ASSESSED CLAIM

Claim 4209859 is in Effingham Township in the unorganized portion to the west of Lot 5 Concession 9 and north of Lot 7 Concession 8. The claim is a two-unit claim not adjacent to any other mineral claims.

LAWRENCE CLAIMS IN EFFINGHAM TOWNSHIP

The claims are approximately 40 km north of the town of Kaladar and may be reached by traveling 42 km north on Highway 41 to the Machesney Lake Road. Follow the Machesney Lake Road west for 5 km to reach the claims' eastern boundary.

KALADAR NORTH TO CLAIMS ON MACHESNEY LAKE ROAD

ASSESSMENT WORK

The assessment work was prospecting, grab sampling and sample assay. I was continuing work started in May 2013 when I encountered a granodiorite ledge in the west half of the claim which showed signs of pegmatite seams. On 14 Nov 2014 I traveled directly to this ledge and collected samples that I sent to Swastika Labs for Au assay and multi-element analysis.

SAMPLES

I collected two rock and one soil sample. The collection points are shown on the map and in the sample tables. The two samples sent to Swastika Labs contained virtually no gold and the rock sample submitted for multi-element analysis provided little indication of any mineable ore. Chromium was shown to be 348 ppm which is about three times the textbook background level.

ROCK SAMPLE WG141101

FINDINGS AND CONCLUSIONS

Gold and precious elements are not present but there might be greater concentrations of chromium to be found in the area.

ADMINISTRATION

I made one return trip from Wellington Ontario to Effingham Township to perform the assessment work. The roundtrip is a distance of about 350 km. No accommodation was required on that trip and food was \$40/day.

This report completed 10 January 2015

Robert D. Lawrence, BSc

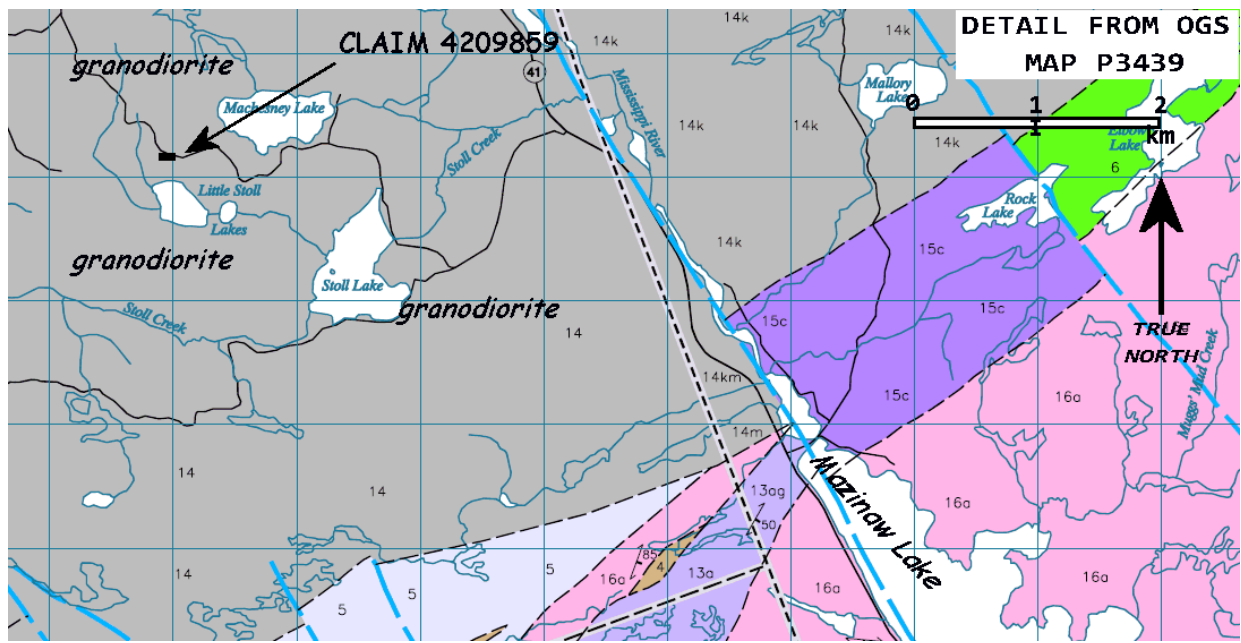

GEOGRAPHY, BEDROCK GEOLOGY, HISTORY

GEOGRAPHY

Within a radius of 5 km the area has several small lakes and bogs and rolling hills reaching an elevation of 350 m from valleys with elevations of about 315 m. The area is covered by coniferous and deciduous forest. The areas of swamp and bog contain alders, cranberry plants, grasses and reeds. There are several rock outcrops along the Machesney Lake Road and on the south and north shores of Machesney Lake. From the north a stream flows into the lake. During the spring a variety of small creeks also flow into the lake. The outlet of the lake is at the east end. Two small streams flow from the north and the west into the Little Stoll Lakes. The stream from the north becomes a large beaver pond (400 meters N to S) in the middle of claim 4209859.

BEDROCK GEOLOGY

The claims lie within the Weslemkoon Batholith. The OGS Map P3439 shows the area as Intermediate Intrusive Rocks while OGS Open File Map 132 refers to it as Weslemkoon Tonalite. Whatever -- the rocks are mainly granodiorite. Within two km of claim 4209859 I have found examples of granite, granite pegmatite, granodiorite, kimberlite, granite gneiss, hornfels, basalt, tuff and syenite.

DETAIL FROM OGS MAP P3439 NORTH OF MAZINAW LAKE.

HISTORY

In March 2010 I had taken samples from the bottom of the beaver pond in the middle of Claim 4209859 and found one sediment sample that contained a crystal that might be a microdiamond. Two other samples had small amounts of kimberlite. In May 2013 I took sediment samples around the west shore of the same pond and found more samples of kimberlite. I also encountered the granodiorite ledge examined in the outing of 14Nov 2014.
