Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	7.05	CAS Casing Casing. One round hematized gabbro stone.							
7.05	70.70	MTN; Por Melanotonalite; Porphyritic Coarse porphyritic MTN. Weakly ser-hem altered throughout. Plagioclase phenocrysts are greenish reddish and faded. 10% beige PEG mostly above 14 m. Trace pyrite occurs with chlorite. No significant veins. Lower contact is approximate gradational into stronger alteration.	7.05	9.00	M930035	1.95	1.95	0.071

70.70	192.00	AGR; Mass Altered Granitoid; Massive Strongly altered AGR. Reddish greenish to 93 m Green below that. 10% scattered beige PEG often are relatively fine grained with diffuse edges mixed with the AGR. Minor pegmatites and bleached crumbly zones and gouge at 84.8 m and 90 m may be related to faults. No important veins. Two sheared mafic dikes near 110 m. Other minor mafics are intensely altered and blended into the AGR with protoliths difficult to distinguish. The lower contact is approximate gradational as alteration diminishes.	70.70	72.00	M930081	1.30	1.30	1.395
			72.00	73.50	M930082	1.50	1.50	1.095

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	2.50	CAS Casing Overburden. 10 cm of rounded stones, TON, MTN, PEG.							
2.50	173.00	MTN; Mass; Por; PEG; Mot; AGR Melanotonalite; Massive; Porphyritic; Pegmatite; Mottled; Altered Granitoid 60% dark greenish grey to greenish altered MTN. 20% greenish and reddish PEG. 20% green AGR adjacent to pegmatites. Patchy weak moderate strong sericite appears related to the abundant PEG scattered throughout. Very erratic pyrite is fine to fairly coarse grained, sparsely disseminated and in chlorite blebs in qtz-chl veinlets and hairlines, generally 0.05% - 0.1%, spottily 0.2% in narrow, 1 m or less, veined zones. But for PEG-related floods, no important veins. Lower contact is approximate as alteration becomes more intense and general.							
2.50	23.00	PEG Pegmatite 40% green PEG and a mix of MTN and AGR related to the pegmatites.							
2.50	173.00	SH03 Sericite-hematite dominant 3 Patchy but extensive sericite and weaker hematite related to pegmatites.	2.50	3.50	M804920	1.00	1.00		<0.005

Description

PIN-1769a; Discretionary blank (M821535) inserted due to VG at 8.26m (M821534). Driller correction at 111m; core spun, broken between 108m and 111m tacs, no recovery between 111m and 114m tacs. Tacos shifted such that core is present between 111m and 114m tacs to avoid a "zero" interval.

102.69	198.72	AGR; Mot; Fol; PEG; Mot Altered Granitoid; Mottled; Foliated; Pegmatite; Mottled 90% AGR, 10% PEG. Contains dm- to m-scale Qcc/Qac/Qcl floods and veins locally bearing trace chalcocopyrite, molybdenite, and galena (?); these are found throughout interval. Local m-scale MDK around middle of interval and a dm-scale SMU in last 1/3 of interval. Some cm- to dm-scale shearing and microbrecciation in AGR is present from 187.2-189.46 m. Up to 0.1% local disseminated magnetite.						
102.69	198.72	SHA05 Sericite-hematite-ankerite dominant 5 90% weak to intense patchy ser and interstitial ank, and ~20% weak to intense patchy hem alteration. Hem abundance is variable locally.	102.69	104.00	L165483	1.31	1.31	1.665

Description			Assay					
			From	To	Sample number	Length	Sample Length (m)	AuBest
105.50	183.00	MTN; AGR; PEG Melanotonalite; Altered Granitoid; Pegmatite MTN(50%); AGR(40%); PEG(10%). Interlayered MTN/transitional AGR wt AGR. MTN is f-mg molted dark greenish black and greenish white; and sometimes has red staining. The red color comes from the hematite staining, MTN has weak sericite and ankerite staining. AGR is f-mg; pale greenish brown in color and has patches of strong red hematite staining. AGR has strong interstitial sericite and ankerite alteration. Both MTN and AGR have sericite and ankerite veins and veinlets. Peg is f-mg greenish yellow. Both the upper and lower contents are gradational.	99.50	101.00	M773906	1.50	1.50	0.012

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	2.15	CAS Casing Casing. No core or rock recovered.							
2.15	14.55	MTN Melanotonalite MTN. Dark greenish grey where not sericitized. Moderate patchy sericite is extensive throughout this interval Coarse "speckled" texture is apparently due to relict 3-4 mm plagioclase phenocrysts. Extensive patchy moderate sericitic alteration. 5% beige PEG. No veins. At 11.15 - 12 m is a rusty bleached crumbly zone. There appears to be some breccia here and minor gouge in shattered rock but no certainty of shearing or a fault zone. Erratic trace disseminated pyrite.							
14.55	26.00	AGR Altered Granitoid Greenish AGR. Fairly strong to strong pervasive sericite is continuous throughout. At 22.9 m is some rusty gouge though no breccia or shearing. No veins. Erratic trace pyrite. At 25.5 - 26 m the rock is bleached crumbly and slightly rusty, brecciated and somewhat sheared. Some small diffuse PEG and quartz.							
26.00	End of DDH Number of samples: 0 Number of QAQC samples: 0 Total sampled length: 0.00

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	3.50	CAS Casing Ovrburden. Several rounded stones of AGR and TON.							
3.50	59.00	AGR; Mass; Por Altered Granitoid; Massive; Porphyritic AGR. Greenish and reddish. Strongly altered though somewhat patchily, suggesting the alteration is mainly due to fairly many pegmatites. 3% MTN. 10% greenish and reddish PEG. Somewhat rotted, slightly rusted rock occurs to 28 m. Some more rotted vugs occur intermittently at 53.5 - 59 m. At a few locations coarse porphyritic texture is evident where alteration is weakest. No important veins. Lower contact is gradational as alteration weakens. At 34.6 m to 37 m is relatively fine grained MTN, unaltered. Above 39 m pyrite is trace or less. The lesser pyrite here may be due to deep weathering. Below 39 m pyrite is 0.2%.							
3.50	59.00	SH04 Sericite-hematite dominant 4 Strong sericite alteration, somewhat variable in intensity and extent, seems stronger adjacent or near to pegmatites. Rare small MTN zones. Patchy weak hematite occurs mostly in PEG and in fractures. Minor erratic silicification related to PEG.	3.50	5.00	M930919	1.50	1.50	0.027

Description			Assay					
			From	To	Sample number	Length	Sample Length (m)	AuBest
226.47	226.55	Vn;5%;Sgq;Fl;; vein (5 mm - 10 cm) 5% smoky grey quartz flooding Dark grey quartz vein.						
226.55	227.55	SAG; Bx; Shr Sheared Altered Granitoid 70°; Brecciated; Sheared 70° 70% SAG. 30% SMU. Both are brecciated and intensely sheared. Perhaps a fault. Some fuchsite in fractures in the mafic. Strong ser-ank throughout. Pyrite is as above and below.	226.55	227.55	M935380	1.00	1.00	2.37
227.10	227.11	Shrh Shear healed 90° Rugged intensely sheared breccia.						
227.55	232.60	AGR; Mass Altered Granitoid; Massive Gren AGR. Intermittent weak shearing or strong foliation. Minor PEG.	227.55	229.50	M935381	1.95	1.95	0.945
			229.50	231.50	M935382	2.00	2.00	1.920
			231.50	232.60	M935383	1.10	1.10	0.641
232.60	234.80	SAG; Shr; Bx Sheared Altered Granitoid; Sheared; Brecciated Sheared breccia. Apparently a fault. Intense shearing. Protolith is unclear. Chloritic planes suggest a possible mafic but it doesn't seem so. A dark 90 cm quartz vein in the upper portion.	232.60	233.60	M935384	1.00	1.00	2.93
232.73	233.60	Vm;5%;Sgq;Fl;;Pyf-cg01 Mo01 Ga; major vein (10 cm or greater) 5% smoky grey quartz flooding Pyrite f-cg 1% Molybdenite 1% Galena Very dark grey quartz vein. The darkness suggests a high sulphide content. Opened shear planes have medium-coarse grained pyrite and a smeared soft mineral that appears to be molybdenite but may be galena.	233.60	234.80	M935385	1.20	1.20	3.62
234.50	234.51	Shrh Shear healed 85° Rugged intensely sheared breccia.						
234.80	260.00	AGR; Mass Altered Granitoid; Massive 50% green AGR. 40% dark greenish grey MTN. 10% very diffuse PEG relatively fine grained, cannot be quantified. Alteration appears to be weakening and getting more patchy and pegmatite-related.						
234.80	260.00	Pyfg00.1 Pyrite fg 0.1% Erratically disseminated pyrite also occurs in chlorite hairlines. AGR portions may be 0.2% Diffused PEG portions have trace. The diffuse fine grained PEG are difficult to distinguish and quantify relative to the AGR.	234.80	236.00	M935386	1.20	1.20	0.195
			236.00	237.25	M935387	1.25	1.25	0.062
237.25	260.00	SS04 Sericite-silica 4	237.25	239.00	M935388	1.75	1.75	0.665
			239.00	240.45	M935389	1.45	1.45	0.299

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	4.23	CAS Casing Casing. No core or rock recovered.							
4.23	55.35	AGR; Mass; MTN; Por Altered Granitoid; Massive; Melanotonalite; Porphyritic 70% AGR, greenish and reddish grey. 20% moderately altered MTN coarse porphyry. 10% greenish and reddish PEG. Spottily vuggy and rusty to 24.7 m. Above 31 m alteration is more patchy and apparently related to PEG. Below 31 m alteration is more continuous and redder. Irregularly disseminated fine grained pyrite, 0.1% overall. Some concentration in chloritic veinlets. Some blebby pyrite in pegmatites. At approximately 52.5 m to 55.35 m there is weak intermittent breccia and very weak shearing. Doesn't appear to be a fault. Slightly bleached, crumbly and shattered at 52.5 - 53.6 m probably due to deep weathering.	4.23	6.20	M854554	1.97	1.97	0.279
