TECHNICAL REPORT

OCT 22 2016 TO OCT 22 2016

This report covers the prospecting and stripping work carried out on October 22 2016 on Diamond Willow Amethyst Mine's mining lease TB383373 permit # PR-15-10708.

Prospecting/stripping was performed by my wife and co-owner of the Diamond Willow Amethyst Mine Carol Fayle and myself Brandon Leroux. The location was on the east and west sides of Breezy creek. We initially started the day looking for signs of out Amethyst, we started at a previous location that was reported in a technical report July 20 2016 to August 20 2016. We looked at the previous out cropping's and then studied the vein formations that were slightly showing thru moss, we uncovered some in our initial prospecting then began stripping using grub hoes and snips for roots, the veins appeared run in all directions see picture AREA 1 (1) thru (8) we then started finding more out crops and veinlets thru out the general area and marked the general area on the GPS, this area referred to as area 1 and is on a high point of rock formation, we then decided to check the lower point of the rock formation referred to as area 1 bottom of cliff, where we found veins and small vugs in the vertical rise of the rock formation see pics AREA 1 BOTTOM OF CLIFF. We then headed down hill in search of more out crops and crossed to the east side of the creek known as area 2, we searched according to the way veins we running in the area on a claim adjacent, after prospecting around we found an interesting out crop see picture AREA 2 east of creek. The GPS UTM FOR Area 1 is 376872E,5394099 and AREA 2 is 377022E,5394315N

Approximately an 8 hour day for 2 people $31.25 \times 16 = 500$ travel time was one trip at $50\text{km} \times .50 = 25.00$ we also used our ATV's at \$10.00 so \$20.00 for ATV's The days total was \$545.00

See pictures below

AREA 1-out crop of Amethyst

Small vug

Area 1 (2) small out crop

Vein

Area 1(3) veins

All directional vein

Area (4) out crop and veins

Small vug and veins

Area 1(5) veins

vein

Area 1 (6) all directional veins

Wider veins

Area 1(7) stripped area 16' x 16'

Vug in forefront of pic.

Area 1 (8) Amethyst in vein

Small crystals

Area 1 bottom of cliff

Vertical rise wall

Area 1 bottom of Cliff (2) vug with larger crystals

Vug with larger crystals

Area 2 East of creek

Larger crystals

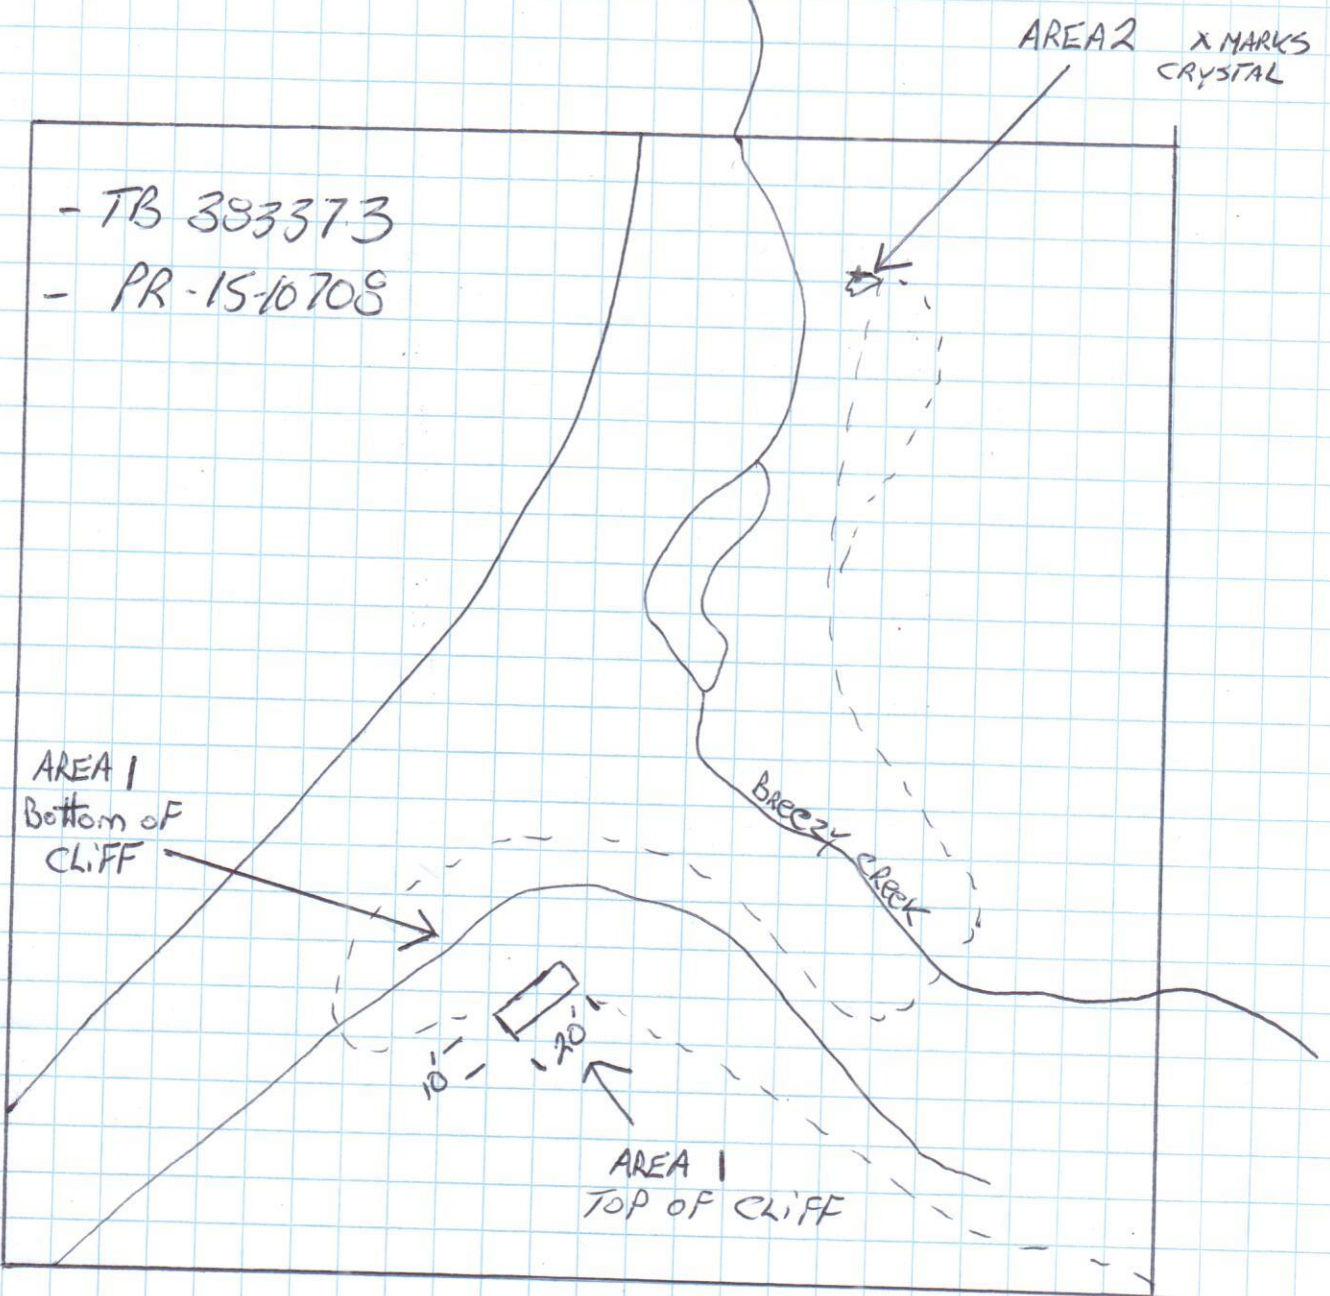

I verify that all the information was conducted on TB383373 on Oct 22 2016

Work performed by Brandon Leroux and Carol Fayle
