Claim # 4275506
Technical report

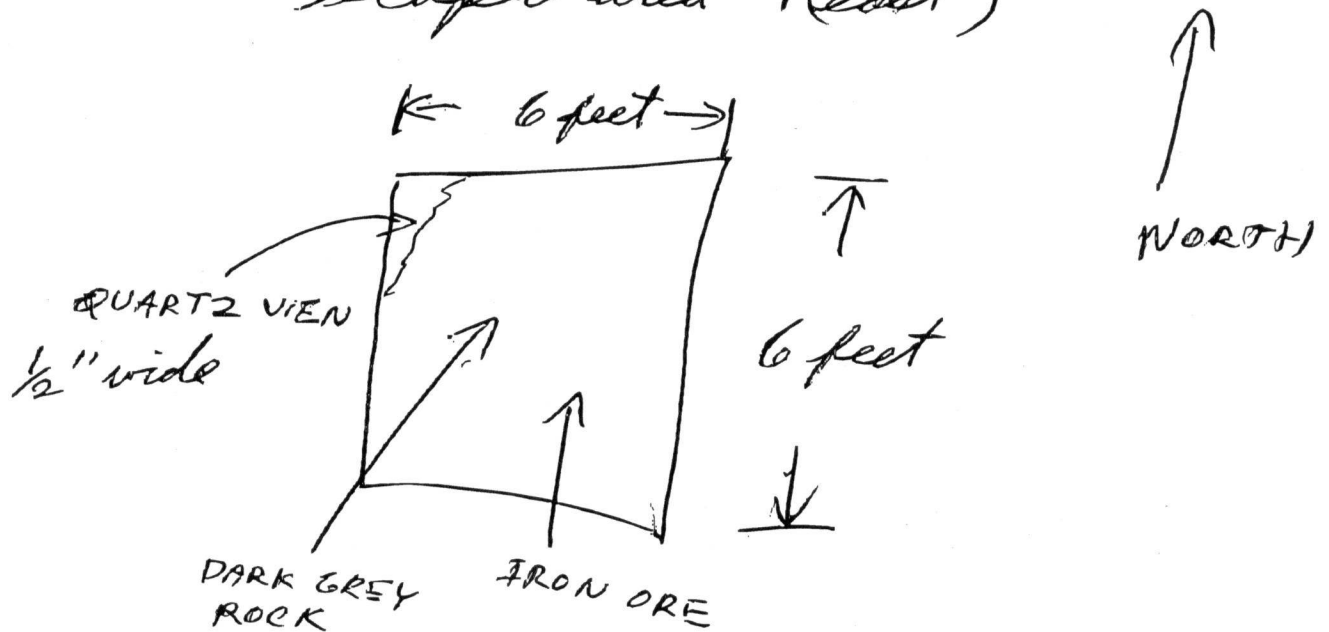

March 2/17

The purpose of the work performed was to explore for minerals on claim # 4275506 in the township of Cunningham, work was performed in early October 2016. The minerals looked for were Gold, silver, copper, Zinc, platinum etc. The property was accessed from the Dore road by an unnamed road running west, this road starts about 15 km north of the Sultan road. The road runs west then turns north, about 5 km another road runs west toward Claim # 4275506 this road turns slightly north, then turns west and enters the claim in the northeast area. There are many trails/old roads that run off of the road that was used to access the claim. The areas were stripped about 6 feet x 6 feet each, some pitting and rock breaking was attempted $\pm$ 2 cubic metres total rocks were looked at with magnifying glass. The rock in the east area was mostly iron ore with some quartz veining $\pm$ one half inch wide. The rest of the rock was grey in color with no quartz veining.

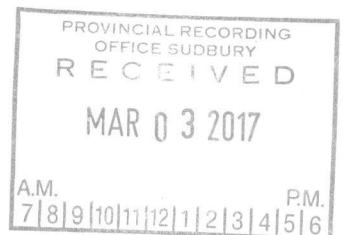

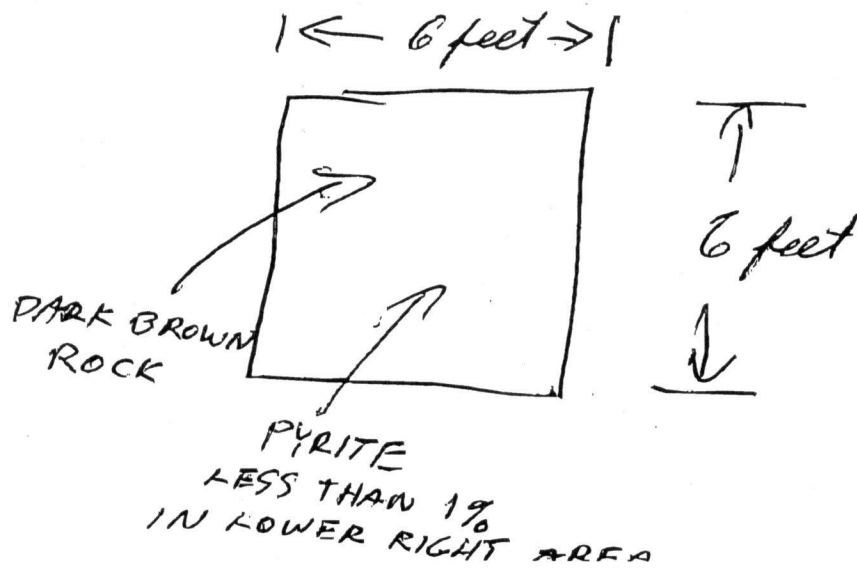

The west area had dark brownish rock with very little to no quartz veins some pyrite was seen perhaps less than 1%. Conclusion is very little was found in these areas. I recommend looking in different areas of the claim.

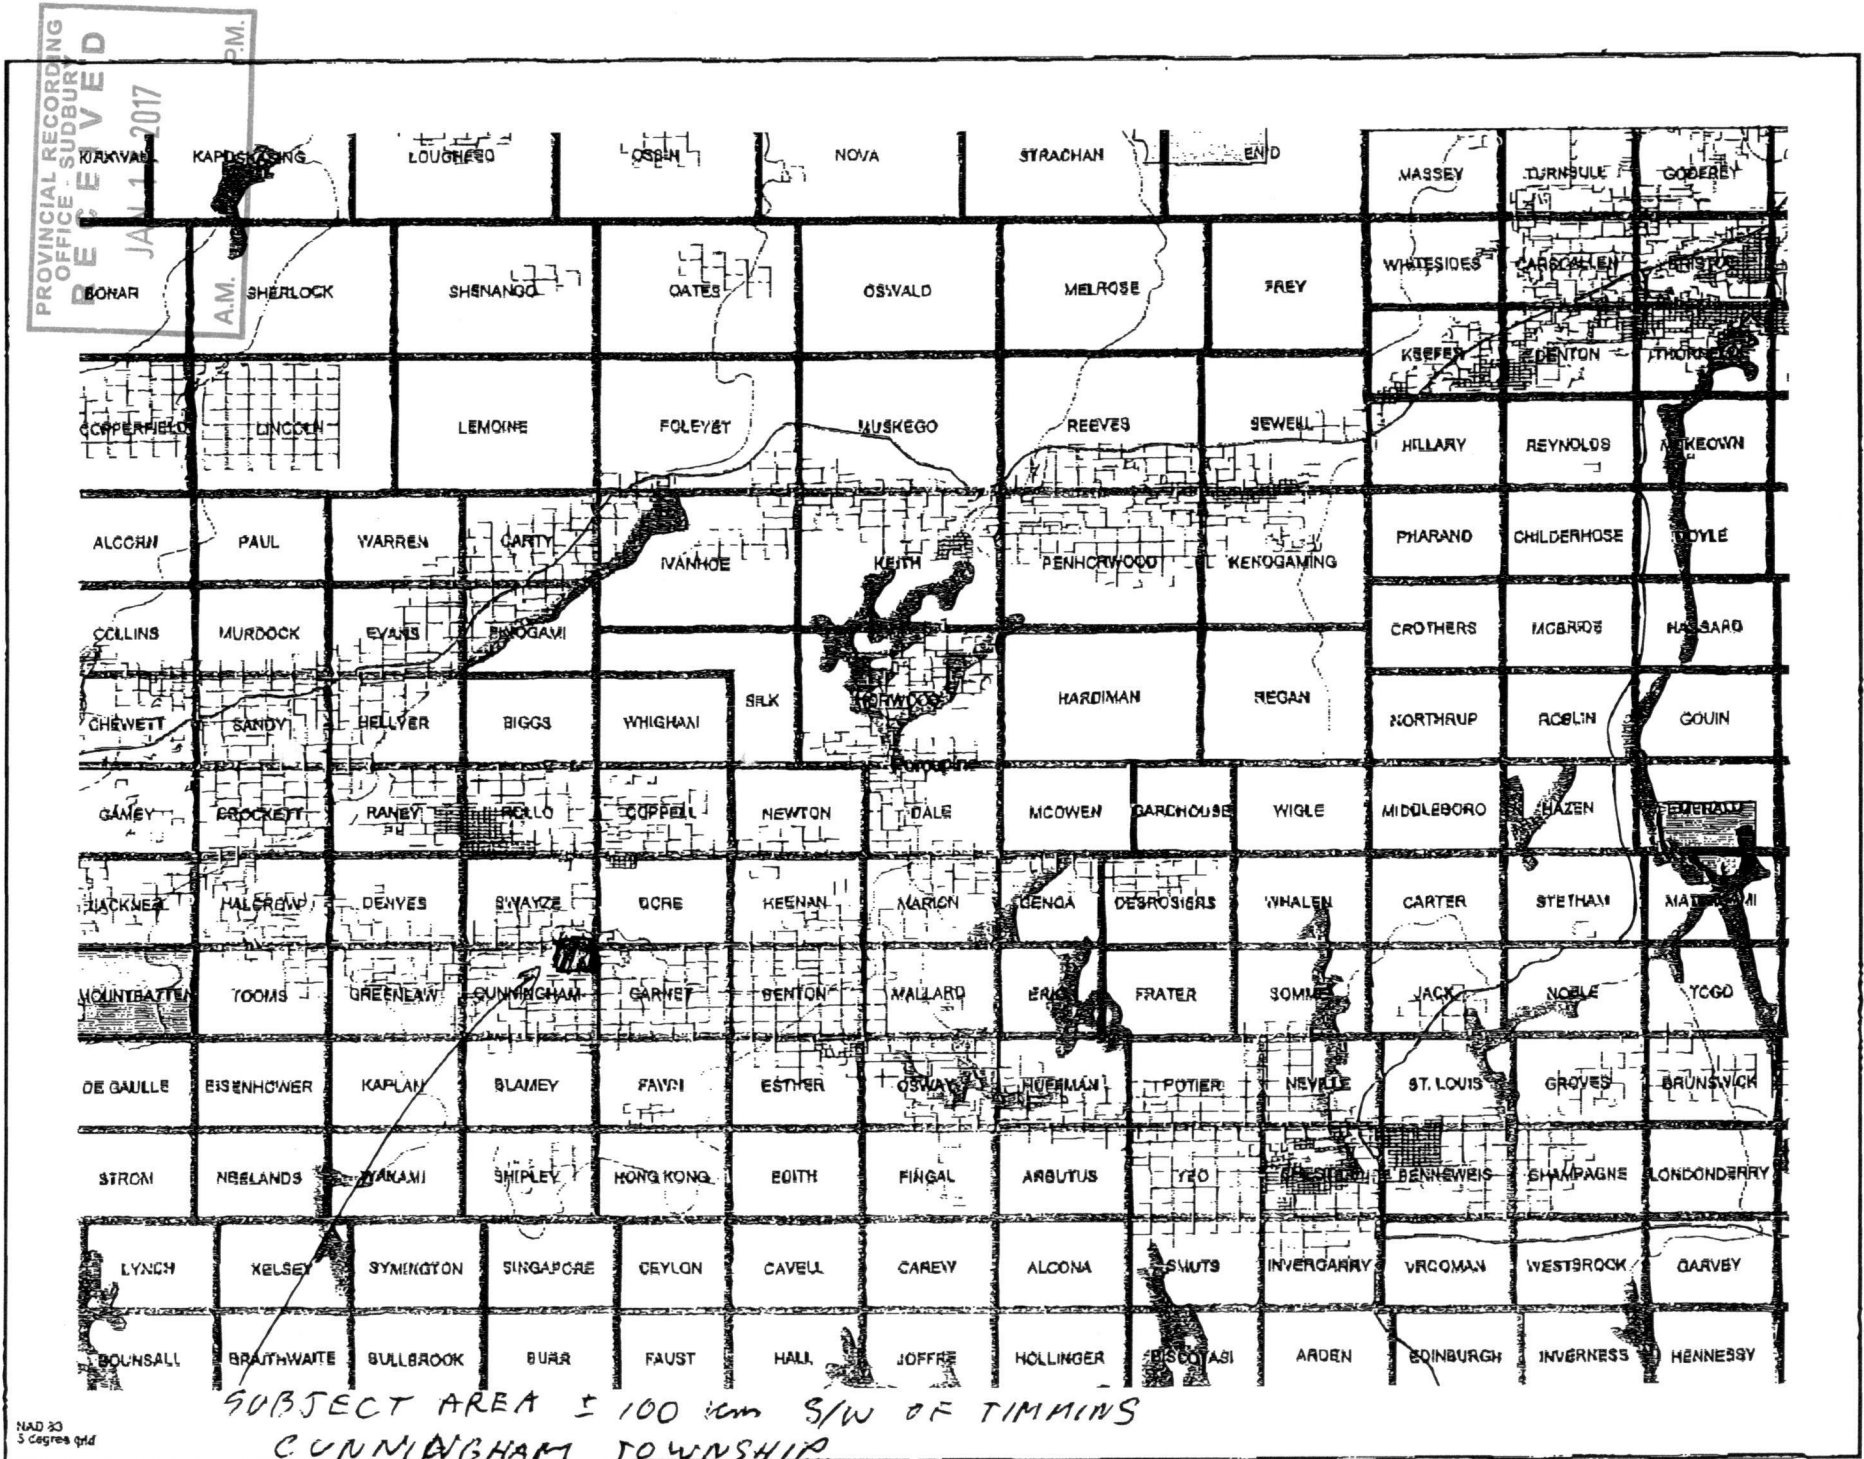

Scraped area #1 (east)

Scraped area #2 (west)

Oct 1/16 Travel to claim to flag site 9:00am
returned 12:30. Flagged sites north
of the small lake and also at the fork
in road east of the swamp. Worked 3 hours

Oct 3/16 Left for site at 7:30am,
machine arrived at $\pm$ 8:00am, stripping
and pitting, Iron ore mostly, some dark
grey rocks, quartz veining, did not see
anything in the veining, machine was
John Deere 310 G, no breakdowns, finish
time 3:20pm,

Oct 4/16 Machine started at 7:30
worked on area west of road, north of
small lake seems to be less iron ore
in this area, dark brown rocks not as
much quartz veining observed machine
stop time 5:35pm
