SUMMARY

This report is a geophysical survey as required by The Ministry of Northern Development and Mines for assessment work purposes, following the recommendation set forth in the The Mining Act Regulations 1991.

The report includes an introduction to the properties, general geology, field results and conclusions based on the field data.

Technical Data is provided on the Assessment Data form found at the back of this report.

All field data as compiled on Site Geology Maps for CLM-399 are found behind the Observations of each site in the report.

Mr. Roy G. Newman Prospecting and Exploration Services was contracted out to do the drilling of two sites. Mr. E. Boyce (contractor), was contracted to look after the material (dynamite and blasting material) and blasting the sites on CLM 399 in Harker Township.

Miss Wendy K. Weller and assistant were contracted out to re-establish all grid lines and to measure the stripped areas, take samples from the small trenches and blast sites. Mr. Norman Gilmour and John Perron assisted in the sampling.

The report for the project includes all site maps, compilation maps, grid maps (UTM points) and assessment data forms.

For more information please see the daily work sheets at the back of the report.

**2012 TRENCHING AND BLAST SITE PROGRAM
ON
CLM-399
IN
HARKER TOWNSHIP
LARDER LAKE MINING DIVISION**

INTRODUCTION

Work started on, July 22nd, 2012 on CLM-399 in Harker Township. The mechanical work was carried out by R. G. Newman Prospecting Exploration Services, of Kirkland Lake, Ontario. The purpose of this trenching and blast site project was to find where the Northern Rhyolite Zone crosses the property and sample it for potential minerals.

All interpolation and field work, maps, grid control points, re-cut of picket lines (on the seven sites), report writing and government assessment forms was carried out by Miss Wendy K. Weller, Virginiatown, Ontario (Geo-tech).

Supervision of the project was carried out by Mr. John E. Perron, Tiger Gold Exploration Corporation, Kirkland Lake, Ontario.

Ownership of the aforementioned lease CLM-399 has been attested to by Tiger Gold Exploration Corporation and was independently ascertained by the writer.

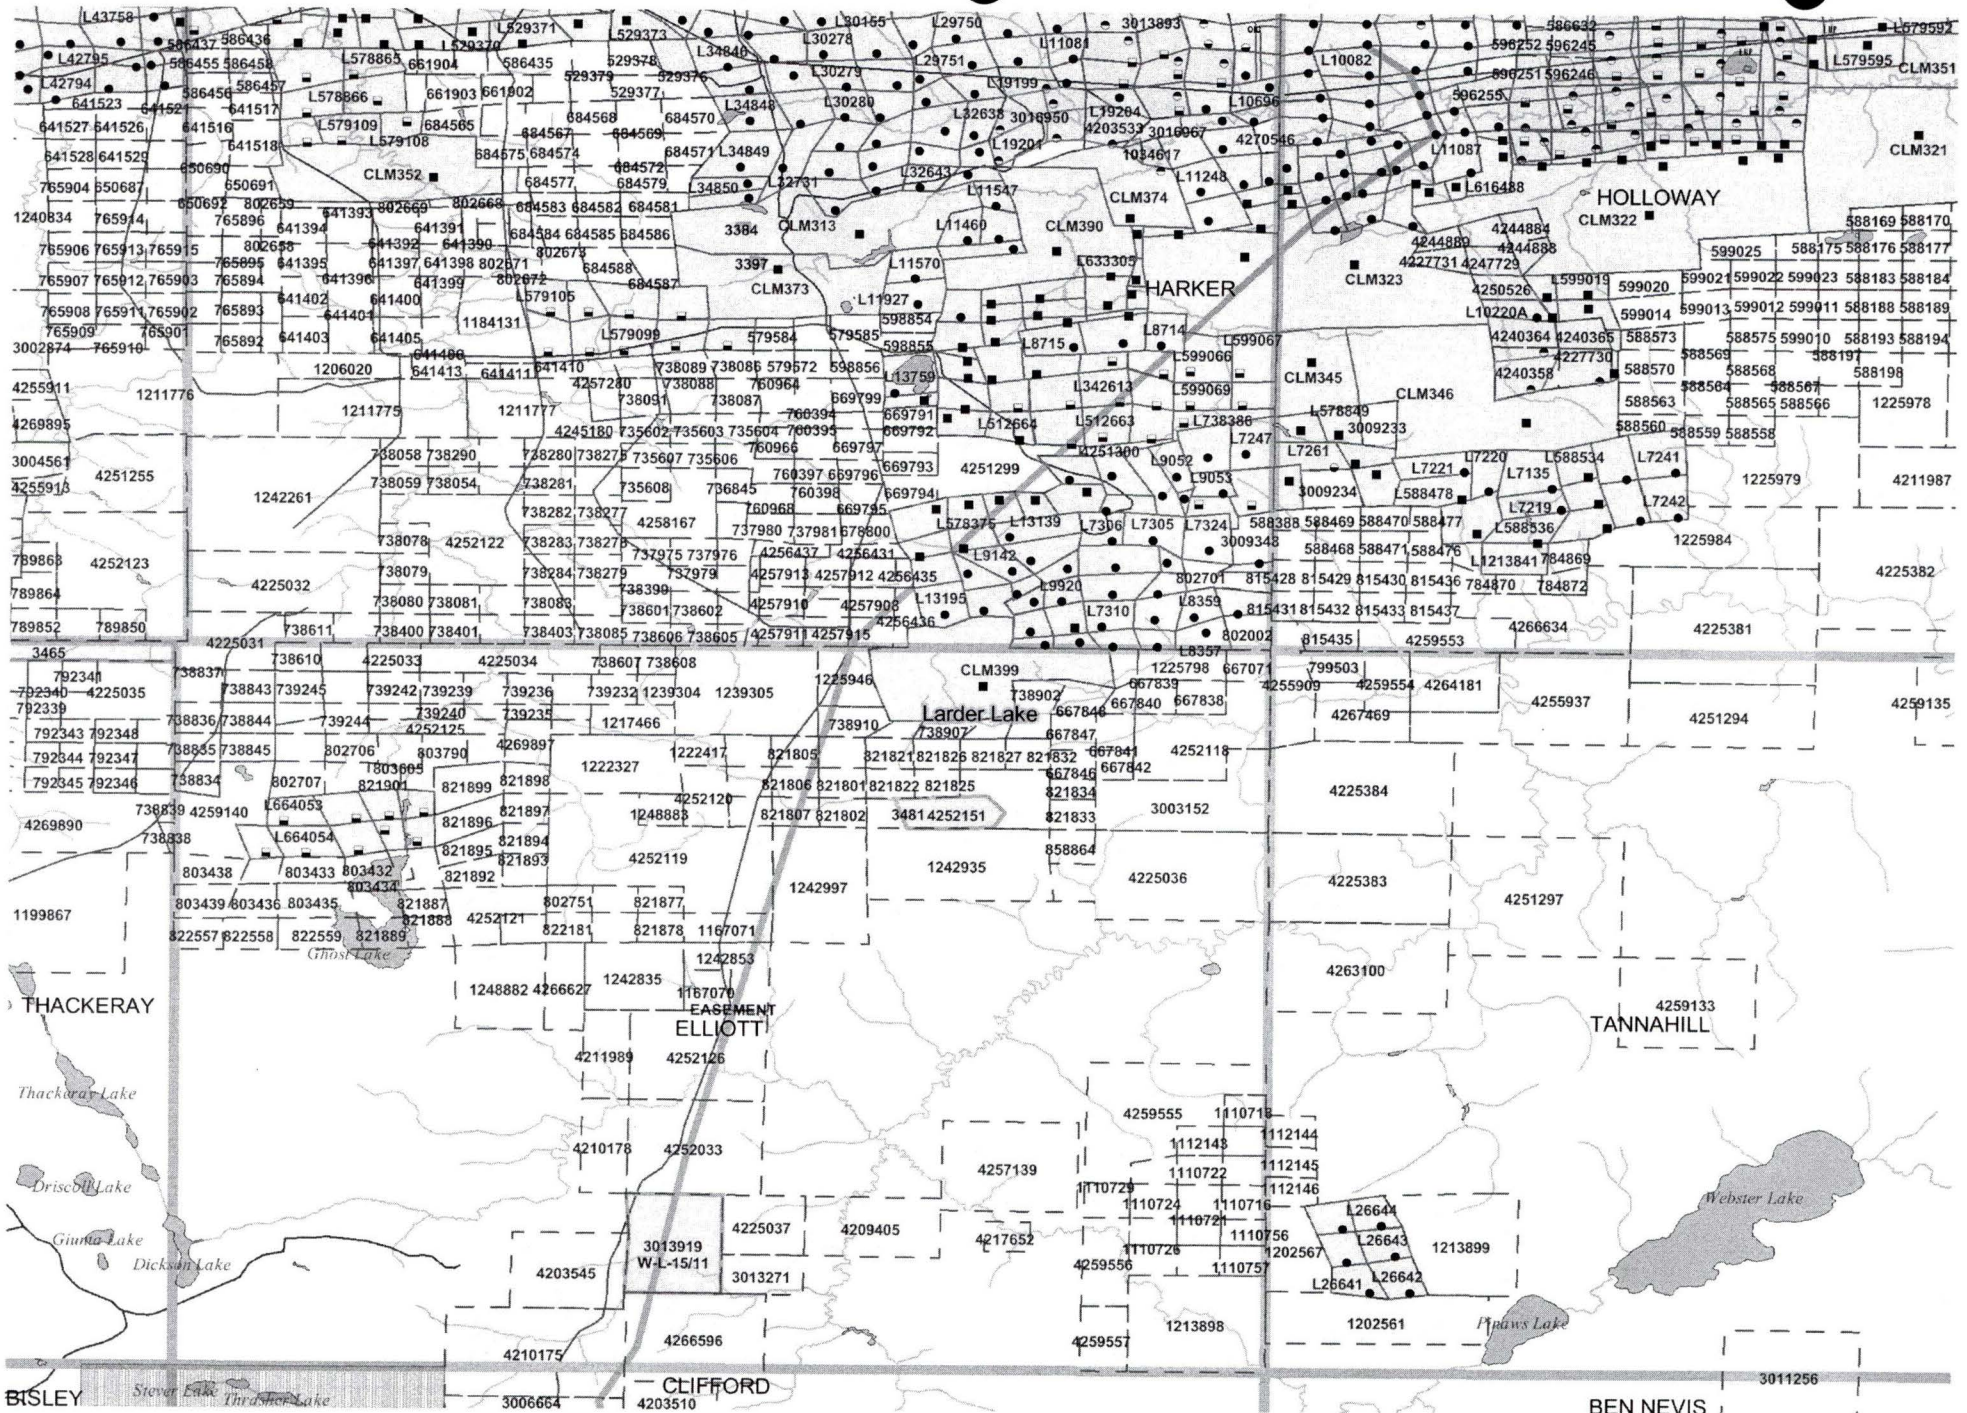

To date there has been no trenching or blast sites in the northwest section of CLM-399.

LOCATION AND ACCESS

CLM-399 belongs to the Iris Group located in the south east corner of Harker Township and the north east corner of Elliott Township, Larder Lake Mining Division, Ontario.

The property is situated approximately 75 miles east of Timmins, Ontario and approximately 25 miles north to north east of Kirkland Lake, Ontario.

Access to the property is provided by Highway 672 that runs approximately 400 meters west of the west side of the Iris Property north east of survey line of CLM 399.

REGIONAL GEOLOGY

The Iris Group is located in the Abitibi Greenstone Belt of the Canadian Shield. This belt is composed of a sequence of metavolcanic and metasedimentary Archean age rocks that cover an area stretching about 220 miles from Timmins, Ontario on the west to Val D'Or, Quebec on the east.

CLM-399 is found in the west section of the Iris Property which is underlain by a sequence of tholeiitic basalt flows belonging to the Upper Blake River Group. This group is composed of a sequence of iron rich and magnesium rich tholeiitic basalt flows forming a stratigraphic package about 30,000 feet thick. These rocks are overlain by younger Blake River Group calc-alkalic volcanics. Both have been folded into a large, east plunging synclinorium, the northern and southern limbs of which have been cut by the major Destor Procupine and Kirkland Lake-Larder Lake fault zones, respectively.

PREVIOUS WORK on CLM-399

During the period 2000 to 2005 detailed ground geophysical surveys were completed by the Perron Group of Companies. All reports can be viewed at the Kirkland Lake Mining Office.

In 2005 in the south west section of CLM-399 a small stripping project was completed along the Southern Rhyolite Horizon. This report can be viewed at the Kirkland Lake Mining Office.

In 2010 a small stripping program was run in the north west corner of CLM-399. This report can be viewed at the ministry office in Kirkland Lake, Ontario.

PRESENTATION AND DISCUSSION OF FIELD RESULTS

In total there are 2 sites on the northwest corner CLM-399. All areas have been stripped, washed, samples taken and assayed and all areas are tied into the existing north/south grid (2000) and GPS waypoints taken (2010 program). For the purpose of this report the field description of the stripping (2010) are included to help identify the geology of the trenches and blast sites.

FIELD DESCRIPTION:

Site A (2010)

Parameters of Site A: PL 2000W 2120N to 2300N

Width- 230 feet

Height-183 feet

Over three quarters of the stripped area is pillow lava. To the north east a contact was noted from pillow lava to flow breccia.

Field Observations:

- 1) Pillow lava
 Colour – dark green (fresh surface)
 Weathering – rust to dark green
 Magnetic – moderate – iron
 Texture- fine grained
 Tops – 80 degrees
 Elongated
 Salvages – thin less than quarter inch – quartz filled small epidote stringers. Quartz vein crossing area at a 48 degree angle, 1 inch to 1 and half inch in width, white to light grey in colour.

- 2) Flow Breccia
 Colour – dark green to black (fresh face)
 Weathering – brown to rust brown
 Magnetic – slightly
 Intense fracturing – 45 degrees to 56 degrees
 No epidote noted
 Few small spider quartz veins noted – white in colour
 Fine grained
 Fine pyrite was noted along the seams of the intensely

SITE A TENCHES AND BLAST SITE

Trench 1

Length: 6.2 feet

Height: 1.9 feet

Samples taken: using the panel sample method

Every two feet starting on the north corner of the trench were taken. 3 samples in total, 1 sample was taken just outside the west side of the trench, all samples can be viewed on the site map for Site A.

Trench 2

Length: 5.3 feet

Height: 1.3 feet

Method for sampling same as trench 1, 3 samples were taken in this site, see site Map A

Blast Site 1

2 feet x 2.3 feet site

1 sample taken

Blast Site 2

2.1 feet x 2.5 feet

1 sample taken

Blast Site 3

2.4 feet by 2.6 feet

1 sample taken

Blast Site 4

2.5 feet x 2.3 feet

1 sample taken

All sites can be seen on Site Map A

Site B:

Parameters of Site B: PL1800W 2083N to 2150N

Width: 155 feet

Height: 105 feet

Over half of the stripped area is flow breccia. To the south the contact between the flow breccia to pillow lava was noted.

There is one small fault noted in the flow breccia crossing north (356 degrees).

Field Observations

- 1) Pillow lava
Colour – dark green
Weathering – rust brown
Magnetic – slightly
Fine grained
Tops – 82 degrees
Salvages – thin less than quarter inch – small white quartz stringers
Elongated
- 2) Flow Breccia
Colour – dark green to black (fresh face)
Weathering – brown to rust brown
Magnetic – slightly
Fracturing – 48 degrees to 54 degrees
Few small spider quartz veins noted, grey to white in colour
Fine grained
Fine pyrite noted along the seams of the fractured breccia

SITE B: TRENCH AND BLAST SITES

Trench 1

Length: 6.22 feet

Height: 2.3 feet

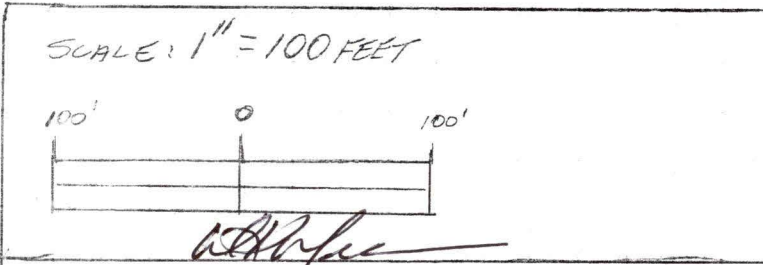

3 two area's sampled, using panel sample method, see Site B map.

Blast Site 1

2 feet x 2.4 feet

1 sample was taken

OBSERVATIONS AND CONCLUSIONS

D. Drummond (1987) Compilation Map – Back Pocket shows the most Northern Rhyolite Zone crosses the top northwest section of CLM 399. He states in his report (1987) there has been little to no work done on the Northern Rhyolite Zone.

This small trenching and blast site project purpose was to try and uncover where this zone crosses the property. The Rhyolite zone was not found in this project.

It is concluded that the stripping and sampling project:

- 1) confirmed the presence of east-north-east trending diabasic flows with a flow breccia top as well as some diabasic and andesitic pillowed flows. Pillow shapes indicate that stratigraphic tops are to the south. The general bedding attitude is N70-80/75/85 degrees South.
- 2) confirmed small to trace amounts of gold and base metals in small trenches and blast hole sites.

At present time all information concerning the Northern Rhyolite Zone and the Iris Property in whole is being compiled on computer and a discussion will enhance about future projects.

RESPECTFULLY SUBMITTED

Miss Wendy K Weller
Geotech-land manager-agent
