Text is dom patchy with intermittent foliated intervals. Fol intervals are 40-50 dtca and defined by patches of weakly to mod schistose ser aggregates or bands of very weak shearing. Perv strong ser-hem alt and associated weak to mod interstitial ank alt. Some random qtz/-ank+/-cal vns/vts; some qtz sweats. Rare random smoky grey qtz+/-white qtz vns/vts-trace floods. Rare chl stringers. 0.05%-0.2% py; diss and vn associated. 1.0m-3.0m intervals with 0.1%-0.5% locally diss fg magnetite. PEG's are white-light pink-light green and m-cg. PEG's dom present as 0.10m-0.50m discrete mass bodies; less commonly interstitial to AGR. PEG's ctcs with AGR vary from sharp to diffuse. 226.33m-226.55m: SMU. Apple green and f-mg with strong shearing 40dtca. Intense perv ser-ank alt and associated weak (trace) interstitial fuc alt. Sharp ctcs. 0.2% diss py. 247.05m-247.20m: SMU. Apple green and f-mg with strong shearing 60 dtca. Perv intense ank-ser alt with associated weak interstitial fuc alt. Fuc abundance higher than usual; trace-1%.	224.50	226.33	N435473	1.83	1.83	0.325
224.50	226.33	SHA04 Sericite-hematite-ankerite dominant 4 Perv strong ser-hem alt and associated weak to mod interstitial ank alt.

Description		Assay						
		From	To	Sample number	Length	Sample Length (m)	AuBest	
		100% SAG. Microbrecciated in first half and sheared/brecciated in second half. Trace disseminated magnetite.	75.00	76.50	N439162	1.50	1.50	0.970
75.42	77.95	Shrh; Bxh Shear healed 65°; Breccia healed Weak to intense shear in SAG accompanied by weak to moderate breccia.	76.50	77.95	N439163	1.45	1.45	0.061
77.95	257.76	AGR; Mass; Fol; PEG; Mot; Bx Altered Granitoid; Massive; Foliated; Pegmatite; Mottled; Brecciated	77.95	79.50	N439164	1.55	1.55	0.402
		90% AGR; 10% PEG. Local ~60 cm Sgq (and a small amount of ankerite) flood at 84.32 m that brecciates portions of AGR wall rock within it. Weak breccia is rarely found elsewhere in some veined sections about 1/3 way through this section. Other rare dm-scale Qcc floods are present near end of this section. Pegmatite abundance varies locally. There is 5% isolated dm-scale SMU and MDK in the last ~35 m of section. Dm-scale shear is found near end. Trace disseminated magnetite.	79.50	81.00	N439165	1.50	1.50	0.166

Description	Assay					
	From	To	Sample number	Length	Sample Length (m)	AuBest
168.00 226.50 MTN; AGR; PEG Melanotonalite; Altered Granitoid; Pegmatite MTN(45%); AGR(35%); PEG(20%). MTN is transitioning into AGR, and has patches of more strongly altered MTN wt int sericite and ankerite. The strongly altered patches can be called AGR. MTN/ transitional AGR is f-mg mottled greenish yellow and grey wt sqg and calcite veins throughout. Patches of AGR are f-mg greenish yellow.	142.50	144.00	M840980	1.50	1.50	0.061

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	2.00	CAS Casing Casing.							
2.00	109.61	MTN; Mot; Pat; Fol; PEG; Mot; AGR; Mot Melanotonalite; Mottled; Patchy; Foliated; Pegmatite; Mottled; Altered Granitoid; Mottled 85% MTN; 10% PEG; 5% AGR. Patchy ser-hem-ank alteration with calcite is found throughout that ranges from weak to locally intense. AGR is found in dm- to m-scale sections and consists of moderate to locally intense ser-hem-ank alteration. Trace local mm-scale gouge. There are a few rare Qtz to Qcc dm-scale floods in AGR and PEG sections. Trace disseminated magnetite and trace chalcopyrite associated with Qcc flooding.	2.00	4.00	N440089	2.00	2.00	0.384

6.73	52.00	TON; MTN; PEG Tonalite; Melanotonalite; Pegmatite TON(50%); MTN(30%); PEG(15%); IDK(5%). TON is f-mg wt a black matrix and off-white phenocrysts; there are patches of red wt hematite; these patches have a red matrix and pinkish white phenocrysts. MTN is f-mg mottled greyish balck and yellow green. PEG is m-cg pinkish white. There are two small IDK dykes at upper end of hole. These dykes are yellowish green grey; wt f-mg off-white phenocrysts. There are calciate and sgq calcite veins throughtout the unit.						
6.73	52.00	HE03 Hematite dominant 3 Patchy moderate hematite staining throughtout the unit.

90.00	136.10	AGR; PEG; SMU Altered Granitoid; Pegmatite; Sheared mafic unit AGR(80%); PEG(15%); SMU(5%). AGR is f-mg greenish yellow. AGR is strongly altered wt int sericite and ankerite and has hematite staining on the upper apx. 12m of the unit. There are sqq veins throughtout the AGR wt associated minor subhedral pyrite. AGR has patchy PEG throughout the unit. PEG is m-cg pinkish white. There is a SMU at 95.14-95.63m; the SMU has intense hematite staing and oxidized. This intense alteration makes shearing angle isn't visible. There is a sharp lower contact.	90.00	91.50	N436535	1.50	1.50	0.275

Description			Assay					
			From	To	Sample number	Length	Sample Length (m)	AuBest
136.10	140.60	SMU; SAG; PEG Sheared mafic unit 70°; Sheared Altered Granitoid; Pegmatite SMU(60%); SAG(30%); PEG(10%). This unit has strong hematite staining and oxidization. These alterations make it hard to distinguish between SMU; AGR; and PEG. But hardness of the rocks differs throughout the unit. A small amount of shearing can be seen at upper end of unit; shearing at an angle of 70-80deg. Lower contact is hard to tell due to strong alterations.	129.00	130.50	N436564	1.50	1.50	0.018
			130.50	132.00	N436565	1.50	1.50	0.039

117.00	180.00	MTN; AGR; PEG Melanotonalite; Altered Granitoid; Pegmatite MTN(50%); transitional AGR(40%); PEG(10%). MTN is f-mg mottled greenish grey. MTN has patches of transitional AGR; which has an increasing sericite and ankerite alteration; these patches have weak to moderate patches of AGR. PEG is m-cg pinkish white. There are sqg veins and calcite veins throughout the unit; wt associated pyrite. Pyrite is f-mg subhedral throughout the unit and range between 0.05 and 3%. There is a gradational upper unit.	99.00	100.50	N432497	1.50	1.50	3.98

Canadian Malartic GP Exploration Division

DDH: **BR-3172**
 Claims title: TB802517
 Section: 1395_E
 Township: A Zone
 Range: Level:
 Work place: Hammond Reef
 Lot:
 Drilled by: Cyr 3 (GB-15)
 Described by: aeapen@osisko.com
 From: 26/05/2012
 To: 28/05/2012
 Description date: 29/05/2012

Collar

Azimuth: 330.00°
 Dip: -66.00°
 Length: 321.00 m

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	4.10	CAS Casing Overburden. A few MTN and AGR stones.							
4.10	179.85	MTN; Mass Melanotonalite; Massive MTN dark greenish grey, mottled by alteration. Locally fine grained and unaltered, as at 128-134.8 m. 10% PEG, greenish to approximately 50 m, reddish below from there. Patchy weak to moderate ser and hem alteration is mainly related to the PEG. Alteration is more continuous at 94-128 m and below 168 m but is always moderate. At 7.8 - 9.0 occurs intermittent limonitic rot. Locally porous. Several more narrow limonitic rotted zones occur to 16.1 m. Trace pyrite to 39 m. Intermittently better below that, trace to 0.1%.	4.10	6.00	N426441	1.90	1.90	0.159

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	1.80	CAS Casing Casing. No core or rock.							
1.80	122.00	MTN; Mass; Por Melanotonalite; Massive; Porphyritic MTN. Dark greenish grey, altered reddish. Medium grained massive to coarse 4 mm porphyry. Red rock throughout. 10% relatively fine grained reddish greenish and beige PEG. Extensive patchy moderate alteration throughout, hematite always dominant. Pyrite is erratic, trace, mostly disseminated with some concentration in chlorite hairlines. Pyrite appears slightly higher, 0.1%, to approximately 38 m.							
1.80	3.05	PEG; Mot Pegmatite; Mottled Greenish PEG. No pyrite.							
1.80	122.00	SHA03; Cl01 Sericite-hematite-ankerite dominant 3; Chlorite 1 Patchy though fairly uniformly distributed throughout, extensive moderate red alteration. Hematite is always dominant. Sericite is common. Ankerite is rarely evident in veinlets. Chlorite hairlines are minor but common.	1.80	3.50	M842829	1.70	1.70		0.198
3.05	4.25	FDK; Mass Felsic dyke 30°; Massive Felsic dike. Hard. Dark grey. Massive uniform fine grained texture.	3.50	5.00	M842831	1.50	1.50		0.305
4.80	6.80	PEG; Mot Pegmatite; Mottled Greenish PEG. No pyrite.	5.00	6.50	M842832	1.50	1.50		0.082

			From	To	Sample number	Length	Sample Length (m)	AuBest
26.74	31.69	Ankerite dominant 3 Moderate interstitial ankerite alteration (35%). Few intermittent units w/ weak to moderate fracture-controlled hematite staining.	26.74	28.23	M856859	1.49	1.49	0.005
		Shear healed 40°; Fault gouge Moderately sheared mafic unit. Pervasive w/ sharp contacts 40-50 deg. Minor unit of wall rock that is weathered - broken and rubbly but showing no shear fabric. Core highly broken and weathered throughout. Several gouge-filled fault planes w/ few intact although negatively weathered.	28.23	29.95	M856861	1.72	1.72	0.005
			29.95	31.69	M856862	1.74	1.74	0.029
31.69	58.50	MTN; Mot; PEG; Pat; SMU Melanotonalite 50°; Mottled; Pegmatite 50°; Patchy; Sheared mafic unit 50° Melanotonalite interspersed w/ pegmatites and rafts of sheared mafic units. 45% MTN. Med to dk greyish-green. F-mg w/ mottled to porphyritic texture. Chloritic w/ interstitial calcite alteration. Hematite + sericite alteration of felsic phenos. Qtz-calcite-chl veining w/ sericite alteration halos associated w/ py. Localized clusters of f-mg magnetite. Mottled w/ PEGs. Gradational contacts. 30% PEG. Beige to pinkish-red and yellowy-green w/ patchy sericitization and fracture-controlled hematite staining. M-cg w/ subhedral grains and localized exsolution textures. Localized clusters of chl. Mottled and irregular but distinct contacts. 25% SMU/MDK. Med-dk to pale greenish. Fg and chloritic w/ interstitial carbonate (ankerite or calcite) alteration. Localized patches of weak to moderate sericitization. Greyish-white Qtz-ankerite/calcite veins/veinlets generally oriented w/in shear plane. Sharp contacts w/ weak to moderate deformation (shearing/foliation).

Description			Assay						
			From	To	Sample number	Length	Sample Length (m)	AuBest	
0.00	2.47	CAS Casing Overburden. Several dozen rounded stones of TON and hematitic MTN.							
2.47	47.06	MTN; TON Melanotonalite; Tonalite 50% MTN. 40% TON. 10% PEG, greenish beige and light grey. TON to 12.5 m. MTN is fine to medium grained massive to some coarse porphyry. No important veins or alteration. Trace pyrite is irregularly disseminated and in chloritic patches and hairlines. The bottom 3 m is more chloritic and locally, heavily pyritic with coarse blebs near the contact with PEG below.	2.47	3.90	M842917	1.43	1.43	<0.005
