## Copper - Sulfur Anomaly

in

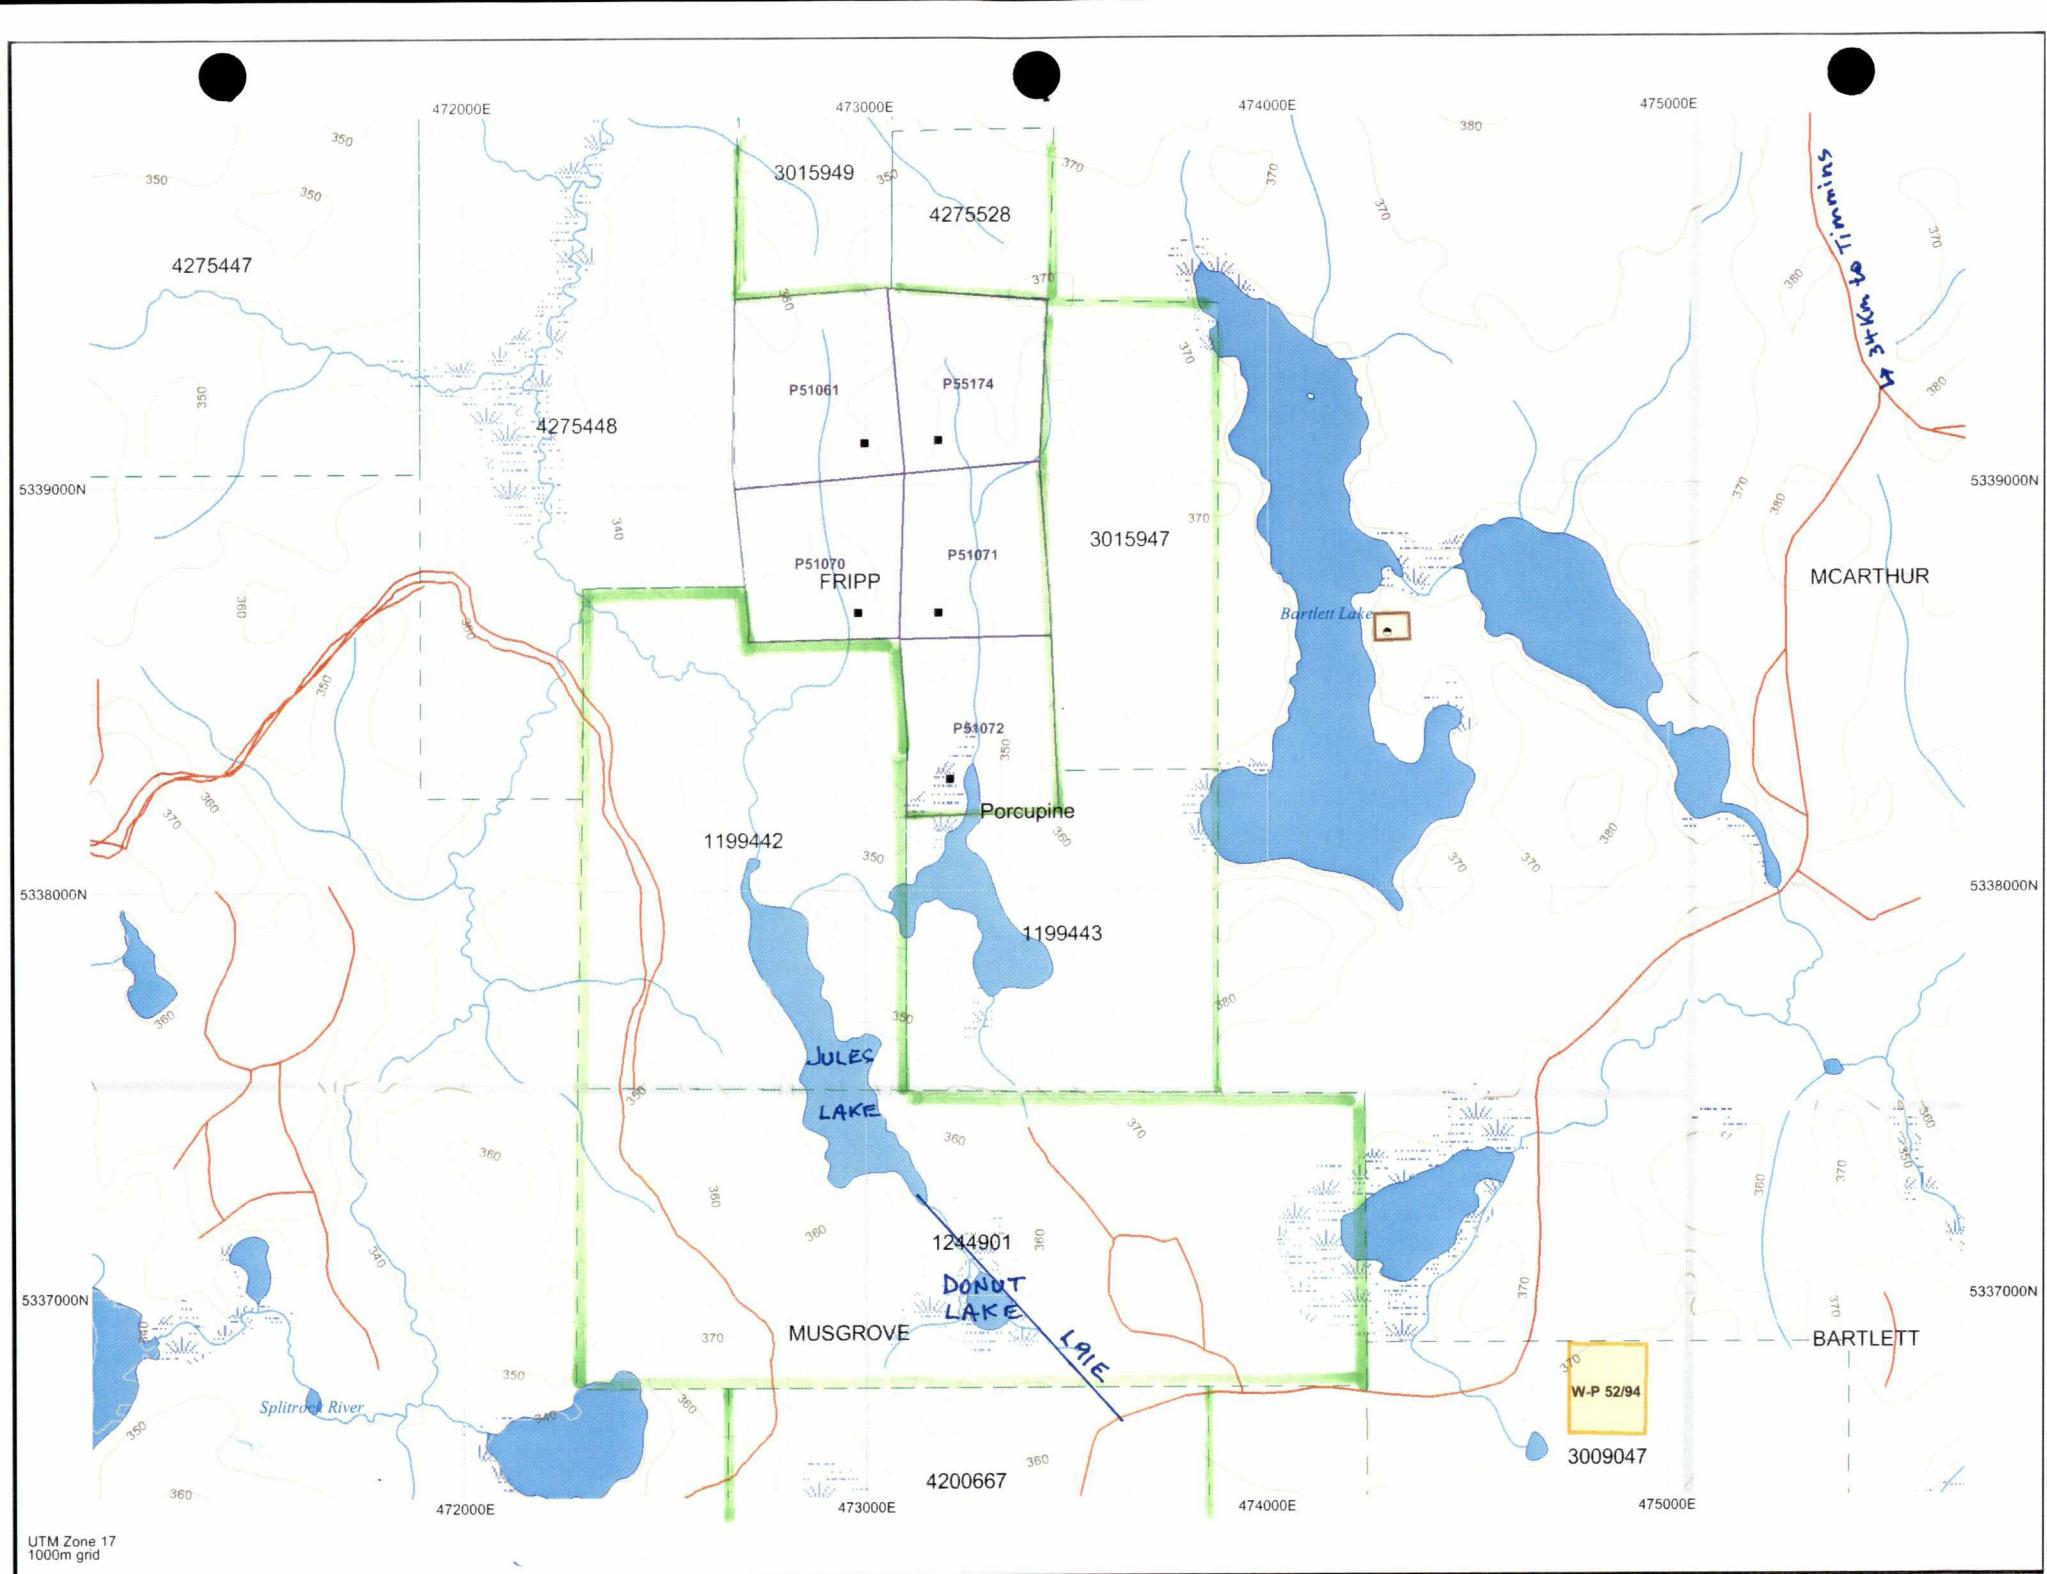

## Jules Lake Sludge

Fripp / Musgrove Townships, Ontario

Claims P 1199442 and P 1244901

Report by Hermann Daxl, M.Sc. Minex, Claim Holder

20 March 2016

**Assessment Work T-702**

Ronka HEM by Hollinger  
300 ft cable, center plotted

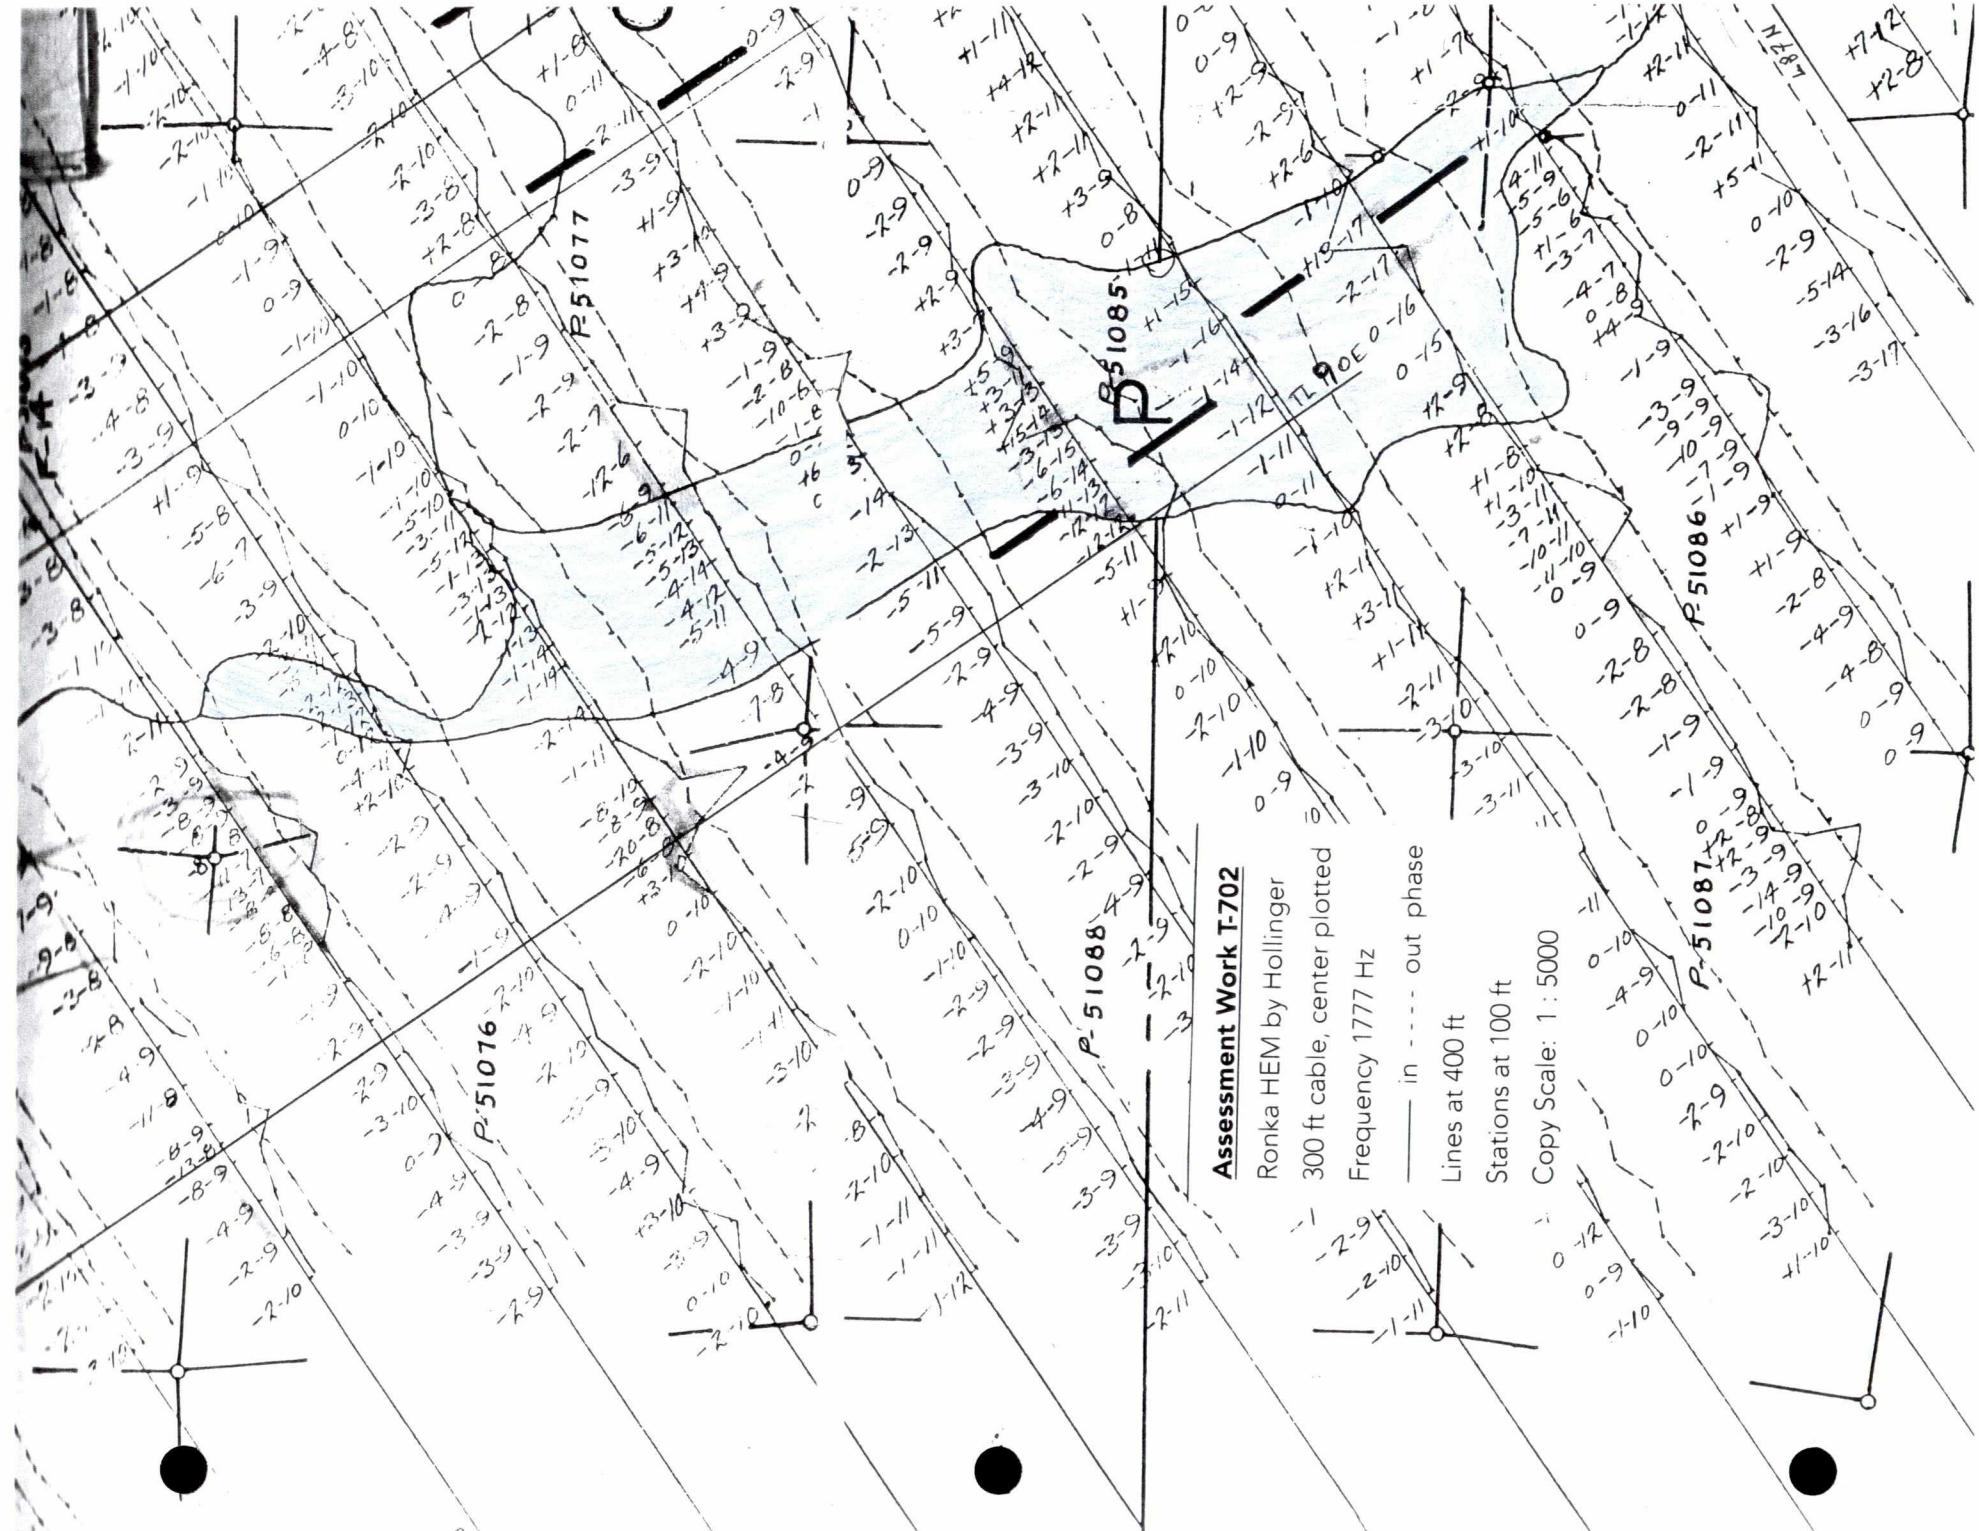

Frequency 1777 Hz

— in - - - out phase

Lines at 400 ft

Stations at 100 ft

Copy Scale: 1 : 5000

## Introduction

The main trend of copper soil anomalies of my assessment work 2.54791 is now confirmed to connect through Jules Lake, where in addition it coincides with sulfur and possibly nickel anomalies, as well as a Ronka HEM conductor. I collected the 39 samples of top-level sludge from the lake bottom through the ice in April 2014 and April 2015, covering the entire Jules Lake which straddles the boundary of my claims P1199442 and P1244901. I dried and sieved them myself and had them analyzed by Actlabs.

I took more soil samples around the lake which I already plotted on the sample location map but they will be part of a future report. I also intend to sample deeper levels in the sludge for comparison since the present values are subtle. My similar assessment work on this claim group is of Donut Lake included in T-6079, 2.44900. Others are T-5850 - 2.40746; T-2689 - 2.48457; and 2.51155.

Travel from Timmins center via gravel roads is 34 km south on Pine Street South, then 3.8 km on the Peterlong Lake Road to NAD83, 17U 473650 E - 5336700 N, which is Line 91E - 8075N in a depression, along which it is 700 m az. 320 via Donut Like to Jules Lake.

## Present Work

The 39 samples of top-level sludge I collected from the bottom of Jules Lake show the anomalous copper-sulfur trend of 30 az. across the lake, and its western splay. This bridges the main copper trend of my report 2.54791. It also fits the pronounced Ronka HEM 1777 Hz NE-dipping (plunging?) conductor on old Line 45 having no cliffs (assessment work T-702 by Hollinger, see excerpt attached). Conductivity of sludge samples was like tapwater. Airborne EM maps show anomalies nearby, but do not show the Hollinger Resource under 10m of swamp, which sheds doubt on seeing conductors through the lake filled with deep sand here (see excerpt OGS Map 81389).

Samples 5131 - 5139 were collected on 18 - 19 April 2014, and 5611 - 5640 on 5 - 12 April 2015, all before the run-off started and the slush came to surface. The several layers of ice totaled 60cm, usually with water in between. The water depth from the ice surface to the

sludge was only 2 - 5 m, and the sludge a further 1 m to a solid bottom of fine sand at the few measurable spots (5131, 32, 36, 39). In comparison, the sludge at Donut Lake was 8m thick and gradually denser downward (T-6079 - 2.44900). This fine glacial beach sand is probably very deep, judging from <15 m high cliffs on shore caused by the long fault parallel to the lake. This western serpentinite margin, if containing a sulfide deposit like the historic high-grade Hollinger Copper Reserve 1300m northward, would have been eroded deeply, so that one should not judge by the strength of conductors. My GPS elevation of Jules Lake is 348m. The samples were located within 5m by GPS as plotted on the enclosed maps.

A 3-L plastic bottle, inverted without bottom and with a sledgehammer head tied inside, was dropped on an insulated cable, then jiggled to make it descend into the sludge, usually <50 cm. Tilting it by pulling on a second wire, a somewhat consistent lump of sludge could be pulled up after several attempts. I poured the lump on packed snow to drain some water, and on the way back it was easy to collect with a pointing trowel into a plastic bag. At home I made an 8cm ball wrapped in paper towels and squeezed the excess clean water of pH 6-7 out. Loosening and crumbling it on paper towels, which I changed about 6 times, drying took 72 to 96 hours at room temperature. The dry crumbs were very hard to crush with a glass bottle in a glass bowl, unless they were diluted with undesirable silt or larger fibers. After sieving to <125 micron in 2014 and to <250 micron in 2015, and rolling with paper for homogenization, about 2 g were sent to Activation Laboratories for Ultratrace 2 - 0.5g aqua regia extraction and ICP/MS analyses. These are not reliable for gold, but for base metals. Please refer to the attached lab certificates.

Scintillometer readings on the southern half of Jules Lake were 1 - 3, versus 10 -13 at home where the sludge samples also had no effect.

## Anomalies

The attached element distribution maps of sulfur, copper, nickel, chromium, silver, lead, with the pertaining lab certificates, illustrate two copper-sulfur trends, one possibly with nickel, in Jules Lake top-level sludge.

The main Cu-S high coincides with the Ronka conductor at the crossing of the main fault az. 330 along the west-shore, and connects the string of Cu soil anomalies along the gully

trending 30az. and continuing 210 az. This augurs well for a copper deposit centered under Jules Lake. Please refer to the attached Ronka excerpt and my copper map of 2014.

The smaller anomaly further north in Jules Lake could be a splay as suggested by another gully from the east, or copper spread along the fault az.330. The excerpt of airborne EM survey Map 81389 shows a conductor here considering side-seeking from crossing flight lines.

I took 6 similar sludge samples previously but from Donut Lake and at about 4 m into the sludge. Background values there are about 10 x lower for Mn, Pb, and several times lower for Ni, Cr, Fe, but similar for Cu, Ag and Zn (T-6079 - 2.44900). That deeper level in the sludge (black muck) there, or the surrounding rocks here, may cause the difference. My other previous work showed that Mn and Pb do not concentrate in black muck. This needs further testing, but should not affect the present copper-sulfur anomalies in Jules Lake.

Sample 5032 (in 2.54791) of thin decayed vegetation attached to local melabasalt 70m east of 5176 is anomalous in Ni, Cr, Pb, Zn, contrary to such a sample over thicker soil nearby, but not in Cu. Anomalous values of Ni, Cr, Pb, but not of copper, may therefore be due to the ultramafic rocks east and south of Jules Lake, possibly enhanced by run-off into the eastern bay. The nearest known sulfide occurrence is uphill southwest of Jules Lake (5352-56), and had no effect even on local soils 5698-99 nor 3041.

However, in addition to copper, nickel also correlates fairly well with sulfur and is higher relative to chromium along the copper-sulfur trend through the lake, so that any sulfides below Jules Lake may also contain nickel. Duplicates show much deviation for Pb and Ag, and both are very low, so that these elements have no importance.

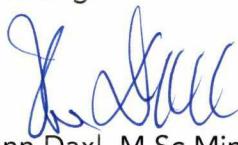

## **Conclusions and Recommendations**

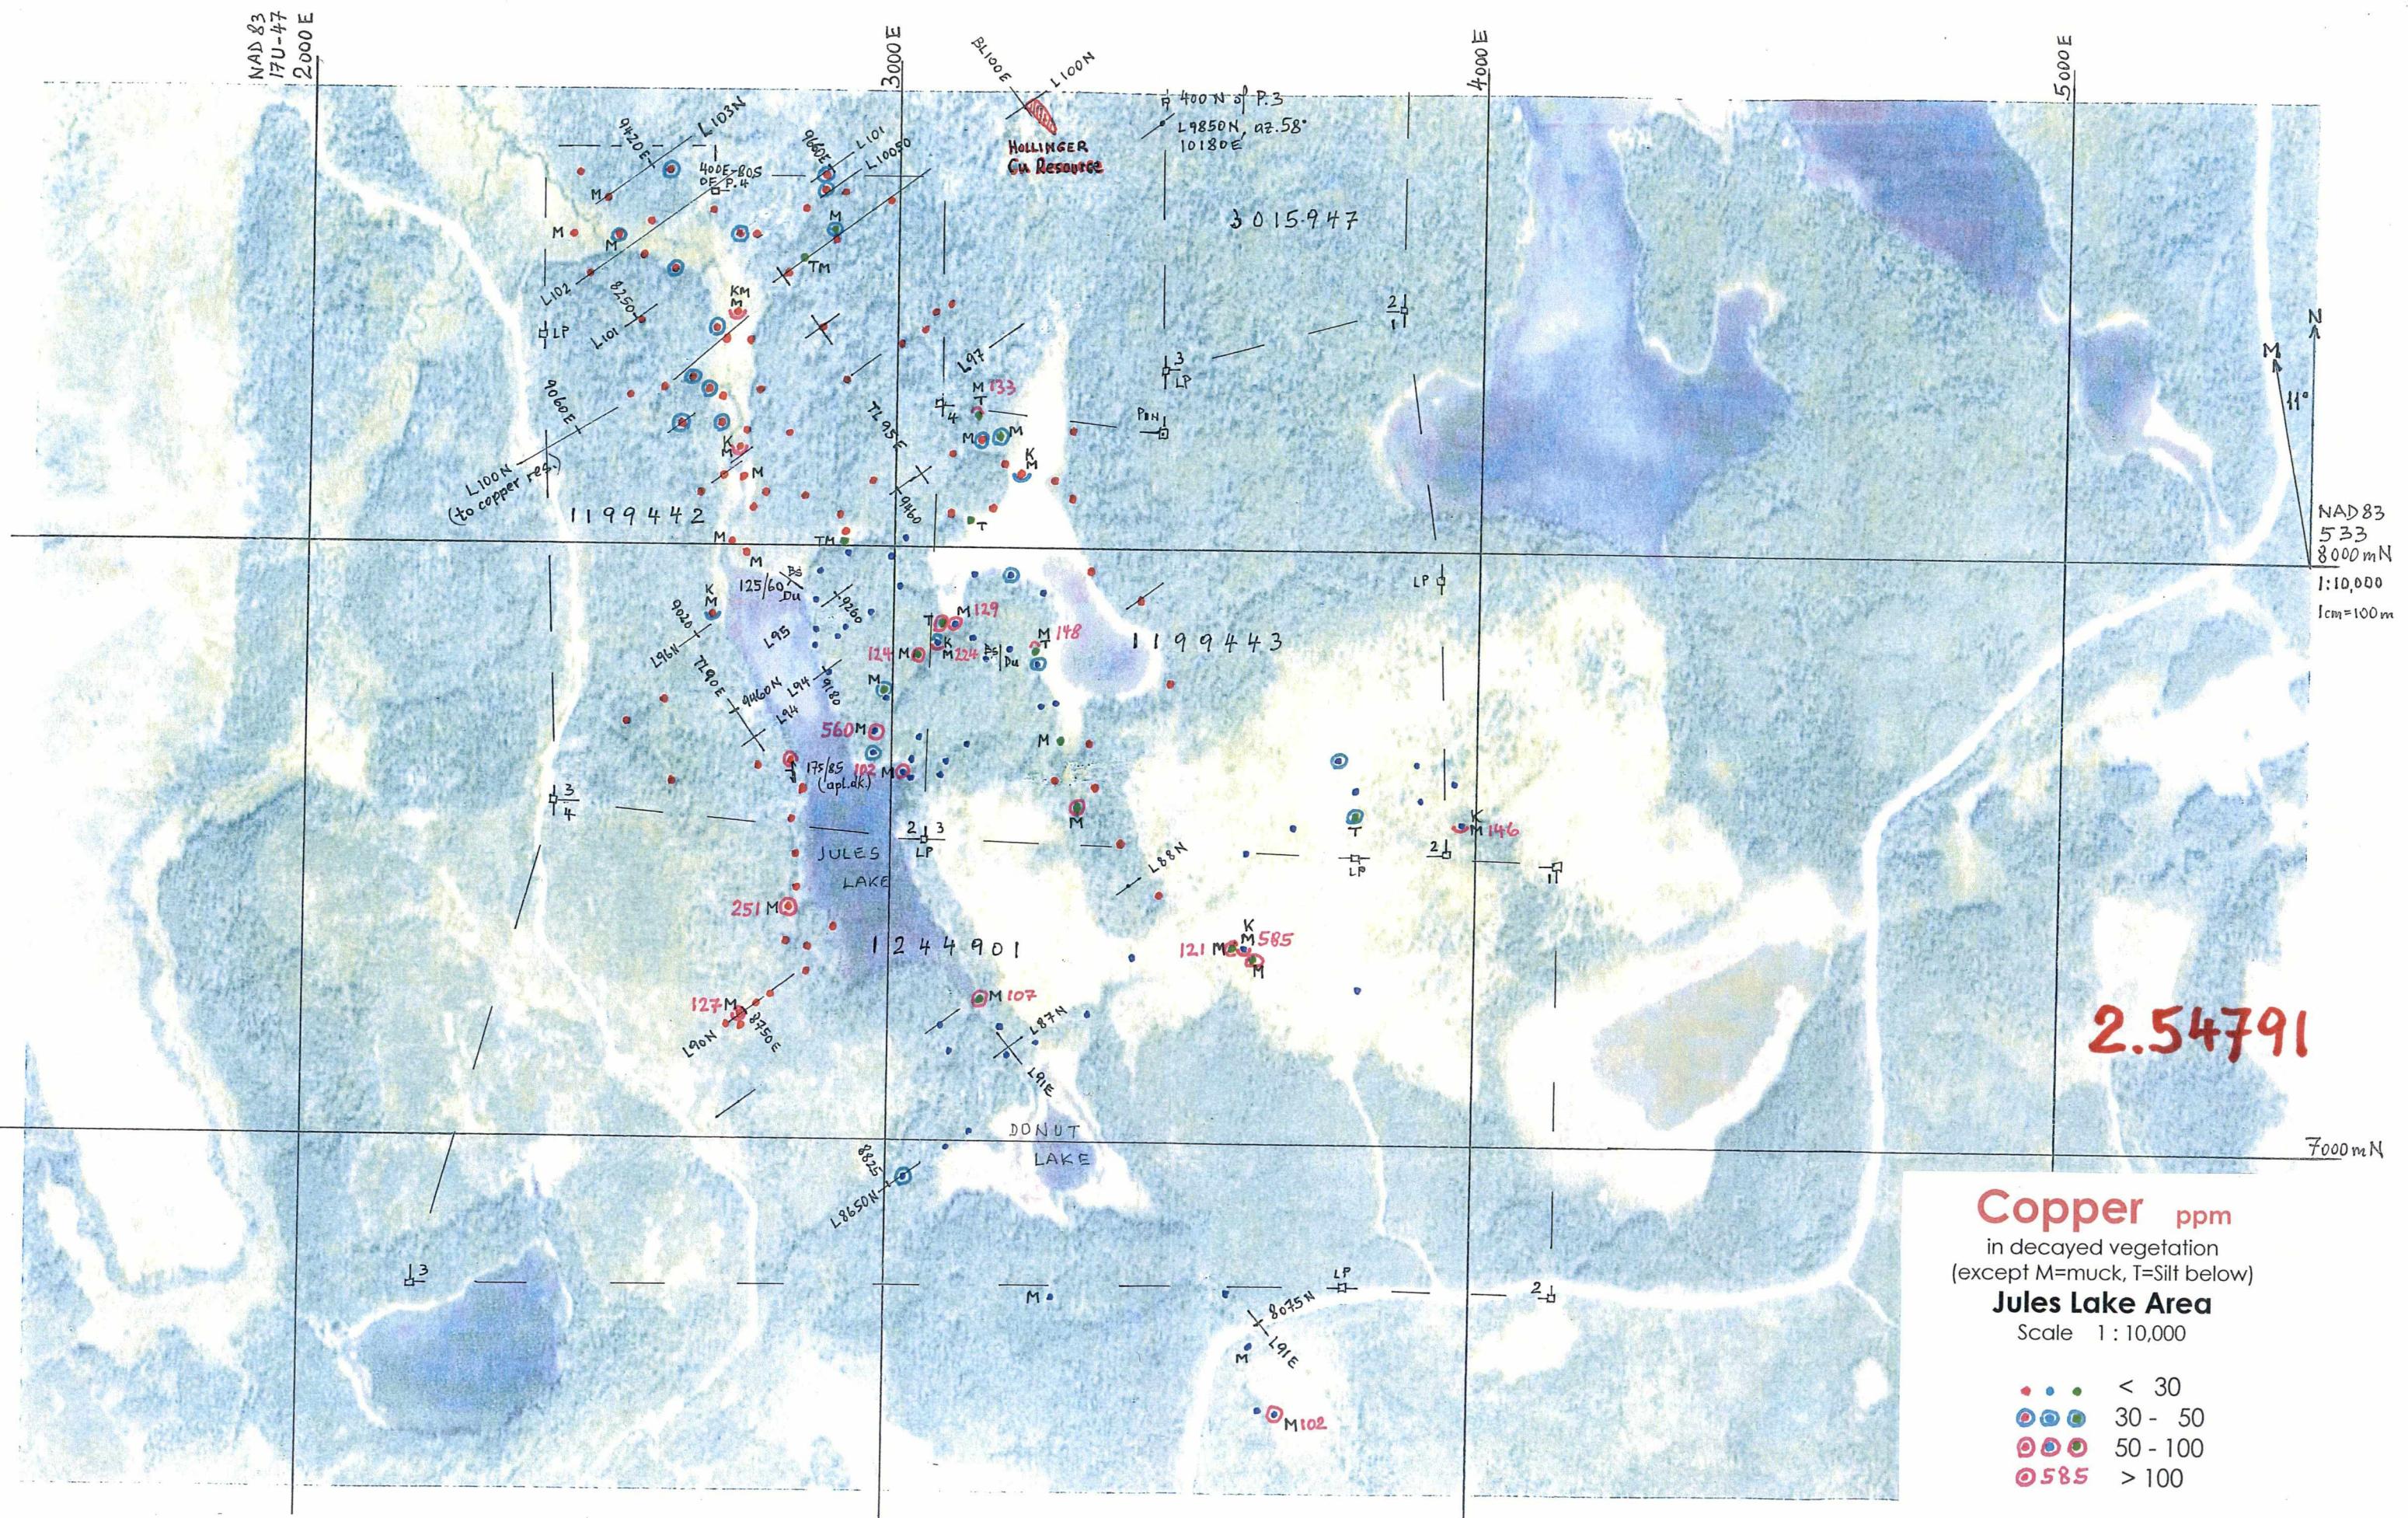

One copper-sulfur anomaly, possibly with nickel, bridges the copper trend across Jules Lake. The other 200m north may be a splay. The values may have been subdued by water flow through the sampled top-level sludge. Sampling of the deepest level of the sludge may result in stronger and more distinct anomalies.

Augering the deeper sludge, as well as a MAG and MaxMin survey on several crossing lines, with 50m and 100m coil separation, 1777 and 3555 Hz, and stations at 25m, all like at Donut Lake (T-6079 - 2.44900) are recommended before drilling.

Respectfully submitted,

20 March 2016

  
Hermann Daxl, M.Sc.Minex, Claim Holder

## CERTIFICATE OF ANALYSIS

DRYED CRUSHED SLUDGE NEAR-TOP

31 Lake Sediments samples were submitted for analysis. sieved <250  $\mu\text{m}$  (except 5627 + 38 125-250  $\mu\text{m}$ )

The following analytical package was requested Code UT-2-0.5g Aqua Regia ICP-ICP/MS - UltraTrace 2 - 0.5g

REPORT      A15-03043

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Assays are recommended for values >10,000 for Cu and Au. The Au from AR-MS is only semi-quantitative. For accurate Au data, fire assay is recommended.

CERTIFIED BY :

Emmanuel Eseme , Ph.D.  
Quality Control

ACTIVATION LABORATORIES LTD.

Near-top dried crushed

Lake bottom sludge, Sieved < 250 µm  
except 5627 + 38 125-250 µm

Detection Limit	0.1	0.1	10
Analysis Method	AR-MS	AR-MS	AR-MS

5611 at 5628	0.4	2.0	220 - took 2 samples of same kind
5612	0.3	7.5	110 - bit fibrous
5613	0.2	2.0	180 - finer top sludge
5614	0.2	1.7	150 - denser but < 50 cm depth
5615	0.1	2.0	250 - top dense
5616	0.2	2.4	140 - < 50 cm bit denser
5617	< 0.1	2.1	160 - 2% shells < 1 mm which fizz
5618	0.2	2.1	160 - 2% shells < 0.5 mm which fizz
5619	< 0.1	1.8	220
5620	0.1	2.1	220
5621	0.2	2.1	220
5622	0.1	2.1	220
5623	0.2	2.7	170 - dried extremely hard
5624	0.2	2.6	180 - dried extremely hard
5625	< 0.1	0.9	100
5626	0.2	1.3	110
5627	< 0.1	0.7	70 - silty, 125-250 µm fraction
5628 at 5611	< 0.1	2.0	230 - 2nd sample of same kind
5629	< 0.1	1.8	180
5630	< 0.1	2.1	220
5631	< 0.1	1.9	310 - finer top sludge
5632	< 0.1	2.0	190 - denser < 50 cm
5633	0.3	2.0	180 - extremely hard to crush
5634	0.2	1.8	250 - extremely hard to crush
5635	0.3	1.7	150 - extremely hard to crush
5636	0.1	1.4	140
5637	0.3	1.2	100 - 10% silt
5638	0.2	1.3	90 - 20% silt, 125-250 µm fraction
5639	0.2	2.6	140
5640	0.9	0.9	30 - 15% silt

NOTE

Dried crumbs are very hard to crush of all except when fibrous or silty.

STANDARD OREAS 45P

Activation Laboratories Ltd.

Report: A15-03043

Calibrated all a little too high,  
but are similar to A14-03414 Sludge.

## QUALITY CONTROL

Activation Laboratories Ltd.

Report: A15-03043

**Quality Control**

Analyte Symbol	Th	U	Hg
Unit Symbol	ppm	ppm	ppb
Detection Limit	0.1	0.1	10
Analysis Method	AR-MS	AR-MS	AR-MS

GXR-1 Meas	2.30	34.60	4010.0
GXR-1 Cert	2.44	34.90	3900.0
DH-1a Meas	> 200	2680.00	
DH-1a Cert	910.00	2629.00	
GXR-4 Meas	15.80	5.10	100.0
GXR-4 Cert	22.50	6.20	110.0
GXR-6 Meas	3.50	0.80	90.0
GXR-6 Cert	5.30	1.54	68.0
SAR-M (U.S.G.S.) Meas	10.00	2.10	
SAR-M (U.S.G.S.) Cert	17.20	3.57	

OREAS 45d (4-Acid) Meas	13.90	1.80	
OREAS 45d (4-Acid) Cert	14.50	2.63	
5612 Orig	0.30	7.70	100.0
5612 Dup	0.20	7.30	110.0
5640 Orig			
5640 Dup			
5641 Orig	6.20	1.10	20.0
5641 Dup	5.80	1.10	30.0
