Summary

Samples were collected during a prospecting and sample collection program in the central part of Cunningham Township. A total of 20 samples were collected, 14 of which were assayed for gold by fire assay. All 20 samples were analysed by ICP-MS after a four acid dissolution .

Location, Access and Ownership

The claims are located in the central part of Cunningham Township. They are numbered P4259264, 4259265 and 4259266 and are recorded in the name of Skead Holdings Ltd. Access is from the Blamey forest access road which runs north from the forest access road between Sultan, Ontario and the Watershed on Hwy 144 about 150 km north of Sudbury, Ontario. Sultan can also be reached from Hwy 129 by secondary Hwy 667 about 30 km south of Chapleau, Ontario.

Work Program

Samples received from the field were cleaned of dirt and moss with a wire brush and placed in plastic bags with a sample number tag. The number was also marked on the outside of the bag with permanent black marker. One approximately fist sized piece from each location was also set aside for further examination.

The samples were sent to Swastika Labs for sample preparation and analysis of 14 samples for gold by fire assay. Pulps and rejects were collected from Swastika Labs, an approximately 20 to 30 gram portion of the pulp was placed in marked coin envelopes and sent to Acme Labs for analysis by ICP-MS after 4 acid dissolution.

The remaining pulps were placed in 40 dram plastic vials, marked with the sample number and stored in wooden boxes. Rejects have also been stored.

Results and Conclusions

Three of the 14 samples assayed for gold gave greater than 75 ppb, the remaining samples gave trace amounts of gold. The ICP-MS analysis showed anomalous values in Ni, Co, Fe and S. Further sampling and a soil sampling survey should be carried out. The property contains sulphide iron formation intruded by ultramafics, a good base metal environment. There are also indications for gold.

Respectfully submitted,

R. A. MacGregor, P. Eng.
