Prospecting on Claim #4275053 12-Units
Page #1 **2.56470**

Day #1 Oct 23/15

^{Douglas}
Prospecting on Line 0 part of Line 100N for 0-^{SL}1600M
north on line 0 no outcrops found small spruce
swamp for 400M and sand & gravel ^{small pine trees} for
1600M stopped then crossed over to Line 100N at
1600M when south on line 100N sand and gravel
for small creek and small pine trees for all the
1200M on Line 100N.

Day #1 Oct 23/15

Lil Allaire prospected on Line #200N and part
of Line 100N going south for 800M which had
sand & gravel pine trees for 300M south there was outcrops
of ultra mafic at 350M south no mineral no assay taken
On Line 200N sand & gravel small pine trees for
1400M north outcrop was located which was andesite
pillow lava volcanics for 200M and then at 1600M
to 2000M north there is large outcrops of Ultra
mafic north sample taken no mineral. From 2000-2400M
north was sand & gravel pine trees.

Day #2 Oct 24/15

Douglas prospected on Line #300N there was sand
& gravel for 1400M small pine trees at 1400M north a large
out crop of andesite pillow lava volcanics for 100M then sand
gravel for 300M north at 1700M north ultra mafic outcrops
for 300M north from 2000M to 2400M north is sand &
gravel and pine trees. no samples taken on this Line 300N

Day #2 Oct 24/15 Page #2

Lil Allaire prospected on Line 400N small outcrops at 200M north which was andesite pillow lava volcanics from 200M north to 1200M north was sand & gravel small pine trees. from 1200M north to 1400M north is outcrops of andesite pillow lava volcanics then from 1400M north to 1700M north is sand & gravel & pine trees. From 1700N to 1900M north is Large outcrop of ultra mafics no sample taken a few specks of pyrite. From 1900N to 2200M north sand & gravel pine trees outcrops from 2200M north to 2400M north is outcrops of andesite pillow lava volcanics no samples taken.

Day #3 Oct 25/15

Douglas prospected on Line 500N outcrop at 100M north andesite pillow lava volcanics no sample taken. From 200M north to 1000M north is sand & gravel pine trees. at 1000M north to 1500M north there was outcrops of andesite pillow lava volcanics for 500M no samples taken a few specks of pyrite. From 1500M north to 1700M north was sand & gravel at 1700M north large ultra mafic outcrop ^{200M} few specks of pyrite no sample taken. From 1900M north sand & gravel & pine trees to 2200M north from 2000M north to 2400M north is outcrops of andesite pillow lava volcanics no samples taken.

Day #3 Oct 25/15

Page #3

Gil Allaine prospected on line 600-700N there was outcrops of andesite pillow lava volcanics on both lines for 200M then there is sand & gravel & pine trees for 800M north from 800M to 1500M north is outcrops of andesite pillow lava volcanics some speck of pyrite no samples taken on either lines. From 1500M north to 1700M north is some outcrops of ultra mafic no samples taken from both lines. From 1700M north to 2200M north is sand & gravel and pine trees some spruce trees also both lines. At 2200M north to 2400M north there is some outcrops of andesite pillow lava volcanics on both lines no samples was taken.

(Report on Claim #4275053-12 Units)

This claim is also very important claim because there was a drill hole #839-28-2 which was drilled by canamax in 1984. I don't really know the ^{exact} location if it is on this block of claim or is it near my border of my claim its hard to make out the exact location by the drill hole ~~has~~ Au, Ag, Cu, Zn. this is in there report. This hole was drill East of the 50,000 tons of .3002 Au about 1 mile along the same strike and along the same row of airborne conductor as the Deposit.

This area is a very good area to be looking for gold its got all the the right rock types for gold. The gold will be found along the ultra mafic contacts. Over at the Primero mine deposit in Hislop Twp to the west the gold is being found all along the Ultra mafic contacts I know the geologist working there and they told me thats where the gold is found. These claims which I hold in Mc Cool Twp is excellent property to be looking for gold. The claims need line-cutting mag, vlf and a IP survey done to pick up the mineralization for gold along the ultra mafic formation. The weaker airborne conductors is along side the ultra mafic contacts.

Douglas Lalonde
