MNDM Claims Abstract (proof of beneficial interest)

In September 2015 David Clement with helper and driver John der Weduwen completed a preliminary prospecting program on claim 4277242, which is part of a larger group of claims called the "Maylac Mine Property"

Claim 4277242 covers the historic Maylac Mine's shaft and underground workings.

This preliminary program consisted of locating the old No. 1 vein at surface and collecting some samples to verify the presence of gold on the property at surface, so as to warrant further work.

12 samples were collected and 8 of those were sent for assay. All assays were performed at Actlabs in Timmins, Ontario.

CLAIMS ABSTRACT

The Maylac Mine Property consists of the following claims, recorded on December 15, 2014 in the Thunder Bay Mining Division. The claims are recorded in the name of David Clement, 30%, Mario Pilon, 30% and Lance Eden, 40%.

Claim Number	Unit Size	Township	Due Date
4277242	1	Fulford	2016-Dec-15
4277243	15	Fulford	2016-Dec-15
4277244	5	Fulford	2016-Dec-15
4277245	7	Fulford & Mcquesten	2016-Dec-15

Location and Access

The Maylac Mine Property claims are situated at approximately 5 kilometres north of Geraldton, ON and immediately south of Hutchison Lake. Access to the property is by secondary highway 584 which runs through the town of Geraldton and northward, centrally through the property.

Daily Log

September 23, 2015

Drive from home (Timmins) in the morning to Geraldton and arrived onto property in late afternoon. Light rain turned to heavier rain so we did not do any work that day. Went back to Geraldton, got a motel room for the night and went over some maps and assessment files of the property.

September 24, 2015

Drive from Geraldton onto property. Walked in side road to the old mine site. Located the old shaft. Did a recon of the old mine site area. No buildings from the old mine are presently standing, and some cement pads and structures were located. We then walked north of the shaft to see if we can locate the historic No. 1 vein where the original discovery was reportedly made and visible gold was found. We located what I believe to be the original No.1 vein, by observing a long trenched and blast area. We proceeded to exposed the vein by stripping the old debris and accumulated overburden with grub hoes and a shovel. The debris and overburden was heavier than I had anticipated and we were not successful in exposing the vein with the tools we had brought. We then proceeded to collect choice loose samples from previous blasting of the vein that were lying along the old trench. This I concluded would give me some representation of mineralization that may be present here.

After collecting and labelling the samples we packed up and headed straight home to Timmins from the property.

Conclusion

All 8 samples were anomalous in gold and sample 851611 ran higher than 5 grams per tonne Au. Sample 851611 was also highly anomalous in Lead and Zinc.

The assays are very encouraging and thus a future program is being drawn up for more extensive stripping and sampling of the No. 1 vein and other reported veins on the property. In light of the encouraging results it is recommended (and planned) to have a Geological Evaluation of the property performed by an accredited professional including a completed report. This evaluation could then be utilized as a tool to guide the claim holders on how to proceed with further organized steps to assess the property.

Personnel

David Clement, Ontario prospector, Licence # 1012340

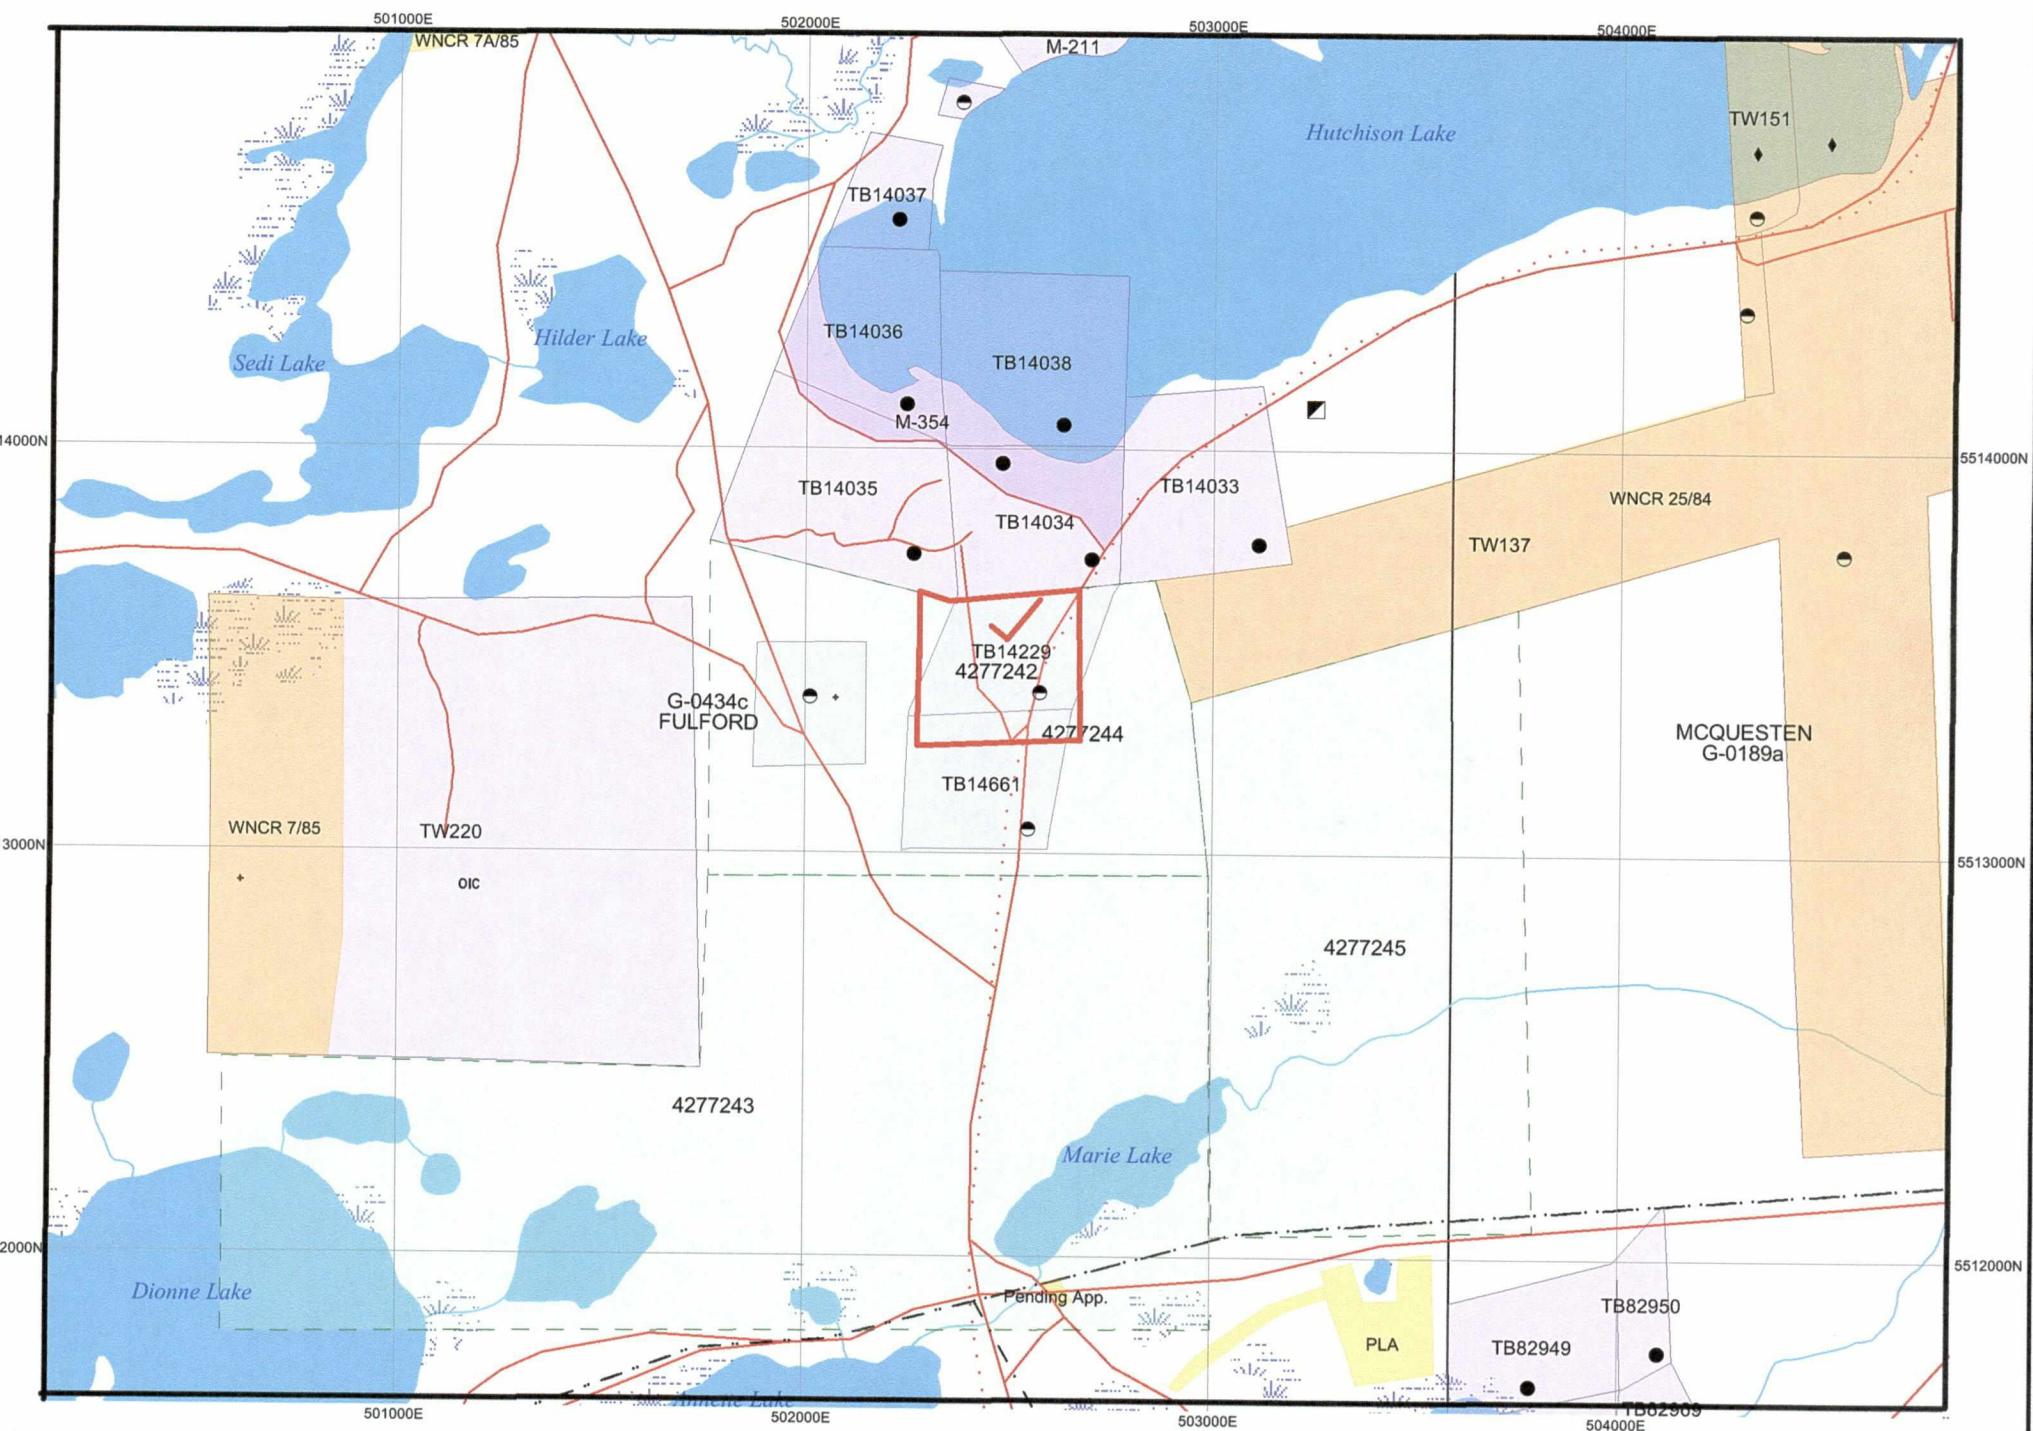

I, David Clement, along with a helper performed the work stated in this report.

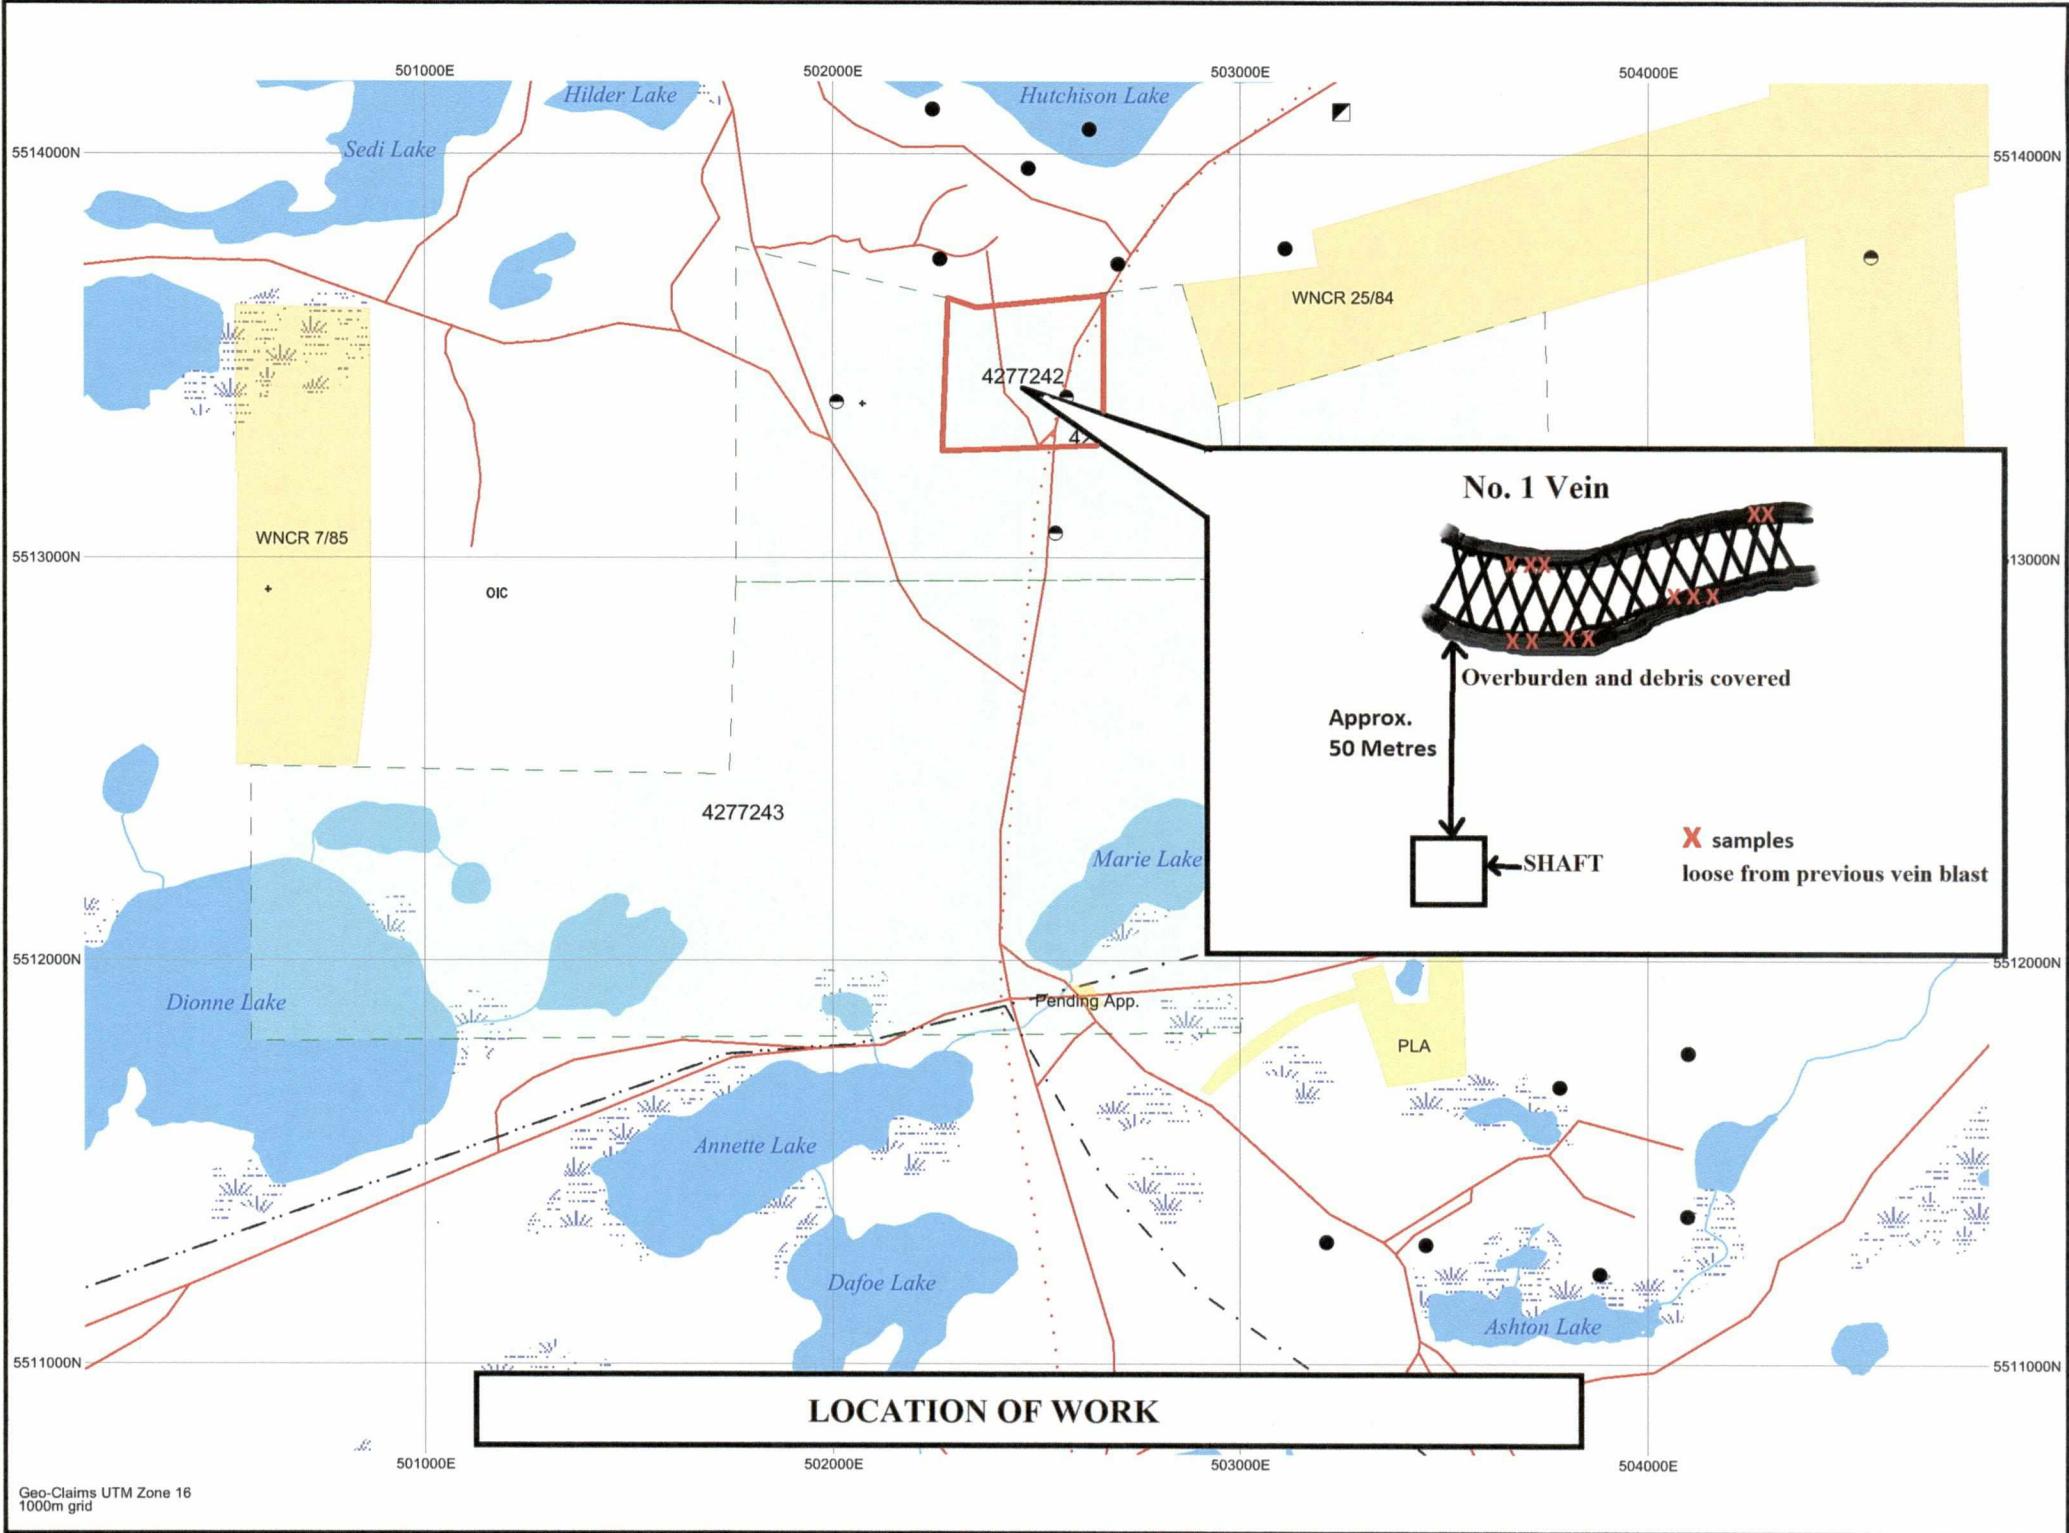

I am also the author of this report.

John derWeduwen, Ontario prospector, Licence # 1001200

CERTIFICATE OF ANALYSIS

8 Rock samples were submitted for analysis.

The following analytical package was requested:

Code 1A2-Timmins Au - Fire Assay AA
Code 1E3-Timmins Aqua Regia ICP(AQUAGEO)

REPORT **A16-00578**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend re assay by fire assay gravimetric-Code 1A3
Values which exceed the upper limit should be assayed for accurate numbers.
