava (?)
128,24	128,70																			Granite dyke
137,50	139,00																			Partially broken core
146,62	146,63																			1cm-thick calcite vein; 65 TCA
147,06	147,07																			1cm-thick calcite-geothite vein; 65 TCA
158,80	158,85																			Small pegmatite vein
164,50	**175,56**																			**Granite**
																				Pervasive calcite-hematite alteration; orange-red and pinkish-red color

166,02	166,03																			A 1cm-thick quartz vein; 35 TCA
175,56	**330,50**																			**Mafic volcanic rock/intrusion**
																				Volcanic breccia and/or intrusion with xenoliths. Pyrrhotite and pyrite also occur locally in the matrix
179,50	184,75																			Zone of hematization giving the rock a purple-ish green color. Locally veins of specularite also occur
192,10	192,60																			Iron formation bed, down-dip (5 to 10 TCA); magnetite-hematite-chlorite
195,50	195,58																			Pegmatite dyke (Kspar-quartz-biotite)
195,88	196,32																			Pegmatite dyke (Kspar-quartz-biotite)
196,86	197,21																			Hematite/specularite filled fractures
202,33	202,34																			Quartz-chlorite-calcite vein; 20 TCA
209,62	209,64																			Quartz vein + pink calcite along the edges; 65 TCA
214,40	214,90																			Heavily broken core
224,57	224,60																			A 3cm-thick quartz vein (80 TCA); with 5% disseminated pyrite as alteration (+ presence of fuschite)
227,00	227,22																			Pegmatite dyke (Kspar-quartz)
228,90	230,20																			Zone partially altered into sericite/ankerite; associated with a series of down-dip quartz veinlets and locally pyrite stringers
231,50	234,22																			Zone partially altered into sericite/ankerite (preferentially along a micro-fracture network, pyrite stringers (1-2%) and down-dip quartz veinlets
236,28	236,75																			Granite dyke
237,95	238,50																			Granite dyke
238,50	239,90																			Zone with a series of pyrite stringers
238,94	238,95																			Quartz-pyrite veinlets; 60 TCA
239,31	239,40																			A 7cm-thick quartz-pyrite vein; semi-massive pyrite
241,56	241,78																			Sericite alteration zone (or bleaching?) including 1-2% pyrite
248,82	249,15																			2-3% pyrite as veinlets + sericite/ankerite alteration associated
250,95	251,19																			A 2cm-thick quartz vein with ankerite-calcite altered edges; 25 TCA
258,75	258,76																			A 1cm-thick quartz-calcite vein + pyrite alteration along edges
260,43	266,36																			Zone of pervasive hematization giving the rock a dark orange-pink color
262,06	262,55																			Schistosity well-developed; (breccia-fault zone ?); 60 TCA
262,65	262,83																			Series of quartz veinlets + epidote alteration associated (or bleaching?)
267,53	274,76																			Pervasive sericite alteration zone (light beige color); including pyrite stringers and quartz-pyrite veins (~one vein/stringer per meter)
269,73	269,87																			Quartz vein (1cm-thick; 15 TCA); tr pyrite
270,02	270,06																			A 4cm-thick quartz-pyrite vein; 45 TCA; 10% pyrite
271,38	271,40																			A 2cm-thick quartz-pyrite vein; 40 TCA; 5% pyrite
274,50	274,65																			A 12cm-thick quartz-pyrite vein; 60 TCA; 5% pyrite
275,00	279,25																			Zone with carbonate filled fractures with hematization along edges (~5% of the rock)
282,99	283,11																			Series of pyrite stringers with bleached edges (60 TCA)
284,18	284,21																			Series of pyrite stringers with bleached edges (70 TCA)
285,36	285,36																			Pyrite stringer; 65 TCA
289,74	289,75																			A 0,5cm-thick calcite-pyrite veinlets; 40 TCA
290,10	291,00																			Series of fine pyrite stringers with hematized edges; 50 TCA. 1-2% pyrite
293,66	293,83																			Disrupted quartz vein including semi-massive pyrite; 10% pyrite
295,30	296,05																			Series of quartz vein (1cm-thick; one at a 30cm interval; various orientations) with carbonate-pyrite partial alteration associated; 3-4% pyrite

0,00	**28,60**	**28,60**	**Casing/Overburden**
28,60	**368,00**	**339,40**	**Granite. Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.**
			Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
			cm to pluri-cm xenoliths occur locally. Local magnetic mafic dykes (<1m-thick) cross-cut the granite
35,13	35,26		Broken core/fault zone?
47,35	51,15		Zone with few thin calcite-(pyrite) stringers (1 at a 20 to 50cm interval) tr pyrite; with carbonate-silica alteration along edges
57,38	57,59		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
59,17	59,25		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
63,30	64,27		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
64,45	65,30		Fault zone; broken and lost core (0,55m missing core form 64.45 - 65.00m)
65,34	65,45		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. + hematization
69,15	69,27		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
69,85	70,15		Down-dip quartz-chlorite veinlet (<0,5cm-thick)
73,05	73,06		Quartz-carbonate-chlorite vein; 70 TCA
74,39	76,65		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. + epidotized clasts (cm)
80,56	80,71		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich.
83,68	83,83		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich.
84,59	84,80		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. Trace pyrite
85,77	85,89		A network of calcite veinlets
85,89	86,91		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
89,25	89,83		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
90,72	94,04		Calcite-hematite alteration zone giving the rock a dark pink color
109,05	113,62		Pervasive carbonate-(silica) alteration zone (light grey color). ± hematization
115,65	117,14		Pervasive carbonate-(silica) alteration zone (light grey color). ± hematization
116,23	116,24		Quartz-chlorite-hematite vein (1cm-thick); 25 TCA
128,54	129,47		Pervasive carbonate-(silica) alteration zone (light grey color).
132,70	133,67		Zone of fractures (<5%) with geothite along edges; locally calcite veinlets are associated
151,45	152,00		Silica-carbonate alteration zone (grey color) with tr. Pyrite
156,29	161,27		Pervasive silica-carbonate alteration zone; locally + chlorite and pyrite (~1%)
158,78	158,86		Quartz-chlorite-(pyrite) vein; 45 TCA
168,60	170,18		Carbonate-(silica) alteration zone (light grey color) with calcite-filled micro-fractures
175,75	176,57		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
177,14	177,17		Quartz-chlorite vein (3cm-thick; 50TCA)
179,77	179,78		Quartz veinlet; 1cm-thick; 60TCA
183,57	184,54		Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
194,60	200,32		Pervasive carbonate-silica alteration zone (light grey color); local micro-fractures of calcite; locally tr pyrite
203,45	207,05		Pervasive carbonate-(sericite) alteration zone
206,01	206,08		A 5cm-thick quartz vein associated with a pluri-dm wide sericite(?) alteration zone; 40TCA. Tr pyrite
209,50	211,35		Unaltered granite; weakly magnetic
211,62	213,94		Pervasive silica-carbonate alteration zone (dark grey color). Tr. Pyrite. Few calcite microfractures/veinlets
223,31	223,35		A 4cm-thick quartz vein with a dm-wide alteration zone associated (silica-pyrite); 1-2% pyrite
229,20	232,18		Carbonate-sericite-silica alteration zone (grey and yellowish-green color); locally 1% pyrite
234,16	236,65		Carbonate alteration zone; light grey color. Calcite micro-veinlets
245,23	265,15		Pervasive silica-carbonate alteration zone; locally a sericite alteration superimpose the silica alteration (light to dark grey). Few quartz veinlets occur (<1cm-thick)
258,60	260,60		Presence of quartz veins (0,5cm-thick; ~1 per 60cm; 80TCA); 1% pyrite associated along edges

COMMENTS
1-2% disseminated pyrite associated to a quartz vein (30TCA)
Carbonate alteration zone; light grey color. Micro-fractures filled with calcite
Sericite-silica alteration zone light greenish-grey color associated with few quartz veins (0.5cm-thick; 60 to 80 TCA; one veinlets at a 20 to 50cm interval). Tr-1% pyrite associated
Sericite alteration zone associated with a 0.5cm-thick quartz vein; tr. Pyrite
Carbonate-(sericite) alteration zone (light greenish-grey color). Few quartz veinlets @ 291.24 to 291.36m and @ 293.85m
Carbonate-(silica) alteration zone
A 3cm-thick quartz-chlorite; 80TCA
Carbonate-silica alteration zone associated with a 4cm-thick quartz vein with 1% pyrite along edges; 70TCA
Carbonate-silica alteration zone associated with few quartz veinlets between 307.95 - 308.00m; tr-1% pyrite associated
A 3cm-thick quartz vein with pyrite-sericite alteration associated. 1% pyrite
Pervasive carbonate-(silica) alteration zone; light grey color
Carbonate-silica alteration zone + calcite filled micro-fractures; light grey color
Silica-(locally ankerite) alteration zone including tr-1% disseminated pyrite along a carbonate micro-veinlets
Carbonate-silica alteration zone; medium-grey color
A 1cm-thick massive pyrite vein (+quartz); 30TCA
Carbonate-(silica) alteration zone associated with calcite micro-fractures
Pegmatite dyke/vein with sericite alteration (10TCA); including a pyrite stringers/veinlets at the downhole contact
Pervasive silica alteration (±carbonate; ±sericite) including few mineralized veins (+disseminated pyrite)
A 1cm-thick quartz-pyrite vein; 25TCA with carbonate alteration associated; 2-3% pyrite
Sericite/ankerite alteration zone associated with a quartz-carbonate veinlet (tr-1% pyrite)
Pyrite stringer; 25TCA
Quartz-pyrite vein (5cm-thick; 30TCA); 20% pyrite
Pervasive silica alteration zone; locally tr-1% disseminated pyrite
1% disseminated pyrite associated with a 1cm-thick quartz vein @ 354.41 - 354.42m; 70TCA
Silica alteration zone (moderate to strong)
A 2cm-thick quartz-chlorite vein; tr-1% disseminated pyrite associated along the edges
1-2% disseminated pyrite associated with a 1cm-thick quartz vein @ 365.16m; 70TCA

0,00	**19,00**	**19,00**	**OB**																	**Casing/Overburden**
19,00	**51,10**	**32,10**																		**Granite. Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.**
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				cm to pluri-cm xenoliths occur locally. Local magnetic mafic dykes (<1m-thick) cross-cut the granite
19,17	19,47																			Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
22,00	22,55																			Heavily broken core (weathering?)
23,65	24,60																			Heavily broken core (weathering?)
26,75	26,87																			Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
26,87	30,65																			Broken core (due to weathering?)
30,16	30,31																			Mafic dyke (diabase); black, aphanitic, magnetic; chlorite-rich. No mineralization associated
42,60	42,61																			A 1cm-thick quartz-calcite vein + silica-carbonate alteration zone associated; tr pyrite
51,10	**57,51**																			**QFP intrusion**
																				Porphyry intrusion; uphole contact at 5TCA. Downhole contact 25TCA; few calcite stringers/veinlets occur. Tr pyrite
57,51	**72,21**																			**Granite**
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				cm to pluri-cm xenoliths occur locally.
72,21	**73,43**																			**Lamprophyre dyke**
																				Black color; strongly magnetite; biotite/phlogopite; calcite; tr pyrite. Contact at 45TCA
73,43	**116,53**																			**Granite**
																				idem as previous granite unit; including few calcite stringers with carbonate alteration along their edges
87,44	87,50																			Quartz and calcite veins/veinlets associated with a carbonate-silica alteration zone (including 1-2% pyrite)
95,18	95,26																			Diabase dyke, magnetite
95,47	95,54																			Diabase dyke, magnetite
95,74	97,17																			Diabase dyke, magnetite
99,28	99,29																			Quartz vein (1cm-thick; 70TCA); carbonate alteration zone associated (light grey color); including tr-1% pyrite
108,25	110,15																			Carbonate alteration zone (light grey color)
111,55	115,45																			Weak carbonate alteration zone (light grey color)
112,67	112,70																			A 2cm-thick quartz vein (60TCA); + a dm-wide pyrite alteration zone associated (2% disseminated pyrite)
116,53	**131,81**																			**Altered granite**
																				Pervasive and penetrative hematite-calcite alteration (locally moderate to strong); pink-purple color
122,20	122,35																			Zone with 2-3% disseminated pyrite associated with a 0,5cm-thick quartz vein @ 122,26m; 80TCA
131,81	**218,55**																			**QFP intrusion**
																				Uphole contact at 90TCA. Medium greenish-grey color. Locally, calcite occurs as stringers and disseminated. Tr-2% disseminated pyrite also occurs locally.
135,20	135,20																			Very fine pyrite stringer
147,62	155,15																			Sericite alteration (?) giving the rock a light yellowish green color. 1-2% disseminated pyrite cross-cut by several pyrite-quartz veins (one per 1 or 2 met interval); downhole contact is gradational
147,83	148,16																			Zone with 10-15% pyrite as veins and stringers (45TCA) associated with small quartz-(calcite) veinlets
151,63	151,64																			Quartz-pyrite veinlet (0,5cm-thick; 30TCA); 5% pyrite
152,69	152,69																			Quartz-pyrite stringer; 20TCA; 5-10% pyrite
154,10	154,10																			Quartz-pyrite stringer; 3% pyrite
156,45	156,88																			Series of three pyrite stringers @ 156.45m; 156.73m and 156.88m; weak sericitization associated. ~27TCA
164,31	164,31																			Quartz-pyrite stringer; 3-5% pyrite; 30TCA
166,16	166,16																			Quartz-pyrite stringer; 3-5% pyrite; 30TCA
172,06	172,06																			Quartz-carbonate veinlet; 65TCA

218,55	**227,50**																			**Granite**
																				Idem as previous granite unit
218,75	219,10																			Series of thin pyrite stringers with silica alteration limited to their edges; (35 to 45TCA)
222,63	222,63																			A thin pyrite stringer; 25TCA
223,75	226,05																			Pervasive and strong silica-(pyrite) alteration zone associated with a series of down-dip/low-angle pyrite-quartz stringers/veinlets; including 1-2% disseminated pyrite
227,45	227,50																			~10% pyrite and calcite at the contact zone between the granite and QFP intrusion; contact @ 15TCA
227,50	**246,93**																			**QFP intrusion**
																				Dark and medium grey color; several down-dip/low-angle quartz-pyrite veins/veinlets occur
230,18	230,19																			Pyrite-calcite-(quartz) veinlets; 30TCA
234,14	234,45																			A series of four pyrite-(±calcite; ±quartz) veinlets; 15TCA; 10% pyrite
235,72	235,95																			A 2cm-thick quartz-pyrite vein; 10TCA; 20% pyrite
246,93	**293,00**																			**Granite**
																				Idem as previous granite unit. Few calcite-(pyrite) stringers occur locally. Silica alteration zones occur almost pervasively (dark grey color)
255,66	255,70																			A 3cm-thick quartz vein + trace pyrite along the edges; 25TCA
257,95	257,97																			A 2cm-thick quartz vein + pyrite alteration associated (1% pyrite); 80TCA
269,16	270,84																			QFP dyke; dark grey; few thin pyrite stringers occur (30TCA)
272,43	273,00																			QFP dyke; light grey
273,85	275,25																			QFP dyke; including pyrite stringers (one at a 30cm interval); 20TCA; downhole contact 20TCA
276,37	277,21																			tr-1% disseminated pyrite
281,35	282,06																			Lamprophyre dyke; black color; magnetic; biotite-calcite; uphole contact @ 20TCA
282,61	282,68																			Lamprophyre dyke; 30TCA
283,70	284,00																			Broken core
292,50	292,50																			Calcite-chlorite-quartz veinlet; 70TCA
293,00	293,00																			EOH

COMMENTS

Casing/Overburden; casing at 27m

Granite. Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.

Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).

cm to pluri-cm xenoliths occur locally.

From	To	COMMENTS
22,80	23,75	Weathered; broken core
22,80	41,60	Zone of partially broken core
36,84	36,85	Open-space fracture partially filled with quartz and chlorite
48,97	49,17	Carbonate alteration zone (light grey color); including a chlorite-calcite-pyrite stringer (1% pyrite); 50TCA
56,50	56,88	Silica alteration zone; dark grey color; tr pyrite
57,84	58,02	Silica alteration zone; dark grey color; tr pyrite
58,58	58,70	Silica alteration zone; dark grey color; tr-1% pyrite
61,15	61,50	Partially broken core
66,75	67,00	Silica alteration zone; including thin pyrite stringers (1-2% pyrite); 60TCA
68,00	74,30	Zone with partially broken core (weathering?); geothite is associated in some fractures
77,58	78,12	Silica alteration zone (dark grey color); tr pyrite and calcite veinlets
82,85	83,80	Silica alteration zone; 1% disseminated pyrite
92,00	92,16	Silica alteration zone including calcite-pyrite stringers; 55TCA; 5% pyrite
92,78	92,85	Silica alteration zone including calcite-pyrite stringers; 60TCA; 2% pyrite
94,85	95,08	Silica alteration zone including calcite-pyrite stringers; 65TCA; 3-4% pyrite
97,17	97,65	Thick quartz-chlorite-Kspar vein (or pegmatite?)
97,77	97,80	A 3cm-thick quartz-chlorite vein; 60TCA
106,42	106,42	Fine pyrite stringer; 60TCA
107,84	108,65	Silica alteration zone associated with down-dip calcite veinlets; tr pyrite
116,70	118,61	Down-dip epidote-calcite veinlet
121,28	121,39	Series of calcite veinlets; 55TCA
122,00	122,00	EOH

2,00	**113,42**	**111,42**																		**Granite. Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.**
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				cm to pluri-cm xenoliths occur locally. Calcite-geothite veinlets/fractures in the first ~35m (weathering)
2,00	9,63																			Carbonate alteration zone (light grey color); ~5% calcite
6,37	6,38																			Quartz vein; 30TCA; no mineralization associated
24,90	25,28																			Silica alteration zone (dark grey color); tr pyrite
37,47	37,80																			Carbonate-silica alteration zone (dark grey color); including calcite micro-veins
43,25	43,60																			Silica alteration zone; including a 2mm-thick quartz-calcite veinlets; 20TCA; tr pyrite
48,67	48,68																			A 1cm-thick calcite vein; 75TCA
50,44	56,30																			Strong and pervasive silica alteration zone + sericitized plagioclase (?); tr pyrite and leucoxene(?). Gradational contacts
58,03	58,36																			Low-angle quartz-chlorite vein; 3cm-thick; 20TCA
58,76	58,98																			Quartz-chlorite vein; 6cm-thick; 25TCA
59,13	59,16																			A 2cm-thick quartz-chlorite vein; 60TCA
68,00	68,02																			Quartz-chlorite vein; 1cm-thick; 60TCA
69,70	70,65																			Strong silica alteration zone including low-angle calcite-chlorite veinlets; 15TCA
79,26	79,28																			Epidote vein (1cm-thick; 20TCA)
85,13	85,45																			Carbonate alteration zone (+Ank?); including a calcite veinlet (20TCA); presence of leucoxene suggests leaching(?)
88,21	89,26																			Carbonate alteration zone (light grey color) including a 0.5cm-thick quartz-chlorite veinlet; 30TCA
89,65	90,63																			Weak carbonate alteration zone (light grey color)
94,54	95,14																			Carbonate alteration zone including two calcite-chlorite veinlets (0.5cm-thick; 15TCA)
98,62	102,56																			Silica-carbonate alteration zone (dark to medium grey color) associated with several calcite-chlorite veinlets (few mm-thick; at a 10 to 40cm interval; 50 to 60 TCA); locally tr pyrite
103,97	104,15																			A 2cm-thick epidote veinlet with geothite; 15TCA
110,15	111,10																			Series of calcite stringers with silica alteration zone along their edges; 15-20TCA; tr pyrite
113,42	**119,78**																			**Altered granite**
																				Calcite-hematite alteration; purple-ish red color; gradational contacts
119,78	**374,00**																			**Granite**
																				Idem as previous granite unit; calcite-geothite veinlets occur systematically at a pluri-m interval
129,93	129,94																			Pink calcite-quartz vein; 75TCA
137,79	137,80																			Quartz-calcite vein; 50TCA
142,00	142,22																			Down-dip pink calcite vein (<1cm-thick) + goethite
147,15	147,59																			Down-dip calcite vein (1cm-thick); chlorite alteration + tr chalcopyrite
159,14	159,35																			Series of calcite-geothite veinlets
163,00	163,64																			Series of microfractures filled with hematite-geothite
166,48	167,12																			Series of microfractures filled with geothite
169,81	170,11																			Silica-chlorite-geothite alteration zone
171,51	171,90																			Silica-carbonate alteration zone including a 0.5cm-thick chlorite-calcite veinlets; 15TCA
172,95	174,71																			Carbonate-(silica) alteration zone including chlorite veinlets
173,24	173,25																			Quartz-chlorite vein (1cm-thick); 50TCA
175,14	175,62																			Carbonate alteration zone
175,27	175,34																			Calcite-quartz-chlorite vein (6cm-thick; 35TCA)

177,48	177,53																			Quartz-chlorite-calcite vein; 3cm-thick; 20TCA
181,00	183,33																			Pervasive carbonate alteration zone associated with quartz-chlorite-calcite veinlets
181,14	181,65																			Down-dip quartz-chlorite-calcite veinlet (1cm-thick)
182,46	182,59																			Quartz-chlorite-calcite vein; 11cm-thick; 30TCA
185,28	185,30																			A 1cm-thick quartz-calcite-chlorite vein; 25TCA
189,19	189,21																			A 1cm-thick quartz-calcite-chlorite vein; 50TCA
198,24	198,62																			Strong epidote alteration/veinlets
208,18	222,97																			Strong carbonate-silica alteration zone (medium to dark grey color); including calcite micro-veinlets/fractures; locally weakly magnetic; tr pyrite.
211,97	212,05																			Quartz-(chlorite) vein; 75TCA
212,15	212,78																			Chlorite-quartz (pinkish) vein/breccia; broken core
220,83	221,70																			A 0.5cm-thick chlorite-calcite-quartz vein (down-dip)
222,64	222,65																			A 1cm-thick quartz-calcite vein; 50TCA
224,80	226,09																			Silica-carbonate alteration zone
228,88	233,90																			Carbonate-(silica) alteration zone with calcite micro-fractures
229,98	230,00																			Quartz-chlorite vein (2cm-thick; 60TCA)
241,22	241,30																			A series of quartz-chlorite veinlets; tr pyrite
249,89	249,93																			Calcite-chlorite vein (3cm-thick); 45TCA
252,02	252,04																			A 2cm-thick quartz-(chlorite) vein; 30TCA
253,24	253,38																			Thick quartz vein, no alteration associated
256,12	256,50																			Silica alteration zone + leaching (presence of leucoxene)
273,72	273,73																			A 1cm-thick chlorite-calcite veinlets; 45TCA
279,16	285,73																			Pervasive and strong silica alteration zone giving the rock a dark grey color; gradational contacts including quartz veinlets and tr pyrite
281,25	281,55																			Quartz-calcite-chlorite vein (~10cm-thick); 20TCA
282,09	282,22																			A 1cm-thick quartz vein; 25TCA; tr pyrite
289,68	289,71																			A 2cm-thick quartz-chlorite-calcite vein; 40TCA
290,30	291,63																			Moderate carbonate alteration zone (light grey color)
302,97	303,22																			Weak silica alteration associated with a 0.5cm-thick quartz vein; 80TCA
314,03	314,04																			Calcite-chlorite vein (1cm-thick; 30TCA)
326,52	330,30																			Silica-(chlorite?) alteration zone (+ carbonate); dark greenish-grey color. Gradational contact
334,69	334,71																			Quartz-chlorite-calcite vein; 1cm-thick; 55TCA
336,37	336,65																			Quartz-(chlorite)-(calcite) vein; 6cm-thick; 20TCA
338,93	340,20																			Silica-carbonate alteration zone (grey color); including tr-1% pyrite
339,88	339,90																			A 1cm-thick pyrite-calcite vein; 30TCA; 5-7% pyrite
347,12	348,08																			Strong silica alteration zone
349,35	350,39																			Strong silica-carbonate alteration zone
353,00	353,39																			Strong silica-carbonate alteration zone
357,17	374,00																			Pervasive carbonate-chlorite alteration zone (greenish-grey color); including tr pyrite and chlorite-carbonate filled fractures/veinlets; locally sheared (at 25TCA); and/or doriote or quartz diorite?

0,00	**6,00**	**6,00**	**OB**																	**Casing/Overburden**
6,00	**101,35**	**95,35**																		**Mafic volcanic rock**
																				Fine-grained; greyish-green color (due to chlorite). Cross-cut by several pegmatite/granitic dykes.
																				Not magnetic, locally pyrrhotite occurs (disseminated). Main fabric ~ 60 to 70TCA. Locally brecciated.
																				Calcite filled fracture (pillow margin?).
6,68	7,94																			Granite/pegmatite dyke; sericitized and weathered
8,17	8,29																			Granite/pegmatite dyke; 70TCA
8,81	9,03																			Pegmatite dyke (Kspar-rich); 55TCA
10,29	10,70																			Granite/pegmatite dyke; sericite-rich
11,22	11,97																			Granite dyke, strongly sericitized and weathered
14,42	14,63																			Partially broken core
34,00	34,12																			A 1cm-thick quartz vein (20TCA); including tr chalcopyrite-pyrrhotite-galena(?) and leucoxene along the edges
34,22	34,70																			Partially broken core
35,14	35,32																			Down-dip quartz vein (thickness?) including 1% pyrrhotite as large blebs; tr chalcopyrite
37,06	37,75																			Granite and pegmatite dyke; including ~5% garnet
46,06	46,12																			A 3cm-thick quartz-(plagio?) vein; including 2-3% pyrrhotite; tr chalcopyrite; 35TCA
53,54	53,55																			A 1cm-thick quartz vein; tr pyrrhotite; tr chalcopyrite; 20TCA
54,39	54,48																			Granite dyke/vein with strong sericitization
54,68	54,80																			Granite dyke/vein with strong sericitization; 35TCA
62,67	62,68																			Calcite veinlets including tr pyrrhotite; 80TCA
71,91	71,93																			Quartz vein (1cm-thick) including leucoxene along edges (leaching?); 25TCA
74,26	74,50																			A 0.5cm-thick quartz-(calcite) vein including tr-1% pyrite and tr chalcopyrite; 15TCA
74,58	74,85																			Magnetic bed (and/or iron formation xenolith?) including 1% pyrite as stringers/layers
75,00	93,00																			Tr-2% disseminated pyrite ± pyrrhotite (euhedral crystals) in mafic volcanic rock
81,25	81,25																			2% pyrrhotite; 2% pyrite disseminated
91,28	91,65																			Strong magnetic horizon (magnetite): digested xenolith of iron formation or interlayer?
94,85	101,35																			Gradational contact between mafic and intermediate volcanic rock unit
100,62	100,88																			Down-dip quartz vein with silica alteration associated; tr pyrite
101,35	**106,45**	**5,10**																		**Intermediate volcanic rock**
																				Volcanic or intrusive? Beige-grey color; tr-1% in filled fractures; fine-grained; most likely volcanic texture
106,45	**288,20**	**181,75**																		**Mafic volcanic rock**
																				idem as previous mafic volcanic rock unit
107,02	107,28																			A 1cm-thick down-dip quartz vein
116,68	116,88																			Quartz vein and/or chert horizon; 1% pyrite
117,00	117,70																			Magnetite-rich horizon; iron formation bed? Or xenolith. 2-3% pyrite as euhedral crystals
123,80	124,28																			Zone with >50% of digested iron formation xenoliths; magnetite-rich including 1-2% euhedral pyrite
126,38	127,35																			Zone with >50% of digested iron formation xenoliths; magnetite-rich including 1-2% euhedral pyrite
128,43	129,44																			Zone with >50% of digested iron formation xenoliths; magnetite-rich including 1-2% euhedral pyrite
140,75	140,77																			A 2cm-thick quartz vein; 30TCA
154,90	157,85																			Magnetic mafic volcanic rock (magnetite)
163,94	164,20																			Iron formation bed; magnetite-rich; 1% pyrite; bedding: 25TCA
164,61	164,75																			Iron formation bed; magnetite-rich; 1% pyrite; bedding: 40TCA

From	To	Interval	COMMENTS
172,73	172,74		A 1cm-thick quartz vein; 60TCA; tr pyrite
179,05	179,28		A 1cm-thick quartz vein; down-dip
188,00	188,03		Quartz vein; 65TCA
189,92	191,00		Bleaching affects the mafic rock (greenish-yellow color)
191,00	193,15		A 2cm-thick quartz and chlorite vein; down-dip; including tr chalcopyrite and tr pyrite; ankerite/sericite pervasive alteration associated
193,15	202,50		Hematite alteration zone giving the rock a pinkish color (along fractures). The zone includes fine pyrite stringers and few quartz-chlorite veins (~1cm-thick; 25 to 40TCA)
211,15	217,40		Pervasive hematization giving the rock a pinkish color; tr-1% pyrite as coarse grains.
217,40	223,07		Mafic intrusion; fine-grained; contact @ 25TCA; including small granitic dykes
217,68	218,83		Felsic dyke
219,19	220,60		Felsic dyke including angular xenoliths of mafic intrusion
220,60	220,85		Mafic dyke, coarse-grained (+chloritoid? Or pyroxene?)
221,15	221,17		A 1.5cm-thick quartz-pyrite vein; 20TCA; 5-10% pyrite
221,73	221,76		Quartz vein a 3cm-thick quartz vein; 45TCA
221,98	222,14		Quartz-(chlorite) vein (12cm-thick; 50TCA)
222,36	222,48		Sericite alteration zone; including 1% disseminated pyrite (fine-grained)
235,04	235,07		A 2.5cm-thick quartz-carbonate vein; including 2-3% pyrite as large euhedral grains; 55TCA. Pyrite also occur along the edges
243,55	243,70		Zone with strong pyrite alteration; very fine-grained; disseminated py: ~10%. Ankerite(?) alteration associated
244,15	244,37		Zone with strong pyrite alteration; very fine-grained; disseminated py: ~10% to 20%).
244,37	244,70		Zone with strong pyrite alteration; coarse-grained; disseminated py: 5% to 10%).
244,83	245,00		A 4cm-thick quartz vein (15TCA); associated with finely disseminated pyrite as alteration (5%).
245,49	245,83		A 1.5cm-thick quartz vein (down-dip) associated with pyrite alteration zone (2-3% pyrite; medium- to coarse-grained)
257,10	257,23		A 10cm-thick Kspar dyke; 25TCA
259,71	259,78		A 1cm-thick dislocated quartz vein
259,89	260,98		Shear zone/fault zone; locally brecciated; chlorite-carbonate-rich
265,26	265,42		A 10cm-thick Kspar-rich dyke; 25TCA
267,53	268,65		Kspar-(quartz) dyke (or pegmatite?); including tr pyrite
268,65	268,83		Contact zone of the dyke (down-dip contact). Quartz-pyrite veins associated (0 to 20TCA; ~1cm-thick; 5% pyrite)
269,00	269,95		Down-dip Kspar-quartz dyke (thickness?); including several thin pyrite stringers (25TCA); 2-3% pyrite
271,07	271,62		A 10cm-thick Kspar-(quartz) dyke; 10TCA
271,62	271,78		A 2cm-thick quartz vein; 10TCA
275,00	282,00		Zone with a dense network of fractures; hematite alteration occur along the edges.
276,49	277,19		Down-dip Kspar-rich dyke/pegmatite
282,00	286,30		Alteration zone (or bleaching?) giving the rock a beige color; locally pyrite stringers are associated
283,07	283,07		Pyrite stringer (0.5cm-thick) cross-cut by a late quartz-carbonate vein (picture); 25 TCA
283,77	284,05		Series of Four pyrite stringers (~27TCA)
286,30	287,30		Pegmatite dyke (Kspar-rich); 20TCA
288,20	**294,35**	**6,15**	**Felsic volcanic rock(?)**
			Pinkish-beige color; Felsic volcanic rock, but some textures suggest sediments, but could be volcanic flows as well
			Locally pyrite occur as disseminated grains and stringers

From	To	COMMENTS
294,35	**296,00**	**Fault Zone**
		Heavily broken core, presence of several quartz veins; locally silicified.
294,91	295,03	Quartz vein
295,22	295,26	Quartz vein; 30TCA
295,50	296,00	Quartz vein (thickness? Due to broken core)
296,00	**500,00**	**Mafic volcanic rock**
		idem as previous mafic volcanic rock unit; + calcite tension fractures; locally hematite alteration associated
296,00	296,16	Pegmatite dyke (Kspar-quartz-muscovite)
297,17	298,25	Breccia zone (associated to fault zone?); >50% matrix; composed of jasper clasts and calcite (sand-size clasts)
298,25	298,52	A 6cm-thick quartz-chlorite vein; 23TCA. Tr-1% pyrite associated at the contact with the breccia
298,90	299,15	Zone with 2-3% disseminated pyrite (replacement?)
299,78	300,77	Zone with a dislocated lamprophyre dyke; weakly magnetic; calcite-rich
305,20	309,50	Zone with hematite alteration associated with calcite tension fractures
309,50	312,00	Felsic unit; magnetic (due to disseminated magnetite); pinkish-grey color; 1-2% pyrite as coarse euhedral crystals and stringers
310,88	310,88	Pyrite stringer; 60TCA
311,00	311,34	Series of three pyrite stringers; 50TCA
311,49	311,50	a 1cm-thick quartz-pyrite veinlets; 40TCA; 20% pyrite
313,47	313,64	Series of pyrite-(quartz) veinlets; 10 to 20TCA; 5% pyrite associated with a strong leached zone along the edges
314,15	314,15	Calcite-pyrite veinlet; 5% pyrite; 65TCA
316,11	316,47	Series of quartz-calcite-pyrite veinlets/stringers; 40TCA; with bleached edges
316,80	316,80	Calcite-pyrite stringer; 50TCA; bleached edges
319,12	319,21	A 8cm-thick quartz vein + pyrite (1-2%) along the edges
332,43	332,79	Quartz-carbonate-chlorite vein (25cm-thick at least; 40TCA); including tr-1% pyrite near the downhole contact
332,87	332,89	A 2cm-thick quartz-pyrite vein; 40TCA; 5-10% pyrite
333,24	333,58	A serie of pyrite-(carbonate) veinlets (50TCA; veins at 5 to 10cm interval); 5% pyrite
333,84	333,85	A 1cm-thick pyrite-carbonate vein; 30TCA; 5-10% pyrite
339,31	339,56	Pegmatite dyke; quartz vein
343,02	343,05	Series of fine pyrite stringers + carbonate alteration associated
344,00	344,02	A 1cm-thick carbonate-pyrite vein; 50TCA; 5% pyrite
346,51	346,55	A 3cm-thick quartz vein; 35TCA
347,88	347,89	A 1cm-thick pyrite-carbonate vein; 10% pyrite; 50TCA
348,37	348,38	A 0.5cm-thick carbonate-(pyrite) veinlets; 2-3% pyrite; 40TCA
350,00	350,20	A series of very fine pyrite-(chlorite)-(carbonate) stringers; 1-2% pyrite; 55TCA
362,80	363,80	Magnetic zone (due to disseminated magnetite)
364,22	364,24	2-3% pyrite associated with a quartz veinlet
364,44	364,45	2-3% pyrite
365,29	365,34	Pegmatite dyke
365,53	365,59	Pegmatite dyke; 10TCA; 3cm-thick
366,56	366,63	A 4cm-thick quartz vein (25TCA); tr-1% pyrite associated
366,75	366,81	Pegmatite dyke

424,80	424,95	Granite dyke (with epidotized plagioclase); 50TCA
436,35	436,41	A 6cm-thick quartz vein; 60TCA
441,75	442,00	Partially broken core due to micro-fractures (with hematite-goethite associated)
447,57	447,58	Quartz vein; 40TCA
450,06	450,12	A 4cm-thick quartz-calcite vein; 40TCA
450,65	450,67	A 2cm-thick pyrite-(calcite) vein; semi-massive pyrite; 35TCA
451,21	451,80	Mineralized zone; pyrite veinlets/stringers network (~35TCA); with ankerite alteration zone associated; 10-15% pyrite
452,00	452,04	A quartz-pyrite vein; 20TCA
452,23	453,00	Mineralized zone; pyrite veins/veinlets (few mm to 1.5cm-thick; ~70TCA); with ankerite alteration zone associated; 10-15% pyrite
455,24	455,36	Diorite dyke
459,73	459,74	A 1cm-thick quartz vein; 25TCA
469,00	477,65	The rock is magnetic due to local magnetite stringers and disseminated magnetite
469,86	470,66	Pegmatite dyke (Kspar-quartz)
470,83	471,14	Down-dip granite dyke (epidotized plagioclase)
471,85	472,44	Granite dyke (epidotized plagioclase)
470,66	476,28	Mafic intrusion (gabbro); weakly magnetic due to disseminated magnetite; medium-grained; green color; chloritic
476,28	476,75	Pegmatite dyke (Kspar-rich)
479,30	479,50	Zone with tr-1% pyrite disseminated
481,59	481,70	Small porphyric dykes (granitic composition)
483,62	483,78	Silicified zone; including a 1cm-thick quartz-(pyrite) vein; 15TCA; 1% pyrite
484,65	484,75	Silicified zone including 1% pyrite
491,00	496,00	Zone with presence of local magnetite stringers
491,85	494,88	Glaumeroporphyric basalt; 5% glaumeroporphyric
497,06	499,70	Glaumeroporphyric basalt; 5% glaumeroporphyric
497,42	497,44	Silicified zone; trace of leucoxene

From	To	COMMENTS
0,00	**5,50**	**Casing/Overburden**
5,50	**610,95**	**Mafic volcanic rock**
		Fine-grained; greyish-green color (due to chlorite). Several volcanic textures, including breccia flow
		Locally magnetic (due to magnetite) especially after 400m
5,96	6,57	Granitic dyke (including mafic rock xenoliths); plagioclase are partially epidotized
8,10	8,30	A 5cm-thick quartz-(ankerite) vein; 20TCA; tr pyrite and leucoxene along the edges
9,03	9,04	A 0.5cm-thick quartz vein; 20TCA; including tr-1% pyrite; leucoxene along the edges
9,41	9,72	Granite dyke (plagioclase partially epidotized)
10,05	10,34	Granite dyke (plagioclase partially epidotized)
10,64	10,78	Granite dyke (plagioclase partially epidotized)
10,93	11,05	Granite dyke (plagioclase partially epidotized) including a 0.5cm-thick down-dip quartz veinlet; tr pyrite
12,55	12,56	A 1cm-thick quartz vein (30TCA); tr pyrite; tr leucoxene along the edges
12,65	12,93	Granite dyke (plagioclase partially epidotized)
13,00	13,22	A 2.5cm-thick quartz vein; 20TCA; tr pyrite
13,64	14,00	A 1cm-thick quartz vein; 15TCA; 1% pyrite, leucoxene along the edges
14,73	14,96	A 2cm-thick quartz vein; 20TCA; tr pyrrhotite; leucoxene along the edges
15,45	15,46	A 1cm-thick quartz vein; 30TCA; tr pyrite; leucoxene along the edges
15,65	16,56	Shear zone (60TCA); including several calcite veinlets (locally quartz) at 60TCA (parallel to shear)
18,63	18,75	Zone with 1-2% disseminated pyrite
19,19	19,42	A 1 cm-thick quartz vein; 10TCA; 1% pyrrhotite; leucoxene along the edges; tr pyrite
20,50	20,73	A 2cm-thick quartz vein; 10TCA
20,86	21,00	A 3cm-thick; dislocated quartz vein (10TCA); 1-2% pyrite; 1% pyrrhotite associated
21,29	21,31	Calcite-pyrite vein; 2% pyrite; 55TCA
21,90	24,25	Zone with granitic injections in the mafic volcanic (10%)
24,53	24,68	Iron formation bed/xenolith with 1-2% pyrite as layers/stringers
25,40	26,19	Iron formation; chlorite-rich; ±magnetite; 1-2% pyrrhotite; tr pyrite
26,68	26,92	Iron formation; chlorite-rich; ±magnetite; 1-2% pyrrhotite; 1% pyrite
27,00	27,30	Partially broken core
29,90	29,91	A 1cm-thick quartz vein; 20TCA
36,08	36,16	Granite dyke (plagioclase partially epidotized)
38,40	38,56	Pervasive epidote alteration zone including garnet(?) or large leucoxene crystals. Sharp edges (could be a vein?)
45,84	45,97	Pegmatite dyke
46,17	46,40	Pegmatite dyke
51,53	51,55	A 2cm-thick quartz vein; 30TCA
52,55	53,18	Mafic intrusion; chlorite-rich (black to dark green color); tr-1% disseminated pyrite
53,60	56,22	Mafic intrusion; chlorite-rich (black to dark green color); 3-4% disseminated pyrite
58,24	58,33	A 6cm-thick calcite vein (pinkish); 30TCA
64,76	65,03	A 1cm-thick calcite vein; 10TCA
73,72	81,47	Strongly magnetic; rounded clasts of magnetic unit (>50% of the rock) or dislocated magnetic dyke; Dark green color; locally 1-2% pyrite
90,79	90,80	A 0.5cm-thick pyrite-(qtz) veinlet; 25TCA
90,83	91,07	Pegmatite dislocated dyke
100,87	101,05	A 1cm-thick quartz vein; 15TCA

COMMENTS
Partially broken core
Partially broken core
Partially broken core
Zone with pegmatite injections/dislocated dyke
Zone with ~5% garnet; 1% disseminated pyrite
A 1cm-thick quartz-calcite veinlet; 25TCA
Late *in situ* breccia (jigsaw-like) with calcite cement
A 2cm-thick quartz-carbonate vein; 35TCA
1-2% disseminated pyrite associated with a 0.5cm-thick quartz veinlet (down-dip)
Partially bleached zone; giving the rock a beige and green color
A 1cm-thick quartz-calcite vein; 70TCA
Zone with 1% disseminated pyrite as coarse euhedral crystals; no vein or alteration associated
Zone partially altered into hematite (pinkish color): ~5% of the rock
Massive chlorite vein (±quartz and ±carbonate); 40TCA
Series of down-dip quartz-chlorite-(carbonate) veinlets (<1cm-thick)
Down-dip quartz vein (<1cm-thick)
A 1cm-thick quartz vein (25TCA); with 1-2% pyrite zone associated (coarse euhedral grains)
A 1cm-thick quartz vein (25TCA); with 1% pyrite zone associated (fine-grained)
A 1cm-thick quartz vein (30TCA); with 1-2% pyrite zone associated (coarse euhedral grains)
A 1cm-thick quartz vein; 35TCA
A 3cm-thick quartz-chlorite vein; down-dip
Pegmatite/granite dyke (Kspar-rich)
Partially broken core
Partially broken core
Mafic dyke with pyroxene porphyry; 55TCA (main fabric defined by orientation of porphyry)
Epidote alteration at the dyke contact; 1% pyrite
Series of quartz veinlets + pyrite stringers; 50TCA; 2-3% pyrite
A 1cm-thick quartz-calcite vein (25TCA); hematite alteration along edges; tr-1% pyrite associated
Down-dip and dislocated quartz-Kspar vein/pegmatite dyke(?)
Heavily broken core + mud
Pyrite-ankerite partially alteration; 2-3% pyrite (euhedral grains); partially broken core
Partially broken core
Quartz-carbonate vein (5cm-thick; 35TCA)
Broken core
Kspar-rich vein/dyke
Granitic dyke (4cm-thick)
Granitic dyke (3cm-thick)
Granitic dyke (5cm-thick)
Granitic dyke, pervasive hematite/geothite alteration associated
Partially broken core; geothite along fractures

278,78	278,94																			Pegmatite dislocated dyke
278,94	280,79																			Pervasive epidote-Kspar alteration zone and/or intrusion/vein; including local magnetite
282,70	282,92																			A 1cm-thick quartz-chlorite vein; 15TCA
289,52	289,67																			A 1cm-thick quartz vein (25TCA); a pervasive silica alteration zone associated
292,07	292,19																			Series of five calcite veinlets associated to a shear zone; veins are parallel to shear; 60TCA
300,25	300,66																			A 1cm-thick quartz vein (10TCA); + silica-ankerite alteration associated
306,15	307,55																			Hematite alteration along a fracture network (<5%) including tr pyrite as euhedral grains
307,55	307,82																			A 25cm-thick quartz vein in a shear zone (60TCA)
308,96	309,33																			Quartz-Kspar pegmatite vein; 15TCA
312,02	312,09																			*in situ* breccia, magnetite in the matrix
314,25	326,45																			Series of dislocated and down-dip pegmatite/granite small dykes (one per meter)
331,34	331,39																			A 5cm-thick quartz-chlorite-(garnet) vein; 80TCA
334,24	335,65																			Mafic dyke; magnetic; fine-grained; ~5% plagioclase porphyry
335,65	335,74																			Breccia vein (calcite) at the downhole contact of the dyke
336,12	336,71																			Granite dyke/pegmatite
337,08	341,71																			Mafic dyke; fine-grained
340,81	340,91																			Pegmatite dyke
349,72	350,06																			Series of fine pyrite stringers; 25TCA
354,00	356,00																			Zone including fine pyrite stringers (1 or 2 per meter; 40TCA)
356,07	356,70																			Series of three pyrite-calcite-(quartz) vein (1 to 2cm-thick) within an ankerite-silica alteration zone (beige-brown color); 5-10% pyrite
357,00	357,62																			Series of pyrite stringers/veinlets (<1cm-thick; ~30TCA; at a 10cm interval); 10% pyrite
357,79	358,06																			Quartz-pyrite vein system; 15% pyrite; ~45TCA
358,25	358,63																			Series of very fine pyrite stringers (<5% pyrite) at a 10 to 15 cm interval; 40TCA
361,16	361,56																			Series of quartz-chlorite vein (1 to 2cm-thick; at a 5 to 15cm interval; 60 to 70TCA)
363,47	363,48																			A 1cm-thick pyrite-calcite-quartz vein; 50TCA; 5% pyrite
364,00	364,45																			A series of quartz-pyrite-calcite stringers at a 5 to 10cm interval; 50TCA; 3-4% pyrite
364,88	365,42																			A series of calcite-pyrite stringers (~50TCA) at a 5 to 15cm interval; 3-4% pyrite
366,13	366,37																			A pyrite stringers network (pyrite is partially altered into geothite); 5-7% pyrite
368,00	368,04																			Kspar-rich granite dyke/vein; 60TCA
368,71	368,84																			Kspar-rich granite dyke/vein; 60TCA
369,10	371,53																			Mafic dyke; magnetic
370,49	370,54																			Small pegmatite dyke
375,68	376,13																			Series of quartz-chlorite-calcite and chlorite veins (at a 10cm interval; 1-2 cm-thick; 25TCA and 90+25TCA)
382,62	382,72																			Heavily broken core
388,17	388,22																			Pegmatite vein/dyke; quartz-rich; 30TCA
388,41	388,48																			Down-dip and dislocated quartz vein
388,82	389,00																			Pegmatite-granite dyke; 20TCA
393,22	393,23																			A 1cm-thick quartz vein; 25TCA
401,78	402,32																			Zone including a series of fine calcite-pyrite stringers (at a 20 to 30cm interval; 60TCA); 1-2% pyrite
403,75	403,75																			Calcite-pyrite veinlets; 50TCA; 2% pyrite

408,00	408,91																			Zone including a series of fine pyrite stringers with a carbonate alteration and/or bleaching associated; ~1% pyrite
408,91	409,26																			Quartz-pyrite vein system; 10-15% pyrite
409,26	409,85																			Zone including a series of fine pyrite stringers
421,78	429,60																			Mafic intrusion; medium- to fine-grained; locally magnetic
423,40	423,50																			Granite/diorite dyke
425,26	425,30																			Small pegmatite dyke
428,19	428,20																			A 0.5cm-thick pyrite-calcite veinlet; 30TCA
428,47	428,56																			Sericite alteration zone; tr pyrite
433,23	433,29																			A 5cm-thick quartz-chlorite vein; 55TCA
434,33	434,35																			Series of fine pyrite stringers; 50TCA; 1% pyrite
434,57	434,60																			A 2cm-thick quartz-chlorite vein; 55TCA
435,34	435,35																			A 1cm-thick quartz-chlorite vein; 70TCA
437,22	437,56																			A down-dip quartz-calcite-chlorite veinlet; tr-1% pyrite associated
438,60	438,68																			Pegmatite dyke; sericitized
442,26	442,60																			Series of pyrite stringers, at a ~5cm interval; 30TCA
445,31	445,75																			Granite dyke (+carbonate alteration)
448,53	449,06																			Series of calcite stringers (at a 5cm interval); ankerite alteration along the edges; tr pyrite
449,68	449,71																			A 0.5cm-thick quartz-carbonate veinlet (60TCA); including tr pyrite within a carbonate alteration zone along the edges
450,15	450,95																			Slightly shear zone (25TCA) including several calcite veinlets
450,55	450,70																			A 10cm-thick quartz vein
451,04	451,15																			Quartz vein
451,23	451,30																			Quartz vein; 50TCA
451,45	452,45																			A 1m-thick quartz vein
452,54	452,70																			Quartz-carbonate vein; 55TCA
463,55	464,33																			Partially broken core
470,13	470,15																			A 1cm-thick pyrite-calcite vein; 25TCA; 3-4% pyrite
472,20	472,42																			Down-dip and dislocated pegmatite dyke
473,65	474,03																			Partial epidote alteration zone
476,65	477,78																			Zone including a series of pyrite-calcite stringers/veinlets (at a 10cm interval; 25 to 55TCA); 2-3% pyrite
482,88	483,19																			Pegmatite dyke; 15TCA
493,32	493,68																			Dislocated pegmatite dyke (Kspar-rich); tr pyrite
495,92	495,95																			A 2cm-thick quartz vein (60TCA); sericite alteration associated
496,55	496,56																			A 1cm-thick quartz vein; 55TCA
497,40	498,12																			Quartz-carbonate vein network (1cm-thick; from 0TCA to 70TCA); bleaching associated
498,49	498,74																			Series of pyrite stringers (at a 5cm interval; 50TCA; 2-3% pyrite)
498,74	498,84																			A 1cm-thick pyrite-quartz vein; 25TCA; 5% pyrite
498,84	499,80																			A down-dip pyrite stringers
501,29	501,36																			A carbonate-pyrite vein (1cm-thick; 40TCA) cross-cut and dislocated by a 1cm-thick quartz vein (90 + 15TCA)
504,74	504,77																			A 2cm-thick pyrite-(carbonate)-(quartz) vein; 30TCA; semi-massive pyrite.
504,85	505,06																			Pegmatite/granite dyke, sericitized
508,30	509,44																			Carbonate alteration zone

508,78	508,79																			A 1cm-thick quartz-chlorite vein; 45TCA
509,29	509,35																			A 3cm-thick quartz vein + 1% pyrite along the edges
510,00	510,42																			Pegmatite dyke, sericitized, including few pyrite stringers; 40TCA
510,54	511,00																			Small pegmatite dyke; down-dip
511,00	511,75																			Series of small pyrite stringers (at a 5 to 20cm interval; 35TCA); hematite alteration along their edges
520,00	520,18																			Carbonate-sericite alteration(?) zone
523,30	523,70																			Partial hematite alteration zone associated with a down-dip quartz vein (1cm-thick) and calcite stringer network
524,70	532,00																			Magnetic rock; including local magnetite stringers
556,81	556,82																			1% pyrite as stringer; 40TCA
574,25	574,40																			Bleached zone; beige color
576,50	585,00																			Zone of dense calcite tension fractures (3-4%)
578,91	578,91																			Pyrite-calcite stringers; 55TCA
586,19	586,21																			Two quartz-pyrite veinlets; 60TCA
586,25	586,50																			1-2% disseminated pyrite (euhedral grains)
587,98	588,57																			Down-dip quartz vein (1cm-thick)
592,22	592,35																			Pegmatite dyke; 50TCA
592,79	592,80																			Quartz veinlet; tr pyrite
601,36	601,39																			1% pyrite as fine dislocated stringers + weak hematite alteration
603,77	603,81																			1% pyrite as fine dislocated stringers + weak hematite alteration
607,35	607,36																			A 1cm-thick pyrite-calcite vein; 30TCA; strong hematite alteration along the edges (alteration zone is 4cm-wide)
607,77	607,78																			1-2% pyrite as stringers; hematite alteration associated
610,95	**611,72**	**0,77**																		**Lamprophyre dyke**
																				Calcite-biotite (or phlogopite?); weakly magnetic; contact at 20TCA. Contact metamorphism (hornfels) on both sides
611,72	**620,25**	**8,53**																		**Mafic volcanic rock**
																				Idem as previous mafic volcanic rock unit; except not magnetic
614,40	619,50																			Zone including few carbonate stringers (at a 50cm interval) with strongly altered edges (ankerite alt)
617,29	617,72																			A down-dip quartz vein + hematite alteration associated
618,96	618,97																			A 1cm-thick quartz vein (including 2% pyrite) + strong ankerite alteration along the edges
620,25	**623,97**	**3,72**																		**QFP intrusion**
																				Strongly sericitized; porphyric texture is hardly recognizable due to alteration, but locally eyes of quartz are still visible.
																				Tr-1% disseminated pyrite. Pyrite also occurs as stringers
622,40	623,18																			1-2% pyrite as fine stringers (~20TCA)
623,97	**652,98**	**29,01**																		**Mafic volcanic rock**
																				Locally magnetic; silicified or cooked (hornfels)
630,56	630,60																			A 4cm-thick quartz-(tourmaline?) vein (70TCA) with a 3cm-wide sericite/ankerite alteration zone on both sides
631,70	633,15																			Silicified zone + weak ankerite alteration giving the rock a brownish-beige color
632,15	632,25																			Zone with pyrite "digested clasts"; 5% pyrite
632,25	632,29																			A 2.5cm-thick quartz vein + tr-1% pyrite along the edges; 30TCA
639,10	641,18																			Zone with partial ankerite/sericite alteration limited to the edges of small fractures or veinlets (>50% of alteration)
639,40	640,53																			Mineralization zone; pyrite stringer network (main orientation is 35TCA); ~5% pyrite
641,00	641,53																			Zone of pyrite stringers (at a 10cm interval; 25TCA); 2-3% pyrite

68,67	69,11		Down-dip granite dyke
77,55	78,06		Quartz-sericite-plagioclase pegmatite (or vein?)
78,06	78,75		Silicified zone + calcite tension fractures; tr pyrite
93,90	93,96		Massive sulphide clasts or dislocated horizons; pyrrhotite-pyrite; tr Chalcopyrite
96,10	96,15		Dislocated quartz-calcite vein (including tr chalcopyrite); pyrrhotite is associated along edges; 2-3% pyrrhotite
107,48	107,66		5% of finely disseminated pyrrhotite (digested clast of iron formation?)
108,08	108,09		1cm-thick quartz vein (grey smoked quartz)
108,45	108,80		A 1cm-thick down-dip quartz vein; 2-3% pyrrhotite; 1% chalcopyrite occurring along the edges
109,03	109,16		Silicified zone including tr-1% pyrite; tr-1% pyrrhotite
122,87	123,68		Series of pluri-cm partially digested clasts of iron formation(?) consist of very fine-grained disseminated pyrrhotite
125,96	126,17		Iron formation breccia: chlorite-chert + magnetite-rich clasts
130,15	130,33		Quartz vein or silicified zone; including tr pyrite; tr-1% pyrrhotite
143,17	143,26		Granitic dyke; quartz-rich (or silicification) + sericite alteration; 65TCA
143,81	143,84		Silicified zone or quartz vein; including 5% chalcopyrite; 1% pyrrhotite
145,10	145,43		Quartz-sericite vein; ~10cm-thick; 25TCA
145,85	147,10		Zone with greenish-blue minerals (fuschite?); 5%; associated along down-dip quartz vein (1cm-thick); tr-1% pyrrhotite-pyrite
148,42	148,78		Pegmatite dyke; silicified
152,43	152,46		Quartz-plagioclase pegmatite vein; 60TCA
152,46	153,78		Granite dyke including a 2cm-thick quartz-plagioclase down-dip vein (or pegmatite)
154,97	155,77		Iron formation bed; chlorite-chert (1 to 3 cm-thick) + layers of pyrite-pyrrhotite; 30TCA
156,15	157,00		Strongly silicified granite dyke
162,93	164,57		Strongly silicified granite dyke
163,22	163,40		A 1cm-thick quartz vein; 15TCA
166,02	166,05		Quartz vein including tr pyrite and 1% molybdenite
180,18	180,80		A 1cm-thick, down-dip quartz-(chlorite) vein
182,69	182,87		Iron formation bed; magnetite-rich; tr pyrite
190,12	196,05		Zone of ankerite/sericite alteration and partial alteration (beige color) associated with calcite tension fractures and quartz veinlets; tr pyrite
194,00	194,55		Mafic dyke with pyroxene coarse-grained (porphyry)
196,05	**203,00**	**6,95**	**Green-carbonate rock**
			Intrusive ultramafic? Presence of fuschite (10-15%); not magnetic
196,61	196,95		Ankerite-silica-sericite alteration zone or altered dyke cross-cut by a 1cm-thick quartz-carbonate vein; 30TCA
197,06	197,12		Ankerite-silica-sericite alteration zone or altered dyke
198,00	198,35		Pegmatite dyke

201,77	202,01																			Diorite dyke; tr-1% disseminated pyrite; 60TCA + ankerite/sericite alteration
202,23	202,30																			Diorite dyke; fine-grained; tr pyrite; ankerite/sericite alteration. Main fabric: 30TCA
203,00	**397,15**	**194,15**																		**Mafic volcanic rock**
																				Medium-grained; medium- to dark-greenish-grey color. Hematite alteration zones are present (up to 20% of the rock) and are associated with late fractures and/or calcite veinlets; locally tr-1% disseminated pyrite; locally magnetic
203,00	205,10																			Hematite pervasive alteration zone giving the rock a pinkish color associated with micro-fractures and carbonate stringers
217,55	218,50																			Pegmatite/granite dyke with sericite alteration and/or muscovite-rich; sericite/ankerite alteration along the edges; tr pyrite
218,50	222,15																			Zone of partial hematite alteration along micro-fractures
221,44	221,48																			A 2cm-thick quartz-carbonate vein; 25TCA
228,40	230,45																			Zone of partial hematite alteration along micro-fractures
230,70	231,50																			Partially broken core (fault zone?)
231,50	231,64																			A 13cm-thick quartz vein with fuschite along edges (associated with a shear/fault zone)
231,64	232,00																			Shear zone (elongated or stretch minerlas); tr-1% fuschite
232,05	232,09																			A 3cm-thick quartz-carbonate vein; 1% fuschite associated; 75TCA
232,65	235,50																			Zone with pervasive hematite alteration (downhole contact is gradational); pinkish color; associated with microfractures
232,75	232,81																			Zone with 1-2% pyrite as coarse grains
234,56	234,65																			In situ breccia, carbonate-chlorite matrix/cement
236,92	237,04																			Sericite alteration zone associate with fine pyrite-(carbonate) stringers; 40TCA; 1-2% pyrite
237,70	238,25																			Partial sericite alteration zone; tr pyrite
238,56	238,56																			Pyrite stringer; 35TCA
238,70	238,85																			Sericite alteration zone associate with a series of pyrite-carbonate stringers; 20TCA and 50TCA; 2-3% pyrite
239,10	239,15																			Sericite alteration zone associate with one fine pyrite stringer; 45TCA
240,83	240,97																			Sericite alteration zone including 1% pyrite
242,55	242,57																			A 1.5cm-thick quartz-pyrite vein; 25TCA; 10% pyrite
242,65	242,91																			2-3% disseminated pyrite
244,00	246,00																			Partial hematization and weak silicification zone associated/along fractures
246,00	246,40																			Ankerite-hematite alteration associated with calcite-quartz stringers; 1% disseminated pyrite.
247,25	247,40																			Sericite/ankerite alteration zone including a series of fine pyrite stringers and a quartz-carbonate veinlet; 50TCA
247,46	247,47																			Quartz-calcite vein (1cm-thick)
247,50	247,52																			Pyrite-quartz vein (2cm-thick); sericite/ankerite alteration associated
248,78	251,42																			Partial sericite alteration zone along micro-fractures; tr pyrite
250,33	250,38																			A 4cm-thick quartz-pyrite vein; 15% pyrite; 40TCA
251,00	251,01																			A 0.5cm-thick massive pyrite vein; 35TCA
251,31	251,32																			A 0.5cm-thick massive pyrite vein; 75TCA
253,96	253,97																			A 1cm-thick calcite-quartz-pyrite veinlet; 2% pyrite; 30TCA
254,96	255,50																			Weak sericite alteration zone associated with fine pyrite stringers; 1-2% pyrite; 50TCA and 20TCA
256,90	257,15																			Weak sericite alteration zone associated with 1% disseminated pyrite 40TCA
257,55	271,57																			Partial hematite (and/or Kspar?) alteration giving the rock a pinkish color; including tr pyrite as fine stringers; locally sheared; locally magnetic
259,38	259,39																			Carbonate veinlet including 2-3% pyrite; 40TCA
260,94	260,94																			A fine pyrite stringer; 50TCA

261,55	261,68																			A thin dislocated quartz veinlet (down-dip) containing 1% pyrite with strong Kspar and/or hematite alteration associated
264,20	264,52																			Shear zone, locally brecciated; presence of quartz vein @ 264.34 - 264.38m; shear :25TCA
273,41	273,70																			Series of small pyrite-calcite stringers (~10); 5% pyrite; 60TCA. A weak sericite/ankerite alteration is associated
274,16	274,29																			Pegmatite (partially digested, xenolith?); Presence of pyrite stringers at the downhole contact
274,67	275,14																			Series of pyrite and quartz-pyrite stringers/veinlets (at a 2 to 5cm interval); 65TCA; 5% pyrite; a sericite/ankerite moderate alt is associated
277,00	280,75																			Zone of partial hematite alteration: pinkish color
279,38	279,56																			Granite/pegmatite dyke (pinkish color; Kspar-rich)
280,75	281,35																			Granite dyke; sericitized and hematized; tr disseminated pyrite
283,63	283,64																			A 0.3cm-thick pyrite veinlet; 50TCA
284,56	284,78																			Thick quartz-(±carbonate)-(±chlorite) vein; 60TCA; 1% disseminated pyrite on either side
284,85	285,11																			Ankerite/sericite pervasive alteration with 1-2% pyrite finely disseminated
293,20	294,78																			Sericite alteration zone including quartz-(pyrite) veins and granite dyke (+mineralization)
293,20	293,22																			A 2cm-thick quartz vein + 1% pyrite along edges; 45TCA
293,48	293,79																			A 5cm-thick quartz vein; 15TCA
293,79	294,02																			Granite dyke; strongly sericitized
294,23	294,56																			Series of cm to pluri-cm-thick quartz veins within a strongly sericitized zone; locally semi-massive pyrite (1cm-thick vein)
294,56	294,78																			A 1cm-thick quartz vein; 10TCA; 1-2% pyrite associated
296,79	296,86																			A 4cm-thick quartz-carbonate vein and/or pegmatite; 25TCA
297,52	297,88																			Hematite alteration zone including 1-2% pyrite as disseminated grains
298,60	299,60																			Hematite alteration zone; magnetic
300,43	300,83																			Pervasive sericite/ankerite alteration zone including pyrite stringers and veins; 5% pyrite
300,76	300,81																			A 4cm-thick quartz-pyrite vein; 5-7% pyrite; 70TCA
302,29	302,40																			Series of pluri-cm thick quartz veins + sericite alteration; pyrite is associated (2%)
302,40	302,65																			Series of fine pyrite stringers (at a 1 to 5cm interval); 3-4% pyrite
309,27	309,30																			A 2cm-thick quartz-calcite-pyrite vein (40TCA); 5% pyrite
309,40	313,55																			Hematite partial alteration zone; gradational contacts
311,15	311,62																			A 2cm-thick quartz-(chlorite)-(carbonate) vein; 5TCA
312,53	312,66																			Series of small parallel quartz veins; 30TCA
313,76	313,92																			A 1cm-thick quartz-carbonate vein; 25TCA
314,10	314,20																			Series of small pyrite stringers, 60TCA; hematite alteration associated
315,35	315,59																			A 1cm-thick quartz-calcite vein; 20TCA
315,85	316,40																			Magnetic zone (due to disseminated magnetite?)
320,78	320,85																			Pegmatite dyke
321,00	327,00																			Magnetic zone + partial hematite alteration
321,42	321,70																			Dislocated pegmatite dyke
340,26	341,82																			Partial to pervasive hematite alteration zone giving the rock a pinkish color; locally magnetic; tr pyrite
342,24	342,64																			Sericite/ankerite alteration zone including pyrite stringers/veinlets (±qtz); 60TCA; 1-2% pyrite
343,74	343,80																			A 5cm-thick quartz-pyrite vein, 10-15% pyrite; 40TCA
343,80	344,15																			Ankerite/sericite alteration zone including a series of pyrite veins/veinlets (at a 4 to 8cm interval); 50-60TCA; 5% pyrite. A series of calcite-geothite (or Kspar?) stockwerk (early) occurs; cross-cut by late pyrite stringers (photo)
344,52	344,96																			Ankerite/sericite partial alteration zone including pyrite veins/veinlets at a 5-10cm interval; 20 and 60TCA; 3-4% pyrite

345,06	345,07																			A 1cm-thick quartz-pyrite vein; 5-10% pyrite; 75TCA
345,38	345,72																			Ankerite/sericite partial alteration zone including pyrite-calcite-(quartz) veins/veinlets at a 5-10cm interval; 40TCA; 3-4% pyrite
346,38	346,38																			Pyrite stringer + ankerite/sericite alteration associated; 60TCA
347,37	347,37																			Pyrite stringer + ankerite/sericite alteration associated; 60TCA
347,93	348,00																			Pegmatite (quartz-Kspar)
348,27	348,90																			Pegmatite (quartz-Kspar); 60TCA; locally down-dip
349,25	349,78																			Series of small pegmatite (few cm-thick) veins
351,62	352,39																			Pegmatite (quartz-Kspar); 60TCA; locally down-dip; + quartz vein
352,49	352,56																			Pegmatite (quartz-Kspar); 45TCA
352,65	352,90																			1-2% finely disseminated pyrite with a carbonate-hematite alteration zone; including a 2cm-thick quartz-carbonate vein also occurs (75TCA)
366,96	367,00																			Quartz-chlorite-calcite vein (grey quartz) + tr-1% pyrite; 30TCA
367,07	367,09																			Quartz-chlorite-calcite vein (grey quartz) + tr-1% pyrite; 30TCA
367,42	367,44																			Quartz-chlorite vein; 70TCA
367,96	367,97																			Thin quartz vein; 30TCA
369,89	369,91																			Quartz-(chlorite) vein (white quartz); 60TCA
370,12	378,05																			Zone with local epidote alteration along micro-fractures (~5% of the rock) + leucoxene. Several calcite tension fractures also occur; locally strongly magnetic
373,16	374,20																			Series of calcite-quartz stringers/veinlets at a 15cm interval; 40TCA. Locally including 1-2% pyrite
380,73	380,75																			A 2cm-thick quartz-chlorite vein; 50TCA
392,20	392,27																			Quartz-carbonate-chlorite vein (35TCA) + local sericite and hematite alteration associated
392,82	392,90																			Calcite-geothite vein; 25TCA
393,06	393,07																			Pyrite-calcite veinlet; 20TCA; 2% pyrite
393,11	393,21																			A 7cm-thick quartz-carbonate-chlorite vein; tr pyrite associated; 35TCA
394,39	394,53																			Pegmatite dyke (quartz-Kspar); 45TCA
395,40	395,48																			Pegmatite dyke (quartz-Kspar); 35TCA
395,61	395,86																			Pegmatite dyke (quartz-rich) + sericite and Kspar; 40TCA
397,15	**408,30**	**11,15**																		**Mafic intrusion (gabbro)**
																				Or syn-volcanic(?) coarse-grained massive flow; chloritic; coarse grains; not magnetic; gradational contacts (frozen margins?)
408,30	**480,26**																			**Mafic volcanic rock**
																				Idem as previous, locally pillow breccia (rich in epidote); leucoxene are also present along fractures; locally magnetic
408,49	408,51																			Quartz-(chlorite) vein; 35TCA
413,38	413,69																			Series of very fine pyrite stringers (tr-1% pyrite) at a 3-5cm interval; weak hematization is also associated along the edges; 40TCA
414,37	414,53																			Quartz-Kspar pegmatite dyke; 40TCA
417,04	417,04																			trace disseminated chalcopyrite
419,61	420,04																			Series of small fractures/stringers at a 5 to 10cm interval; 35TCA locally contains pyrite (tr-1%). Hematite alteration along edges + leucoxene
420,29	420,96																			Series of small fractures/stringers and quartz veinlets at a 2 to 5cm interval; 40TCA; 1-2% PY. Tr. Molybdenite. Hematite alteration along edges + leucoxene (indicate leaching?)
421,10	421,78																			Series of small fractures/stringers at a 5 to 10cm interval; 35TCA locally contains pyrite (tr-1%). Hematite/sericite/epidote alteration ass.
427,26	427,48																			Granitic dyke (hematized); porphyry plagioclase
435,71	435,81																			10% pyrite as alteration along carbonate vein(?) or xenolith(?)
438,04	438,05																			A 1cm-thick quartz vein; 40TCA

440,61	440,62																			Small quartz-Kspar pegmatite(?) vein; tr pyrite
446,30	446,86																			A 1cm-thick down-dip quartz-carbonate-(chlorite) vein
446,44	446,86																			Series of pyrite stringers and quartz veinlets (at a 3 to 10cm interval; 35TCA); pervasive hematite alteration associated
447,81	447,83																			A 1cm-thick quartz-(carbonate) vein with hematized edges; 35TCA
449,80	449,83																			A 2cm-thick chlorite-quartz vein; 35TCA
453,15	454,65																			Hematite alteration zone giving the rock dark pinkish color. Tr-1% disseminated pyrite; locally magnetic
454,15	454,65																			Series of pyrite stringers (20TCA) at a 1 to 5cm interval; 2-3% pyrite
454,42	454,44																			A 1cm-thick quartz-carbonate vein; 35TCA
455,45	455,65																			1-2% pyrite as fine stringers at a 2-3cm interval
455,65	455,71																			A 5cm-thick quartz vein; 50TCA
456,89	456,89																			Trace chalcopyrite in a fine quartz stringer; 55TCA
459,02	459,11																			A 8cm-thick quartz-chlorite vein; 50TCA
467,50	468,00																			Series of calcite stringers/tension fractures and quartz veinlets with carbonate-hematite(?) alteration associated
467,71	467,84																			5% pyrite as veins, + quartz veinlets in a carbonate-hematite alteration zone
468,00	471,00																			1-2% leucoxene along local fractures/calcite veinlets
471,90	476,00																			Zone of partial "bleaching" (or sericite?) associated/along micro-fractures and quartz veinlets. Leucoxene is also associated
471,91	472,01																			A 7cm-thick quartz-carbonate vein; tr pyrite along the edges; 35TCA
473,66	474,18																			A 1cm-thick down-dip quartz vein
475,66	475,67																			A 1cm-thick quartz vein + leucoxene along edges; 25TCA
476,85	477,78																			Granite dyke; pervasive silica-carbonate alteration (grey color)
479,75	480,26																			Granite dyke; silica-carbonate alteration
480,26	**494,26**	**14,00**																		**Kimberlite/lamprophyre**
																				Phlogopite-rich; calcite; locally weakly magnetic (near the downhole contact); locally >50% of xenoliths (serpentine/olivine)
481,25	482,15																			10-15% of xenoliths; rounded; up to 1cm; composition: serpentine/olivine
482,15	485,10																			>50% of xenoliths; rounded; up to 1cm; composition: serpentine/olivine
489,15	489,36																			Mafic dyke or large xenolith
485,50	485,50																			Schistosity: ~85TCA
493,70	493,70																			Schistosity: 20TCA
494,26	**518,00**																			**Mafic volcanic rock**
																				Idem as previous mafic volcanic rock unit
499,65	500,08																			Ankerite-silica alteration zone; no pyrite. Calcite-chlorite-(±sericite/muscovite) vein associated; 25TCA
503,35	507,18																			Epidote partial alteration zone; locally + hematite alteration
507,56	507,57																			A 1cm-thick quartz vein; 35TCA
510,30	510,60																			Series of quartz-calcite veins/veinlets with 1-2% disseminated pyrite associated in the hosted rock; 50TCA
514,32	514,43																			A 1cm-thick quartz vein; 15TCA
516,92	516,96																			Pink calcite vein (+quartz veinlets associated); 40TCA
518,00	518,00																			EOH

GeoVector Management Inc.

6,98	7,14		Down-dip pyrite veinlet (2-3mm-thick)
14,30	15,07		Sheared zone (locally broken core); 25TCA
14,65	15,11		Down-dip pyrite-(calcite)-(quartz) veinlet (0.5cm-thick)
16,55	17,15		Series of down-dip (<10TCA) quartz veinlets (0.5cm-thick); locally including 3-4% pyrite
18,00	19,45		A 0.5cm-thick down-dip calcite-pyrite veinlet; 2-3% pyrite
21,30	22,55		A 0.5cm-thick down-dip pyrite-calcite veinlet; 3-4% pyrite
25,80	26,34		A 0.5cm-thick down-dip pyrite-calcite veinlet; 1-2% pyrite
26,97	**55,65**	**28,68**	**Granite**
			Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
			Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
			Locally silicified near the uphole contact with QFP; giving the rock a grey color); locally hematized (pink color)
26,97	30,85		Silicified; dark grey color
27,80	28,80		Zone of pyrite stringers/veinlets and quartz-pyrite veins (cm-thick) at a 2 to 5cm interval; 25TCA; locally strongly sheared
29,30	29,70		Down-dip pyrite stringers (0.5cm-thick) + pyrite along the edges; up to 5% pyrite
29,82	29,84		Quartz-pyrite vein (1cm-thick); 35TCA; 2-3% pyrite
29,98	30,15		5% pyrite as stringers and alteration
30,65	30,85		1-2% disseminated pyrite
37,10	37,85		series of micro-fractures (at a 2 to 10cm interval) with pyrite associated; 1-2% pyrite. Hematization is also associated (pinkish color)
38,50	39,70		Hematite alteration zone (downhole contact is gradational); locally including tr-1% pyrite
39,07	39,09		1cm-thick chlorite-quartz vein; 40TCA
43,13	43,15		1cm-thick chlorite-quartz vein; 25TCA
52,86	53,12		A 5cm-thick quartz-chlorite vein; 20TCA
53,49	53,51		A 2cm-thick quartz-chlorite vein; 50TCA
55,65	**72,04**		**QFP/porphyric intrusion**
			plagioclase porphyry; light to medium-grey color; tr-1% disseminated pyrite
72,04	**102,28**		**Granite**
			idem as previous granite unit; the uphole contact is silicified (grey color)
72,04	72,32		Sheared zone (35TCA) at the contact with the QFP; + a 1cm-thick quartz-chlorite@ 72.10m
72,32	78,20		Silicified zone (±calcite) giving the rock a dark grey color); downhole contact is gradational
81,95	82,05		Granitic (Kspar-rich) or aplite dyke; 40TCA
88,84	88,90		Granitic (Kspar-rich) or aplite dyke; 60TCA
91,13	91,16		A 2cm-thick quartz-chlorite vein; 40TCA
91,60	91,78		A 16cm-thick quartz vein; 45TCA
93,69	93,73		Calcite-chlorite vein; 50TCA
100,60	100,64		A 2cm-thick quartz-chlorite; 25TCA
102,28	**106,20**		**QFP**
			Strongly sheared (or schistosity well-developed near the uphole contact); 50TCA.; tr pyrite
106,20	**128,00**		**Granite**

COMMENTS
Idem as previous granite unit; locally silicified (grey color); tr disseminated pyrite
A 6cm-thick quartz-chlorite vein; 60TCA; trace pyrite
Kspar-rich dyke (aplite?); pinkish color
Carbonate-quartz-chlorite vein; 30TCA
Quartz-chlorite vein; 35TCA; 1% chalcopyrite
A 15cm-thick quartz vein; including tr-1% chalcopyrite; tr-1% pyrite; tr galena; 65TCA
A 1cm-thick calcite-chlorite veinlet; 15TCA; tr pyrite
Quartz-(chlorite) vein (1cm-thick); 15TCA
A 5cm-thick chlorite vein; 50TCA
Tr pyrite (euhedral crystals)

0,00	**1,60**	**1,60**	**OB**																	**Casing/Overburden**
1,60	**105,60**	**104,00**																		**Granite.**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Locally carbonate alteration zones (grey color), schistosity well-developed in these altered zones
1,60	9,80																			Pervasive carbonate alteration zone (dark-grey color); schistosity well-developed (40TCA); sericite/muscovite along schistosity plans
13,75	23,00																			Carbonate alteration zone (dark-grey color); sericite/muscovite along schistosity plans + calcite tension fractures (1-2%); 50TCA
25,55	28,00																			Partially altered zone (carbonate alteration) associated/along micro-fractures; locally tr chalcopyrite; tr pyrite
27,46	27,47																			A 1cm-thick quartz-calcite-chlorite vein; 50TCA
31,00	34,85																			Pervasive carbonate alteration zone (dark-grey color); schistosity well-developed (20TCA); chlorite-calcite veinlets (~10TCA)
53,67	54,07																			Carbonate alteration zone (grey color); including few calcite veinlets (pink calcite); 30TCA
56,33	63,40																			Pervasive carbonate alteration (grey color); schistosity well-developed marked by chlorite; 35TCA
57,33	57,80																			Broken core (due to weathering?)
66,13	66,15																			A 2cm-thick quartz vein; 55TCA
69,25	69,27																			A 1cm-thick quartz-calcite vein; 20TCA
69,50	80,30																			Weak to moderate carbonate alteration zone (light to medium grey color)
70,34	70,42																			tr-1% pyrite as fine stringers; 45TCA
70,80	71,04																			Pervasive and strong ankerite alteration zone
71,92	71,96																			A 4cm-thick chlorite-calcite vein; 75TCA
72,13	72,14																			A 1cm-thick quartz-calcite vein + ankerite alteration along the edges; 50TCA
74,83	74,92																			A 9cm-thick calcite-chlorite vein; 80TCA
75,74	75,85																			A 8cm-thick quartz-calcite-chlorite vein; 45TCA
77,85	77,90																			A 4cm-thick quartz-(chlorite) vein; 75TCA
83,67	83,72																			A 5cm-thick chlorite-quartz-calcite vein; 65TCA
92,54	92,88																			Carbonate alteration zone (dark grey color) with schistosity well-developed (marked by chlorite minerals); 30TCA
93,30	95,00																			Pervasive calcite-hematite alteration zone; purple-ish color.
97,75	105,60																			Calcite alteration (±hematite), including few calcite tension fractures/veinlets
100,24	100,28																			Open-space fracture partially filled with euhedral calcite, chlorite and quartz
105,60	**111,62**																			**QFP/porphyric intrusion**
																				Plagioclase porphyry; dark greenish-grey color; locally tr-1% disseminated pyrite; local sericite alteration
111,62	**115,05**																			**Granite**
																				Idem as previous granite unit; carbonate alteration + calcite tension fractures
114,00	114,80																			Series of pyrite-calcite veinlets/stringers at a 25 to 30cm interval; 2-3% pyrite; 50TCA
115,05	**125,65**																			**QFP/porphyric intrusion**
115,05	115,55																			Contact zone; pervasive sericite-silica alteration; including pyrite as fine stringers and thick vein
115,44	115,47																			A 3cm-thick semi-massive pyrite vein (±calcite, ±quartz)
115,73	115,73																			A fine pyrite stringer; 15TCA
119,00	120,00																			Partially broken core
119,69	119,70																			A 0.5cm-thick pyrite veinlet; 15TCA
125,00	125,65																			Contact zone; pervasive sericite alteration zone, including a fine pyrite-calcite stringer; 1% pyrite; 25TCA
125,65	**139,15**																			**Granite**
																				Almost pervasively altered (carbonate); locally trace pyrite
125,65	126,40																			Alteration zone at the contact with the QFP. Two main structural fabrics (photo): carbonate tension fractures developed in quartz crystals (90TCA); and the main schistosity (marked by chlorite minerals): 5TCA
139,15	**144,70**																			**QFP/porphyric intrusion**

0,00	**1,50**	**1,50**	**OB**																	**Casing/Overburden**
1,50	**89,15**	**87,65**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Locally carbonate alteration zones and tr pyrite
6,25	6,65																			Broken core
7,38	7,61																			A 2.5cm-thick aplite vein/dyke; 25TCA; carbonate alteration associated (along the edges)
10,65	11,85																			Pervasive carbonate alteration zone (light grey color); including tr-1% disseminated pyrite
26,13	26,61																			Pervasive carbonate-(±hematite) alteration zone (grey color); including small down-dip calcite-goethite filled fractures; tr pyrite
29,43	29,67																			Quartz-chlorite-biotite
32,30	40,96																			Carbonate alteration zone (grey color); presence of leucoxene; tr pyrite
42,91	43,10																			Quartz-chlorite vein; 50TCA
61,75	62,28																			Shear zone including dislocated quartz veinlets (parallel to shear); 30TCA; carbonate alteration associated
67,67	69,60																			Weak hematite-(calcite) alteration zone
73,56	74,00																			Strong silica alteration (+ hematite); tr-1% pyrite
75,24	75,45																			A 10cm-thick pegmatite dyke + 10cm-wide silica alteration along edges including 1% pyrite
77,72	78,19																			Pervasive and strong silica alteration zone including 1-2% pyrite as disseminated euhedral grains
81,92	81,94																			A 1cm-thick quartz vein; 45TCA
83,45	83,91																			Silica alteration zone (dark grey color)
89,15	**110,70**																			**QFP**
																				Plagioclase porphyry; dark greenish grey; sericite-rich
97,70	98,00																			Broken and partially broken core
99,25	99,27																			A 1.5cm-thick calcite vein; 20TCA
109,15	109,52																			1% pyrite associated with sericite and with microfractures (15TCA)
109,75	110,70																			Sheared zone at the downhole contact with the granite; 20TCA; tr pyrite along shear plans
110,70	**193,90**																			**Granite**
																				Idem as previous granite unit; Strongly and pervasive altered into silica-sericite-(carbonate?) giving the rock a dark grey color; Locally calcite tension fractures occur.
113,90	114,35																			Zone with 1-2% disseminated pyrite
114,64	114,90																			1-2% pyrite as veinlets (70TCA); strong carbonate sericite/chlorite alteration associated
116,12	116,18																			1% pyrite as stringers; 50TCA
116,66	116,79																			1-2% pyrite as veinlets (±Qtz); strong carbonate sericite/chlorite alteration associated
117,09	117,30																			Sericite strong alteration (schistosity well-developed; 45TCA); 1-2% pyrite as stringers/veins and 1-2% pyrrhotite as veinlets at the QFP contact.
117,30	117,95																			QFP dyke; strongly sericitized; 1-2% pyrite as veinlets; 45TCA
117,95	118,70																			Strongly sericitized zone (schistosity well-developed; 45TCA); 2-3% pyrite as disseminated grains and as veinlets
118,30	118,41																			Series of dislocated quartz veins (few cm-thick each); including 2-3% pyrite and tr-1% Molybdenite
119,00	119,12																			1% pyrite as veinlet (50TCA) and disseminated grains; sericite/chlorite-silica alteration associated
119,70	120,07																			1-2% pyrite as stringers/veinlets (60TCA); + silica-sericite/chlorite alteration associated
120,55	120,70																			1% pyrite as disseminated + silica-sericite/chlorite alteration associated
121,95	122,38																			Strong silica alteration zone (±sericite/chlorite) including 2-3% pyrite as veins/veinlets and disseminated pyrite; 50TCA
123,10	123,80																			tr-1% pyrite as fine stringers (±calcite) with silica-carbonate alteration along edges; 60TCA

From	To	COMMENTS
124,57	124,67	Carbonate-quartz vein including 1-2% pyrite and 1% hematite; ankerite alteration zone associated along edges
127,00	127,65	Strong silica-sericite/chlorite alteration zone; including 1-2% pyrite
128,55	129,10	Tr-1% pyrite associated with micro-fracturing with silica-carbonate alteration along edges; 15TCA
131,40	133,95	Pervasive and strong silica-sericite/chlorite alteration zone including locally 2-3% pyrite as veins/veinlets (at a 10 to 25cm interval; 40 to 50TCA)
134,75	135,40	1-2% disseminated pyrite and fine stringers + pervasive silica-sericite/chlorite alteration associated
137,40	138,25	Pervasive silica-sericite/chlorite alteration + carbonate alteration zone; including 1% disseminated pyrite
139,35	139,80	Pervasive carbonate alteration zone (grey color); including tr-1% disseminated pyrite
140,03	140,15	Tr-1% disseminated pyrite associated with microfractures (40TCA)
141,30	142,60	Pervasive and strong carbonate-sercite/chlorite alteration zone with well-developed schistosity (marked by sericite-chlorite minerals); 15TCA; including tr-1% disseminated pyrite
143,55	148,80	Pervasive carbonate-silica alteration zone + sericite/chlorite. Average tr-1% disseminated pyrite; (dark grey color)
143,71	143,90	Series of two calcite-vuggy veins including tr-1% pyrite along their edges; 30TCA
144,05	144,55	Strong silica-sericite alteration zone including up to 5% pyrite (disseminated and in quartz veinlets)
145,35	145,67	Series of cm-thick dislocated quartz veins and calcite-vuggy veins; including tr-1% pyrite along edges.
146,04	146,10	A 2cm-thick semi-massive pyrite vein (±carbonate; ±quartz); 60TCA
147,10	147,42	A 1cm-thick quartz-carbonate-chlorite vein (10TCA); tr-1% pyrite associated
148,00	148,19	A 1cm-thick pink calcite vein; 10TCA; tr-1% pyrite associated
153,56	155,28	Pervasive carbonate-silica alteration zone including tr disseminated pyrite grains and as local stringers
159,29	159,45	Pervasive and strong carbonate-silica alteration; tr-1% pyrite as disseminated grains and stringers
159,90	160,60	Pervasive and strong carbonate-silica alteration; including 2-3% pyrite as stringers and veins (at a 5 to 10cm interval); 60TCA
160,75	160,82	Pervasive and strong carbonate-silica alteration; tr-1% pyrite as disseminated grains and stringers
163,62	163,79	Pervasive and strong carbonate-silica alteration; tr pyrite as disseminated grains and stringers
164,90	165,04	Pervasive and strong carbonate-silica alteration; tr pyrite as disseminated grains and stringers
167,14	167,72	Pervasive and strong carbonate-silica alteration; tr pyrite as disseminated grains and stringers
169,90	170,30	Pervasive and strong carbonate-silica alteration zone including 1-2% pyrite as stringers and disseminated grains; 40TCA
172,65	172,76	A 10cm-thick quartz-(chlorite) vein; 80TCA
173,15	**193,90**	**Altered granite**
		Strong hematite-calcite alteration (light purple-ish red color); chlorite-rich. Both contacts are gradational
180,07	180,22	A 1cm-thick quartz vein; 20TCA
192,32	192,35	A 2cm-thick quartz vein; 1-2% pyrite along edges; 25TCA
193,90	**215,00**	**Granite**
		Idem as previous granite unit
205,53	205,69	QFP dyke, hematized (pinkish color)
207,00	207,08	QFP dyke, hematized (pinkish color)
211,81	211,83	Quartz vein; 60TCA
215,00		EOH

0,00	**22,80**	**22,80**	**OB**																		**Casing/Overburden; casing at 27m**
0,00	**3,00**	**3,00**																			**Overburden**
3,00	**100,79**	**97,79**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																					Several carbonate alteration zones along fractures and tr pyrite
12,93	13,43																				Carbonate alteration zone; including local quartz-chlorite veins; tr pyrite
15,80	15,84																				A 4cm-thick quartz-chlorite vein; 80TCA
18,89	18,92																				A 3cm-thick quartz-chlorite vein; including tr jaspe/hematite; 70TCA
29,73	29,74																				A 1cm-thick quartz vein including 5% pyrite; 4% Chalcopyrite
40,77	40,91																				A strong silica-carbonate alteration zone; including tr pyrite
44,86	45,30																				Partially broken core
49,40	52,60																				Zone of partially broken core; micro-fractures/micro-breccia
56,50	56,80																				Broken core
57,63	57,98																				A 7cm-thick quartz vein; 15TCA
60,95	62,57																				Carbonate-(±hematite) alteration zone (grey to pinkish grey color); including locally tr chalcopyrite
62,28	62,30																				A 1cm-thick quartz-calcite vein; 40TCA
67,18	100,79																				Pervasive silica-carbonate alteration zone; (grey color)
74,35	76,45																				Hematite-silica alteration zone (purple-ish red color); including 1-2% disseminated pyrite
77,81	78,04																				Pegmatite dyke
85,25	87,25																				Broken core
88,78	88,96																				Hematite-silica alteration zone
91,10	99,00																				Pervasive carbonate-silica (dark grey color); strongly along micro-fractures (core partially broken core)
97,55	98,45																				Zone with 1% disseminated pyrite
100,79	**147,38**	**46,59**																			**Altered granite**
																					Hematite-calcite alteration; purple-ish red color; locally vuggy due to calcite dissolution. Both contacts are gradational
141,23	142,00																				Unaltered granite
142,96	143,55																				Unaltered granite
147,38	**207,66**	**60,28**																			**Granite**
																					Including local small fractures and calcite stringers with local carbonate-silica alteration along the edges
147,85	154,06																				Zone with micro-fracture network; locally partially broken core
157,76	157,77																				Quartz vein; 70TCA
168,84	168,86																				2cm-thick quartz vein; 55TCA
170,72	171,05																				Quartz veinlet dense network (~5% vein) with various orientations. No alteration associated and no mineralization associated
172,36	173,00																				Silica-carbonate alteration zone; tr pyrite; presence of leucoxene
173,00	173,39																				QFP dyke
186,00	186,25																				A 1cm-thick calcite-geothite filled fracture/vein; 15TCA
207,66	**242,52**	**34,86**																			**Altered granite**
																					Hematite-calcite alteration; purple-ish red color; locally vuggy due to calcite dissolution. Both contacts are gradational
224,81	226,56																				QFP dyke; pervasive hematite-chlorite alteration (photo)
229,45	229,87																				QFP dyke; pervasive hematite-chlorite alteration; schistosity locally well-developed

230,77	233,25																				QFP dyke; pervasive hematite-chlorite alteration; schistosity locally well-developed; 55TCA; partially broken core
242,52	**257,00**	**14,48**																			**Granite**
																					Idem as previous granite unit
247,06	247,07																				A 1cm-thick quartz vein; 40TCA
248,60	249,80																				Hematite-calcite alteration zone (purple-ish color); gradational contacts
257,00	**269,45**	**12,45**																			**Altered granite**
																					Idem as previous altered granite unit
269,45	**320,88**	**51,43**																			**Granite**
																					Idem as previous granite unit
272,32	273,26																				Weak hematite-calcite alteration zone (light pinkish-red color)
274,55	281,80																				Pervasive silica-carbonate alteration and locally hematite; tr pyrite; presence of leucoxene
278,62	278,74																				1% pink-purple garnet
280,85	280,90																				Calcite; 35TCA
283,67	283,94																				Quartz veinlets (0.5cm-thick); at a 2 to 5cm interval
291,06	297,40																				Silica-carbonate pervasive alteration zone (dark grey color)
292,17	292,25																				A 7cm-thick quartz vein + chlorite and tr-1% pyrite along the edges; 50TCA
300,81	302,00																				Hematite-calcite alteration zone (light reddish color)
310,06	310,07																				A 0.5cm-thick quartz-vuggy vein; 50TCA
310,60	310,62																				A 2cm-thick quartz vein; 35TCA
310,87	310,91																				A 2cm-thick quartz vein; 40TCA
317,62	317,67																				Chlorite-quartz vein + leucoxene along the edges
320,88	**347,10**	**26,22**																			**Altered granite**
																					Purple-ish color; hematite-calcite alteration + chlorite-rich; locally vuggy due to calcite dissolution;
330,70	331,67																				QFP dyke; completely altered into hematite + chlorite
341,10	341,27																				Aplite dyke(?); broken core; pervasive hematite alteration
347,10	**570,95**	**223,85**																			**Mafic volcanic rock**
																					Very fine-grained; chlorite-rich; medium- to dark green color. Locally magnetic; locally varioles filled with hematite and/or jaspe
347,10	356,00																				Zone of broken and partially broken core (the contact zone with the granite
348,05	348,75																				Pervasive hematite alteration (dark red color) with local varioles filled with hematite/jasper
351,70	353,09																				Pervasive and strong hematite alteration (red color)
356,00	356,14																				Pegmatite vein/dyke; 35TCA
357,65	358,15																				Carbonate alteration zone; 5% vuggy caused by dissolution
362,71	362,97																				Vuggy open-space fracture/vein; 10% porosity
363,90	363,92																				2% pyrite as stringers; 50TCA
364,07	364,18																				4-5% pyrite as stringers and filled voids or primary layers(?); 80TCA
367,70	376,00																				Zone with partial hematite-calcite alteration + granite small injections // to schistosity; ~25TCA
374,00	403,70																				Volcanic breccia/pillow breccia; matrix rich in magnetite; magnetite also present in fractures; 5% of fractures

382,87	382,91																				A 4cm-thick semi-massive pyrite vein (±calcite); sheared (80TCA); graphite along sheared plans
382,40	384,00																				Zone with granitic injections (plagio-rich)
386,43	386,45																				1-2% pyrite as stringers (+calcite stringers) on 2cm; 80TCA
393,11	393,18																				1-2% pyrite as stringers (at a 4cm interval); 70TCA
394,33	394,62																				Series of down-dip fractures; filled with calcite and magnetite; up to 1% pyrite
396,45	397,35																				Down-dip "syenite" with a dislocated quartz vein; including 1% cubic pyrite
398,50	412,40																				Pervasive hematite alteration zone + zone small granitic/syenite injections (cm-thick veins to pluri-dm dykes; also hematized) ~50% of the rock
399,51	399,53																				Open-space fracture partially filled with carbonate and pyrite; trace pyrite
401,12	401,48																				Down-dip syenite dyke with dislocated quartz veinlets and cubic pyrite grains (1%) + sericite
401,55	401,58																				A 2cm-thick chlorite vein; 35TCA
403,22	403,50																				Dislocated syenite dyke
403,70	404,25																				Dislocated syenite dyke
406,15	407,06																				Dislocated syenite dyke (with pervasive hematite-carbonate alteration)
407,65	408,78																				Syenite/granite dislocated dyke with rounded and digested xenoliths (locally >50%)
408,26	408,32																				A 2cm-thick massive hematite vein; 30TCA
412,40	413,80																				Open-sapce fracturing with strong sericite alteration limited to the edges; locally weathered(?)
414,20	414,67																				Broken core + carbonate veins
414,67	424,90																				Locally tr-1% pyrite as fine stringers and disseminated pyrite; no alteration associated; locally granitic injections associated (carbonatized)
415,64	415,94																				Series of pyrite stringers (1-2% pyrite) at a 10cm interval)
416,80	416,81																				Pyrite-carbonate stringers; 35TCA
423,49	423,60																				2-3% pyrite as stringers + moderate ankerite alteration associated
426,85	427,68																				Zone with carbonate veins/tension fractures: ~50% of the rock
428,65	428,69																				Carbonate vein; 30TCA
428,98	429,04																				Carbonate vein; 35TCA
432,44	432,46																				A 2cm-thick carbonate vein + 2% pyrite along edges; 70TCA
432,91	432,99																				3% pyrite as veinlet (1cm-thick) and stringers; 60TCA
433,12	433,76																				1-2% of very fine disseminated pyrite grains and along fractures/schistosity plans (30TCA)
438,45	448,55																				Volcanic breccia/pillow breccia + weak hematized matrix; giving the rock a green and pink color; tr pyrite associated
451,54	451,55																				A 0.5cm-thick chlorite-pyrite veinlet; 15TCA
451,75	451,81																				10% pyrite as coarse grains in a chlorite-rich zone along a carbonate vein
451,81	451,85																				Carbonate vein; 3cm-thick; 30TCA; pyrite along the edges
453,17	453,19																				Massive pyrite vein; 2cm-thick; 80TCA
455,67	455,68																				A 0.5cm-thick calcite-pyrite vein (semi-massive pyrite); 75TCA
456,21	456,36																				Chlorite-rich vein; 10cm-thick; 1-2% pyrite finely disseminated along edges
461,47	461,63																				Quartz-carbonate dyke/vein; fine-grained; 20TCA
472,40	473,00																				Partially broken core
474,50	477,00																				Broken and partially broken core
476,73	476,91																				1-2% very fine-grained disseminated pyrite + ankerite-hematite alteration

601,30	601,70																				Down-dip carbonate vein (1cm-thick)
603,84	603,85																				A 1cm-thick pyrite veinlet; 60TCA; 1-2% pyrite
603,95	604,37																				Down-dip small syenite dyke + 3cm-thick quartz-(tourmaline) vein. Sericite alteration + tr pyrite
618,37	618,46																				Granite dyke; carbonatized; 80TCA
618,83	618,84																				Tr chalcopyrite; tr pyrite associated with a down-dip quartz veinlet
619,10	619,12																				A 2cm-thick quartz-tourmaline vein; 65TCA. Ankerite alteration along the edges; tr pyrite
619,49	619,69																				A 3cm-thick quartz-(chlorite)-(carbonate) vein; 20TCA; tr pyrite associated
627,76	627,77																				A 0.5cm-thick quartz vein (65TCA) + tr pyrite associated
637,69	637,70																				A 0.5cm-thick quartz-chlorite vein; 10TCA
638,00	EOH

From	To	COMMENTS
638.00	**682.40**	**Mafic volcanic rock**
		Chlorite-rich. Massive flow/flow breccia/glaumeropophyric (locally); including carbonate veinlets/tension gashes
642.18	642.36	Pegmatite dyke; pervasive carbonate alteration
645.34	645.56	Quartz-chlorite vein (15TCA) + pyrite stringers asociated along edges; 2-3% pyrite
662.26	662.31	A 4cm-thick quartz-pyrite vein; 30TCA. 5-10% pyrite
663.86	664.12	Granite dyke (epidotized)
674.85	675.40	Series of chlorite and chlorite-quartz veins (1cm-thick average; 15TCA). Trace pyrite with hematization associated along edges
682.40	**685.15**	**Altered mafic volcanic rock**
		Ankerite-sericite alteration (or bleaching?). Beige-greenish color. Uphole contact is gradational. Trace pyrite
683.30	683.60	Shear zone including 2-3% pyrite along plans
685.15	**707.27**	**Granite**
		Pervasive carbonate (ankerite) alteration giving the rock a beige-grey color. Locally tr-1% disseminated pyrite is associated
687.42	687.44	A 2cm-thick quartz vein; 80TCA
687.62	687.81	A 3cm-thick quartz vein; locally down-dip. 1-2% disseminated pyrite associated along edges
690.40	690.47	Series of two quartz veins or tension gashes (1cm-thick each)
690.95	691.06	A 6cm-thick pyrite-(quartz) vein; 25TCA. 10-15% pyrite
691.31	691.32	A 1cm-thick quartz vein; 30TCA
691.58	691.60	A 2cm-thick quartz vein; 45TCA
691.70	691.80	2-3% disseminated pyrite
692.41	692.46	A 5cm-thick quartz vein; 70TCA
692.86	692.90	A 3cm-thick quartz-chlorite vein; 25TCA
694.43	694.87	Quartz-(carbonate)-(chlorite) vein
696.85	705.00	Zone with cm-thick quartz-(carbonate) vein (30-50TCA) at a 50-100cm interval. Locally tr pyrite
707.18	707.18	Fine pyrite stringer; 45TCA
707.27	**710.47**	**Altered mafic volcanic rock**
		Ankerite-sericite alteration + hematization. Trace-1% pyrite. Locally weakly magnetic.
710.47	**714.74**	**Granite**
		Carbonate alteration + local hematization
711.10	711.12	1cm-thick quartz vein; 15TCA
714.74	**721.70**	**Mafic volcanic rock**
		Fine-grained; grey color. Local hematization; locally 1% euhedral pyrite
721.70	**725.70**	**Granite**
		Pervasive carbonate-silica alteration; dark grey color
723.75	723.78	A 2cm-thick quartz vein; 25TCA
723.89	724.07	Pegmatite dyke; sericite
725.25	725.70	Zone with pluri-mm to cm-thick carbonate vein at a 2 to 5cm interval; 45-60TCA
725.70	**734.00**	**Mafic volcanic rock**
		Fine-grained; grey color. Local carbonate alteration
725.98	726.04	Quartz vein + ankerite alteration associated along edges; 65TCA
727.14	727.50	Quartz-(carbonate)-(chlorite) vein; down-dip; partially broken core
729.06	730.42	Granite dyke; carbonate alteration
730.42	730.63	A 19cm-thick carbonate-quartz-(chlorite) vein; 40TCA
730.98	731.12	1-2% pyrite as fine stringers (60 and 25TCA)
731.25	731.29	A 3cm-thick quartz-pyrite vein; 25TCA. 10% pyrite
733.55	734.00	Ankerite-sericite alteration zone (and/or bleaching); including 3-4% pyrite

From	To	COMMENTS
734.00	**737.78**	**Granite**
		Carbonate alteration; including cm-thick quartz veins at a 50cm to 75cm interval. 40-50TCA
734.52	734.54	A 1cm-thick quartz-pyrite veinlet; 20TCA
735.58	736.08	Mafic volcanic xenolith; pervasive ankerite-sericite alteration and/or bleaching.
736.39	736.40	A 0.5cm-thick quartz veinlet; 35TCA. 1-2% pyrite associated
737.52	737.57	A 5cm-thick quartz vein. 2% pyrite along edges. 45TCA
737.78	**760.12**	**Mafic volcanic rock**
		Grey color; locally carbonate alteration
738.00	739.16	Zone with pyrite stringers (0.5 to 1cm-thick; at a 10cm interval; 45TCA average
739.73	739.74	A 0.5cm-thick pyrite veinlet; 45TCA
740.51	740.58	A 5cm-thick quartz-(chlorite) vein; 45TCA. Tr-1% pyrite associated along edges
740.83	741.00	Quartz-pyrite vein; 20-25% pyrite; 40TCA
742.15	742.19	Quartz-(chlorite) vein; 25TCA
743.40	746.50	Zone with local Chalcopyrite occurrence (1-2% chalcopyrite)
744.00	744.19	Pegmatite dyke; Kspar-quartz-epidote
744.74	744.77	Series of two pyrite vein (0.5cm each; 55TCA)
750.19	750.25	A 2cm-thick quartz-chlorite-(hematite?) vein; 10TCA
750.50	750.90	Granite dyke; epidote and silica alteration
755.00	759.10	Zone with tr-1% disseminated pyrite and locally very fine pyrite stringers at a 20 to 50cm interval; 30-40TCA
758.75	759.02	A 0.5cm-thick quartz-hematite(?) vein; 15TCA
759.79	760.12	Granite/pegmatite dyke; pervasive silica alteration
760.12	**761.58**	**Altered mafic volcanic rock**
		Kspar and silica alteration. The alteration is most likely associated with a syenite dyke. Fracturing occurs with Kspar and carbonate (±hematite) associated.
760.88	761.23	Syenite dyke; down-dip
761.58	**783.77**	**Mafic volcanic rock/granite**
		Several granite dykes are injected into the chlorite-rich mafic volcanic rock. The dykes are usually less than 1m-thick. Granite has a pervasive carbonate-silica alteration.
763.15	765.28	Granite dyke (carbonate alteration). Dark grey color
765.38	765.69	Granite/pegmatite dyke
773.85	773.96	Carbonate-(quartz) vein; 30TCA
777.19	778.20	Granite dyke; carbonate alteration
783.77	**793.75**	**Granite**
		Pervasive carbonate alteration; dark grey color
793.75	**891.27**	**Mafic volcanic rock**
		Chlorite-rich; weak carbonate alteration; locally silicified
799.30	799.50	Carbonate vein/breccia vein
800.45	800.46	Pyrite veinlet; 45TCA
802.30	805.85	Zone with disseminated chalcopyrite; up to 1% chalcopyrite
803.55	803.57	A 2cm-thick pyrite vein; 75TCA
805.80	805.81	Thin pyrite stringer; 55TCA
806.65	810.00	Zone with disseminated chalcopyrite; up to 1% chalcopyrite
807.82	807.83	A 1cm-thick pyrite vein; 70TCA

810.00	810.20																			Shear zone (40TCA) including pyrite vein parallel to shear (10% pyrite)
810.65	811.25																			Series of pyrite stringers (at a 15-20cm interval; 25TCA and down-dip)
818.64	818.68																			A 3cm-thick pyrite vein (60TCA) with ankerite and hematite alteration along edges
827.40	830.20																			Pervasive hematite-(silica?) alteration zone giving the rock a dark brownish-red color
830.20	848.00																			Zone with weak hematite-silica alteration. The zone included several carbonate-(specularite) veinlet/tension gashes at a 0.50m to 1m interval. Locally Kspar and/or hematite is associated along edges
843.10	844.50																			Granite dyke (Kspar-rich); locally down-dip. Pervasive carbonate-hematite alteration
848.48	848.55																			A 7cm-thick Calcite-Fluorite-chlorite vein; 60TCA
850.00	850.21																			Fine-grained granite dyke and/or aplite
850.88	851.00																			Granite dyke
851.98	853.39																			Granite dyke (epidotized) including large mafic xenoliths
855.12	855.13																			Hematite-carbonate vein (specularite); 60TCA
855.47	855.48																			Hematite-carbonate vein (specularite); 40TCA
858.05	858.09																			Hematite-carbonate vein (specularite); 40TCA
860.90	860.91																			A 1cm-thick quartz vein; 45TCA
865.04	865.19																			Aplite dyke; down-dip
865.75	865.87																			Aplite dyke; 40TCA
866.26	866.58																			Series of disrupted granite/aplite dyke
867.73	867.83																			Granite dyke; 30TCA
871.15	871.23																			tr-1% pyrite
873.11	873.46																			Weak shear zone; 25TCA
874.00	875.00																			Zone with 1% disseminated magnetite.
888.05	888.49																			Granite dyke; epidotized
890.51	890.80																			Granite dyke
891.27	**903.57**	**12.30**																		**QFP dyke**
																				Porphyry intrusion; grey color. Identical to xenoliths in the near-surface granite. Locally tr. Pyrite
902.66	902.67																			A 0.5cm-thick quartz-carbonate-chlorite veinlet (40TCA); including tr-1% pyrite along edges
903.57	**929.00**	**25.43**																		**Mafic volcanic rock**
																				Locally, epidotized (and/or bleaching)
918.50	918.55																			Quartz-carbonate veinlet + ankerite alteration along edges (45TCA); including 1-2% pyrite (euhedral disseminated grains)
929.00	EOH

0,00	2,50	2,50	OB																	Casing/Overburden; casing at 27m
2,50	211,00	208,50																		Granite
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Locally carbonate-geothite veinlets near the surface
3,65	9,59																			Pervasive carbonate alteration (light grey color); locally shear/schistosity (35TCA)
7,63	8,24																			Shear zone + carbonate veining (35TCA)
19,40	19,41																			A 1cm-thick quartz vein + hematite alteration along the edges (85TCA)
22,56	22,67																			1-2% pyrite along micro-fractures and calcite stringers; 80TCA
23,64	23,93																			Carbonate alteration zone including 2-3% pyrite along micro-fractures and calcite stringers
27,22	27,81																			Carbonate alteration zone (grey color)
29,65	30,85																			Carbonate alteration zone (grey color)
29,90	29,93																			A 2cm-thick quartz-chlorite-carbonate vein; 20TCA
30,70	30,73																			A 2cm-thick quartz-chlorite-carbonate vein; 20TCA
34,50	34,92																			Carbonate-silica alteration zone; tr pyrite.
35,74	36,09																			Strong carbonate-silica alteration zone; tr pyrite
36,58	36,62																			A 4cm-thick quartz vein; 85TCA
51,44	51,70																			Strong carbonate-silica alteration zone; tr pyrite
54,78	55,70																			Zone with late calcite-geothite filled fractures
58,35	67,28																			Pervasive carbonate alteration (light grey color); including carbonate tension fractures; Both contacts are gradational
82,52	82,56																			A 4cm-thick carbonate-chlorite-(quartz) vein;80TCA
94,53	94,60																			A 5cm-thick quartz-chlorite vein; 35TCA
106,40	118,76																			Carbonate alteration zone (light grey color)
106,40	107,15																			Strong and pervasive carbonate alteration zone; including calcite-pyrite veinlets/tension fractures(?); tr-1% pyrite
109,45	110,15																			Strong carbonate (ank?)-silica alteration zone; including 3-4% pyrite as vein (cm-thick at a 5 to 10cm interval; 35 to 50TCA)
111,45	113,40																			Strong sericite alteration zone (sheared and/or schistosity well-developed due to sericite). 1-2% pyrite along schistosity plans; 50TCA
112,13	112,33																			Series of quartz veinlets (~1cm-thick) at a 2 to 5cm interval; 50TCA
121,55	121,65																			Tr pyrite along micro-fractures
126,00	129,09																			Weak (but pervasive) carbonate alteration zone (light grey color); including local calcite tension fractures
127,72	127,74																			A 2cm-thick quartz and chlorite vein; 85TCA
128,70	128,72																			A 1cm-thick quartz vein; 60TCA
133,27	133,33																			A 4cm-thick aplite dyke
138,82	139,25																			Carbonate-silica alteration zone (grey color)
140,37	140,58																			A 8cm-thick chlorite-quartz vein + ankerite alteration along edges; 30TCA
149,07	149,11																			A 4cm-thick QFP dyke (pink color)
153,97	154,00																			A 3cm-thick quartz vein + silica alteration zone; 55TCA
155,92	159,66																			Carbonate alteration zone (medium-grey color)
159,00	159,23																			Quartz-(chlorite) vein; 65TCA
162,60	162,62																			A 1cm-thick quartz vein; 35TCA
163,27	163,31																			A 3cm-thick quartz vein; 60TCA
165,40	166,40																			Weak calcite-hematite alteration zone
165,57	165,61																			Quartz vein; broken core
169,10	170,70																			Carbonate-sericite alteration zone (schistosity well-developed; 40TCA); presence of calcite tension fractures (5%); tr disseminated PY
170,37	170,51																			Series of quartz-carbonate-chlorite veins; 40TCA; tr pyrite

0,00	**2,00**	**2,00**	**Casing/Overburden; casing at 27m**
2,00	**51,46**	**49,46**	**Granite**
			Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
			Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
2,48	2,70		Broken core
10,83	10,83		Tr pyrite
18,77	21,70		Pervasive carbonate-sericite alteration zone
18,92	19,60		Down-dip calcite-chlorite vein; 3cm-thick
24,68	25,90		Hematite-calcite alteration zone (pinkish color); including calcite tension fractures
28,44	28,45		A 1cm-thick quartz vein; 55TCA
32,87	33,48		Silica alteration zone associated with a series of low-angle quartz-chlorite veins; 10TCA; leucoxene associated
43,99	44,00		A 1cm-thick pyrite-quartz vein; 45TCA
47,63	47,64		A 1cm-thick quartz vein; 60TCA
49,20	51,46		Pervasive silica alteration zone (including tr-1% leucoxene) at the contact with QFP unit
51,46	**72,11**	**20,65**	**QFP**
			Light to dark yellowish grey color
52,79	52,80		A 1cm-thick calcite-pyrite vein; 3% pyrite; 30TCA
58,85	59,29		Rusty zone (weathering) associated with a quartz-biotite vein; 35TCA
61,70	61,80		Quartz-geothite vein; 30TCA
62,31	62,42		Rusty zone (weathering)
64,20	64,25		Rusty zone (weathering) associated with a 2cm-thick quartz vein; 55TCA
72,11	**203,00**	**130,89**	**Granite**
			Idem as previous granite unit
72,11	97,86		Silica-carbonate alteration zone (light grey color); tr disseminated pyrite
80,40	82,00		Sericite alteration zone; schistosity well-developed (10TCA); 1% pyrite along schistosity plans
80,51	80,53		Quartz vein; 40TCA
80,88	81,00		A 1cm-thick quartz vein; down-dip
81,13	81,14		Quartz vein; 40TCA
94,51	94,54		Quartz vein + hematite alteration along edges; 3cm-thick; 70TCA
103,00	131,68		Carbonate-silica alteration zone (dark grey color)
106,42	106,53		Series of micro-fractures including tr pyrite; 40TCA
124,10	128,30		Hematite-calcite alteration zone
135,10	203,00		Pervasive silica-carbonate alteration zone (gradational contacts)
136,10	136,22		Pegmatite/quartz vein; 25TCA; 7cm-thick
136,56	136,57		A 1cm-thick quartz vein; 60TCA
139,00	139,10		A 10cm-thick quartz-chlorite vein
144,56	145,10		Sericite-rich; schistosity well-developed (15TCA); including a 1cm-thick quartz vein.
153,95	154,49		1-2% pyrite as stringers; a strong silica alteration associated
154,75	155,45		1-2% pyrite as stringers; a strong silica alteration associated
157,15	159,60		Series of cm-thick pyrite-quartz veins/veinlets at a 15 to 40cm interval; various orientations
157,94	157,96		A 2cm-thick pyrite-quartz vein; 70TCA; 5% pyrite
160,66	161,50		Sericite-silica alteration zone (yellowish-green color); including tr pyrite
167,42	167,52		1-2% pyrite as disseminated grains and along micro-fractures/calcite stringers; 55TCA
168,15	168,40		2-3% pyrite as stringers/veinlets; 55TCA

84,95	84,96																			Quartz-chlorite-tourmaline vein; 50TCA
91,53	91,57																			A 3cm-thick quartz vein; 45TCA. Locally dislocated by micro-fault
96,60	98,80																			Silica-carbonate-sericite alteration (schistosity well-developed); locally tr pyrite
97,60	97,68																			Quartz-chlorite vein; 60TCA; including tr-1% pyrite
108,36	108,39																			A 3cm-thick quartz-pyrite vein; 55TCA; 2-3% pyrite
109,58	109,67																			Carbonate-sericite-silica alteration zone associated with a mm-thick pyrite stringers; 25TCA
111,00	116,00																			Carbonate-sericite-silica alteration zone (locally disseminated pyrite along schistosity plan).
111,73	112,17																			Series of pyrite stringers (at a 5 to 15cm interval; 25TCA); 2-3% pyrite
117,18	117,34																			Series of two quartz veins (tr-1% PY) with hematite alteration along the edges; 25TCA
117,47	117,67																			Series of two pyrite stringers (20TCA) + hematite alteration along edges
118,35	118,41																			Silica-hematite alteration zone including tr-1% pyrite
119,13	119,93																			Series of micro-fractures with silica and/or hematite along edges; from 10 to 25TCA; at a 2 to 5cm interval
121,85	121,90																			1% pyrite as fine stringers; 60TCA
122,00	127,85																			Pervasive silica-(carbonate)-(sericite) alteration zone; dark grey color; tr-1% pyrite as local stringers
123,42	123,43																			A 0.5cm-thick quartz-pyrite vein (50TCA); with sericite-silica alteration strongly developed (+ schistosity: 50TCA)
123,50	123,51																			A 1cm-thick quartz-pyrite vein; 5% pyrite
123,56	123,77																			A 16cm-thick quartz-tourmaline-pyrite-(chlorite) vein; 50TCA; 5-10% pyrite (ZamZam vein)
127,85	129,47																			Pervasive and strong hematite-calcite alteration zone (orange-red color)
134,41	134,43																			A 2cm-thick quartz vein; 25TCA
136,00	136,75																			Carbonate-silica-sericite-(±hematite) alteration zone (grey-purple color); including local pyrite stringers

136,04	136,04																				Pyrite-calcite stringer; 50TCA
136,63	136,69																				1-2% pyrite as stringers; 80TCA
140,16	140,18																				A 0.5cm-thick pyrite-quartz veinlets; 20TCA; + silica alteration zone (1cm-wide) along the edges. (3-4% pyrite).
141,26	141,29																				A 2cm-thick quartz-tourmaline vein; 70TCA
160,60	165,00																				Silica-carbonate-(sericite) alteration zone (grey color)
160,70	160,71																				A 1cm-thick quartz-pyrite vein; 50TCA; 2-3% pyrite.
160,99	161,08																				A 8cm-thick quartz-chlorite vein; 55TCA
164,87	164,96																				A 3cm-thick felsic dyke/vein (aplite?); 15TCA
166,36	166,58																				Series of two quartz-pyrite veinlets (70TCA; 0.5cm-thick each; at a 8cm interval) and two pyrite stringers (80TCA); silica alteration along edges
167,07	167,37																				Series of fine pyrite stringers (at a 15cm interval) + silica alteration along the edges; 60TCA
167,45	167,50																				Series of fine pyrite stringers (at a 15cm interval; 65TCA) + silica alteration.associated; 1-2% pyrite.
167,66	167,80																				Semi-massive pyrite in quartz veins and as disseminated grains along the edges; 60TCA
167,90	167,98																				A 8cm-thick felsic dyke + sericite alteration
168,37	168,38																				A 0.5cm-thick calcite-pyrite veinlets; 70TCA; 2-3% pyrite
168,48	168,59																				A 5cm-thick aplite dyke; 25TCA; with 1% pyrite along microfractures + sericite
168,69	168,70																				A 0.5cm-thick quartz-pyrite veinlets; 60TCA
172,28	172,77																				Weak silica-carbonate alteration zone; tr pyrite
173,97	177,68																				Silica-carbonate alteration zone including several calcite tension fractures (few mm-thick)
177,11	177,17																				A 2cm-thick quartz-chlorite-tourmaline vein; 30TCA
178,45	178,46																				Calcite-(pyrite) vein; 60TCA; ±hematized edges; 1% pyrite
184,72	184,75																				Tr-1% pyrite as stringers; 45TCA; carbonate-silica-(±hematite) alteration along edges
184,77	184,78																				A 1cm-thick quartz vein; 30TCA
185,39	185,39																				Pyrite stringers (tr-1% pyrite) + pluri-cm wide carbonate-silica alteration associated; 60TCA
186,00	186,16																				Carbonate-silica-(hematite) alteration zone including; 1% pyrite
187,40	199,05																				Pervasive carbonate-silica-(sericite) alteration zone giving the rock a greyish color; tr-1% disseminated pyrite
189,95	190,06																				Sheared zone (mylonite?); 60TCA; with strong sericite and/or bleaching associated; tr-1% pyrite
190,10	190,24																				A 12cm-thick quartz-(green carbonate)-(tourmaline)-(pyrite) vein (1-2% pyrite)
190,24	191,32																				Strong sericite alteration zone including quartz-carbonate-pyrite veinlets (<1cm-thick; at a 10-15cm interval; 65TCA); 2-3% pyrite
191,32	191,36																				A 3cm-thick quartz-(tourmaline) vein; 60TCA
191,42	191,55																				A 10cm-thick quartz-pyrite-carbonate vein; 65TCA; 10% pyrite
191,55	192,90																				Strong sericite alteration zone including tr-1% disseminated pyrite and local cm-thick quartz veins (80TCA)
196,50	198,70																				Silica-hematite alteration zone (gradational contacts); including calcite tension fractures and local disseminated pyrite (1-2%PY)
198,22	198,25																				A 3cm-thick quartz-calcite-chlorite-(hematite) vein + pyrite along edges; 55TCA
198,37	198,38																				A 1cm-thick quartz-calcite-chlorite-(hematite) vein + pyrite along edges; 55TCA
201,66	201,67																				A 1cm-thick quartz-calcite-chlorite vein + silica-carbonate alteration zone; 55TCA
203,00	213,28																				Pervasive carbonate-(sericite) alteration zone including local carbonate tension fractures (light grey color)
208,50	210,25																				Partially broken core
216,40	216,45																				A 2cm-thick chlorite-pink calcite vein; 20TCA

217,65	218,80																				Carbonate-silica alteration zone (grey color); gradational contacts
224,00	246,00																				Carbonate-silica-(hematite) alteration zone (weak to moderate) with local chlorite-rich zones along some fractures
246,00	248,25																				Strong sericite/chlorite-silica alteration zone with presence of leucoxene and tr pyrite
248,04	248,06																				A 2cm-thick quartz vein; 35TCA
248,25	251,00																				Carbonate-silica-(hematite) alteration zone (weak to moderate)
251,00	252,20																				Strong sericite/chlorite-silica alteration zone with presence of leucoxene and tr-1% pyrite
252,20	262,45																				Pervasive carbonate-silica-sericite (locally hematite) alteration zone (greyish to pinkish color)
264,50	266,55																				Pervasive carbonate-silica-sericite (locally hematite) alteration zone (greyish to pinkish color)
268,40	**275,15**	**6,75**																			**QFP**
																					Greenish-grey color; tr disseminated pyrite
275,15	**305,65**	**30,50**																			**Granite**
																					Idem as previous granite unit; Pervasively altered into silica-carbonate-sericite/chlorite; locally hematized
278,80	282,30																				Pervasive hematite alteration (orange color)
286,91	286,93																				A 2cm-thick quartz vein; 50TCA
291,85	295,55																				Partially broken core
296,00	296,95																				Pervasive hematite alteration with 1-2% voids (due to calcite dissolution)
299,21	299,59																				Mafic dyke; fine-grained; chlorite-rich; not magnetic
305,65	**308,40**	**2,75**																			**QFP**
																					Idem as previous QFP unit; tr pyrite as fine stringers
305,68	306,23																				Series of fine pyrite stringers at a 2 to 5cm interval; 50TCA; with moderate sericite alteration associated (beige color)
308,40	**356,00**	**47,60**																			**Granite**
																					Idem as previous granite unit. Several carbonate-silica-sericite-(hematite) alteration zones occur (giving the rock a greyish to pinkish color)
308,40	318,50																				Carbonate-silica-sericite-(±hematite) alteration zone (grey to pinkish color)
309,80	310,09																				QFP dyke
314,60	315,85																				Partially broken core
316,60	316,90																				Broken core
321,50	326,75																				Carbonate-hematite and sericite-silica alteration zones (grey and orange-pink color)
325,10	326,67																				Broken and partially broken core
327,70	327,71																				Quartz vein; 5TCA
328,03	328,30																				Broken core
330,40	330,59																				Strong hematite-carbonate alteration zone (orange-pink color)
331,30	332,80																				Strong hematite-carbonate alteration zone (orange-pink color)
332,50	332,53																				Quartz vein; dislocated; contacts not well-defined
337,45	338,05																				Silica-sericite alteration zone (dark grey color)
341,85	343,25																				Series of down-dip fractures (partially broken core)
347,85	356,00																				Moderate hematite-carbonate alteration zone (pinkish color); with voids occuring locally
355,19	355,24																				Kspar-rich vein; 20TCA

4,50	**97,32**	**92,82**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																					Carbonate tension fractures/veinlets + goethite near the surface
14,07	14,08																				1cm-thick quartz vein; 50TCA
23,64	24,14																				Carbonate alteration zone (grey color)
35,60	36,54																				Carbonate-(hematite) alteration zone (light pinkish-grey color); including a down-dip chlorite-carbonate veinlet
36,70	36,71																				1cm-thick calcite vein + goethite alteration along edges; 65TCA
37,62	39,20																				Carbonate alteration zone (light grey color); including fine calcite veinlets and/or tension fractures (25TCA)
47,26	47,35																				Small pegmatite dyke
49,64	54,10																				Carbonate alteration zone (light grey color); including fine calcite veinlets and/or tension fractures (25TCA)
52,69	53,72																				A 3cm-thick quartz vein; 70TCA
53,41	53,45																				Strongly silicified zone including tr-1% pyrite
54,45	54,50																				Small pegmatite dyke; 20TCA
56,42	56,52																				A 8cm-thick quartz-carbonate-chlorite vein; 55TCA
62,14	62,65																				Schistosity well-developed (marked by chlorite); 40TCA
75,15	75,80																				Pervasive and strong hematite-chlorite alteration zone (dark orange-pink color)
81,07	81,27																				Series of fractures (at a 2 to 4cm interval) filled with goethite and calcite
85,93	86,25																				Carbonate alteration zone (light grey color)
88,16	88,19																				A 2cm-thick quartz vein; 25TCA
88,32	89,05																				Carbonate alteration zone (light grey color)
93,90	94,45																				Carbonate alteration zone (light grey color)
96,00	96,25																				Series of fractures (at a 2 to 4cm interval) filled with goethite and calcite
97,32	**101,12**	**3,80**																			**QFP**
																					Plagio porphyry; dark to medium-grey color
97,32	97,70																				Broken core
100,49	100,50																				A fine pyrite stringer; 30TCA; 1% pyrite
100,68	101,12																				Hematized and/or weathered zone (goethite; boxworks of pyrite)
101,12	**162,19**	**61,07**																			**Granite**
																					Idem as previous granite unit
101,34	101,84																				Carbonate-(hematite) alteration zone (light pinkish-grey color); tr pyrite
104,85	105,00																				Broken core
107,02	107,04																				A 1cm-thick quartz vein; 35TCA
110,00	112,20																				Partially broken core
115,35	115,59																				A down-dip calcite-goethite-vuggy veinlet
127,60	128,25																				Partially broken core
129,20	129,37																				Partially broken core
132,60	137,75																				Zone with a series of micro-fractures with chlorite along edges
133,41	133,43																				A 2cm-thick quartz vein; 55TCA
145,83	146,24																				Carbonate-(hematite) alteration zone (pinkish-grey color); including a 2cm-thick chlorite-carbonate vein; 20TCA
147,00	147,04																				A 3cm-thick vein; 50TCA

																					Idem as previous granite unit; local carbonate-silica-sericite alteration zone
193,40	193,77																				Silica-carbonate alteration zone (medium-grey color)
196,26	196,70																				Silica-carbonate alteration zone (medium-grey color); tr-1% disseminated pyrite
198,22	198,82																				Silica-carbonate alteration zone (medium-grey color)
204,67	209,18																				Carbonate alteration zone; light grey color
212,50	222,25																				Alteration zone: alternance of hematite-carbonate alt (pink-orange color) and carbonate-silica alt (light to medium grey color); including local calcite tens fractures and epidote veinlets
217,07	217,12																				Epidote pervasive alteration zone associated with a chlorite veinlets and/or filled fractures @ 217,12 - 217,15m
223,47	223,66																				Carbonate-silica-(hematite) alteration zone; tr pyrite
227,79	229,14																				Carbonate alteration zone; light grey color
242,40	242,43																				A 2cm-thick quartz vein + epidote alteration associated; tr pyrite along edges
244,00	244,34																				Weak to moderate carbonate-hematite alteration zone
248,15	248,27																				Silica-sericite alteration zone (dark grey color); schistosity well-developed (50TCA)
249,63	249,78																				Pegmatite dyke; no quartz
258,25	259,04																				Hematite-silica partial alteration zone (pinkish-red and grey color)
261,58	261,81																				Hematite-silica partial alteration zone (pinkish-red and grey color)
260,77	260,78																				tr pyrite
263,64	263,66																				Quartz-(carbonate) vein (40TCA) associated with a carbonate-hematite-silica alteration zone
267,49	267,73																				Micro-fracture network with goethite along edges
278,00	282,55																				Partially broken core
288,55	294,82																				Strong hematite-silica alteration zone (orange color). Contacts are gradational
298,55	300,40																				Carbonate-silica alteration zone (medium to dark grey color), including tr disseminated pyrite
299,82	299,84																				A 1cm-thick quartz-biotite/chlorite vein; 15TCA
308,05	309,05																				Strong silica alteration zone (dark grey color)
317,00	318,08																				Hematite-carbonate alteration zone (pinkish-red color)
325,65	325,88																				Hematite-carbonate alteration zone (pinkish-red color)
325,88	333,72																				Silica-sericite-carbonate alteration (locally + hematite). Presence of leucoxene due to leaching(?)
332,62	332,64																				A 2cm-thick quartz-chlorite vein; 60TCA
337,00	**474,67**	**137,67**																			**Altered granite**
																					Hematite-carbonate alteration zone (purple-ish red color), locally sericite/chlorite-silica alteration (dark greenish grey color)
347,60	347,85																				Partially broken core/sheared zone (65TCA); including calcite breccia-vein on 3cm.
354,10	362,00																				Sericite/chlorite-silica alteration zone (dark greenish-grey color); Contacts are gradational
369,26	370,50																				Unaltered granite (only weak epidotization/sericitization)

380,37	381,55																				QFP dyke; pervasively altered into hematite-calcite-chlorite; 35TCA
385,52	385,62																				Breccia/sheared zone; 65TCA
400,45	403,20																				Partially broken core
414,00	429,55																				Chlorite-rich zone
422,85	424,30																				Series of down-dip Kspar-quartz veins (1cm-thick); including tr specularite
439,32	440,13																				Mafic dyke; fine-grained; chlorite-rich; not magnetic. Dark green color; partially broken core
474,67	**530,85**	**56,18**																			**Mafic volcanic rock**
																					Massive flow and flow breccia. Chlorite-rich. Locally tr pyrite
478,35	479,25																				QFP dyke; locally down-dip. Pinkish color due to hematization
479,95	480,60																				QFP/granite dyke;purple-ish color due to hematization
482,95	483,32																				Down-dip syenite dyke
491,84	491,91																				A 7cm-thick granite dyke
498,29	498,30																				A 0.5cm-thick quartz vein; including tr CPY; tr PY
498,65	499,00																				Silicified zone including a 1.5cm-thick quartz vein (15TCA)
499,77	499,83																				A 4cm-thick quartz vein; 35TCA
500,77	500,78																				A 1cm-thick quartz vein; 30TCA; tr pyrite
501,54	501,56																				A 1cm-thick quartz vein; 30TCA; tr pyrite
503,89	505,35																				Granite dyke with epidotized plagioclase
505,59	505,80																				Small QFP dyke
506,45	506,60																				Small QFP dyke
506,60	507,50																				Granite dyke with epidotized plagioclase
509,00	511,36																				Granite intrusion (with epidotized plagioclase); including local mafic volcanic rock xenoliths
512,80	513,03																				QFP dyke
513,11	513,34																				Syenite dyke + sericite and quartz
513,50	514,47																				Granite dyke
515,12	515,25																				Granite dyke
516,54	516,61																				Quartz vein + carbonate and Kspar alteration associated; 20TCA; tr pyrite
518,42	520,93																				Granite dyke/intrusion, pervasive alteration (hematite-carbonate); purple-ish red color. Leucoxene and chlorite-rich
520,93	521,45																				Jasper alteration and/or veinlet
521,45	527,85																				Diorite(?) intrusion and/or gabbro
527,85	527,93																				A 6cm-thick Kspar-rich pegmatite; 40TCA
528,70	529,73																				Hematite vein; 45TCA
530,85	**543,00**	**12,15**																			**Vacuolar lava flow(?) filled with calcite.**
																					Locally strongly silicified (could be confused with QFP). Local pyrite stringer and diss grains. Trace garnet
530,85	531,65																				Strong silicification
532,18	532,58																				Series of pyrite stringers (at a 7 to 10cm interval; <1cm-thick; 40-50TCA); 5% pyrite
541,35	543,00																				Strong silicification + hematite alteration (QFP-like); tr pyrite
543,00	**551,27**	**8,27**																			**Mafic volcanic rock**

																				Chlorite-rich; dark green to black color. Aphanitic
545,60	546,66																			Down-dip granite dyke (pervasive hematite-carbonate alteration; purple-ish red color)
546,95	547,07																			Granite dyke (pervasive hematite-carbonate alteration; purple-ish red color); 35TCA
551,27	**553,70**	**2,43**																		**Granite intrusion**
																				Pervasive carbonate alteration (grey color)
553,70	**586,40**	**32,70**																		**Altered mafic volcanic rock**
																				Bleached; presence of fuschite. Locally tr-1% disseminated pyrite. Contacts are gradational
554,70	555,65																			Strong silica-sericite alteration zone, including 1-2% pyrite as fine stringers (at a 2-4cm interval; 60TCA) and quartz veinlets (20TCA). Tr fuschite alo edges
561,15	561,24																			Strong silicified zone and/or quartz vein; 25TCA
563,05	563,06																			A 0.5cm-thick pyrite-quartz veinlet; 25TCA; parallel to schistosity
563,40	563,59																			A 5cm-thick quartz-pyrite vein; 25TCA; 10% pyrite
565,80	567,35																			Granite dyke; strong carbonate-sericite alteration; including a pluri-cm thick and down-dip quartz-carbonate vein
567,90	571,00																			Down-dip quartz-Kspar vein and/or syenite dyke with small veinlets at 30-35TCA. Tr Molybdenite; tr chalcopyrite
571,75	574,00																			Granite dyke; carbonate-silica alteration
575,00	576,45																			In situ breccia zone; locally sheared with 1% disseminated pyrite along plans (+ fuschite); 25TCA
575,25	575,28																			A 2cm-thick quartz vein (20TCA) including tr Molybdenite, tr pyrite
578,60	578,63																			A 2cm-thick quartz vein; 30TCA
579,62	579,65																			A 1cm-thick quartz vein; 20TCA
586,40	**701,00**	**114,60**																		**Mafic volcanic rock**
																				Chlorite-rich; including several carbonate-calcite tension fractures. Occurrence of leucoxene. Locally weak magnetism. Massive flow and bre flow
586,87	586,90																			A 2cm-thick quartz-carbonate vein; 35TCA
595,42	595,86																			Granite dyke with carbonate alteration (grey color)
600,91	601,34																			Granite dyke
602,88	602,89																			A 1cm-thick quartz-hematite (specularite) vein; 30TCA
610,63	610,68																			Carbonate-jasper/hematite vein; 3cm-thick; 30TCA
611,25	611,68																			Down-dip granite dyke; with carbonate-hematite alteration
612,58	614,40																			Weakly hematized zone (dark purple-ish-green color); including several low-angle and down-dip granitic dykes (also hematized)
617,38	617,52																			Iron formation xenolith/large clast; magnetite; 5% disseminated pyrite
618,50	619,20																			Series of dislocated and down-dip quartz-Kspar-sericite veins/dykes
622,15	623,15																			Granite dyke; locally down-dip
625,35	626,72																			Down-dip carbonatized and silicified granite dyke
625,67	626,00																			Down-dip quartz-carbonate veins (1cm-thick)
628,59	628,61																			A 2cm-thick quartz-(pyrite) vein; 45TCA; 1-2% pyrite
629,00	629,30																			Zone with down-dip and dislocated quartz vein (dark grey); with 1-2% pyrite associated
630,00	631,07																			Zone with sheared and dislocated quartz vein parallel to main schistosity (15TCA); 1-2 disseminated pyrite associated
637,56	637,57																			A 1cm-thick quartz-carbonate vein; 80TCA; 1-2% pyrite associated
637,79	638,11																			Silicified zone + sericite; 1-2% disseminated pyrite associated. Presence of eyes of quartz.

COMMENTS
2-3% pyrite
Granite dyke + rounded xenoliths of hosted rock (mafic volcanic rock)
Granite dyke + rounded xenoliths of hosted rock (mafic volcanic rock)
2-3% pyrite and tr-1% chalcopyrite associated with a carbonate-silica veinlet network
1-2% pyrite associated with dislocated quartz veinlets
Granite dyke; unaltered
Silica-pyrite on 3cm; 1-2% pyrite
Granite dyke; carbonatized
A 1cm-thick quartz vein; 15TCA
Aplite dyke + hematite alteration associated
Quartz vein + specularite/hematite along edges; 20TCA
2-3% pyrite in carbonate and quartz veinlets on 2cm
Semi-massive pyrite vein (+quartz); 30TCA; >25% pyrite
Diopside(?)-quartz-chlorite vein (including tr pyrite) with a 5 to 20cm-thick epidote alteration zone on either sides
Series of low-angle (15 to 35TCA; 1 to 3cm-thick) quartz-carbonate vein (dark grey quartz); including locally tr chalcopyrite at a 10 to 15cm interval

1 2

GeoVector Management Inc.

SAMPLE RECORDS

HOLE DESCRIPTION		HOLE LOCATION		HOLE ORIENTATION	
PROJECT:	Carscallen	NORTHING:	5358351 N, NAD83	AZIMUTH:	240.00
HOLE NO:	CAR-42-2010	EASTING:	451890 E, NAD83	INCLINATION:	-50.00
LOGGED BY:	Eric Hebert	ELEVATION:	0.00	FINAL DEPTH:	701m
START DATE:	0.00			CORE SIZE:	NQ
FINISH DATE:	0.00

From	To	Interval	COMMENTS
701.00	**860.95**	**159.95**	**Mafic volcanic rock**
			Chlorite-rich. Massive flow/flow breccia/glaumeropophyric (locally); including carbonate veinlets/tension gashes
703.81	704.15		Iron formation xenolith; magnetite-rich; 1-2% disseminated pyrite
704.93	704.97		Semi-massive pyrite vein + carbonate; 75TCA
705.09	705.18		1-2% disseminated pyrite grains
706.50	706.58		Quartz vein + Kspar alteration along edges; 25TCA
709.36	709.51		Zone with up to 5% pyrite associated with carbonate filled fractures
713.52	713.57		A 4cm-thick quartz-pyrite vein; 40TCA; 10-15% pyrite
714.58	716.00		Series of pyrite stringers/veinlets at a 5-10cm interval; 45TCA
715.39	715.48		A 8cm-thick quartz-pyrite vein; 45TCA. 10% pyrite
716.52	716.54		A 2cm-thick pyrite-carbonate vein; 60TCA
719.45	721.85		Granite dyke; pervasive carbonate-(chlorite) alteration; tr-1% disseminated pyrite
721.87	721.94		A 6cm-thick quartz-(chlorite) vein; 45TCA
722.20	722.85		Local pyrite stringers at a 20cm interval; 40TCA
727.31	727.38		Small pegmatite dyke (Felds-Quartz-Chlorite)
731.56	731.65		Small pegmatite dyke (Felds-Quartz-Chlorite); 20TCA
754.16	754.44		Series of quartz-chlorite veins; 70TCA. (+bleaching associated)
754.70	754.76		A quartz-chlorite vein (+bleaching associated); 35TCA. Tr chalcopyrite
754.84	755.00		A quartz-chlorite vein (+bleaching associated); 30TCA. Tr chalcopyrite
761.84	761.87		A 2.5cm-thick pyrite-carbonate vein; 75TCA. Semi-massive pyrite; pyrite is also associated as alteration (2-3% euhedral grains)
769.00	769.25		Broken core
774.60	778.00		Zone with tr-1% disseminated pyrite; voids are associated (due to dissolution of carbonate). Bleaching is locally associated
776.86	776.89		2-3% pyrite + disseminated voids
799.88	800.00		Zone with 2% chalcopyrite associated with late(?) carbonate veins
806.75	806.85		A disrupted quartz-Kspar vein (1cm-thick); large euhedral grains of pyrite are associated (5%PY).
813.79	814.12		A disrupted granite dyke (disrupted along carbonate tension gashes)
819.35	819.56		Carbonate-(quartz)-(chlorite) vein; trace of pyrrhotite-chalcopyrite along edges; 80TCA
820.47	820.81		Quartz-epidote-chlorite vein(?) or silicified zone
823.64	823.86		Granite dyke
824.79	825.06		Granite dyke; pegmatitic
832.50	833.23		Granite dyke
836.26	836.59		Granite dyke
836.73	837.02		Granite dyke
842.69	842.79		Pegmatite dyke
852.90	858.75		Mafic volcanic rock; pervasive bleaching and/or sericite alteration(?). The rock is light green to grey color
858.75	859.50		Magnetic horizon (due to disseminated magnetite?)
859.50	860.95		Hematite pervasive alteration giving the rock a pinkish-green color
860.95	**875.68**	**14.73**	**QFP**
			Pervasive carbonate-ankerite/sericite alteration (beige color). Tr very fine grained pyrite and local quartz veins (cm-thick)
872.15	872.82		Mafic volcanic rock (xenolith)
875.68	**899.00**	**23.32**	**Mafic volcanic rock**
			Chlorite-rich. Idem as previous. Locally magnetic
875.68	877.25		Contact zone; pervasive hematite alteration associated; magnetic
888.16	888.28		Granite dyke
888.39	888.80		Granite dyke; locally down-dip
889.14	889.41		Granite dyke; carbonate alteration
889.58	890.95		Zone with small granite dyke (<10cm-thick at a 15 to 20cm interval) + carbonate alteration
897.16	897.19		Quartz vein + Kspar alteration along edges; 35TCA
899.00	EOH

0,00	13,50	13,50	OB																		Casing/Overburden
13,50	170,60	157,10																			Granite
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
13,50	70,35																				Pervasive sericite/chlorite-silica-carbonate alteration zone (greenish-grey color) with well-developed schistosity (down-dip). Fractures with geothite along the edges occur near the surface.
13,50	14,50																				Broken core
18,20	18,40																				Broken and partially broken core
24,00	24,00																				Schistosity: 5TCA
31,00	31,00																				Schistosity: down-dip
39,15	39,27																				3-4% pyrite as disseminated grains and in calcite and quartz veinlets (~cm-thick); 65TCA
39,61	39,68																				3-4% pyrite as disseminated grains and in calcite and quartz veinlets (~cm-thick); 65TCA
52,12	52,12																				Fine pyrite stringer; 50TCA
52,28	52,48																				Late open-space fracturing/brecciation partially filled with carbonate minerals
53,00	53,00																				Schistosity: 25TCA, marked by chlorite/epidote minerals
53,33	53,34																				Carbonate vein (35TCA) with 1% euhedral pyrite
59,74	59,77																				A 3cm-thick quartz-pyrite vein; 5% pyrite; 65TCA
70,62	70,63																				A 1cm-thick aplite(?) dyke/vein; 50TCA
71,45	71,49																				A 5cm-thick aplite dyke/vein; 60TCA
74,15	74,19																				A 4cm-thick aplite dyke/vein; 60TCA
74,43	74,47																				A 4cm-thick aplite dyke/vein; 65TCA
75,89	75,91																				A 2cm-thick aplite dyke/vein; 65TCA
78,75	78,76																				A 0.5cm-thick aplite dyke/vein; 65TCA
80,97	80,98																				A 1cm-thick carbonate-chlorite vein within a sericite-carbonate alteration zone; 60TCA
88,29	88,32																				A 2cm-thick carbonate vein; 55TCA
89,78	89,79																				A 0.5cm-thick quartz-carbonate with ankerite-silica alteration associated (~5cm wide zone on either sides); 50TCA
90,34	90,35																				A 1cm-thick quartz-pyrite vein (5% PY; 55TCA; ankerite-silica alteration associated (~10cm wide zone on either sides); 50TCA
93,58	95,00																				Weak to moderate carbonate alteration zone (light grey color)
98,26	98,29																				A 2cm-thick aplite dyke/vein; 65TCA
98,32	98,34																				A 2cm-thick aplite dyke/vein; 65TCA
98,66	98,72																				Sericite-carbonate alteration zone including a 0.5cm-thick quartz-carbonate vein + 1% disseminated pyrite; 55TCA
101,12	101,15																				Sericite-carbonate alteration zone including a 0.5cm-thick carbonate veinlet + tr-1% disseminated pyrite; 55TCA
101,30	101,32																				Sericite-carbonate alteration zone including a 0.5cm-thick carbonate stringer + tr-1% disseminated pyrite; 55TCA
102,49	102,50																				Sericite-carbonate alteration zone including a 0.5cm-thick carbonate stringer + tr-1% disseminated pyrite; 55TCA
102,85	107,07																				Sericite-carbonate alteration zone (grey color) including few mineralized zones
103,25	103,27																				A 2cm-thick quartz-pyrite vein; 50TCA; 4% pyrite
103,39	103,43																				Two pyrite-carbonate stringers (60 to 70TCA); 2-3% pyrite
103,57	103,60																				A 2cm-thick quartz-pyrite vein; 55TCA; 2-3% pyrite
105,21	105,21																				1% pyrite as veinlet
107,02	107,03																				A 1cm-thick pyrite-carbonate vein; 65TCA; 2% pyrite
108,91	109,10																				Series of three pyrite-carbonate-(quartz) veinlets (0.5cm-thick; at a 7cm interval); a sericite-carbonate-silica alteration is associated
112,30	112,35																				A 4cm-thick quartz-pyrite vein; 60TCA; 5% pyrite as coarse euhedral crystals. Sericite-silica-carbonate alteration zone is associated

116,13	116,16																			A 2cm-thick quartz-pyrite-carbonate vein; 65TCA; 1-2% pyrite
121,95	122,32																			Strong sericite-silica alteration zone; schistosity well-developed (down-dip)
128,00	138,65																			Carbonate-sericite-(silica) alteration zone (light to medium grey color); including several carbonate tension fractures (~50TCA; at a 10-20cm interval)
131,84	131,85																			A 1cm-thick quartz vein + tr pyrite along the edges; 35TCA
131,95	132,01																			A 4cm-thick quartz-carbonate-chlorite vein; 40TCA
132,16	132,17																			A 1cm-thick quartz-carbonate-chlorite vein; 40TCA
132,32	132,34																			A 1cm-thick quartz vein; 40TCA
132,47	132,48																			A 0.5cm-thick pyrite-calcite veinlet; 60TCA
136,39	136,40																			Tr pyrite in a carbonate stringer; 25TCA
144,93	144,98																			A 5cm-thick quartz-pyrite vein; 70TCA; 3-4% pyrite
145,82	145,84																			A 1cm-thick aplite vein/dyke; 25TCA
146,67	146,68																			A 0.5cm-thick carbonate-pyrite stringer; 70TCA; 1% pyrite
147,54	147,58																			A 4cm-thick quartz-pyrite vein; 45TCA; 3-4% pyrite. Carbonate alteration associated (light grey color)
148,09	148,10																			A 0.5cm-thick pyrite-carbonate vein; 25TCA; 2-3% pyrite. Carbonate alteration along the edges
151,04	151,14																			A 9cm-thick pyrite-quartz-carbonate vein; 65TCA; 5-10% pyrite
154,81	154,90																			A 9cm-thick quartz-(carbonate)-(pyrite) vein; 60TCA; 1-2% pyrite. Carbonate alteration associated.
155,44	155,44																			Tr pyrite along a chlorite-carbonate stringer; 35TCA
156,87	156,88																			A 1cm-thick carbonate-pyrite vein; 40TCA; 2-3% pyrite
161,00	170,60																			Carbonate-(sericite) alteration zone (light to medium grey color); including local mineralized zones.
161,56	161,56																			1% pyrite along a fine carbonate stringer; 60TCA
161,70	161,70																			1% pyrite along a fine carbonate stringer; 60TCA
161,92	161,95																			A 2cm-thick quartz-pyrite vein; 45TCA; 2% pyrite
166,00	166,00																			Schistosity: 15TCA
167,24	167,33																			Quartz vein and/or silicification zone
170,60	**190,20**	**19,60**																		**QFP**
																				Beige color (sericite alteration). Tr-1% disseminated pyrite; locally 2-3%PY. Uphole contact at 40TCA
175,29	175,32																			A 2cm-thick quartz vein; 25TCA
174,00	175,50																			Partial alteration (sericite/ankerite?), beige color); contact are gradational
177,81	177,82																			A 1cm-thick quartz-carbonate vein; 25TCA
179,34	179,35																			A 1cm-thick quartz-chlorite-carbonate vein; 50TCA

179,70	180,00																				2-3% pyrite as disseminated aggregates and as local stringers
187,68	187,71																				A 1cm-thick quartz vein; 25TCA
190,20	**266,00**	**75,80**																			**Granite**
																					Idem as previous granite unit; several carbonate-silica-(sericite)-(±hematite) alteration zones
190,20	195,50																				Pervasive and strong carbonate-silica-sericite/chlorite alteration zone; including 1-2% (up to 3%) disseminated pyrite grains. (Dark grey color)
193,03	193,04																				A 1cm-thick carbonate-pyrite veinlet; 35TCA; 1-2% pyrite
195,50	212,60																				Carbonate-(±hematite) alteration zone (light pinkish-grey color); locally tr pyrite
203,27	203,44																				Quartz-chlorite-tourmaline vein; 45TCA. Tr pyrite along the edges.
215,45	217,60																				Carbonate-(±hematite) alteration zone (light pinkish-grey color); locally tr pyrite
217,60	229,70																				Pervasive and strong carbonate-silica-sericite/chlorite alteration zone; including local mineralization veins
217,84	217,91																				A 6cm-thick quartz-pyrite vein; up to 5% pyrite; 35TCA
218,61	218,65																				A 4cm-thick carbonate-pyrite vein; 5% pyrite; 50TCA
221,20	221,67																				Series of carbonate-chlorite stringers; at a 5cm interval (25 - 40TCA); 1-2% pyrite
227,53	227,55																				A 1cm-thick carbonate vein (40TCA) + large euhedral pyrite grains; 3-4% pyrite
228,28	228,29																				A 1cm-thick quartz-carbonate-pyrite vein; 65TCA; 3-4% pyrite
233,90	266,00																				Pervasive (but moderate) carbonate-(±silica)-(±sericite) alteration zone (light grey to pinkish grey color). Presence of calcite tension fractures. Locally tr pyrite.
234,64	234,65																				A 0.5cm-thick carbonate-pyrite veinlet; 2% pyrite
237,32	237,35																				A 3cm-thick massive pyrite vein (±quartz); 60TCA
245,08	245,09																				A 0.5cm-thick quartz vein; 50TCA
250,12	250,13																				A 0.5cm-thick quartz vein; 45TCA
253,90	254,12																				A 7cm-thick pegmatite dyke; 20TCA
266,00	EOH

0,00	**5,00**	**5,00**	**OB**																		**Casing/Overburden**
5,00	**125,00**	**120,00**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
6,97	7,57																				Series of calcite veins/filled fractures with geothite along edges; 20TCA
9,00	10,75																				Broken and partially broken core
18,22	19,69																				Weak to moderate carbonate alteration zone (light grey color)
20,84	21,06																				Goethite-(calcite) filled fractures
23,39	23,41																				A 2cm-thick quartz vein; 25TCA; chlorite-silica alteration associated (dark grey color)
27,11	27,12																				A 0.5cm-thick quartz vein; 85TCA
27,65	27,78																				Tr-1% pyrite as stringers; silica alteration associated
38,29	38,88																				Syenite dyke; tr pyrite
38,66	38,67																				A 1cm-thick pyrite veinlet; 25TCA
57,77	58,36																				Strong carbonate alteration zone; presence of leucoxene
59,80	60,33																				Strong carbonate alteration zone; presence of leucoxene; including a 3cm-thick quartz-chlorite-carbonate vein; 60TCA
60,36	60,37																				A 1cm-thick quartz vein; 25TCA
61,46	61,58																				Strong carbonate-sericite alteration zone; including a 1cm-thick quartz-chlorite vein; 70TCA
69,08	69,25																				A 3cm-thick quartz vein + silica alteration zone associated; 25TCA. Tr pyrite and goethite along the edges
70,50	71,90																				Silica-carbonate alteration zone (including carbonate tension fractures) and locally tr pyrite
70,67	70,69																				A 1cm-thick quartz-chlorite-carbonate vein + 1% pyrite along the edges; 20TCA
73,40	75,70																				Pervasive carbonate-silica-sericite alteration including carbonate tension fractures and mineralized zones
75,02	75,04																				A 1cm-thick quartz-pyrite vein; 60TCA; 5% pyrite
75,10	75,12																				A 2cm-thick quartz-pyrite; 5% pyrite
75,19	75,20																				1-2% pyrite as veinlet; 45TCA
79,75	81,52																				Partial carbonate-hematite alteration zone
84,30	85,00																				Partial carbonate-hematite alteration zone
85,00	85,90																				Silica-sericite-carbonate alteration zone including 1% disseminated pyrite
85,90	86,80																				Partial carbonate-hematite alteration zone
86,65	86,66																				A 1cm-thick quartz vein; 1% pyrite
97,71	97,72																				A 1cm-thick quartz vein; 25TCA
106,40	110,00																				Unaltered granite; pinkish color
119,67	119,70																				A 2cm-thick quartz vein; 25TCA
125,00	**162,60**	**37,60**																			**Altered granite**
																					Hematite-carbonate alteration; purple-ish red color
143,10	143,48																				Pegmatite dyke (?), completely altered into hematite-carbonate; orange color
143,48	143,97																				Zone with hematite/jasper alteration as local "patches" (red color); presence of leucoxene
144,43	144,68																				Mafic dyke; dark green-black color; chlorite-rich
148,00	148,35																				Hematite-carbonate alteration + sericite/ankerite alteration (beige color)
162,60	**182,15**	**19,55**																			**Granite**
																					idem as previous granite unit
164,45	164,46																				A 0.7cm-thick pyrite veinlet; 50TCA
164,94	164,95																				A 0.5cm-thick quartz-pyrite veinlet; 50TCA

165,06	165,10																			A 4cm-thick pyrite-quartz vein; 10-15% pyrite; 35TCA
167,27	167,28																			A 0.5cm-thick quartz-pyrite veinlet; 60TCA; 2% pyrite
167,95	167,96																			A 0.5cm-thick carbonate-pyrite veinlet; 55TCA; 1% pyrite
175,62	175,65																			A 2cm-thick quartz vein; 45TCA
182,15	**207,40**	**25,25**																		**Altered granite**
																				Hematite-carbonate alteration zone; pinkish color. Chlorite-rich; gradational contacts
200,44	200,72																			1-2% pyrite as fine stringers (at a 5cm interval; 60TCA). Chlorite-rich alteration associated. Partially broken core
207,40	**300,37**	**92,97**																		**Granite**
																				idem as previous granite unit
211,10	211,39																			Hematite-carbonate alteration; purple-ish color
213,15	213,16																			A 1cm-thick quartz vein; 80TCA
224,70	227,30																			Strong silica-carbonate-(hematite) alteration zone (dark grey color)
226,21	226,35																			Aplite dyke (?) with ankerite alteration (brownish-beige color).
233,76	233,80																			Small pegmatite vein; 80TCA
241,92	254,00																			Zone of partial hematite alteration and/or goethite; stronger along micro-fractures.
244,20	244,28																			Syenite dyke + dislocated quartz vein; tr pyrite
253,17	253,31																			A 9cm-thick syenite(?) dyke; orange-red color; 35TCA. Dislocated quartz veinlets or tension fractures; tr pyrite
257,92	258,02																			Tr pyrite along chlorite micro-veins; 45TCA
265,93	265,98																			A 3cm-thick pegmatite (?) dyke
268,99	269,00																			A 1cm-thick quartz vein; 65TCA
272,50	273,15																			Strong hematite/goethite-silica alteration zone (orange-red color)
274,00	276,25																			Strong hematite/goethite-silica alteration zone (orange-red color); tr pyrite
275,95	275,97																			A 2cm-thick pyrite-carbonate vein; 2-3% pyrite; 60TCA
276,80	281,45																			Strong hematite/goethite-silica alteration zone (orange-red color) + locally broken core
286,55	287,30																			Strong hematite/goethite-silica alteration zone (orange-red color)
287,90	289,05																			Strong hematite/goethite-silica alteration zone (orange-red color)
287,97	288,00																			5-10% pyrite on 2cm; associated with chlorite-carbonate veinlets; 5-10% chalcopyrite disrupted by micro-fault. Chalcopyrite is semi-massive; pyrite is finely disseminated.
300,37	**318,23**	**17,86**																		**Mafic volcanic rock**
																				Chlorite-rich; locally breccia flow(?) with partially digested clasts. Not magnetic; locally tr-1% disseminated pyrite or along micro-fractures
301,40	301,66																			Granite dyke
304,75	305,12																			Zone of carbonate veinlets/tension fractures (~ 12 veins on 10cm)
305,65	305,66																			A 1cm-thick carbonate-pyrite vein; 60TCA; 1-2% pyrite
316,09	316,09																			1-2% pyrite
318,23	**386,00**	**67,77**																		**Granite**
																				Pervasive alteration (carbonate-silica-sericite) zone in alternance with ankerite/sericite-silica alteration zone (beige and pink color)
325,35	329,65																			Strong and pervasive sericite/ankerite-silica alteration zone (beige color); gradational contacts

323,90	324,10																			A 6cm-thick syenite dyke + dislocated quartz vein; 30TCA
325,93	326,06																			A 13cm-thick QFP dyke; beige-orange color
327,69	327,71																			A 1cm-thick quartz-(carbonate) vein; 25TCA
327,89	327,93																			A 1cm-thick quartz-(carbonate) vein; 20TCA
328,05	328,06																			A 1cm-thick quartz-(carbonate) vein; 15TCA
328,30	328,51																			A 5cm-thick quartz-(carbonate) vein; 15TCA; including tr tourmaline(?) and fine specularite hematite(?)
328,54	328,56																			A 2cm-thick quartz-(carbonate) vein; 75TCA
330,05	330,16																			Zone with micro-fractures + local quartz vein (70TCA); core is partially broken
330,55	332,50																			Sericite/ankerite-silica alteration zone; gradational contacts (beige-greenish color)
332,50	334,15																			Silica-hematite alteration zone (orange-grey color); gradational contacts
334,15	335,00																			Strong sericite-silica alteration zone (light greenish-grey color); including 1% pyrite along carbonate veinlets; 20TCA
338,50	341,00																			Pervasive carbonate-silica-(±hematite) alteration zone (light grey color; locally pinkish grey)
343,26	343,27																			A fine pyrite stringer; 70TCA
346,37	348,80																			Carbonate-silica-(hematite) alteration zone (contacts are gradational); light pinkish-grey color; locally tr pyrite as fine stringer
348,80	351,00																			Strong sericite-ankerite-silica alteration zone (yellowish beige color); including tr disseminated pyrite and local mineralized veins
348,96	348,99																			A 2cm-thick quartz-pyrite; 3-4% pyrite; 35TCA
349,34	349,35																			A 0.5cm-thick quartz-pyrite vein
349,70	349,73																			A 2cm-thick pyrite-quartz vein; 45TCA; 10-20% pyrite as very coarse grains (~1cm)
350,95	351,00																			A 3cm-thick quartz vein; 40TCA
351,50	351,55																			Series of two quartz-pyrite veins (1cm-thick and 2cm-thick; 70TCA; 1-2% pyrite); cross-cut by carbonate vein (50TCA)
352,39	352,40																			A 1cm-thick quartz-pyrite vein; 45TCA
356,45	357,30																			Sericite/ankerite-silica alteration zone (greenish-beige color); contacts are gradational
357,12	357,13																			Pyrite stringer; 50TCA
357,30	361,50																			Hematite-silica alteration zone (pinkish grey color)
363,25	365,06																			Sericite/ankerite-silica alteration zone (greenish-grey color)
364,00	364,06																			QFP dyke; hematized
364,42	364,44																			A 1.5cm-thick quartz-pyrite vein; 2-3% pyrite; 55TCA
365,06	371,10																			Hematite-silica-sericite alteration zone (pinkish-grey color)
367,11	367,15																			A 2cm-thick quartz vein; 40TCA
367,55	367,56																			A carbonate-pyrite vein; 2% pyrite; 45TCA
367,60	367,79																			Zone with 1-2% pyrite as alteration associated with a 1cm-thick quartz-magnetite vein; 25TCA
372,50	373,00																			Strong silica-(sericite) alteration zone (dark grey color); tr pyrite
372,92	372,93																			A 1cm-thick quartz vein; 40TCA
373,00	374,00																			Strong silica-hematite-(sericite) alteration zone; (dark pinkish-grey color)
374,00	380,12																			Strong silica-sericite-carbonate alteration zone (medium to dark grey color); including locally 1% disseminated pyrite
374,31	374,34																			A 2cm-thick quartz-pyrite-(±hem) vein, 55TCA; up to 5% pyrite
380,12	385,10																			Silica-(sericite)-(hematite) alteration zone (light pinkish-grey color)
385,10	386,00																			Sericite/ankerite-silica alteration zone (greenish-beige color); including local pyrite stringer (50TCA); <1% pyrite

0,00	**9,00**	**9,00**	**OB**																		**Casing/Overburden**
9,00	**104,40**	**95,40**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																					Locally fine fractures with silicified edges. Locally weakly magnetic where unaltered
9,65	9,86																				Carbonate-silica alteration zone (grey color); including tr-1% disseminated pyrite
10,37	10,38																				A 1cm-thick carbonate-(pyrite) vein; 70TCA; 1-2% pyrite
24,03	24,04																				Tr-1% pyrite along fracture and/or chlorite veinlet
51,85	51,99																				A 9cm-thick quartz-carbonate-(tourmaline?) vein; 55TCA; tr pyrite
54,12	54,21																				A 7cm-thick chlorite-carbonate-quartz vein; 50TCA
56,90	62,77																				Unaltered granite (pinkish color); locally weakly magnetic
64,70	65,35																				A micro-fracture (5TCA) with chlorite-pyrite along the edges + silica alteration; tr-1% pyrite
66,85	69,85																				Pervasive silica-sericite alteration (dark grey color) associated with fine down-dip chlorite-pyrite stringer and low-angle mineralized zone
68,68	69,35																				Low-angle quartz-pyrite veinlet (1cm-thick); 5TCA. Up to 5% pyrite
69,40	69,82																				Series of low-angle quartz-pyrite veins (15TCA; 2-3cm-thick); up to 10% pyrite
73,25	81,35																				Unaltered granite; locally weakly magnetic
79,00	79,44																				A 1cm-thick quartz vein (10TCA)
81,70	83,25																				Partially broken core
104,40	**144,50**	**40,10**																			**Altered granite**
																					Hematite-calcite alteration zone; chlorite-rich; locally goethite. Locally ~5% vuggy due to calcite dissolution. Contacts are gradational
113,80	113,81																				Small shear zone; 50TCA, including tr-1% pyrite and chlorite
144,50	**178,65**	**34,15**																			**Granite**
																					Idem as previous granite unit
161,35	164,90																				Weak carbonate alteration zone (light grey color)
162,92	163,01																				A 7cm-thick quartz-(chlorite)-(carbonate) vein; including tr-1% pyrite associated; 50TCA
176,25	176,75																				Series of small fractures (at a 5 to 10cm interval; 45TCA) with silica alteration along edges; tr-1% pyrite
177,26	177,28																				A 2cm-thick quartz-pyrite vein; 60TCA. 3-4% pyrite
178,00	178,05																				Quartz-pyrite veinlets on 3cm; up to 5% pyrite
178,65	**201,65**	**23,00**																			**Altered granite**
																					Hematite-calcite alteration zone; chlorite-rich. Purple-ish red color. Contacts are gradational. Up to 5% voids due to calcite dissolution
182,55	183,75																				Zone of pyrite alteration; 2-3% pyrite as disseminated grains and locally filling some voids. Locally 1-2% chalcopyrite
183,47	183,52																				A 4cm-thick semi-massive pyrite vein; 50TCA
201,65	**281,85**	**80,20**																			**Granite**
																					Idem as previous granite unit
201,65	203,48																				Weak carbonate alteration zone (light grey color)
212,55	215,31																				Altered granite (hematite-calcite). Locally presence of voids due to calcite dissolution. Contacts are gradational
217,60	224,80																				Weak to moderate carbonate-(silica) alteration zone (light to medium grey color). Contacts are gradational
218,30	218,33																				Small aplite dyke; 80TCA
220,65	223,50																				Strong silica-sericite alteration zone (dark grey color). Core is partially broken
222,45	222,63																				A carbonate-jasper-sericite vein/breccia vein; tr fuschite; tr pyrite

2 7

225,17	225,23																				Small aplite dyke; 80TCA
237,00	238,65																				Goethite (and/or Kspar?)-silica partial alteration zone (orange color). Including local quartz veinlets
237,05	237,07																				A 2cm-thick aplite dyke/vein; 65TCA
239,00	242,00																				Zone of partially broken core
239,55	239,72																				Strong silica-goethite alteration zone (orange-red color)
240,55	240,62																				A 5cm-thick syenite dyke (40TCA) + quartz associated and 1% pyrite as dislocated stringers
242,35	246,45																				Goethite (and/or Kspar?)-silica partial alteration zone (orange color). Including local quartz veinlets
244,50	245,30																				In situ breccia with chlorite-(leucoxene) matrix
249,70	249,85																				Series of micro-fractures at a 1cm interval; 30TCA. 1% pyrite associated along edges + silica-hem/goethite alteration
253,80	257,30																				Strong silica-hematite/goethite and/or Kspar alteration zone; including local carbonate and/or quartz tension fractures
255,30	255,75																				Down-dip 0.5cm-thick quartz veinlet
259,55	259,58																				A 2cm-thick quartz vein (45TCA); including tr pyrite; tr chalcopyrite. Faulted on few mm (10TCA).
259,77	259,80																				Quartz-carbonate and chlorite veinlets on 3cm; 90TCA
268,75	269,30																				Silica-carbonate-hematite alteration zone associated with a 0.5cm-thick quartz veinlet (15TCA); tr pyrite
273,55	277,00																				Moderate to strong silica-hematite/goethite and/or Kspar alteration zone; including local carbonate and/or quartz tension fractures
281,85	**296,55**	**14,70**																			**Altered granite**
																					Hematite-carbonate-vuggy alteration zone (red to purple-ish red color). Uphole contact is gradational. Chlorite/sericite-silica strong alteration the downhole contact.
295,35	296,55																				Strong chlorite/sericite-silica alteration zone (dark greenish-grey color); including 1% disseminated pyrite.
296,55	**299,50**	**2,95**																			**Mafic volcanic and/or ultramafic**
																					Dark green to black color (chlorite-rich); presence of fuschite (1%); locally brecciated.
297,40	297,40																				Schistosity: 5TCA
299,28	299,50																				Contact zone: brecciated with chlorite-rich matrix; 50TCA
299,50	**341,00**	**41,50**																			**Granite**
																					Idem as previous granite unit
299,50	301,45																				Contact zone; pervasive carbonate-sericite alteration zone (grey color)
301,45	307,70																				Pervasive hem/goethite-silica-carbonate alteration zone giving the rock a orange-red color
302,00	302,40																				Broken core; fault zone
315,75	316,30																				Carbonate-hematite-silica alteration zone (pinkish orange color)
325,35	335,15																				Weak to moderate carbonate-sericite alteration zone (light to medium grey color)
332,69	332,81																				A 3cm-thick quartz-tourmaline-chlorite-carbonate vein; 25TCA
334,07	334,28																				A 9cm-thick quartz-tourmaline-chlorite-carbonate vein; 30TCA. Tr chalcopyrite; tr pyrite
334,46	334,56																				A 3cm-thick quartz-chlorite/biotite-carbonate vein; 35TCA
339,04	339,05																				A 0.5cm-thick pyrite veinlet; 60TCA. Silica-carbonate alteration zone associated along edges.
339,17	339,18																				A 0.5cm-thick carbonate-(pyrite) veinlet; 50TCA. Silica-carbonate alteration zone associated along edges.
341,00	EOH

0,00	**1,58**	**1,58**	**OB**																		**Casing/Overburden**
1,58	**23,25**	**21,67**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																					Pervasively altered (silica-carbonate-sericite); dark greenish-grey color. Locally tr-1% pyrite
9,45	9,78																				Zone with tr-1% pyrite associated with a down-dip calcite veinlet
11,75	12,12																				Shear zone with eyes of quartz; sericite alteration; 60TCA; tr pyrite
14,96	14,97																				Carbonate-pyrite stringer; 1-2% pyrite; 60TCA
16,62	16,64																				A 1cm-thick carbonate vein; 1-2% pyrite; 40TCA
19,16	19,25																				A 9cm-thick aplite dyke (80TCA). + presence of sericite
20,40	23,25																				Strong sericite-silica alteration zone at the QFP contact (light yellowish-green color); including tr PY; tr CPY
23,25	**39,05**	**15,80**																			**QFP**
																					Locally 1% disseminated pyrite; yellowish-green beige color. Including local pyrite stringers.
23,25	23,70																				Series of pyrite stringers (at a 2 to 8cm interval); 60TCA
23,72	23,88																				Rusty zone (weathering?); partially broken core
24,01	24,02																				A 0.5cm-thick massive pyrite veinlet; 50TCA
24,23	24,32																				Two quartz-pyrite veinlets; 30TCA
25,21	25,22																				A 0.5cm-thick quartz-pyrite vein; 50TCA; 3-4% pyrite
26,08	26,11																				A 2cm-thick quartz-chlorite vein; 25TCA; tr-1% pyrite
28,44	28,55																				Two carbonate-pyrite veinlet; 50TCA; 2-3% pyrite
31,02	31,03																				Carbonate-pyrite veinlet; 50TCA; 2% pyrite
32,07	32,30																				Two carbonate-pyrite veinlet; 50TCA; 2-3% pyrite
39,05	**254,00**	**214,95**																			**Granite**
																					Almost pervasively altered into silica-carbonate-(sericite); dark grey color
39,05	43,00																				Sericite-silica-carbonate alteration zone (greenish-grey color); Schistosity well-developed; 55TCA
43,00	48,00																				Carbonate-silica alteration zone (light to medium grey color); contacts are gradational
46,45	46,80																				Tr-1% pyrite as local chlorite-pyrite stringer
52,20	53,10																				Carbonate-(silica) alteration zone (light grey color); including locally 1% pyrite
55,00	60,95																				Pervasive silica-sericite-carbonate alteration zone; including local mineralized veins and veinlets (contacts are gradational)
55,29	55,30																				Pyrite stringer; 55TCA
56,24	56,25																				A 1cm-thick quartz-(pyrite) vein; 40TCA; 1-2% pyrite along edges
56,62	56,64																				A 2cm-thick quartz-pyrite vein; 40TCA; 5% pyrite
57,08	57,09																				A 1cm-thick carbonate-pyrite veinlet; 25TCA; 2% pyrite
59,10	59,85																				QFP dyke; pinkish color due to pervasive hematization; sericite alteration and quartz veinlets also associated; tr pyrite
60,38	60,80																				Down-dip pyrite stringer; 1-2% pyrite; tr CPY
62,45	73,00																				Carbonate alteration zone (light grey color) including local fine pyrite stringers. Contacts are gradational
63,88	63,90																				A 1cm-thick carbonate-pyrite vein; 25TCA; 2-3% pyrite
64,03	64,03																				Pyrite stringer; 60TCA; 1-2% pyrite
68,33	68,33																				Pyrite stringer; 50TCA; 1-2% pyrite
68,71	68,72																				A 0.5cm-thick pyrite-carbonate veinlet; 35TCA. 1-2% pyrite; tr CPY
69,54	69,55																				A 0.5cm-thick pyrite-quartz veinlet; 60TCA. 1-2% pyrite
70,03	70,04																				A 0.5cm-thick pyrite-carbonate veinlet; 50TCA. 1-2% pyrite

99,31	99,33																				3-4% pyrite on 2cm + quartz veinlets
99,49	99,51																				A 2cm-thick quartz vein; 70TCA
99,62	99,72																				Quartz-pyrite vein; 5-10% pyrite; 70TCA
101,52	101,52																				Pyrite stringer; 35TCA
102,80	106,70																				Silica-(hematite) alteration zone (medium grey to pinkish grey color); contacts are gradational
105,22	105,26																				Quartz-pyrite veinlets on 3cm; 55TCA; 2-3% pyrite
110,92	110,92																				Pyrite-carbonate stringer; 25TCA
111,17	111,44																				Series of pyrite stringers (25 and 50TCA) + silica-sericite alteration zone associated; 2-3% pyrite
113,30	113,85																				Silica-carbonate alteration zone including 1-2% pyrite as disseminated grains and local stringers
114,74	114,75																				A 0.5cm-thick pyrite-carbonate vein; 50TCA; 1-2% pyrite
117,39	117,40																				A 0.5cm-thick pyrite-carbonate vein; 35TCA; 1-2% pyrite
117,45	117,46																				A 0.5cm-thick pyrite-quartz vein; 35TCA; 1-2% pyrite
126,45	126,48																				1% pyrite as fine stringers; 50TCA
126,80	127,00																				silica alteration zone; tr pyrite
127,75	127,86																				1% pyrite as fine stringers + silica alteration associated; 55TCA
138,70	142,53																				silica-carbonate-(sericite) alteration zone (dark grey color); including local fine calcite tension fractures. Contacts are gradational
139,62	140,00																				Series of quartz veins (<1cm-thick) with various orientations; tr-1% pyrite associated
145,85	153,87																				Pervasive silica-carbonate-(sericite) alteration zone (dark grey color). Locally tr pyrite
149,38	149,40																				A 2cm-thick pink calcite vein; 45TCA. Tr pyrite
164,30	169,65																				Strong silica-carbonate-(sericite) alteration zone
168,60	168,62																				A 2cm-thick carbonate-pyrite vein; 45TCA; 2-3% pyrite
170,76	170,87																				Goethite-calcite alteration
174,45	178,95																				Zone with micro-fractures/chlorite-calcite stringers at a 10 to 50cm interval (45 - 60TCA) with mm to m-wide silica alteration zone. Tr pyrite
175,35	175,54																				Sericite alteration zone; tr pyrite
176,08	176,70																				Carbonate/goethite ± sericite alteration zone. Pinkish color.
178,95	186,42																				Strong silica-carbonate-(sericite) alteration zone (dark grey color). Contacts are gradational. Locally tr pyrite
179,02	179,03																				a 1cm-thick carbonate-pyrite-(chlorite) veinlet; 50TCA. 1-2% pyrite
179,12	179,13																				a 1cm-thick quartz-pyrite vein; 55TCA; 2-3% pyrite

COMMENTS
a 1cm-thick quartz-carbonate-pyrite vein; 55TCA; 2-3% pyrite
Strong silica-sericite-carbonate alteration zone (dark grey color) including tr-1% pyrite as disseminated grains and locally as stringers
Sericite-silica alteration zone associated with a 3cm-thick carbonate-chlorite-quartz vein; 70TCA
Strong silica-carbonate alteration zone; dark grey color
Strong silica-carbonate alteration zone; dark grey color
Two chlorite-quartz veinlets (1cm-thick each) associated with ankerite/sericite alteration along edges; 75TCA
Pervasive ankerite/sericite-hematite-(silica) alteration zone (beige-pink color). Contacts are gradational
A 1cm-thick quartz vein; 55TCA
A 1cm-thick quartz vein; 55TCA
Moderate to strong silica-carbonate-(sericite) alteration zone (medium to dark grey color)
Strong and pervasive ankerite/sericite-silica-hematite alteration zone (beige-pinkish red color)
Partial silica-carbonate-sericite alteration zone (medium to dark grey color)
Silica-carbonate alteration zone (+ carbonate tension fractures; medium to dark grey color)
Silica-carbonate alteration zone (+ carbonate tension fractures; medium to dark grey color)
Sheared zone + quartz veins (sericite-rich); 60TCA

0,00	**33,00**	**33,00**	**OB**																	**Casing/Overburden**
33,00	**55,75**	**22,75**																		**Weathered granite**
																				Goethite alteration (weathering). Broken and partially broken core
34,40	34,65																			Aplite dyke; broken core
55,75	**219,00**	**163,25**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
65,90	66,20																			Weak carbonate-silica alteration zone (light grey color); including two quartz-chlorite veinlets (60TCA); contacts are gradational
83,75	87,05																			Silica-carbonate-(sericite) alteration zone (contacts are gradational). Presence of leucoxene
95,10	96,10																			Down-dip calcite-hematite veinlet + silica-carbonate alteration associated
111,70	120,25																			Weak to moderate carbonate-sericite-silica alteration zone (light to medium grey color). Contacts are gradational. Locally tr pyrite and carbonate tension fractures
137,70	141,50																			Strong sericite/chlorite-silica-carbonate alteration zone
139,10	139,75																			Broken core; breccia/shear zone; quartz veinlets associated
140,25	140,30																			Broken core
140,90	140,91																			A 0.5cm-thick quartz veinlet; tr-1% euhedral pyrite associated along the edges; 40TCA
144,95	146,53																			Carbonate alteration zone (light to medium grey color)
150,10	150,60																			Strong sericite/ankerite alteration zone (sharp contact; beige color); associated with two quartz-chlorite veinlets (1cm-thick each; 50TCA)
153,36	154,50																			Carbonate alteration zone (light to medium grey color)
156,50	156,57																			Aplite dyke + local sericite; 60TCA
159,00	159,85																			Hematite-carbonate-silica alteration zone (pinkish color); including a 0.5cm-thick hematite veinlet; 20TCA
163,40	163,80																			Silica-(hematite) alteration zone including a 1cm-thick quartz-chlorite vein; 45TCA
174,20	178,35																			Sericite-carbonate-silica alteration zone (dark grey color)
178,35	178,38																			A 3cm-thick aplite dyke/vein; 50TCA
179,85	182,63																			Carbonate-silica alteration zone (medium-grey color)
180,69	180,70																			A 1cm-thick quartz vein; 55TCA
184,40	188,00																			Hematite-silica alteration zone (pinkish grey color); locally partially broken core
188,00	189,85																			Sericite-silica-(±hematite) alteration zone (dark grey)
188,13	188,19																			A 5cm-thick quartz vein; 50TCA
190,30	197,65																			Partial hematite-carbonate-(silica) alteration zone (pinkish color)
199,75	210,75																			Partial hematite-carbonate-(silica) alteration zone (pinkish color); including down-dip carbonate-chlorite veinlets
216,00	219,00																			Silica-carbonate alteration zone; contacts are gradational
219,00	**346,10**	**127,10**																		**Altered granite**
																				Hematite-calcite alteration zone (light orange-red color). Local voids due to calcite dissolution. Presence of mafic volcanic xenoliths
316,05	317,00																			Mafic volcanic rock dislocated unit/xenolith; including tr pyrite
317,00	321,80																			Chlorite-rich altered granite; schistosity well-developed; 30 to 35TCA
322,50	324,80																			Zone with tr-1% disseminated pyrite; locally tr chalcopyrite (@323.34m)
323,70	323,71																			Pyrite stringer; 60TCA
326,03	326,04																			Pyrite stringer; 80TCA
326,77	326,80																			Semi-massive pyrite vein on 3cm (80TCA) at the contact with mafic volcanic xenolith
326,77	326,95																			Mafic volcanic xenolith
327,15	327,45																			Mafic volcanic xenolith, brecciated. Carbonate filled fracture/cement associated

328,84	329,44																				Series of pyrite cm-thick veins at a 10cm interval; 30TCA. 3-4% pyrite. Locally up to 2cm-thick semi-massive pyrite vein.
330,15	330,65																				Mafic volcanic xenolith including 3-4% pyrite as pluri-mm thick veinlets at a 5-10cm interval (30-40TCA)
337,10	337,40																				Mafic volcanic xenolith; chlorite-rich
337,87	338,00																				Chlorite vein and/or mafic xenolith(?); partially broken core
340,95	343,30																				Mafic volcanic xenolith or interbedded unit. Chlorite-rich
341,15	341,30																				Micro-shear zone/breccia zone
346,00	346,10																				Hematite alteration and/or veinlets at the contact with mafic volcanic rock unit
346,10	**390,80**	**44,70**																			**Mafic volcanic rock**
																					Massive flow and breccia flow (autoclasts); chlorite-rich; not magnetic. Locally tr-1% cubic pyrite
346,10	346,32																				Broken core; contact zone
351,50	351,82																				Granite dyke
363,55	364,95																				Down-dip granite dyke
366,00	368,88																				Zone with Kspar-rich nodules (2-3cm diameter) and/or hematite (5-10% of the rock)
369,00	369,17																				Zone with 5% disseminated pyrite
374,11	374,18																				Series of fine pyrite stringers; 20TCA
374,38	374,40																				Semi-massive pyrite (+carbonate) on 2cm (65TCA)
390,40	390,70																				Pegmatite dyke; 5TCA
390,80	**407,35**	**16,55**																			**QFP/porphyry intrusion**
																					Quartz proportion varies; locally chlorite-rich (especially along contact zones). Tr-1% disseminated pyrite and as few fine stringer
392,25	392,26																				A 1cm-thick quartz vein; 55TCA
392,78	392,79																				A 1cm-thick quartz vein; 60TCA
392,86	392,87																				A 1cm-thick quartz vein; 60TCA
393,45	393,45																				Micro-fracture with 2-3% pyrite along edges; 25TCA
402,51	402,62																				Down-dip pyrite stringer
402,66	402,86																				Fine pyrite stringer; 10TCA
403,65	403,69																				A 3cm-thick quartz-green carbonate vein; 25TCA
407,35	**526,60**	**119,25**																			**Mafic volcanic rock**
																					Massive flow; chlorite-rich, not magnetic
419,31	419,37																				Pegmatite dyke; 65TCA
419,44	419,54																				Tr-1% pyrite along micro-fractures; 30TCA
419,59	419,66																				Pegmatite dyke; tr pyrite associated; 35TCA
428,05	428,91																				Down-dip quartz-sericite/ankerite vein
429,08	429,45																				Zone of partially broken core and quartz veining (breccia/shear?)
429,45	429,75																				Dislocated quartz-Kspar vein (down-dip?)
429,92	430,40																				A 1cm-thick down-dip quartz vein
431,60	431,70																				Silicified zone and/or quartz vein (?); 1% pyrite
432,16	432,18																				A 2cm-thick quartz-carbonate vein; 70TCA
432,23	432,24																				A 1cm-thick quartz-carbonate vein; 60TCA

COMMENTS
Silica-ankerite alteration zone
A weakly developed shear zone; tr-1% pyrite along shear plans (35TCA)
Carbonate-(pyrite) pervasive alteration zone and/or dislocated vein(?). 1-2% disseminated pyrite
Series of quartz vein (cm-thick; 20TCA) with 1% pyrite associated
Silica/ankerite vein and/or alteration zone including 1% pyrite as veinlets
Quartz vein (white color); 45TCA
Aplite dyke/vein; 70TCA
A 1cm-thick pyrite-carbonate vein (60TCA); 2-3% pyrite
Quartz-garnet-epidote down-dip vein(?)
Syenite dyke; fine sericite-rich micro-fractures also occur (tr pyrite)
Quartz-sericite/epidote vein/pegmatite
A 3cm-thick, down-dip Kspar-quartz vein
Chert-magnetite-pyrite xenolith (iron formation?) and/or small bed
A 4cm-thick Kspar-rich vein/dyke; 35TCA
Syenite dyke
A 9cm-thick quartz-pyrite vein; 70TCA. 5-10% pyrite
Quartz-Kspar pegmatite dyke; 70TCA
Syenite dyke + sericite along micro-fractures
Pegmatite dyke; epidotized
Silicified zone and/or quartz vein
Bleached zone; locally fuschite is associated; schistosity (25TCA)
Bleached zone including ~1% fuschite and dm-thick quartz veins
Kspar-quartz-sericite veining system
Bleached zone and/or sericite alteration
4cm-thick quartz vein; 25TCA
Granite dyke
Down-dip quartz-sericite vein/alteration zone; tr pyrite; tr chalcopyrite
Sericite-silica alteration zone
Granite dyke + quartz vein
Granite dyke
Granite dyke
Zone with 1-2% disseminated pyrite and tr-1% chalcopyrite associated with carbonate veinlets (25TCA) + sericite alteration
Down-dip quartz-Kspar vein + bleaching along edges
Bleached zone
Small porphyry intrusion dyke(?)
1% chalcopyrite; tr-1% pyrite associated with a dislocated quartz veinlet
Quartz vein including small proportion of Kspar and sericite
Quartz vein; 15TCA

4 7

From	To	Interval	COMMENTS
521,27	521,34		Pegmatite dyke (quartz-Kspar-sericite)
522,67	522,68		Carbonate vein including 1% pyrite; tr-1% chalcopyrite
522,76	522,92		Quartz vein with 1-2% pyrite and 1% chalcopyrite along edges; 60TCA
522,96	523,15		Series of quartz and carbonate veinlets including 1-2% pyrite; 1% chalcopyrite; 50TCA
526,60	**529,82**	**3,22**	**Syenite intrusion**
			Kspar-rich; fine-grained; pervasive sericite alteration associated
529,82	**572,85**	**43,03**	**Mafic volcanic rock**
			Idem as previous mafic volcanic rock unit
531,12	531,45		Granite dyke
532,32	532,48		Granite dyke
533,15	533,27		Carbonate breccia-vein
539,78	540,24		Pegmatite-granite dyke; 10TCA
541,96	544,04		Granite dyke
554,15	554,60		Granite dyke + epidote alteration along edges
555,75	555,86		Granite dyke
560,11	560,35		Pegmatite dyke
568,70	569,65		Magnetic mafic volcanic rock
572,85	**579,80**	**6,95**	**QFP dyke**
			Yellowish-beige color (sericite alteration?). Locally tr-1% disseminated pyrite. Very fine pyrite stringers and cm-thick quartz veins also occur
579,80	**585,60**	**5,80**	**Mafic volcanic rock**
			Idem as previous mafic volcanic rock unit
583,47	583,75		Quartz vein including tr pyrite and tr molybdenite
585,60	**589,32**	**3,72**	**QFP dyke**
			Greenish-grey color; plagioclase porphyry. Locally tr disseminated pyrite
589,32	**597,38**	**8,06**	**Mafic volcanic rock**
			Idem as previous mafic volcanic rock unit
590,80	592,50		QFP dyke; medium to dark grey color; plagioclase porphyry
596,00	597,00		Down-dip magnetite-rich horizon (iron formation xenolith or thin bed); including 1-2% cubic pyrite
597,38	**EOH**

0,00	**3,63**	**3,63**	**OB**																	**Casing/Overburden**
3,63	**47,10**	**43,47**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
4,65	9,15																			Carbonate-silica-(sericite) alteration zone (medium to dark grey color); including calcite tension fractures
13,28	13,29																			Chlorite-rich fracture + tr pyrite
16,67	16,69																			A 2cm-thick carbonate-pyrite vein; 25TCA; 3% pyrite
19,87	19,89																			A 2cm-thick calcite-quartz vein; 80TCA
24,20	25,75																			Partial silica-carbonate-(sericite) alteration associated along micro-fractures; tr pyrite. Schistosity well-developed; 70TCA
32,00	47,10																			Pervasive carbonate-sericite-silica alteration zone (medium-grey color); schistosity: 35TCA
35,50	36,42																			Down-dip carbonate stringer including tr-1% pyrite
47,10	**70,20**	**23,10**																		**QFP dyke**
																				Locally up to 2% pyrite and as stringers. Beige color; sericitized.
47,50	47,50																			Down-dip schistosity
50,50	50,50																			Schistosity: 50TCA
47,64	47,82																			Down-dip and disrupted quartz vein; tr-1% pyrite
48,52	48,56																			A 3cm-thick quartz vein; 50TCA
54,00	54,70																			2% pyrite as "blebs"
65,15	69,12																			Weak sericite alteration; carbonate stringer
64,40	64,60																			Three quartz-pyrite veinlets/stringers (at a 10cm interval; 60TCA); 1-2% pyrite
70,17	70,20																			A 3cm-thick quartz vein; 35TCA
70,20	**187,70**	**117,50**																		**Granite**
																				Idem as previous granite unit
70,20	78,30																			Pervasive silica-sericite-carbonate alteration zone (dark grey color); locally tr pyrite
75,62	75,65																			A 2cm-thick quartz-carbonate vein; 45TCA
83,18	83,19																			A 1cm-thick carbonate-pyrite veinlet; 45TCA; 1-2% pyrite
83,43	83,44																			A 1cm-thick carbonate-pyrite veinlet; 45TCA; 1-2% pyrite
84,05	84,06																			A 1cm-thick carbonate-pyrite veinlet; 45TCA; 1-2% pyrite
89,21	89,21																			Carbonate-(pyrite) stringer; 20TCA. Tr-1% pyrite
91,12	93,10																			Pervasive silica-carbonate-sericite alteration zone (dark grey color). Contacts are gradational
107,27	107,67																			Silica-carbonate alteration zone; including local carbonate-(pyrite) veinlets/stringers; tr pyrite
120,70	121,90																			Carbonate alteration zone (contacts are gradational)
121,35	121,40																			Chlorite-calcite vein; 80TCA
122,30	122,80																			Silica-carbonate alteration zone; medium-grey color
122,48	122,51																			A 1cm-thick calcite-goethite vein + 1cm-thick pyrite-carbonate vein; 20TCA; 2-3% pyrite
124,00	126,00																			Pervasive and strong silica-carbonate-(sericite) alteration zone; including locally tr pyrite and calcite tension fractures
131,51	131,54																			A 3cm-thick aplite dyke/vein; 60TCA
132,03	132,05																			Quartz-(tourmaline) vein; 70TCA
138,87	138,91																			A 3cm-thick quartz-pyrite vein; 45TCA; 3-4% pyrite. Hematite also associated
141,70	142,85																			Silica-carbonate alteration zone (medium to dark grey)
147,50	150,00																			Weak to moderate silica-carbonate alteration zone. Contacts are gradational
148,33	148,63																			Weak sheared zone; chlorite-rich; 40TCA. Tr pyrite

152,23	152,24																				Pyrite-chlorite stringer; 35TCA
153,94	153,95																				Pyrite-chlorite stringer; 20TCA
158,52	158,55																				A 3cm-thick aplite dyke/vein; 55TCA
160,85	162,90																				Carbonate-sericite alteration zone (light medium grey color)
161,70	161,73																				A 3cm-thick quartz-pyrite-chlorite vein; 40TCA; 5% pyrite
166,85	176,00																				Silica-hematite alteration zone (orange-grey color)
172,88	172,89																				A 0.5cm-thick quartz vein; tr-1% disseminated pyrite associated along edges; 55TCA
176,00	187,70																				Pervasive and strong sericite/chlorite-carbonate alteration (dark green-grey color); Schistosity well-developed (45TCA); including tr-2% disseminat pyrite
179,45	180,65																				Shear zone(?) or schistosity well-developed (45TCA); including locally 1-2% disseminated pyrite
183,90	185,85																				Shear zone(?) or schistosity well-developed (65TCA); including locally 1-2% disseminated pyrite
187,70	**227,30**	**39,60**																			**QFP intrusion**
																					Greenish-grey color; 1-2% disseminated pyrite "blebs". Locally beige ankerite/sericite alteration. Several pyrite-(quartz)-(carbonate) veinlets at a 1-2m interval. Uphole contact at 30TCA
196,85	197,25																				Strong silica alteration
199,61	199,65																				A 3cm-thick quartz vein (25TCA) cross-cutting and displaced a 0.5cm-thick pyrite (70TCA); photo
201,78	201,80																				A 1cm-thick quartz-pyrite vein; 40TCA; 2-3% pyrite
206,63	206,65																				A 2cm-thick quartz-green carbonate vein; 30TCA
208,92	208,93																				A 1cm-thick quartz-pyrite vein; 40TCA; 2-3% pyrite
211,33	211,34																				A 1cm-thick pyrite veinlet; 60TCA
211,52	211,53																				A 1cm-thick quartz-pyrite vein; 50TCA; 2-3% pyrite
212,36	212,37																				A 1cm-thick quartz-pyrite vein; 35TCA; 2-3% pyrite
217,78	217,79																				A 1cm-thick quartz-pyrite vein; 40TCA; 2-3% pyrite
217,84	217,85																				A 1cm-thick quartz-pyrite vein; 40TCA; 2-3% pyrite
219,87	219,88																				A 1cm-thick quartz-pyrite vein; 40TCA; 2-3% pyrite
222,55	225,30																				Ankerite/sericite alteration zone including local pyrite-carbonate-(quartz) stringers at a 15cm interval; 40TCA
225,15	226,50																				Ankerite/sericite alteration zone including two pyrite-carbonate veinlets (<1cm-thick); 35TCA
227,50	**258,70**	**31,20**																			**Granite**
																					Pervasively altered into silica-sericite-carbonate (dark greenish-grey color); including tr-2% pyrite as disseminated grains and as veinlets
230,31	230,66																				Series of pyrite-(quartz) veinlets (55TCA; <1cm-thick; at a 15cm interval); 2-3% pyrite
231,93	231,94																				A 1cm-thick pyrite veinlet; 40TCA
235,25	235,55																				Up to 3% disseminated pyrite
240,20	241,65																				Schistosity well-developed due to abundant sericite/chlorite minerals; weak shear(?); 50TCA
242,60	242,61																				1cm-thick pyrite veinlet; 40TCA
253,80	254,15																				QFP dyke; 1-2% pyrite; contact @ 25TCA
254,31	254,32																				1cm-thick pyrite-carbonate veinlet; 45TCA
258,70	**268,70**	**10,00**																			**QFP intrusion**
																					Ankerite/sericite alteration (greenish to beige color). 1-2% disseminated pyrite; pyrite also present as local pyrite stringers/veinlets. Uphole contact@40TCA

0,00	13,50	13,50	OB																	Casing/Overburden
13,50	293,00	279,50																		Granite
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Some zones are pervasively altered into silica-carbonate-sericite; grey color and local pyrite along micro-fractures (15TCA)
24,97	25,00																			A 3cm-thick quartz-chlorite vein; 70TCA
34,12	54,10																			Silica-carbonate-sericite alteration zone (medium-grey color); few carbonate tension fractures associated
34,27	34,29																			A 2cm-thick quartz vein; 25TCA
43,31	43,34																			A 2cm-thick carbonate-quartz vein; 60TCA
47,53	47,60																			A 3cm-thick carbonate-chlorite-quartz vein; 25TCA
49,32	49,38																			A 1cm-thick, down-dip chlorite-carbonate-(pyrite) vein; 1-2% cubic pyrite
49,57	49,80																			A 1cm-thick carbonate-chlorite-(pyrite) vein; 10TCA; tr-1% pyrite
50,92	50,93																			A 0.5cm-thick quartz vein (35TCA) + 1% disseminated pyrite along the edges
52,63	52,65																			A 1cm-thick chlorite-carbonate-(pyrite) vein; 30TCA
74,80	75,60																			Pervasive silica-carbonate-sericite alteration zone
75,34	75,35																			A chlorite-pyrite stringer; 20TCA
75,60	76,16																			Down-dip aplite(?) dyke or fine-grained granite dyke
79,13	79,14																			A 1cm-thick pyrite vein with a 5cm-wide silica-carbonate-sericite alteration zone associated; 50TCA
84,53	84,55																			A 2cm-thick quartz-carbonate vein; 60TCA
84,80	85,65																			Silica-sericite-carbonate alteration zone including pyrite-carbonate veinlets (15TCA); 1-2% pyrite
87,57	87,90																			A 10cm-thick quartz-pyrite vein; 25TCA; up to 5% pyrite
89,35	91,00																			Silica-carbonate-(sericite) alteration zone (contacts are gradational); including few mineralized zones
89,62	89,64																			A 2cm-thick quartz-pyrite vein; 50TCA; 3-4% pyrite
90,30	90,31																			A 0.5cm-thick carbonate-pyrite veinlet; 20TCA; 1% pyrite
97,99	98,02																			A 3cm-thick quartz vein; 60TCA
109,98	110,03																			A 4cm-thick quartz-chlorite vein; 60TCA
115,89	115,93																			A 3cm-thick quartz-chlorite vein; 60TCA
120,00	130,30																			Carbonate alteration zone (light grey color). Contacts are gradational
120,94	120,95																			A 1cm-thick quartz vein; 35TCA
128,67	128,72																			A 5cm-thick quartz vein; 70TCA
128,72	128,96																			Mafic dyke; 70TCA
142,67	142,69																			A 2cm-thick quartz vein; 60TCA
146,68	146,70																			A 1cm-thick quartz vein; 20TCA
150,17	150,19																			A 2cm-thick quartz-chlorite vein; 50TCA
162,40	163,45																			Sericite/chlorite-silica-carbonate alteration zone (grey color); including 1% disseminated pyrite

162,91	162,93																			A 1cm-thick carbonate-chlorite-(pyrite) vein; 20TCA
174,65	177,85																			Pervasive carbonate-silica alteration zone (medium grey color)
176,50	176,55																			A 3cm-thick quartz-pyrite vein/breccia vein (60TCA). Semi-massive pyrite as fine grains in matrix and coarse grains
181,95	183,55																			Weak to moderate silica-carbonate alteration zone (medium grey color)
182,26	182,42																			A 2cm-thick quartz-pyrite vein; 10TCA; 5% pyrite as coarse grains
183,72	183,75																			A 2cm-thick quartz-carbonate vein; 80TCA
184,62	184,65																			A 3cm-thick quartz-chlorite vein; 60TCA
187,60	187,61																			A 1cm-thick quartz-(tourmaline?) vein; 80TCA
189,28	189,34																			A 5cm-thick quartz vein; 45TCA
189,48	189,50																			A 2cm-thick quartz-carbonate-chlorite; 70TCA
191,00	193,00																			Down-dip QFP dyke (locally weak hematization); light pinkish color
193,26	193,76																			Down-dip QFP dyke (locally weak hematization); light pinkish color
194,00	195,30																			Down-dip syenite dyke (fine-grained) + sericite
203,60	204,22																			Down-dip syenite dyke including tr euhedral pyrite
211,40	212,65																			Weak carbonate-silica alteration zone including local chlorite-carbonate cm-thick veinlets
230,28	230,56																			Syenite dyke + sericite along micro-fractures
236,47	236,49																			A 2cm-thick quartz-carbonate vein; 80TCA
237,23	237,25																			A 2cm-thick quartz-carbonate-(chlorite) vein; 80TCA
243,70	243,92																			Down-dip aplite dyke
250,30	250,75																			Weak silica-carbonate alteration zone including pluri-mm thick quartz veinlets; 15TCA; tr chalcopyrite
256,36	258,32																			Weak hematite-silica alteration zone (dark pinkish grey color); locally tr pyrite
260,35	261,60																			QFP dyke; 25TCA; tr-1% disseminated pyrite
262,10	262,85																			QFP dyke; 15TCA; tr-1% disseminated pyrite
264,10	264,54																			QFP dyke; 10TCA; tr-1% disseminated pyrite
264,70	264,73																			A 3cm-thick quartz vein; 80TCA
269,90	270,00																			Quartz vein; 75TCA
279,22	279,24																			Quartz vein; 60TCA
287,08	287,09																			A 1cm-thick quartz vein; 65TCA
290,76	290,77																			A 1cm-thick quartz vein; 75TCA
293,00	**EOH**

Depth			Rock Type					Structure		ALTERATION				Mineralisation						
										Alteration Intensit			CODE	Sulphide			Veins			
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	COMMENTS
0,00	**18,50**	**18,50**	**OB**																	**Casing/Overburden**
18,50	**39,20**	**20,70**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Some weak carbonate alteration zones occur; giving the rock a light grey color
39,20	**57,10**	**17,90**																		**Shear zone**
																				Moderate to strong sheared zone including locally up to 5% pyrite (goethite is associated due to weathering); shear: 65TCA
39,43	39,49																			Quartz vein
43,38	43,48																			Up to 5% pyrite as veinlets; sub-parallel to shear
44,90	47,40																			Strong shear; partially broken core
45,70	45,71																			A 0.5cm-thick pyrite veinlet; sub-parallel to shear
47,40	57,10																			Moderate sheared zone with chlorite associated along shear plans. Hematization also occurs giving the rock a purple-ish color
57,10	**139,00**	**81,90**																		**Granite**
																				Idem as previous granite unit; carbonate-(±silica)-(±hematite) alteration zones occur, giving the rock a greyish color
65,27	65,29																			1cm-thick quartz vein; 15TCA
68,62	68,64																			1cm-thick carbonate vein; 15TCA
69,02	69,03																			A 1cm-thick pyrite-carbonate vein; 30TCA; 2-3% pyrite
69,60	70,00																			A 1cm-thick down-dip quartz vein
75,25	76,23																			Down-dip QFP dyke; weakly hematized
79,10	79,12																			A 2cm-thick quartz-carbonate-pyrite vein; 60TCA; 1-2% pyrite
82,40	82,49																			A 5cm-thick carbonate-chlorite vein; 40TCA
86,25	86,60																			QFP dyke; 15TCA; weakly hematized
92,06	92,12																			Quartz-carbonate-chlorite vein; 65TCA
93,23	93,39																			Tr-1% pyrite as stringer
98,13	101,39																			Down-dip and disrupted aplite dyke (2-3cm-thick) including local pyrite stringers
104,20	118,00																			Pervasive carbonate alteration zone including 1-2% disseminated pyrite
104,80	105,60																			Quartz-pyrite veinlets (at a 5 to 10cm interval; 25TCA); 2-3% pyrite
105,36	105,40																			Semi-massive pyrite vein (3cm-thick; 60TCA)
108,73	108,74																			A 1cm-thick semi-massive pyrite vein; 30TCA
109,68	109,69																			A 1cm-thick semi-massive pyrite vein; 30TCA
117,16	117,17																			A 1cm-thick semi-massive pyrite vein; 30TCA
120,00	124,70																			Hematite-carbonate alteration zone (purple-ish red color)
139,00	**EOH**

0,00	**23,53**	**23,53**	**OB**																		**Casing/Overburden**
23,53	**193,55**	**170,02**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																					An almost pervasive carbonate alteration is associated giving the rock a grey color including carbonate tension fractures
29,00	32,00																				Goethite/hematite-rich zone (due to weathering)
30,17	30,18																				a 1cm-thick quartz-carbonate vein; 60TCA
65,55	66,15																				Partially broken core
69,25	71,60																				Partially broken core
75,70	82,30																				Weak carbonate alteration zone (light grey color)
88,20	92,75																				Weak carbonate alteration zone (light grey color)
91,32	91,60																				Small pegmatite dyke; 25TCA
93,05	93,17																				Quartz-chlorite vein; 60TCA
106,24	106,37																				A 0.5cm-thick carbonate-chlorite-quartz vein (30TCA); 1% disseminated pyrite associated along the edges
112,05	112,17																				Syenite dyke including; tr pyrite
125,27	125,28																				A 0.5cm-thick quartz vein; 45TCA
133,65	135,50																				Weak carbonate-silica alteration zone (medium-grey color)
135,36	135,40																				Quartz-chlorite-(Kspar) vein; 80TCA
140,23	146,21																				Pervasive sericite-silica-carbonate-(±hematite) alteration zone (greenish-grey to pinkish-grey color). Presence of leucoxene
152,90	154,45																				Pervasive hematite-carbonate alteration zone (orange-red color). Contacts are gradational
160,72	161,00																				Strong silica-sericite alteration zone (dark grey color)
172,71	173,00																				Quartz-carbonate vein network; pseudo-breccia vein
180,42	181,00																				Strong silica-sericite alteration zone (dark grey color); schistosity: 15TCA
193,55	**261,00**	**67,45**																			**Altered granite**
																					Hematite-carbonate alteration zone (pinkish-red color). Locally presence of voids
212,05	212,55																				Broken core
237,25	237,34																				Shear zone(?) or chlorite-rich zone; including tr-1% pyrite along schistosity/shear plans (45TCA)
239,55	242,40																				Weak sheared zone (55TCA); locally down-dip. Chlorite-sericite-rich. Locally tr pyrite
239,55	240,20																				Broken core
254,65	255,35																				Unaltered granite; except a strong epidotization
261,00	**286,25**	**25,25**																			**Granite; sericite/chlorite alteration**
																					Grey color; pervasive sericite/chlorite alteration; schistosity well-developed (down-dip). Locally tr pyrite along chlorite veinlet
270,90	272,15																				Broken core
286,25	**391,55**	**105,30**																			**Altered granite**
																					Idem as altered granite @ 193.55 - 261m
313,68	313,93																				Syenite dyke or aplite(?) dyke; pervasively hematized
324,65	324,98																				Mafic xenolith (chlorite-rich); aphanitic; inlcuding 10-15% pyrite as cm-thick massive pyrite vein (80TCA)
327,25	327,28																				A 3cm-thick massive pyrite vein; 70TCA
330,71	331,12																				Mafic xenolith; chlorite-rich; aphanitic; locally including 2-3% pyrite as veinlets; 70TCA
333,53	333,70																				Chlorite-rich zone including 1-2% disseminated pyrite
368,84	368,85																				Pyrite stringer; 30TCA
377,36	377,37																				Chlorite-carbonate-pyrite fine stringers; 60TCA

388,44	388,45																				Chlorite-pyrite fine stringers; 40TCA
391,55	**407,05**	**15,50**																			**QFP intrusion**
																					Locally 1-2% disseminated pyrite. Locally Kspar alteration (and/or hematite?). Light orange-pinkish color)
394,61	394,61																				Fine pyrite stringer; 45TCA
395,37	395,17																				Fine pyrite stringer; 55TCA
395,80	406,70																				Kspar alteration (and/or hematite) (light orange-pinkish color). Presence of voids. 1-2% disseminated pyrite
398,20	398,20																				Pyrite stringer; 35TCA
398,95	398,95																				Pyrite stringer; 35TCA
399,17	399,17																				Pyrite stringer; 35TCA
407,05	**411,30**	**4,25**																			**Altered granite**
																					Idem as altered granite @ 193.55 - 261m; tr-1% disseminated pyrite near the QFP contact
411,30	**430,40**	**19,10**																			**Granite**
																					Pervasive carbonate-sericite alteration (light to medium grey color)
414,20	415,00																				Mafic xenolith; chlorite-rich. Strongly magnetic; 3-4% disseminated pyrite grains
419,95	420,35																				Broken core; pyrite veinlet network and/or matrix / breccia-vein. 2-3% pyrite
430,40	**505,05**	**74,65**																			**Mafic volcanic rock (and/or intrusive?)**
																					Massive flow and breccia flow; chlorite-rich. Locally granite injections near the contact zone. Locally 3-4% PY (euhedral)
434,58	434,62																				A 4cm-thick quartz vein (50TCA); including leucoxene along edges
434,79	434,81																				A 2cm-thick quartz vein; 30TCA
434,83	434,84																				A 1cm-thick quartz vein; 30TCA
438,00	439,22																				Zone with granite injections/small dykes
442,68	442,89																				Silicified zone and/or chert bed including 3-4% pyrite as stringers (+1-2% specularite and jasper also associated); tr chalcopyrite
443,25	443,46																				5% pyrite as disrupted veins within a chlorite-rich horizon
445,73	446,60																				2-3% pyrite within chert-rich xenolith(?)
448,45	449,71																				Granite dyke including mafic xenolith; pervasive carbonate alteration
456,03	456,29																				Pegmatite dyke (?); Kspar-rich
456,35	456,92																				2-3% pyrite as disrupted pyrite veins within a chlorite-rich horizons
470,36	470,96																				Granite dyke; partially hematized
472,25	475,20																				Zone with 3-4% disseminated pyrite (euhedral)
475,20	475,24																				Carbonate vein; 55TCA
479,45	480,00																				2-3% disseminated pyrite
484,25	485,00																				Series of pyrite veinlets (<1cm-thick; at a 5 to 20cm interval; 40-60TCA); silica and magnetite associated
502,55	502,69																				Down-dip quartz-chlorite vein; tr pyrite
502,72	502,74																				Semi-massive pyrite veinlet; 50TCA
505,05	**517,25**	**12,20**																			**QFP**

																				Porphyry less abundant near contacts. Greenish-grey color. Locally tr pyrite. Contacts at 30TCA
517,25	**525,80**	**8,55**																		**Mafic volcanic rock**
																				Idem as previous mafic volcanic unit
525,80	**530,15**	**4,35**																		**QFP**
																				Light grey color; locally 1% disseminated pyrite; contact at 30TCA.
526,67	526,68																			A 1cm-thick quartz vein; 40TCA
529,66	529,70																			Down-dip massive chalcopyrite veinlet
530,15	**554,45**	**24,30**																		**Mafic volcanic rock**
																				Including local xenoliths of iron formation (chert-magnetite-pyrite-chlorite); locally up to 3% disseminated pyrite grains in chlorite-rich horizons
535,27	535,34																			Aplite dyke
535,34	535,41																			Granite dyke
540,52	540,54																			1-2% pyrite; tr-1% chalcopyrite
541,75	542,00																			Granite dyke
542,30	542,82																			Granite dyke
551,65	551,85																			Series of low-angle (20TCA) and down-dip quartz-(pyrite) veinlet; 1-2% pyrite
552,98	553,18																			A 18cm-thick quartz-Kspar-sericite vein
553,45	553,63																			5-10% pyrite as large aggregates + two quartz veinlets associated (50TCA)
554,45	**556,08**	**1,63**																		**Iron Formation**
																				Magnetite-chert-pyrite-chlorite beds (alternance of cm-thick beds/layers); 60TCA. 1-2% pyrite
556,08	**560,25**	**4,17**																		**Mafic volcanic rock**
																				Idem as previous mafic volcanic unit
560,25	**595,10**	**34,85**																		**QFP**
																				Light greenish-grey color; locally down-dip. Very locally tr-1% pyrite
571,80	572,55																			Mafic xenolith including locally 1-2% euhedral pyrite
595,10	**652,60**	**57,50**																		**Mafic volcanic rock**
																				Chlorite-rich; breccia flow and pillow breccia. Locally nodular. Pyrite is abundant in the matrix, locally semi-massive. Locally magnetic.
602,13	602,20																			3-4% disseminated pyrite and as stringer (25TCA)
607,85	607,93																			3-4% disseminated pyrite
608,24	608,51																			Pervasive carbonate alteration zone (and/or dyke?); tr pyrite associated
609,00	613,40																			Zone with up to 5% pyrite as aggregates forming pseudo-clasts in the volcanic breccia. Locally specularite is associated
613,15	613,40																			Semi-massive pyrite in the matrix
632,30	633,05																			Iron formation/chert xenolith; black color. Chert-rich including 3-4% pyrite. Magnetic due to magnetite and/or pyrrhotite (tr amount)
633,50	633,65																			Iron formation/chert xenolith; black color. Chert-rich including 1-2% pyrite. Magnetic due to magnetite and/or pyrrhotite (tr amount)
636,78	637,20																			Iron formation/chert xenolith; black color. Chert-rich including 3-4% pyrite. Magnetic due to magnetite
641,54	641,89																			Series of pluri-cm thick quartz veins associated with silica-chlorite-rich zones; tr CPY
642,83	642,83																			tr chalcopyrite
649,09	649,26																			Iron formation/chert xenolith; black color. Chert-rich including 5% pyrite. Tr chalcopyrite; tr magnetite

652,60	**657,85**	**5,25**																		**Altered mafic volcanic rock**
																				Strong ankerite-silica (beige color) contacts are gradational including local mineralization zones and quartz veinlets
652,67	652,68																			A 1cm-thick quartz vein + 1-2% pyrite associated; 35TCA
652,90	652,93																			A 3cm-thick quartz vein + 1-2% pyrite associated; 50TCA
652,97	652,98																			A 0.5cm-thick quartz vein + 1-2% pyrite associated; 50TCA
655,22	655,45																			Sheared/brecciated zone
656,07	656,40																			Strong ankerite-silica alteration zone including dislocated quartz veinlets + coarse pyrite cubes (1-2%)
656,40	656,70																			Zone with 3-4% fuschiste associated with a 8cm-thick quartz vein (50TCA); tr pyrite
657,85	**710,00**	**52,15**																		**Mafic volcanic rock**
																				Idem as previous mafic volcanic unit
660,15	660,90																			Syenite dyke including locally tr CPY, tr graphite; tr pyrite in a carbonate veinlet
661,30	661,66																			Down-dip syenite dyke
661,90	661,97																			Quartz-Kspar vein (5TCA); including tr pyrite
663,38	663,76																			Quartz-Kspar vein/pegmatite
663,79	663,82																			A 2cm-thick quartz vein; 35TCA
665,00	665,38																			Quartz-Kspar pegmatite/syenite dyke
665,45	665,60																			Syenite/granite dyke
665,87	666,14																			Syenite dyke
666,80	667,30																			Kspar-quartz-sericite/muscovite pegmatite including tr pyrite
681,30	681,60																			Chert-chlorite-pyrite bed/xenolith; 2-3% disseminated pyrite
685,90	685,92																			A 1cm-thick pyrite-pyrrhotite-chalcopyrite veinlet (2-3%)
689,75	690,16																			Silica-rich zone including 1% pyrrhotite; 1% chalcopyrite; tr pyrite
695,57	695,80																			Silica-rich zone including 5% disseminated pyrrhotite; 1-2% chalcopyrite
698,50	698,56																			Up to 5% disseminated pyrrhotite
705,78	705,90																			Strong carbonate(?) alteration zone and/or vein
710,00	EOH

0,00	**6,50**	**6,50**	**OB**																		**Casing/Overburden**
6,50	**49,20**	**42,70**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
12,62	12,69																				Aplite dyke; 35TCA
15,41	15,50																				Aplite dyke; 25TCA
17,00	17,23																				Quartz-(chlorite) vein
20,38	20,48																				Aplite dyke; 30TCA
33,30	38,25																				Zone of broken core and partially broken core with late hematite/goethite along fractures (due to weathering?). Breccia/shear ?
38,25	41,20																				Hematized zone; contacts are gradational. Schistosity is locally down-dip.
44,70	47,00																				Hematized zone; contacts are gradational.
49,20	**72,35**	**23,15**																			**QFP**
																					Porphyry intrusion; Greenish-grey color; locally 1% disseminated pyrite. Few pyrite stringers. Local micro-fractures/fine carbonate tension fractures occur. Presence of marks on the core from the bit from 51.50 to 52.20m : could affect the results
72,35	**157,70**	**85,35**																			**Granite**
																					Idem as previous granite unit
72,85	73,40																				QFP dyke
77,63	77,67																				Carbonate-quartz vein
85,50	87,80																				Zone of hematization (reddish color)
86,35	86,76																				Quartz-(carbonate) vein
93,52	93,58																				Weak shear zone; tr pyrite; 60TCA
99,73	100,16																				Strong hematization; red color
100,39	100,44																				Strong hematization; red color
100,72	100,74																				A 2cm-thick aplite dyke/vein; 65TCA
110,64	110,66																				A 2cm-thick quartz-chlorite-carbonate vein; 90TCA
110,91	110,95																				A 4cm-thick quartz-chlorite vein; 70TCA
119,21	119,24																				A 3cm-thick carbonate vein; 50TCA
119,29	119,32																				A 3cm-thick tourmaline-quartz vein; 80TCA
119,87	120,60																				Down-dip chlorite-quartz vein
132,65	132,90																				Carbonate/ankerite alteration zone (light beige color)
135,89	135,92																				Quartz-carbonate vein; 50TCA
136,15	136,19																				Quartz-chlorite vein; 80TCA
138,71	138,96																				A weak sheared zone + sericite and tr-1% pyrite; 60TCA
141,75	157,70																				Pervasive carbonate-(sericite) alteration zone (medium-grey color); including carbonate tension fractures
144,34	144,52																				Dense network of carbonate-chlorite veinlets/filled fractures; main orientation: 70TCA
144,76	144,86																				Dense network of carbonate-chlorite veinlets/filled fractures; main orientations: 60 TCA and 70TCA
145,87	145,91																				A 4cm-thick semi-massive chalcopyrite vein (+quartz and tourmaline); 70TCA
147,39	147,40																				A 0.5cm-thick chalcopyrite-(±pyrite) vein; 20TCA
154,15	154,60																				Ankerite/silica alteration zone including tr pyrite and local quartz breccia-vein
157,70	**169,15**	**11,45**																			**QFP**
																					Small porphyry; greenish-grey color. Locally silica/ankerite alteration occurs. Tr-1% disseminated pyrite. No vein occurs
162,15	162,85																				Ankerite/silica alteration(?) zone; including 1-2% disseminated pyrite (euhedral)

163,58	163,63																			Ankerite/silica alteration(?) zone; including 1-2% disseminated pyrite (euhedral)
166,60	166,80																			Ankerite/silica alteration(?) zone; including 1-2% disseminated pyrite (euhedral)
169,15	**181,00**	**11,85**																		**Granite**
																				Pervasive carbonate alteration (5-10% carbonate); ± hematized
173,92	174,25																			Schistosity well-developed; 55TCA
181,00	**182,90**	**1,90**																		**Syenite dyke**
																				Locally sericite along micro-fractures. Uphole contact is down-dip. Down-hole contact at 50TCA
182,90	**303,88**	**120,98**																		**Granite**
																				Idem as granite from 6.50m to 49.20m; including several carbonate tension fractures + local carbonate alteration associated
184,00	184,80																			Syenite dyke; locally down-dip; tr pyrite; tr chalcopyrite
196,33	196,41																			A 7cm-thick quartz-(chlorite) vein; 50TCA
201,31	201,33																			A 2cm-thick quartz-(chlorite) vein; 35TCA
203,35	203,51																			Small shear zone; tr pyrite; 45TCA
209,80	211,20																			QFP dyke; dark grey color; very few porphyry
219,75	221,60																			Weak shear zone and/or sericite alteration zone with schistosity well-developed; 70TCA; tr pyrite
231,10	231,46																			Mafic dyke or xenolith(?); 45TCA. Not magnetite
233,75	239,50																			Pervasive sericite-carbonate alteration zone (medium to dark grey color); including local tr pyrite
238,45	238,46																			A 1cm-thick chlorite-carbonate-(pyrite) vein; 80TCA
238,57	238,58																			A 1cm-thick chlorite-carbonate-(pyrite) vein; 60TCA
241,99	242,04																			Carbonate-quartz vein; 80TCA
243,06	243,55																			Mafic dyke; not magnetic; 40TCA
254,82	254,91																			Quartz vein; 90TCA
255,49	255,51																			Carbonate-quartz vein; 80TCA
263,37	263,49																			Down-dip carbonate-(quartz) vein
265,23	265,30																			Chlorite-quartz vein; 75TCA
281,65	281,69																			A 4cm-thick quartz-tourmaline vein; 60TCA
303,88	**314,50**	**10,62**																		**Intermediate volcanic rock**
																				Light grey color; locally presence of porphyry
307,30	309,75																			Shear zone, almost mylonite; 55TCA. Sericite-rich
314,50	**390,57**	**76,07**																		**Mafic volcanic rock**
																				Chlorite-rich; green color. Massive flow/breccia flow. Locally glaumeroporphyry. Locally nodular. Tr-1% disseminated pyrite as euhedral grains. Locally strongly magnetic
315,57	315,68																			Granite dyke
327,80	334,75																			Strongly magnetic zone + glaumeroporphyry
343,83	344,06																			Small QFP dyke + ankerite alteration
355,72	355,92																			Iron formation xenolith/bed; magnetite; tr pyrite
355,99	356,14																			Iron formation xenolith/bed; magnetite; tr pyrite
375,55	375,59																			Quartz-carbonate vein; 40TCA

382,42	383,00																				Series of iron formation xenolith; magnetite + pyrrhotite (1-2%)
390,57	**400,88**	**10,31**																			**Gabbro dyke/sill**
400,88	**504,25**	**103,37**																			**Mafic volcanic rock**
																					idem as previous mafic volcanic rock unit
405,68	405,73																				Granite dyke
417,10	418,55																				Nodular basalt and/or glaumeroporphyry(?)
453,39	453,55																				Iron formation xenolith; chlorite-rich, weakly magnetic; 1-2% pyrite
465,77	465,82																				A 2cm-thick semi-massive pyrite vein (±carbonate); 15TCA. Tr-1% chalcopyrite.
486,56	486,66																				A 8cm-thick quartz-ankerite-(pyrite) vein + ankerite alteration zone associated; tr-1% pyrite
487,05	487,65																				Strong carbonate alteration zone; partially broken core
487,65	488,50																				Granite dyke; altered into carbonate
487,78	487,88																				Quartz-carbonate-chlorite vein
495,83	496,22																				Syenite and granite dyke; tr pyrite
504,25	**505,65**	**1,40**																			**QFP dyke**
																					Weak sericite alteration associated. Light greenish-grey color
504,25	504,68																				Kspar-quartz-epidote pegmatite dyke
505,65	**512,25**	**6,60**																			**Granite dyke**
																					Strong and pervasive sericite-(silica) alteration associated giving the rock a dark greenish-grey color. Presence of leucoxene. Contact at 20TCA
512,25	**518,00**	**5,75**																			**Mafic volcanic rock**
																					idem as previous mafic volcanic rock unit
513,65	513,67																				Carbonate vein with semi-massive pyrite along the edges; 60TCA
518,00	**EOH**

0,00	4,50	4,50	OB																		Casing/Overburden
4,50	170,00	165,50																			Granite
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
4,50	19,20																				Pervasive carbonate alteration (light grey color). Locally weathered
8,45	8,83																				Weak shear zone (sericite-rich); tr pyrite. Shear: 50TCA
8,83	8,85																				Carbonate-pyrite veinlet; 25TCA; 2-3% pyrite
9,75	10,00																				Sericite-rich zone including 1-2% as disseminated grains and fine stringers
9,95	9,96																				A 1cm-thick quartz vein; 40TCA
16,47	16,48																				Carbonate-pyrite veinlet; 50TCA; 2-3% pyrite
26,16	26,20																				Quartz vein; 30TCA
28,40	29,00																				Carbonate-sericite alteration zone associated with micro-fractures (with tr-1% pyrite associated)
32,55	41,89																				Carbonate alteration zone (light grey color); including several rounded xenoliths
39,00	40,25																				Strong silica-carbonate alteration zone including tr-1% disseminated pyrite (dark grey color)
39,10	39,20																				2-3% pyrite as veinlets and within a carbonate-quartz vein system (25TCA)
42,70	44,45																				carbonate-(sericite) alteration zone; grey color
45,53	45,54																				A 1cm-thick carbonate-pyrite vein; 60TCA
46,60	47,35																				Down-dip and disrupted QFP dyke; hematized (pinkish color)
51,00	51,85																				Carbonate-sericite alteration zone (grey color)
51,14	51,16																				Disrupted quartz vein
51,85	53,15																				Pervasive ankerite/sericite-silica alteration zone (beige-brown color); Locally tr pyrite
52,53	52,58																				Down-dip quartz vein (1cm-thick)
53,15	53,65																				QFP dyke; hematized (pinkish color); 10TCA
57,15	59,13																				Carbonate-silica alteration zone including several carbonate veinlets; dark grey color
60,18	60,19																				A 1cm-thick quartz-chlorite vein; 60TCA
62,90	66,20																				Carbonate alteration zone (grey color)
67,67	67,82																				Aplite (?) dyke
68,37	68,44																				Aplite (?) dyke
70,60	74,30																				Carbonate-sericite-silica alteration zone (dark grey color)
71,41	72,00																				Series of three quartz-(pyrite) veins (cm-thick; at a ~25cm interval; 25-40TCA)
74,30	75,15																				QFP dyke; hematized(?) or Kspar-rich(?)
75,15	85,00																				Pervasive carbonate-(sericite) alteration zone (grey color); downhole contact is gradational; including several carbonate tension fractures/veinlets
76,20	76,52																				QFP dyke; hematized(?) or Kspar-rich(?)
86,47	86,68																				QFP dyke; hematized
98,70	105,60																				Weak carbonate alteration zone (light grey) including several carbonate veinlets/tension fractures.
107,92	107,97																				A 5cm-thick aplite dyke; 70TCA
112,20	112,92																				Weak carbonate alteration zone (±ankerite); light greyish-beige color)
120,41	120,43																				A 1cm-thick carbonate-pyrite vein; 30TCA; 1-2% pyrite
120,90	124,60																				Pervasive and strong silica-carbonate-sericite alteration zone (dark grey color)
121,90	122,08																				Series of thin quartz veins (<1cm-thick); 60TCA; with tr pyrite associated
126,53	127,00																				Series of pyrite-carbonate stringers (at a 5 to 15cm interval; 40TCA); a weak carbonate alteration is associated (light grey color); 1-2% pyrite
133,45	136,40																				Silica-carbonate alteration zone (medium to dark grey color)

0,00	5,73	5,73	OB																		Casing/Overburden
5,73	215,00	209,27																			Granite
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
6,88	6,92																				Quartz vein; 60TCA
12,91	13,37																				Carbonate alteration zone including two quartz-carbonate veins (~1cm-thick) with tr-1% pyrite associated
20,80	25,70																				Pervasive carbonate-silica-(sericite) alteration zone (dark grey color; contacts are gradational); including local quartz and carbonate veins; tr pyrite
23,24	23,30																				A 4cm-thick carbonate vein; including 1-2% pyrite; 40TCA
28,80	28,81																				Carbonate-(pyrite) stringer; 30TCA
36,62	36,63																				A goethite-carbonate-chalcopyrite stringer; 15TCA
38,15	38,90																				Pervasive silica-sericite-carbonate alteration zone (dark grey color); including tr pyrite; schistosity well-developed (40TCA)
41,50	47,85																				Carbonate-sericite alteration zone (medium-grey color). Contacts are gradational
43,16	43,18																				A 1cm-thick carbonate-chlorite-pyrite vein; 25TCA; 1-2% pyrite
53,96	53,97																				A 1cm-thick carbonate-chorite vein; 35TCA
71,43	71,48																				Quartz-carbonate-chlorite vein; partially broken core
75,70	80,15																				Pervasive carbonate-sericite alteration zone (locally ankerite); medium-grey color
76,81	76,87																				Quartz-chlorite vein; partially broken core
78,05	78,08																				3-4% pyrite as veinlets (+carbonate)
79,37	79,40																				A 3cm-thick quartz-chlorite vein; 50TCA
79,82	79,84																				A 2cm-thick quartz-carbonate vein; 40TCA
81,20	81,28																				Aplite dyke; 65TCA
81,77	81,85																				Quartz vein; 55TCA
87,55	88,95																				Carbonate-sericite alteration zone (grey color)
95,13	95,14																				A 1cm-thick quartz-carbonate-(pyrite) vein; 35TCA; 1% pyrite
95,30	95,44																				Quartz-chlorite vein; partially broken core
95,60	95,61																				Thin pyrite veinlet; 35TCA
99,04	99,20																				Schistosity well-developed due to sericite-rich zone; 65TCA
100,17	100,18																				A 1cm-thick carbonate vein + 1-2% pyrite along edges; 35TCA
101,87	103,25																				Carbonate-(±goethite) alteration zone (light pinkish-grey color); including locally 1% pyrite
102,18	102,23																				Hematized QFP dyke and/or small pegmatite; 50TCA
102,77	102,84																				Micro-fractures with goethite associated + 1-2% pyrite along the edges; 35TCA
103,63	103,65																				A 2cm-thick carbonate vein; 35TCA
106,20	106,24																				Quartz-chlorite-carbonate vein; 65TCA
106,34	106,36																				Quartz-carbonate vein; 65TCA
108,10	108,36																				Pervasive carbonate-sericite alteration zone; including a 1cm-thick carbonate-chlorite vein (65TCA)
122,41	122,43																				A 2cm-thick quartz vein; 70TCA
125,26	125,33																				Aplite dyke; 40TCA
127,49	127,54																				A 4cm-thick quartz vein; 70TCA
130,37	130,87																				Strong silica alteration zone associated with a series of micro-fractures (30TCA) with chlorite along their edges
133,55	187,45																				Pervasive carbonate-silica-(sericite) alteration zone (medium to dark grey color); including local mineralization zones
139,21	139,29																				Quartz vein (50TCA); tr pyrite associated along edges
142,70	143,00																				Strong ankerite-sericite alteration zone including tr-1% pyrite associated with a 4cm-thick quartz-chlorite-carbonate vein at 142.84 - 142.88m

HOLE DESCRIPTION		HOLE LOCATION		HOLE ORIENTATION	
PROJECT:	Carscallen	NORTHING:	5357819 N, NAD83	AZIMUTH:	310
HOLE NO:	CAR-54-2010	EASTING:	451900 E, NAD83	INCLINATION:	-50
LOGGED BY:	Eric Hebert	ELEVATION:		FINAL DEPTH:	215m
START DATE:	June 4th 2010	Line 9+57E; Station 1+75N		CORE SIZE:	NQ
FINISH DATE:	June 5th 2010				

Depth			Rock Type					Structure		ALTERATION				CODE	Mineralisation: Sulphide			Veins			COMMENTS
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.		Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	
158,05	158,27																				Pyrite-(carbonate) vein (1cm-thick; 15TCA)
159,46	159,47																				A 1cm-thick carbonate-(pyrite) veinlet; 50TCA; 1% pyrite
166,46	166,49																				A 2cm-thick quartz-pyrite vein; 35TCA; 3-4% pyrite
182,70	186,45																				Carbonate-(sericite) alteration zone (light grey color). Schistosity well-developed (35TCA). Contacts are gradational
183,14	183,19																				Quartz-chlorite vein; 75TCA
183,35	184,95																				Weak shear and/or sericite-rich zone with well-developed schistosity; 35TCA. Tr pyrite
185,06	185,39																				Weak shear and/or sericite-rich zone with well-developed schistosity; 35TCA. Tr pyrite
188,30	188,42																				A 12cm-thick quartz-tourmaline-(chlorite) vein (70TCA)
189,32	189,35																				A 3cm-thick quartz-chlorite-carbonate vein; 45TCA
202,00	203,05																				Pervasive carbonate alteration zone (light to medium grey color); core is partially broken
205,04	205,15																				Weak shear and/or sericite-rich zone with well-developed schistosity; 40TCA
213,70	213,79																				A thin QFP (?) dyke and/or hematized-silicified zone
214,74	214,78																				A 4cm-thick quartz-carbonate-chlorite vein; 55TCA
215,00	EOH

0,00	**0,88**	**0,88**	**OB**																		**Casing/Overburden**
0,88	**44,40**	**43,52**																			**Altered granite**
																					Pervasive hematite-carbonate alteration (purple-ish red color). Presence of voids and local xenoliths (pluri-cm to pluri-dm)
																					Downhole contact is gradational
14,03	14,65																				Xenolith; also hematized
23,00	27,45																				Unaltered granite (only epidotization)
33,70	34,28																				Unaltered granite (only epidotization)
44,40	**92,75**	**48,35**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
45,49	45,57																				Carbonate-hematite vein and/or alteration(?) zone
64,50	67,15																				Altered granite (hematite-carbonate alteration; purple-red color)
68,80	68,82																				Tr-1% finely disseminated pyrite along a chlorite-rich veinlets/micro-fractures; 25TCA
74,25	75,50																				Weak hematization (pinkish color)
83,00	84,30																				Carbonate-(hematite) alteration zone including locally tr-1% pyrite as very fine stringers (+carbonate-chlorite); 40TCA
89,48	89,62																				Shear zone; sericite-rich; 65TCA
92,75	**99,70**	**6,95**																			**Shear zone**
																					Carbonate-sericite alteration associated; including local pyrite stringers // to shear (40 to 50TCA); tr-1% pyrite
93,07	93,08																				Pyrite-carbonate stringer; 40TCA
93,55	93,57																				A 1cm-thick carbonate vein + pyrite along edges (40TCA); 2-3% pyrite
96,86	96,87																				Pyrite stringer (30TCA)
99,35	99,70																				Broken core
99,70	**104,55**	**4,85**																			**Granite**
																					Chlorite-hematite alteration (green and light red color)
104,55	**107,65**	**3,10**																			**Shear zone**
																					Carbonate-sericite-hematite rich; shear at 60TCA; including local pyrite stringers parallel to shear
107,37	107,60																				Series of pyrite stringers (at a 5cm interval; 60TCA); 2-3% pyrite
107,65	**113,20**	**5,55**																			**Granite**
																					Chlorite-hematite alteration (green and light red color)
113,20	**115,85**	**2,65**																			**Shear zone**
																					Carbonate-sericite-hematite rich; shear at 60TCA; including local pyrite stringers parallel to shear
113,53	113,80																				Series of pyrite stringers at a 5 to 10cm interval; 60TCA; 2-3% pyrite
115,50	115,73																				Series of pyrite stringers at a 10cm interval; 60TCA; 2-3% pyrite
115,85	**124,50**	**8,65**																			**Altered granite**
																					Hematite-carbonate alteration zone (purple-red color)
124,50	**128,65**	**4,15**																			**Shear zone**
																					Weak shear due to abundance of sericite and chlorite (+carbonate-hematite alteration)
128,65	**231,00**	**102,35**																			**Granite**
																					Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																					Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).

From	To	Interval	COMMENTS
			Several carbonate-silica-(sericite) alteration zones occur
128,65	144,50		Strong carbonate-silica-sericite alteration zone
134,00	134,03		Three pyrite stringers; 45TCA
147,90	148,15		Weak shear and/or schistosity well-developed (due to sericite); 60TCA
158,90	163,40		Carbonate-silica alteration zone (medium to dark grey color). Contacts are gradational
159,05	159,50		Series of three pyrite stringers at a 15cm interval (45TCA); 1-2% pyrite
161,00	161,01		A 1cm-thick carbonate-pyrite vein (45TCA); 1-2% pyrite
179,45	186,10		Sericite-carbonate-silica alteration zone (dark grey color); schistosity well-developed (35TCA); locally tr pyrite
181,26	181,26		Pyrite stringer; 70TCA
185,37	185,38		A 1cm-thick quartz-pyrite (60TCA); 3-4% pyrite
186,34	186,34		Fine chalcopyrite stringer; 40TCA
186,10	226,60		Carbonate-(sericite) alteration zone (medium-grey color)
200,53	200,54		A carbonate-pyrite stringer; 60TCA
201,59	201,65		Pyrite-carbonate-quartz vein; 20TCA; 5% pyrite
201,91	201,93		A 1cm-thick pyrite-quartz vein; 30TCA; 5-10% pyrite
202,02	202,03		A 1cm-thick pyrite-quartz vein; 10TCA; 5% pyrite
202,28	202,32		A 2cm-thick pyrite-carbonate vein; 60TCA; 5-10% pyrite
207,50	209,20		Strong ankerite alteration superimpose the carbonate-(sericite) alteration
211,62	211,63		1cm-thick carbonate-chlorite vein + 1% pyrite along edges
212,76	212,77		1cm-thick quartz-pyrite vein (60TCA); 2-3% pyrite
213,66	213,91		Weak shear and/or schistosity well-developed due to abundance of sericite/chlorite
231,00	**237,83**	**6,83**	**Altered granite**
			Hematite-carbonate alteration (purple-red color)
234,85	236,20		Sericite/chlorite-rich zone; including tr pyrite
237,83	**242,00**	**4,17**	**Granite**
			Idem as previous granite unit

0,00	**1,55**	**1,55**	**Casing/Overburden**
1,55	**275,40**	**273,85**	**Granite**
			Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
			Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
5,00	6,40		Strong and pervasive silica alteration zone; including locally tr-1% pyrite
9,49	9,83		Carbonate alteration zone (light grey color) including few chlorite-carbonate stringers; 40TCA
11,62	11,65		A 3cm-thick quartz-chlorite-carbonate vuggy vein; 50TCA
12,86	12,96		Quartz-chlorite vein; 50TCA
17,16	17,54		Carbonate alteration zone (light grey color) associated with a down-dip carbonate veinlet
20,71	20,73		A 1cm-thick carbonate-pyrite-(quartz) vein (30TCA); 1-2% pyrite; Silica-carbonate alteration zone associated
35,54	35,57		Quartz vein; 85TCA
49,60	51,00		Pervasive carbonate-silica alteration zone (medium-grey color)
49,71	50,13		Series of pyrite stringers (at a 5 to 15cm interval; 50TCA)
49,81	49,82		A 1cm-thick quartz-pyrite vein; 50TCA; 1-2% pyrite
53,55	55,00		Silica-carbonate alteration zone (medium to dark grey color)
60,92	60,95		A 3cm-thick quartz vein; 75TCA
64,76	64,80		A 4cm-thick quartz-(chlorite)-(carbonate) vein; 65TCA
67,90	67,92		A 1cm-thick quartz-pyrite-(calcite) vein; 50TCA; 2-3% pyrite
71,06	71,17		A 10cm-thick quartz-(carbonate) vein; 60TCA
71,65	72,20		Strong silica-sericite alteration zone (dark grey color)
73,24	73,32		A 7cm-thick quartz-(chlorite) vein; 60TCA
74,15	74,18		Aplite(?) dyke; sericitized; 75TCA
75,45	75,49		Quartz-chlorite vein; 65TCA
76,06	76,13		Aplite dyke; 25TCA
79,00	81,55		Sericite-silica-carbonate alteration zone (dark grey color)
80,50	80,78		A 25cm-thick quartz-pyrite vein; 30TCA; 25% pyrite
81,25	81,45		Series of pyrite stringers at a 5cm interval; 25TCA; 2-3% pyrite
84,50	86,70		Silica-carbonate alteration zone (dark grey color). Contacts are gradational
88,52	90,00		Silica-carbonate alteration zone (dark grey color). Contacts are gradational
90,40	92,00		Silica-carbonate alteration zone (dark grey color); including a down-dip pyrite stringer
94,45	104,00		Strong silica-sericite-carbonate alteration zone (dark grey color). Contacts are gradational
98,04	98,11		Semi-massive pyrite (+quartz and carbonate) in a 5cm vein; 25TCA
100,39	100,40		1-2% pyrite along carbonate veinlet edges; 50TCA
101,67	101,68		A 0.5cm-thick quartz-pyrite vein; 55TCA
106,43	106,50		A 6cm-thick quartz-(chlorite) vein; 65TCA
109,81	109,82		A 1cm-thick quartz-pyrite vein; 50TCA; 2-3% pyrite; silica-sericite alteration zone associated (10cm wide)
113,00	113,86		Silica-sericite alteration zone (dark grey color)
118,75	120,30		Silica-sericite alteration zone (dark grey color)
130,40	130,44		A 4cm-thick quartz-chlorite vein; 70TCA
139,10	139,11		A 1cm-thick carbonate-(pyrite) veinlet; 25TCA; 1% pyrite

139,75	146,60																				Pervasive sericite-carbonate-silica alteration zone (grey color)
140,05	140,70																				Low-angle (15TCA); pyrite stringer
141,12	141,40																				Pyrite stringers at a 5 to 10cm interval; 15TCA
142,84	142,85																				Pyrite-carbonate stringer; 20TCA
145,58	145,59																				Pyrite stringer; 35TCA
154,94	155,05																				A 1cm-thick carbonate-pyrite vein; 25TCA; 3-4% pyrite
157,19	157,19																				Pyrite stringer; 55TCA
164,11	164,18																				Syenite dyke; 65TCA
164,30	164,39																				Small shear zone; sericite-rich + 1% pyrite; 70TCA
165,09	165,16																				Syenite dyke; 65TCA
173,40	176,30																				Carbonate alteration zone (light grey). Contacts are gradational
182,45	184,45																				Carbonate alteration zone (light grey). Contacts are gradational
183,36	183,50																				A 11cm-thick quartz-pyrite vein; 60TCA; 25% pyrite
183,55	184,00																				1-2% pyrite disseminated in a sericite-rich zone
186,55	188,00																				Carbonate alteration zone (light grey). Contacts are gradational
187,54	187,65																				Aplite dyke (or syenite); 65TCA
189,45	201,25																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone; including tr-1% disseminated pyrite and local quartz veinlet
201,25	203,95																				Strong sericite-ankerite alteration zone (yellowish-beige color); including 1% disseminated pyrite
201,50	201,53																				A 3cm-thick quartz-pyrite vein (55TCA); 5% pyrite
203,95	218,30																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone; including tr-1% disseminated pyrite and local quartz veinlet
204,67	205,38																				Series of pyrite stringers and pyrite-quartz stringers at a 5 to 20cm interval (50 to 70TCA)
208,24	208,36																				Weak shear and/or sericite-rich zone; schistosity/shear: 35TCA
215,15	215,90																				Ankerite/sericite-rich zone (beige color)
227,00	227,85																				Carbonate-(hematite) alteration zone (light pinkish-grey color). Contacts are gradational
230,15	254,00																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone
234,30	234,36																				Syenite dyke; 45TCA; weak sericitization; tr pyrite
254,00	256,00																				Sericite/chlorite-carbonate-(hematite) alteration; including locally tr-1% pyrite
256,00	260,05																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone
260,05	261,40																				Sericite-rich alteration zone; schistosity well-developed (45TCA)
260,88	261,12																				A series of pyrite-(quartz) stringers at a 5cm interval
261,40	265,05																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone
265,05	271,70																				Sericite-rich alteration zone; schistosity well-developed (65TCA); including tr-1% disseminated pyrite
265,72	265,74																				A 1cm-thick; disrupted quartz-jasper-(pyrite) vein; 70TCA
268,13	268,15																				A 1cm-thick quartz-green carbonate-chlorite vein (65TCA); including 1% pyrite along edges
268,22	268,27																				A 4cm-thick quartz-green carbonate-chlorite vein (65TCA); including 1% pyrite along edges
268,78	268,79																				A 1cm-thick quartz-green carbonate-chlorite vein (40TCA); including 1% pyrite along edges
271,70	275,40																				Pervasive silica-carbonate-sericite-(±hematite) alteration zone
273,24	273,27																				A 2cm-thick carbonate vein; 30TCA

275,40	**290,00**	**14,60**																			**Altered granite**
																					Carbonate-(hematite) alteration zone; presence of voids due to carbonate dissolution; locally tr-1% pyrite
281,00	282,90																				Zone with 1% disseminated pyrite
290,00	**393,95**	**103,95**																			**Granite**
																					Idem as previous granite unit; several sericite-carbonate-(±hematite) alteration zones
290,00	302,65																				Weak carbonate-sericite-(±hematite) alteration zone (light pinkish-grey color)
300,30	300,30																				Chlorite-carbonate-pyrite stringer; 55TCA; 1-2% pyrite
302,65	306,10																				Carbonate-(sericite) alteration zone (light grey color). Contacts are gradational
303,35	303,40																				A 4cm-thick quartz-pyrite vein; 65TCA; semi-massive pyrite
304,52	304,53																				A 0.5cm-thick quartz-pyrite vein; 50TCA; 1-2% pyrite
305,18	306,06																				Series of pyrite-(quartz) veins/stringers (~1cm-thick) at a 15cm interval; 3-4% pyrite
309,75	314,75																				Pervasive carbonate-sericite alteration zone
310,53	310,55																				A 1cm-thick pyrite-quartz vein; 55TCA; 3-4% pyrite
311,12	311,14																				A 2cm-thick quartz-pyrite vein; 50TCA; 5% pyrite
316,70	318,50																				Carbonate-(±hematite) alteration zone (light pinkish-grey color). Contacts are gradational
317,28	317,29																				Pyrite stringer (60TCA) and quartz veinlet (50TCA)
318,22	318,22																				Pyrite-quartz stringer; 50TCA
323,25	326,70																				Carbonate-(±hematite) alteration; contacts are gradational
323,66	323,67																				A 1cm-thick quartz-(pyrite) vein; 50TCA
324,13	324,15																				A 2cm-thick quartz vein; 60TCA
335,00	336,00																				Carbonate-(±hematite) alteration zone; contacts are gradational
335,30	335,31																				Pyrite stringer; 55TCA
335,58	335,59																				1cm-thick quartz vein; 65TCA; tr chalcopyrite
339,70	352,00																				Carbonate-sericite-(silica) alteration zone (grey color); including locally tr disseminated pyrite. Contacts are gradational.
345,04	345,53																				Shear zone and/or sericite-rich zone with schistosity well-developed (65TCA)
347,35	347,40																				Series of fine pyrite stringers (50TCA); 1% pyrite
348,62	348,63																				A 0.5cm-thick quartz-(pyrite) veinlet; 65TCA; tr-1% pyrite
349,63	349,74																				2-3% pyrite as disseminated grains and as local stringers/veinlets
349,97	350,01																				A 3cm-thick pyrite-(carbonate)-(quartz) vein; 30TCA; 5% pyrite
350,72	350,79																				A 3cm-thick quartz-carbonate vein (35TCA); including pyrite cm blebs; 1-2% pyrite
352,00	355,85																				Weak carbonate alteration zone (light grey color). Contacts are gradational
355,85	360,70																				Sericite-carbonate alteration zone (greenish-grey color); including local quartz veinlet (0.5cm-thick); schistosity well-developed (50TCA)
356,20	356,21																				Quartz-(pyrite) vein (40TCA); 1% pyrite
358,82	358,83																				A 1cm-thick quartz-pyrite vein (55TCA); 1-2% pyrite
360,70	391,00																				Pervasive carbonate-(±hematite) alteration zone (light pinkish grey color); locally sericite-rich. Contacts are gradational. Presence of carbonate tension fractures/veinlets
366,90	367,22																				Aplite dyke; sericitized. Uphole contact is brecciated.
392,30	393,55																				Weak goethite alteration zone

0,00	**14,25**	**14,25**	**OB**																		**Casing/Overburden**
14,25	**110,95**	**96,70**																			**Altered granite**
																					Hematite-carbonate alteration (purple-ish red color). Presence of voids
40,31	40,88																				Aplite dyke (15TCA); hematized.
51,55	51,80																				Pegmatite dyke; 15TCA
61,40	61,41																				Sheared zone; including 1-2% pyrite (stringers); 40TCA
63,46	63,47																				Pyrite stringer; 70TCA
64,10	64,11																				Pyrite stringer; 70TCA
65,27	65,28																				1% pyrite along a micro-fracture (30TCA)
66,09	66,10																				1% pyrite along a micro-fracture (35TCA)
66,36	66,37																				1% pyrite along a micro-fracture (40TCA)
102,00	102,25																				Mafic xenolith; chlorite-rich
110,95	**199,00**	**88,05**																			**Mafic volcanic rock**
																					Massive flow; flow breccia; chlorite-rich
122,00	122,24																				5% pyrite associated with a silica-rich zone (digested xenolith?)
146,94	147,00																				A 5cm-thick carbonate vein (40TCA) including 2-3% pyrite; 1-2% chalcopyrite
147,09	147,15																				A 5cm-thick carbonate vein; 40TCA
147,58	147,62																				A 3cm-thick carbonate vein; 35TCA
147,68	147,74																				A 5cm-thick carbonate vein; 40TCA
164,80	165,05																				Zone with partially digested clasts of sulphide (chalcopyrite-pyrite; 1-2%)
172,50	172,67																				1-2% pyrite as fine stringers + locally tr-1% chalcopyrite
175,73	175,76																				A 3cm-thick carbonate vein; 35TCA; including 1-2% pyrite
175,76	175,90																				Series of fine pyrite stringers at a 1cm interval; 50TCA; 1-2% pyrite
176,96	177,12																				A 3cm-thick carbonate breccia-vein; 15TCA
177,50	177,51																				A 0.5cm-thick pyrite vein (60TCA)
185,00	185,06																				Iron formation xenolith (massive magnetite); tr-1% pyrite
189,00	189,22																				a 11cm-thick massive pyrite vein (±carbonate); 50TCA
189,25	189,40																				Series of pyrite-carbonate veinlets (1cm-thick; 50TCA)
190,08	190,09																				A 1cm-thick pyrite-carbonate vein; 60TCA
190,29	190,38																				A 5cm-thick quartz-carbonate vein (40TCA); including 2-3% pyrite
192,45	192,80																				Iron formation bed or xenolith(?); magnetite-rich; tr-1% pyrite
193,10	193,35																				Iron formation bed or xenolith(?); magnetite-rich; tr-1% pyrite
195,56	195,68																				Iron formation xenolith; magnetite-rich; tr-1% pyrite
196,79	196,85																				Disrupted quartz vein including 1% pyrite
197,43	197,70																				Disrupted syenite dyke; including 1% pyrite
198,26	198,27																				Carbonate-pyrite stringer; 60TCA
199,00	**200,10**	**1,10**																			**Shear zone**
																					Shear: 45TCA. Chlorite-rich. Contacts are gradational.
199,05	199,10																				A 5cm-thick quartz-(carbonate) vein; 50TCA
200,10	**265,10**	**65,00**																			**Mafic volcanic rock**

																				Idem as previous mafic volcanic unit
200,10	200,20																			Granite dyke; carbonate alteration
200,35	200,67																			Weak sheared zone; 55TCA
206,75	207,70																			Syenite dyke (Kspar-rich) intermixed with granite
207,70	208,12																			Granite
208,44	208,65																			Syenite dyke (Kspar-rich) + quartz vein; intermixed with granite
208,90	209,75																			Syenite dyke (sericite-rich); intermixed with granite
210,68	211,15																			Granite; pervasive carbonate alteration
212,02	212,14																			Granite dyke
220,50	220,61																			Disrupted quartz vein; including 1% pyrite
220,63	220,67																			Series of pyrite and quartz-pyrite stringers; 50TCA
224,20	224,34																			Granite dyke; carbonate alteration
224,39	224,74																			Quartz-sericite vein (15TCA); including 1-2% pyrite; tr jasper
225,50	230,00																			Partially broken core
225,66	225,85																			Quartz-ankerite-sericite vein (45TCA); including 1-2% pyrite
226,40	226,55																			Sheared zone; 55TCA
226,85	227,00																			Small syenite dyke
227,10	230,40																			Zone with Kspar-rich vein/alteration (syenite?); ~5-10% of the rock
236,12	236,36																			Down-dip carbonate-epidote pyrite veinlet
249,23	249,24																			Trace of chalcopyrite in small clasts
265,10	**272,85**	**7,75**																		**Altered mafic volcanic rock**
																				Bleaching and/or sericite alteration. Alteration is partial, concentrated along microfractures including tr-1% pyrite. Contacts are gradational
267,76	267,77																			Series of pyrite stringers; 30TCA
267,80	268,18																			A 5cm-thick quartz-(carbonate)-(pyrite)-(chlorite) vein (20TCA); 1-2% pyrite as large blebs (>1cm)
272,85	**433,60**	**160,75**																		**Mafic volcanic rock**
																				Idem as previous mafic volcanic unit
296,45	296,47																			Small aplite dyke/vein (40TCA)
296,54	296,60																			Small aplite dyke/vein (30TCA)
297,76	297,79																			Small aplite dyke/vein (60TCA)
301,70	302,20																			Broken core
310,80	311,12																			Granite dyke + leucoxene along edges
318,30	318,55																			Small syenite dyke (15TCA) + down-dip carbonate-pyrite stringer
328,95	329,45																			Quartz-carbonate-Kspar-sericite vein; locally down-dip
330,09	330,15																			Granite dyke (carbonate alteration); 40TCA
335,10	336,15																			A 1 to 3cm-thick quartz-(carbonate) vein; down-dip.
337,50	337,53																			A 2cm-thick quartz-(carbonate) vein; 25TCA
339,16	339,18																			A 2cm-thick quartz-(carbonate) vein; 25TCA

339,50	339,51																			A 1cm-thick quartz vein; 25TCA
358,46	358,56																			Pegmatite/granite dyke; 45TCA
359,85	362,50																			Zone with partial ankerite-hematite alteration (10-20% of the rock), especially along quartz veins (locally tr pyrite)
360,62	360,64																			A 1cm-thick quartz vein; 10TCA
361,93	362,06																			A 5cm-thick quartz vein; 25TCA
362,30	362,41																			Quartz-carbonate vein network with strong ankerite-hematite alteration associated
364,58	364,62																			A 4cm-thick pyrite-carbonate-quartz vein; 55TCA; 10% pyrite
368,34	368,36																			A 2cm-thick semi-massive pyrite vein (+ quartz and carbonate); 70TCA
376,15	377,00																			Series of fine pyrite stringers at a 30cm interval (45TCA); 1% pyrite
397,51	397,54																			A 3cm-thick semi-massive pyrite (+carbonate); 60TCA
398,58	398,60																			A 2cm-thick carbonate-pyrite vein (40TCA); 3-4% pyrite
398,84	398,84																			Pyrite stringer; 50TCA
398,97	398,98																			A 0.5cm-thick pyrite vein (45TCA)
400,00	400,95																			Granite dyke
401,51	401,55																			Quartz-pyrite vein + pyrite stringer (80TCA); 5% pyrite
403,06	403,21																			Series of pyrite stringers at a 5cm interval; 50TCA
404,60	404,75																			Series of fine pyrite stringers at a 2cm interval (50TCA); 2-3% pyrite
405,23	405,25																			A 1cm-thick quartz-pyrite vein (50TCA); 3-4% pyrite
410,13	410,14																			A 1cm-thick pyrite vein; 55TCA
417,98	418,00																			Pyrite-carbonate-quartz vein; 1cm-thick; 40TCA
418,06	418,11																			A 3cm-thick pyrite-quartz-carbonate vein (40TCA); 5% pyrite
420,42	420,44																			A 2cm-thick pyrite-carbonate vein (80TCA); 5% pyrite
425,78	425,79																			Pyrite stringer; 50TCA
430,61	430,65																			Series of two pyrite stringers; 35TCA
431,37	431,98																			Granite dyke
432,96	432,97																			Pyrite stringer; 30TCA
433,60	**449,60**	**16,00**																		**Granite**
																				Pervasive ankerite-sericite alteration (yellowish-beige color); schistosity: 25TCA; locally tr disseminated pyrite
449,60	**462,20**	**12,60**																		**QFP dyke**
																				Sericite alteration (yellowish-beige color); locally tr-1% pyrite
453,76	454,15																			Series of quartz veins; various orientations
455,06	455,07																			Pyrite-carbonate vein (1cm-thick; 30TCA)
456,10	456,10																			Pyrite stringer; 25TCA
458,61	458,62																			Pyrite-carbonate vein (1cm-thick; 35TCA)
459,93	459,94																			A 0.5cm-thick pyrite-carbonate vein; 50TCA
462,20	**503,00**	**40,80**																		**Granite**
																				Pervasive sericite-carbonate-(hematite) alteration; pinkish-grey color
467,30	468,00																			Chlorite alteration (dark grey/black color)

COMMENTS
Syenite dyke + quartz vein (10TCA); including tr pyrite; 7cm-thick
Series of cm-thick quartz vein; down-dip to 70TCA
Pyrite stringer; 40TCA
Pyrite stringer; 70TCA
A 1.5cm-thick pyrite-quartz vein; 35TCA
A 0.5cm-thick quartz-pyrite vein; 40TCA
Syenite dyke (4cm-thick; down-dip)
Series of pyrite stringers (60TCA)
Series of pyrite stringers and quartz veinlets at a 5 to 10cm interval; 70TCA
Series of pyrite stringers and local quartz veinlets at a 15 to 30cm interval (50 to 60TCA)

0.00	**11.00**	**11.00**	**OB**																	**Casing/Overburden; casing at 27m**
11.00	**143.70**	**132.70**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Presence of calcite veinlets (more or less hematite) occur.
28.85	29.50																			Carbonate alteration zone (Ankerite-calcite); giving the rock a grey color
47.85	48.04																			Calcite-goethite stringers + carbonate alteration associated
60.03	60.58																			Pervasive carbonate alteration associated with local calcite tension gashes
70.71	72.82																			Mafic volcanic xenoliths (flow breccia) with magnetite in matrix (strongly magnetic). 2-3% disseminated pyrite (euhedral grains)
73.47	74.43																			Mafic volcanic xenoliths (flow breccia) with magnetite in matrix (strongly magnetic). 2-3% disseminated pyrite (euhedral grains)
105.00	114.30																			Pervasive carbonate-silica alteration zone (dark grey color) with local hematization and local pyrite (1% disseminated pyrite)
117.00	126.30																			Pervasive hematite-silica alteration zone (greyish-orange color). Locally partially broken core (fault zone? Or weak shear); included several calcite tension gashes/veinlets
121.30	122.00																			Partially broken core; calcite tension gashes (down-dip)
122.65	123.00																			Partially broken core; calcite tension gashes (down-dip)
129.00	132.65																			Hematite-silica alteration zone (light orange-red color)
131.28	131.31																			Quartz vein; 35TCA
134.05	134.85																			Hematite-calcite alteration zone; reddish color
137.20	138.12																			Hematite-calcite alteration zone; reddish color
143.70	**208.20**	**64.50**																		**Altered Granite**
																				Pervasive hematite-calcite alteration; red-purple color. Specularite hematite locally occur; presence of voids (dissolution)
144.80	144.84																			A 2cm-thick quartz vein; 20TCA
150.56	151.44																			Syenite dyke/pegmatite
185.65	185.84																			Mafic xenolith or chlorite-rich vein/dyke(?). Core partially broken
189.13	189.17																			Small shear zone with jasper/hematite is associated
189.82	189.83																			Pyrite stringer; 5mm-thick; 65TCA
190.45	190.46																			Pyrite stringer; 5mm-thick; 60TCA
190.81	190.82																			Pyrite stringer; 5mm-thick; 45TCA
198.66	198.77																			Kspar-rich pegmatite
201.98	202.05																			Semi-massive pyrite vein; 45TCA
202.20	202.51																			10% pyrite as aggregates along carbonate tension gashes/breccia veins
208.20	**332.00**	**123.80**																		**Mafic volcanic rock**
																				Chlorite-rich; not magnetic. Massive flow; locally breccia flow. Locally 1% disseminated pyrite
208.20	209.80																			Contact zone; altered granite dykes; intermixed with mafic volcanic (as xenoliths)
215.25	217.10																			Altered granite (hematite) dyke containing locally >50% mafic xenoliths. Downhole contact is gradational (digested margin)
215.89	215.90																			Small pyrite stringer; 30TCA
218.30	218.70																			1% disseminated pyrite grains
219.29	219.30																			Pyrite-(carbonate) stringer; 50TCA
219.64	219.65																			Pyrite-carbonate stringer; 50TCA
220.82	220.83																			Small pyrite stringer; 60TCA
221.23	221.24																			A 0.5cm-thick carbonate-pyrite veinlet; 55TCA
222.36	222.37																			Pyrite veinlet; 80TCA
222.60	222.90																			Weak shear zone; carbonate alteration along shear plans; 70TCA
224.95	225.10																			A 4cm-thick quartz vein; 25TCA. Weak ankerite(?) alteration associated
228.82	228.83																			A pyrite veinlet + hematite alteration along edges; 30TCA
231.84	232.30																			Broken core
233.75	244.55																			Hematite alteration zone; giving the rock a reddish color

From	To	COMMENTS
240.09	240.11	a 2cm-thick pyrite vein; 80TCA
248.38	248.45	Massive pyrite vein; partially broken core (tr jasper and quartz)
249.93	249.93	Thin pyrite stringer; 50TCA
251.21	251.21	Thin pyrite stringer; 50TCA
251.36	251.36	Thin pyrite stringer; 50TCA. Ankerite alteration along the edges
252.15	252.35	Series of pyrite veins + pyrite-quartz vein. Ankerite alteration associated. 50-60 TCA
252.39	252.67	Series of pyrite stringers. No significant alteration associated. 60TCA
253.16	253.24	Series of pyrite stringers and veinlets + ankerite alteration associated
254.46	254.49	A 2cm-thick pyrite-(quartz) vein; 45TCA
255.80	255.90	Quartz-carbonate-pyrite vein/breccia vein; 70TCA
255.90	256.12	Series of pyrite-carbonate stringers + ankerite alteration associated
256.29	256.35	A 3cm-thick quartz-pyrite-(carbonate) vein + ankerite alteration along edges; 10% pyrite; 45TCA
256.85	256.88	A 2cm-thick pyrite-carbonate vein; 45TCA
258.87	258.87	Pyrite stringer; 75TCA
260.78	260.81	A 2cm-thick pyrite-carbonate-chlorite vein; hematite-ankerite alteration along edges
261.40	261.45	Quartz-carbonate-chlorite breccia vein; 30TCA
261.50	261.75	Quartz-carbonate-pyrite-(chlorite) breccia vein (5% pyrite; 40TCA)
261.82	261.83	Pyrite-(chlorite) veinlet; 45TCA
262.01	262.01	Pyrite veinlet; 75TCA
263.02	263.02	Pyrite stringer; 60TCA
266.96	267.45	Series of pyrite-carbonate stringers at a 5 to 15cm interval; 60TCA. Weak ankerite alteration associated
274.32	274.66	Series of quartz-(pyrite) stringers (at a 2-3cm interval); 50-60TCA
275.45	275.48	Calcite-quartz vein; 50TCA
277.02	281.99	Fine-grained mafic volcanic rock (chlorite-rich); pillow lava?
285.82	285.95	Series of five pyrite stringers (50TCA) + weak ankerite alteration associated
286.50	286.51	Pyrite-carbonate stringer; weak ankerite alteration along the edges; 45TCA
287.13	287.18	Quartz vein + pyrite stringers with ankerite alteration associated; 60TCA
290.25	290.26	Pyrite stringer; 50TCA
295.00	295.06	Quartz-(chlorite) vein; 60TCA
296.51	296.60	Series of pyrite-carbonate stringers + weak ankerite alteration associated
300.69	300.90	Series of pyrite stringers + weak ankerite alteration associated
303.62	303.64	Quartz-chlorite breccia vein; 30TCA
305.25	305.75	Broken core (seems to be due to broken rods)
314.65	314.69	A 3cm-thick quartz vein; 30TCA
322.62	322.70	small pegmatite dyke (Quartz-Kspar)
323.57	323.94	Granite dyke
325.14	325.27	Kspar-quartz pegmatite dyke
326.19	326.27	Kspar-quartz pegmatite dyke
329.00	329.37	Granite dyke
332.00	**332.00**	**EOH**

0.00	**1.20**	**1.20**	**OB**																	**Casing/Overburden; casing at 27m**
1.20	**160.07**	**158.87**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Including several carbonate veinlets with carbonate alteration along edges
5.23	5.37																			Down-dip quartz vein; 1cm-thick
14.95	15.66																			Carbonate alteration zone (grey color) including carbonate-(chlorite) tension gashes/veinlets
15.85	15.91																			A 3cm-thick quartz vein; 20TCA
17.31	17.36																			A 5cm-thick pegmatite dyke (Kspar-rich); 80TCA
27.36	28.08																			Carbonate alteration zone (grey color) including carbonate-(chlorite veinlets
35.70	36.35																			Weak hematite-silica alteration zone (orange-grey color)
57.80	58.26																			Carbonate alteration zone + carbonate-chlorite-quartz veins
59.00	59.72																			Broken and partially broken core
75.08	75.92																			Pervasive carbonate alteration (grey color) including chlorite veinlets
77.00	77.14																			Late fracturing with goethite-calcite-chlorite associated
94.10	103.55																			Carbonate-(silica) pervasive alteration zone (grey color) including several calcite-(chlorite) tension gashes/veinlets. Locally disseminated pyrite (2-3%)
98.50	102.00																			2-3% disseminated pyrite; locally trace of chalcopyrite and pyrrhotite
105.90	106.05																			Chlorite-rich vein (?); ± goethite-calcite
109.00	109.55																			Down-dip and disrupted quartz-chlorite vein (1cm-thick)
111.60	112.12																			Carbonate-chlorite alteration zone
116.72	117.00																			Series of calcite + goethite filled fractures
121.18	121.65																			Silica-carbonate alteration zone (dark grey color)
122.75	123.20																			A 1cm-thick quartz vein (15TCA) with goethite/hematite alteration along edges
137.63	138.22																			Pegmatite dyke (20TCA); Kspar-rich
144.75	147.72																			Pervasive carbonate-(chlorite) alteration zone (greenish-grey color)
154.18	154.30																			A 4cm-thick quartz vein; 15TCA
160.07	**215.60**	**55.53**																		**Altered granite**
																				Pervasive hematite-carbonate alteration (purple-red color); including voids (due to dissolution?)
184.85	184.97																			Chlorite-rich vein or mafic xenolith(?)
195.25	195.43																			Chlorite-rich fractures; core is partially broken
215.60	**299.00**	**83.40**																		**Mafic volcanic rock**
																				Massive flow and local breccia flow. Carbonate-hematite alteration occurs near the uphole contact. Several mineralization zones occur. Not magnetic; chlorite-rich.
215.60	215.65																			Broken core due to shear; 35TCA
215.65	215.90																			Series of pyrite stringers-(±carbonate); at a 10cm interval; 45TCA
215.90	216.02																			Massive pyrite vein; 50TCA
216.02	216.65																			Altered granite dyke
216.65	217.00																			Strong shear (45TCA). Carbonate veins associated
217.49	217.59																			2% disseminated pyrite in a shear zone (45TCA)
219.66	222.38																			Hematite-carbonate alteration zone

224.00	233.00																			Zone with several granite injections (dykes, breccia veins?); Altered into carbonate-hematite; including partially broken core
225.69	225.74																			Series of pyrite stringers; 45TCA
227.85	227.88																			A 2cm-thick pyrite vein; 45TCA
228.00	228.52																			Granite dyke (hematite-carbonate alteration)
233.74	233.76																			A 1.5cm-thick pyrite vein
233.00	273.25																			Mafic volcanic rock; hematite(?) partial alteration. Locally carbonate (+voids and broken core due to dissolution)
235.25	235.37																			A series of pyrite veinlets (locally disrupted) + ankerite (or bleaching?) associated
244.00	246.60																			Broken and partially broken core (fault zone?)
250.41	250.46																			A 3cm-thick pyrite semi-massive vein; 30TCA
253.70	253.83																			Series of pyrite stringers; 60TCA
254.04	254.05																			A 1cm-thick pyrite vein; 60TCA
255.00	260.00																			Zone with voids (due to carbonate dissolution); including <1% very fine-grained disseminated pyrite
257.90	258.00																			Series of pyrite veinlets; 40TCA
259.60	259.61																			Pyrite veinlet; 45TCA
260.50	261.14																			Series of fine pyrite stringers (at a 2 to 10cm interval; 45TCA)
261.59	261.60																			Pyrite stringer; 25TCA
261.84	261.85																			Pyrite stringer; 25TCA
262.18	262.37																			A 16cm-thick massive pyrite vein; 40TCA
271.33	271.34																			Pyrite stringer; 60TCA
271.62	271.80																			Granite dyke (hematite-carbonate alteration)
272.06	272.13																			Series of pyrite-carbonate veins/veinlets; 50TCA
275.29	277.00																			Shear zone(?); including pink calcite as filled fractures
282.90	282.96																			Fine pyrite-chlorite stringer + ankerite alteration along edges
283.83	283.90																			Pyrite-carbonate stringer (45TCA) + ankerite-pyrite alteration associated
287.82	287.83																			Pyrite stringer (45TCA)
288.20	288.66																			2-3% disseminated euhedral grains of pyrite (most likely alteration associated with a quartz vein at 288.66 - 288.73m)
288.66	288.73																			A 3cm-thick quartz vein; 15TCA; pyrite associated as alteration
288.88	289.01																			A 3cm-thick quartz-(pyrite) vein + pyrite as alteration. 20TCA; 2-3% pyrite
289.60	289.63																			A 2cm-thick pyrite-carbonate-(chlorite) vein; 60TCA. Semi-massive pyrite
294.93	295.70																			Down-dip quartz vein (1cm-thick)
299.00	299.00																			EOH

0.00	**1.40**	**1.40**	**OB**																	**Casing/Overburden; casing at 27m**
1.40	**198.80**	**197.40**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Including several carbonate-(goethite) veinlets with carbonate alteration along edges
13.04	13.07																			A 2cm-thick quartz vein; 25TCA
21.30	21.44																			Late calcite vein/tension gashes; goethite is associated
39.14	39.25																			*In situ* breccia/breccia vein; chlorite matrix; 1% pyrite
47.06	47.11																			Quartz vein; 3cm-thick; 25TCA
48.83	48.86																			A 3cm-thick quartz vein; 30TCA
55.70	60.00																			Carbonate pervasive alteration (grey color)
63.65	66.40																			Carbonate pervasive alteration (grey color)
66.14	66.17																			Two quartz-(chlorite) vein (1cm-thick each; 70TCA)
69.75	70.15																			Carbonate-(chlorite) alteration zone associated with weak shear zone (40TCA)
81.88	82.26																			A 4cm-thick quartz vein (15TCA). Trace of leucoxene; goethite and silica alteration associated
86.72	87.00																			Quartz-(chlorite) vein; no mineralization associated; 60TCA
91.89	92.15																			A 2cm-thick quartz vein (15TCA) + silica alteration associated along edges
93.60	93.68																			Goethite associated with fractures; tr euhedral pyrite
97.27	98.75																			Carbonate-silica alteration zone (grey color)
103.59	103.61																			A 2cm-thick quartz vein; 50TCA
104.70	113.20																			Pervasive carbonate-(silica) alteration zone (light grey color). Contacts are gradational. Locally core is broken (due to partial dissolution)
106.94	107.03																			Quartz-chlorite vein; 50TCA
109.97	110.02																			A 1cm-thick quartz vein; 15TCA
135.00	135.15																			Goethite (+silica) associated with late fractures
135.92	135.95																			A 3cm-thick quartz vein; 60TCA
140.88	145.60																			Zone with carbonate alteration including local carbonate-chlorite filled fractures
151.40	155.48																			Pervasive carbonate-silica alteration zone (contacts are gradational)
157.94	158.00																			A 5cm-thick quartz-chlorite vein (70TCA); +silica alteration associated
165.26	165.30																			Aplite dyke; 65TCA
171.86	171.90																			A 3cm-thick quartz-(carbonate) vein; 80TCA
177.70	177.94																			A 1cm-thick quartz vein; 10TCA
180.12	180.15																			A 2.5cm-thick quartz vein; 60TCA
187.77	187.80																			A 2.5cm-thick quartz vein; 70TCA
190.46	195.20																			Zone with weak hematite-silica alteration zone (light pink-orange color)
198.80	**278.75**	**79.95**																		**Altered granite**
																				Hematite-calcite alteration. Purple-ish red color. Uphole contact is gradational
255.76	255.77																			A pink calcite vein (40TCA) + sericite along edges. Tr pyrite.
257.00	257.40																			Weak shear zone (55TCA), with chlorite associated. The shear zone includes carbonate-(pyrite) veins; 2-3% pyrite
258.51	258.52																			A small fracture (25TCA) with sericite-hematite along edges. Trace pyrite
260.25	260.48																			Weak shear zone; 60TCA
278.75	**362.00**	**83.25**																		**Mafic volcanic rock**
																				Massive flow + breccia flow facies. Chlorite-rich. Pervasive carbonate-(hematite) alteration near the uphole contact. Partially broken core (due to carbonate dissolution). Locally magnetic near the end of hole.
279.58	281.41																			Partially broken core (due to weak shear?). Chlorite-rich.

HOLE DESCRIPTION		HOLE LOCATION		HOLE ORIENTATION	
PROJECT:	Carscallen	NORTHING:	5358018 N, NAD83	AZIMUTH:	240
HOLE NO:	CAR-61-2010	EASTING:	451905 E, NAD83	INCLINATION:	-75
LOGGED BY:	Eric Hebert	ELEVATION:		FINAL DEPTH:	350m
START DATE:				CORE SIZE:	NQ
FINISH DATE:					

Depth			Rock Type					Structure		ALTERATION				Mineralisation						
										Alteration Intensit			CODE	Sulphide			Veins			
From	To	Interval	Major Rock Code	Main Texture	2nd Texture	3rd Texture	4th Texture	Structure / Contact	ACA	Silicification	Sericite	Chlorite	Other Alt.	Sulphide Type	Sulphide %	Texture	Vein Mineralogy	Vein Type	Accessory Mineralogy	COMMENTS
0.00	**29.00**	**29.00**	**OB**																	**Casing/Overburden**
29.00	**200.55**	**171.55**																		**Granite**
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Including several carbonate-(goethite) veinlets with carbonate alteration along edges. Locally weakly magnetic
29.00	42.46																			Pervasive carbonate alteration (grey color) including several carbonate veinlets/tension gashes (at a 5 to 20cm interval)
45.50	45.75																			Broken core
46.53	47.45																			Pervasive carbonate alteration zone (light grey color)
60.61	60.73																			Calcite veinlets + goethite associated along edges
72.10	85.64																			Pervasive carbonate-(±sericite) alteration zone (dark grey color)
82.30	83.00																			Weak shear zone; + sericite(?) alteration associated
89.65	90.93																			Pervasive carbonate alteration
103.65	107.16																			Pervasive carbonate alteration
115.30	118.82																			Pervasive carbonate-sericite alteration zone (grey color) including locally tr pyrite
120.88	121.27																			Down-dip carbonate-chlorite veinlet + ankerite alteration along edges
122.25	123.10																			Pervasive carbonate alteration zone (grey color)
122.58	122.68																			5% disseminated pyrite (very fine-grained) associated with fracture network
126.77	130.04																			Pervasive carbonate alteration zone (grey color). Contacts are gradational
132.89	133.60																			Pervasive carbonate alteration including carbonate-chlorite vein (tr pyrite)
141.88	142.22																			Broken core (due to weathering?)
146.48	148.63																			Pervasive carbonate alteration (ankerite); including locally tr pyrite
150.00	152.30																			Weak hematite alteration (orange-pink color)
153.33	156.44																			Weak hematite alteration (orange-pink color)
158.25	160.56																			Pervasive and strong hematite-carbonate alteration zone (orange-pink color)
169.55	175.10																			Pervasive hematite-(calcite) alteration zone (orange-pink color)
184.35	187.50																			Pervasive hematite-(calcite) alteration zone (orange-pink color)
187.50	192.20																			Pervasive carbonate-(sericite?) alteration zone (dark grey color)
192.20	195.50																			Pervasive and strong carbonate alteration zone; including shear/brecciated zone; chlorite-rich. Core is locally broken. Presence of leucoxene. Schistosity is well-developed (marked by chlorite); 30TCA
195.50	200.55																			Pervasive carbonate-(sericite?) alteration zone (dark grey color)
200.55	**350.00**	**149.45**																		**Altered granite**
																				Hematite-carbonate alteration. Presence of leucoxene (due to leaching?). Orange-pink color; locally chlorite-carbonate-rich (dark green color)
212.45	251.30																			Pervasive and strong carbonate alteration zone; including shear/brecciated zone; chlorite-rich. Schistosity is well-developed (marked by chlorite); 60TCA, locally down-dip. Locally tr jaspe xenolith (φ: 1 to 5mm)
244.40	245.25																			broken and partially broken core
273.03	273.04																			pyrite stringer; 25TCA
274.95	274.96																			pyrite stringer; 25TCA
275.77	275.78																			Pyrite stringer; 40TCA + strong chlorite-carbonate alteration associated (dark green color)
278.30	278.60																			Series of pyrite-chlorite veinlets (0.5cm-thick) at a 5cm interval; 25TCA. 2-3% pyrite

0.00	3.35	3.35	OB																	Casing/Overburden
3.35	235.12	231.77																		Granite
																				Coarse-grained, light yellowish-green color due to a weak but pervasive epidotization/sauricitization.
																				Composition: Quartz (20%); Kspar (20%); Plagio (35%); Hornblende/chlorite (25%).
																				Including several carbonate-(goethite) veinlets with carbonate alteration along edges.
22.65	27.45																			Carbonate alteration zone (contacts are gradational); light grey color
23.34	23.60																			A 3cm-thick quartz-pyrite-chlorite vein (15TCA); weathered. 5-10% pyrite
28.70	29.00																			Broken core
40.34	40.70																			Pervasive hematite-carbonate alteration (pink color)
42.84	42.88																			A 3.5cm-thick quartz-(chlorite-epidote) vein; 85TCA
46.79	46.80																			A 1cm-thick quartz-(chlorite-epidote) vein; 90TCA
48.15	48.17																			A 2cm-thick quartz-(chlorite-epidote) vein; 60TCA
49.28	49.30																			A 2cm-thick quartz-(chlorite-epidote) vein; 60TCA
61.81	61.83																			A 2cm-thick quartz-(chlorite-epidote)-(carbonate) vein; 70TCA
72.40	72.44																			A 2cm-thick pyrite-quartz vein; 25TCA
73.65	73.76																			A 8cm-thick massive pyrite vein (45TCA) + quartz; including tr-1% chalcopyrite-pyrrhotite
74.88	74.89																			Pyrite stringer; 45TCA
76.11	76.13																			A 1cm-thick quartz-pyrite vein; 35TCA
77.59	77.60																			Carbonate-chlorite-pyrite veinlet; 30TCA
79.67	79.68																			Carbonate-chlorite-pyrite veinlet; 30TCA
80.63	80.64																			Fine quartz-pyrite stringer; 35TCA
82.41	82.42																			Fine carbonate-chlorite-pyrite stringer; 25TCA
82.78	82.79																			A 1cm-thick quartz-pyrite vein; 25TCA
83.29	83.31																			A 1cm-thick quartz-chlorite-pyrite vein; 25TCA
83.88	83.89																			Fine pyrite stringer; 25TCA
85.86	85.91																			A 3.5cm-thick pyrite-quartz-chlorite vein (seems sheared/mylonitized?); 55TCA
87.08	87.15																			Quartz vein; 80TCA
90.44	90.54																			Carbonate alteration zone associated with pyrite stringers (1-2% pyrite); 45TCA
95.58	96.12																			Series of pyrite stringers/veinlets at a 10cm interval; 15-30 TCA. 2-3% pyrite
97.06	97.07																			Pyrite stringer; 15TCA
97.58	97.59																			Pyrite stringer; 15TCA
97.83	97.88																			Down-dip pyrite stringer
111.20	111.24																			A 3cm-thick quartz-carbonate vein (80TCA) + hematite-carbonate alteration associated along edges
124.65	125.45																			Partially digested xenolith(?); porphyry origin
126.28	126.30																			A 2cm-thick quartz-pyrite vein (45TCA); 5% pyrite
128.40	129.60																			Pervasive carbonate alteration zone (grey color)
132.07	133.19																			Large xenolith; locally magnetic. Porphyric
134.35	136.00																			Weak hematite-carbonate alteration zone (contacts are gradational)
135.10	135.45																			Series of fine pyrite stringers (40TCA) and quartz-carbonate veinlets (70TCA) at a 5-10cm interval
150.15	150.50																			Partially broken core
150.75	155.00																			Pervasive hematite-carbonate alteration zone (pink color). Contacts are gradational
155.90	155.92																			A 2cm-thick quartz vein; 70TCA
158.50	163.30																			hematite-carbonate weak alteration (light pinkish-grey color). Contacts are gradational
166.50	169.00																			Granite is locally magnetic (disseminated magnetite grains)
178.35	187.30																			Pervasive carbonate alteration zone (locally + hematite) (dark grey to pinkish grey color). Contacts are gradational; locally tr pyrite
188.35	192.10																			Pervasive carbonate alteration zone (locally + hematite) (dark grey to pinkish grey color). Contacts are gradational; locally tr pyrite
197.70	200.50																			Weak carbonate-(hematite) alteration zone. Contacts are gradational
203.00	220.15																			Weak carbonate-(hematite) alteration zone including local carbonate tension gashes/veinlets. Contacts are gradational

From	To	Interval	COMMENTS
223.35	230.30		Weak carbonate-(hematite) alteration zone including local carbonate tension gashes/veinlets. Contacts are gradational
235.12	**255.00**	**19.88**	**QFP**
			Greenish color. Sericitized; including 2-3% disseminated pyrite as small aggregates of grains. Downhole contact 40TCA. Uphole contact at 35TCA
241.00	241.30		Fine pyrite stringer; down-dip
255.00	**263.30**	**8.30**	**Granite**
			Pervasive carbonate-sericite alteration (greenish-grey color)
260.00	260.20		Broken core
261.95	263.30		Brecciated zone, weathered(?); partially broken core
263.30	**264.50**	**1.20**	**QFP**
			Greenish color. Sericitized; including 2-3% disseminated pyrite as small aggregates of grains and as veinlets (at a 10-20cm interval; ankerite alteration along edges; 20TCA). Downhole contact 40TCA. Uphole contact at 35TCA
264.50	**325.20**	**60.70**	**Granite**
			Pervasive carbonate-sericite alteration (greenish-grey color)
264.50	269.37		Pervasive carbonate-hematite alteration zone (light pinkish-grey color)
273.34	273.39		A 4cm-thick chlorite-pink calcite-quartz vein + pyrite associated as alteration
275.10	275.35		A 1.5cm-thick quartz vein; 15TCA
279.58	279.59		A 1cm-thick quartz vein; 85TCA
281.80	281.83		A 3cm-thick quartz-carbonate vein; 85TCA
282.45	284.36		Weak hematite alteration zone (orange-pink color)
294.10	311.43		Pervasive and strong carbonate-(sericite) alteration zone (dark grey color). Contacts are gradational
300.70	301.35		Weak shear zone; including local pyrite veinlets; 40TCA
303.15	303.30		in situ breccia; including quartz-pyrite (5% pyrite)
316.45	316.49		Quartz vein; partially broken core
318.54	320.00		Pervasive carbonate-sericite alteration zone (dark grey color). Schistosity is down-dip
319.28	319.73		Down-dip quartz vein; partially broken core
320.40	321.65		Pervasive hematite-carbonate alteration zone (purple-ish red color). Contacts are gradational
321.25	321.35		A 6cm-thick quartz vein; 30TCA
325.20	**349.10**	**23.90**	**Altered granite**
			Hematite-carbonate alteration. Purple-ish red color. Contacts are gradational
349.10	**457.32**	**108.22**	**Granite**
			Including pervasive carbonate-sericite alteration zones (greenish-grey color)
349.10	351.58		Pervasive and strong carbonate alteration (dark grey color)
351.58	354.80		Series of mafic xenoliths and shear zones (including locally pink calcite and fuschite)
352.00	352.22		Zone with 5% fuschite
352.38	352.45		Shear/breccia zone; chlorite-rich; 60TCA
353.85	354.30		Mafic xenolith; sheared (15TCA)
354.80	358.43		Weak hematite-carbonate alteration zone (contacts are gradational)
356.77	356.83		A 2cm-thick quartz vein; 15TCA
368.70	371.00		Weak hematite-carbonate alteration zone (contacts are gradational)
383.00	383.88		Mafic xenolith; epidote-rich; tr pyrite
388.06	388.12		A 6cm-thick quartz vein; 85TCA
388.55	388.60		A 5cm-thick quartz-chlorite-carbonate vein; 80TCA
388.70	388.72		A 2cm-thick quartz-chlorite-carbonate vein; 60TCA
399.15	399.18		A 2.5cm-thick quartz vein; 85TCA

413.75	415.00																			Pervasive hematite-carbonate alteration (purple-ish red color). Contacts are gradational
420.45	425.00																			Carbonate alteration zone (light grey color); including local carbonate veinlets/tension gashes. Contacts are gradational
425.47	425.53																			A 3cm-thick quartz-carbonate-chlorite vein; 80TCA
427.39	427.51																			A 12cm-thick quartz-(+chlorite) vein; 80TCA
427.55	431.20																			Carbonate alteration zone (light grey color); including local carbonate veinlets/tension gashes. Contacts are gradational
430.50	430.92																			5-7% pyrite as stringers/veinlets (at a 5cm interval); 25TCA
439.88	439.93																			A 3cm-thick quartz-chlorite vein; including 2-3% pyrite; 25TCA
444.57	444.61																			A 1cm-thick quartz vein; 15TCA
457.32	**510.75**	**53.43**																		**Altered granite**
																				Hematite-carbonate alteration. Purple-ish red color.
498.60	499.57																			Large chlorite-rich xenolith; fine-grained
500.30	501.36																			A 1cm-thick quartz vein; down-dip. Core is broken due to diamond drilling bit
508.40	510.75																			Contact zone (with the mafic volcanic rock unit); characterized by a chlorite-rich alteration and dislocated quartz veins (cm-thick scale)
510.75	**656.00**	**145.25**																		**Mafic volcanic rock**
																				Chlorite-rich; breccia-flow, pillow breccia and massive flow facies. Including several carbonate veinlets/tension gashes; contact at 25TCA
513.00	513.45																			Zone with tr-1% disseminated chalcopyrite and pyrite associated with a carbonate vein (20TCA)
522.20	522.41																			Granite dyke
528.35	528.72																			Series of cm-thick quartz-carbonate-chlorite veins/breccia veins; 30-45TCA
529.38	529.46																			Small granite dyke
531.06	531.17																			Aplite dyke
533.50	533.59																			Down-dip pyrite stringer
534.02	534.03																			Fine carbonate-pyrite stringer; 60TCA
534.85	535.32																			Pegmatite dyke (feldspar and quartz)
555.80	557.28																			Granite dyke; 10TCA
557.60	557.97																			Granite dyke; 25TCA
567.24	567.49																			"breccia?" vein; chlorite-epidote-rich + 10% clasts of quartz vein (or dislocated vein); 1% pyrite; 1% pyrrhotite
576.24	576.30																			Down-dip quartz vein + tr chalcopyrite
580.40	580.80																			Zone with several carbonate veinlet/tension gashes (45TCA); including 1-2% disseminated pyrrhotite
580.80	581.08																			Shear zone (35TCA); including carbonate xenoliths; tr pyrrhotite
582.82	583.30																			Quartz-chlorite-carbonate dislocated vein (25TCA); including 5-7% pyrrhotite + 1% chalcopyrite along edges.
587.75	587.78																			1% disseminated pyrrhotite
597.45	597.54																			Granite dyke
597.66	597.75																			Grainte dyke
600.86	601.11																			Down-dip vein (chlorite-rich); including 1-2% disseminated pyrrhotite; tr-1% chalcopyrite
602.87	602.96																			Down-dip vein (chlorite-rich); including 1-2% disseminated pyrrhotite; tr-1% chalcopyrite
610.46	611.00																			Aplite dyke; epidote-rich
613.37	614.00																			Xenolith of iron formation (chlorite-magnetite-chert); tr-1% pyrite
616.62	617.04																			Granite dyke
617.78	618.10																			Aplite dyke; epidotized; 5TCA
618.38	618.95																			Aplite dyke + quartz vein; epidotized; 20TCA. Tr disseminated pyrite
618.95	622.56																			Granite; pervasive carbonate-sericite alteration; including tr disseminated pyrite
622.08	622.35																			Quartz vein + strong sericite alteration associated along edges. Tr pyrite; 45TCA
652.58	652.72																			1-2% disseminated pyrite (euhedral grains)
656.00	**EOH**																			**EOH**
