## INTRODUCTION

The following report will deal with the results of a preliminary prospecting program carried out on the Benoit Township Gold Property. This property consists of a single unit mining claim (1030123) located in Benoit Township, Larder Lake Mining Division, Ontario (Figure #3). This work was supervised by Steven Anderson.

A total of 2 days were spent by two individuals, in an attempt to relocate an old incline shaft reported to occur within the claim. A total of 6 grab samples were taken from the dump area around the shaft. The purpose of this program was to take samples from the shaft or dump area in an attempt to confirm the previously reported free gold values. This work was carried out on September 5<sup>th</sup> and 6<sup>th</sup>, 2015.

This report will deal with the results of the preliminary prospecting program carried out on the above-mentioned property.

## BENOIT PROJECT

Location Map

Figure #1

### **LOCATION AND ACCESS**

The Benoit Twp. Property consists of a single claim (1 unit) located in the south central portion of Benoit Township (Figure #2). The property has a legal description of, the northwest quarter of the north half of Lot 4, Concession 1, Benoit Township.

The property is located approximately 20 km northwest of the town of Kirkland Lake, Ontario. Access to the work area was gained by taking Hwy 101 north, to the Village of Borques. The east west road that accesses the village continues to the east and runs along the northern boundary of the claim (Figure #2).

### **PERSONELL**

The following people were directly involved in carrying out the preliminary prospecting on the Benoit Property.

Prospector  
Helper

Steve Anderson  
Glenda Smith

Timmins  
Timmins

### PREVIOUS WORK

The first phase of exploration to be conducted by the claim holder.

The following is a description of previous work carried out on the property as reported in OGS Report R-92, Page 19.

R.S.Potter, 1920:

In Benoit Township, concession 1, lot 4, northwest quarter, north half, a 40 foot incline shaft was collared on a quartz vein cutting mafic volcanic rocks. The quartz vein is 210 feet long and 1 foot wide (average). It strikes northeast and dips 45SW to almost horizontal. Along the footwall between the vein and the volcanic rocks is a felsite dike containing considerable pyrite and some galena. Native gold was seen in places. (Wright 1921, p.55)

### CLAIMS

The area worked during this program focused on a single unit mining claim Located in Benoit Township, Larder Lake Marie Mining Division Mining Division. The claim is recorded 100% in the name of Steven Anderson and is described below.

<u>Claim #</u>	<u>Units</u>	<u>Description</u>
1030123	1 unit	NW ¼, N ½, Lot 4, Con 1 Benoit Township

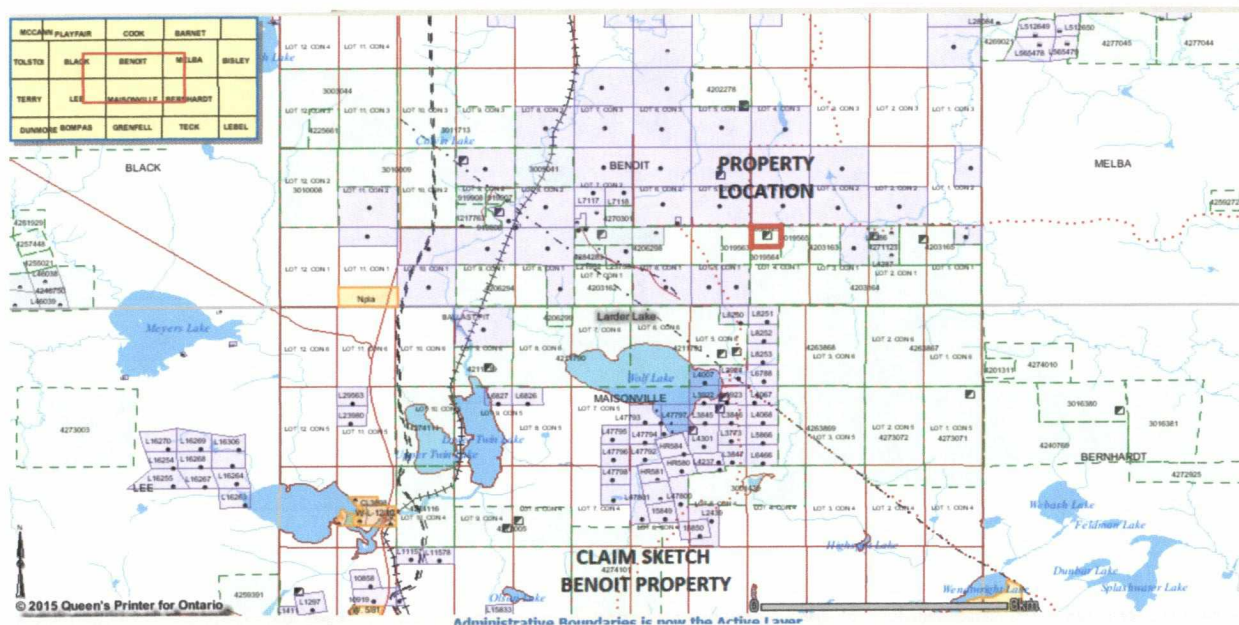

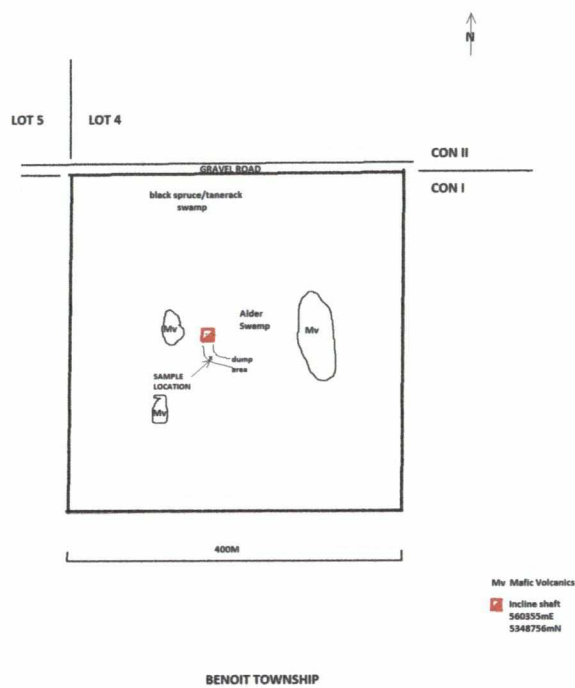

Figure #2

## WORK PROGRAM

The current work program involved spending 2 days travelling from Crystal Falls and prospecting the subject claim. A total of 6 grab samples taken from the dump area around the incline shaft. The first day was spent travelling and prospecting the eastern portion of the claim. The second day the incline shaft was located and samples were taken from the dump area, located to the southeast of the shaft. The assay results can be found under appendix A of this report.

---

### **SURVEY RESULTS**

The following is a description of the 6 samples taken. All samples were taken from the dump area, Nad 83, Zone 17, 560365mE, 5348746mN.

- 2210 Mafic Volcanic with 2cm quartz vein, 2 % pyrite
- 2211 Mafic Volcanic with 2 % pyrite
- 2212 Mafic Volcanic with 10% pyrite
- 2213 Quartz with 2cm Mafic Volcanic, 5 % pyrite
- 2214 Mafic Volcanic with 2 % pyrite
- 2215 Mafic Volcanic with quartz and 5 % pyrite

### **RECOMMENDATIONS AND CONCLUSIONS**

The prospecting program carried out on the Benoit Project was successful in locating the incline shaft on the property (Nad 83, Zone 17, 560355mE, 5348756mN ) It was also successful in confirming the presence of gold, as reported by previous operators in 1920. Of the 6 samples taken, 3 contained anomalous values in gold that include 266ppb, 487ppb and 24.1 grams/ton. Sample 2213 shows the property has the potential to host a high grade deposit.

At this point the property should be covered with a north-south grid and magnetometer and Induced Polarization surveys carried out. Base on the amount of sulphides present in and around the shaft area, the IP should respond well. Any anomalous zones should then be tested with diamond drilling.

CERTIFICATION

I, Steve Anderson of Timmins, Ontario hereby certify that:

1. I hold a three-year Geological Technologist Diploma from Sir Sandford College, Lindsay, and Ontario, obtained in May 1981.
2. I have been practising my profession since 1979 in Ontario, Quebec, Nova Scotia, New Brunswick, Newfoundland, NWT, Manitoba, Saskatchewan and Greenland.
3. I have been employed directly with Asamera Oil Inc. Urangellschaft Canada Ltd. Nanisivik Mines Ltd., R.S. Middleton Exploration Services Ltd., Rayan Exploration Ltd and I am currently co-owner of Vision Exploration.
4. I have based conclusions and recommendations contained in this report on knowledge of the area, my previous experience and on the results of the fieldwork conducted on the property during September, 2015
5. I am currently the claim holder for the subject property.

Dated this 21<sup>st</sup> day of October, 2015  
At Timmins, Ontario.
