Report on 2017 Drilling Program Completed on the River Valley Platinum Group Metal Project, Dana Township, Ontario

1. Summary and Introduction

The 2017 Drilling Program was undertaken on New Age Metals (NAM) River Valley PGM Project between July 17 and October 1st 2017. The program consisted of the completion of 15 diamond drill holes. The 15 hole drill program was based on the results of the 2015 and 2016 Drilling Programs that resulted in the identification and expansion of new PGM mineralization zone (See Figure 5 and 6). The zone is now named the Pine Zone. The planning of the 2017 program was aided by the 2015/2016 drilling results in conjunction with IP geophysical surveys completed in the past and early in 2017. The 2017 Drilling Program resulted down-dip and laterally expansion of the Pine Zone. The supervision of the program and Core Logging was undertaken by the Author of this report, New Age Metals Senior Projects Geologist Richard Zemoroz.

2. Project Location and Access

The location of the River Valley PGM Project can be summarized as follows:

- **Area:** northern Ontario
- **Township:** Dana Township
- **Mining Division:** Sudbury
- **Ownership:** 100% owned by New Age Metals Inc. (formerly Pacific North West Capital Corp.)
- **Claim Map Sheet:** CLM450 (Mining Lease)
- **NTS Map Sheet:** NTS_041I/NE
- **UTM Coordinates:** centred at approx. 555400 mE and 5172500 mN (NAD83 UTM Zone 17N)

The River Valley PGM Project is located 145 road-km east of the City of Greater Sudbury, Ontario (Figure 1). The project is covered by 2 mining leases (CLM450 and CLM451) and 16 unpatented mining claims. The River Valley Extension Project, located south adjacent to the River Valley Project, was acquired from Mustang Minerals in 2016 and consists of 14 unpatented mining claims. All work reported herein was completed on CLM450, which is a Mining Lease.

The River Valley Project is accessed from Sudbury by travelling east along Highway 17 for 100 km to the town of Warren. Turn and travel north along Highway 539 for 22 km to the junction of Highway 805. Turn left and travel northwest along Highway 805 from the village of River Valley for 20 km. Turn right onto a logging road and travel 800 metres, then turn right at a fork in the road and continue an additional 200 metres. At this point, several skidder roads and access trails lead south toward the mineralized zones.

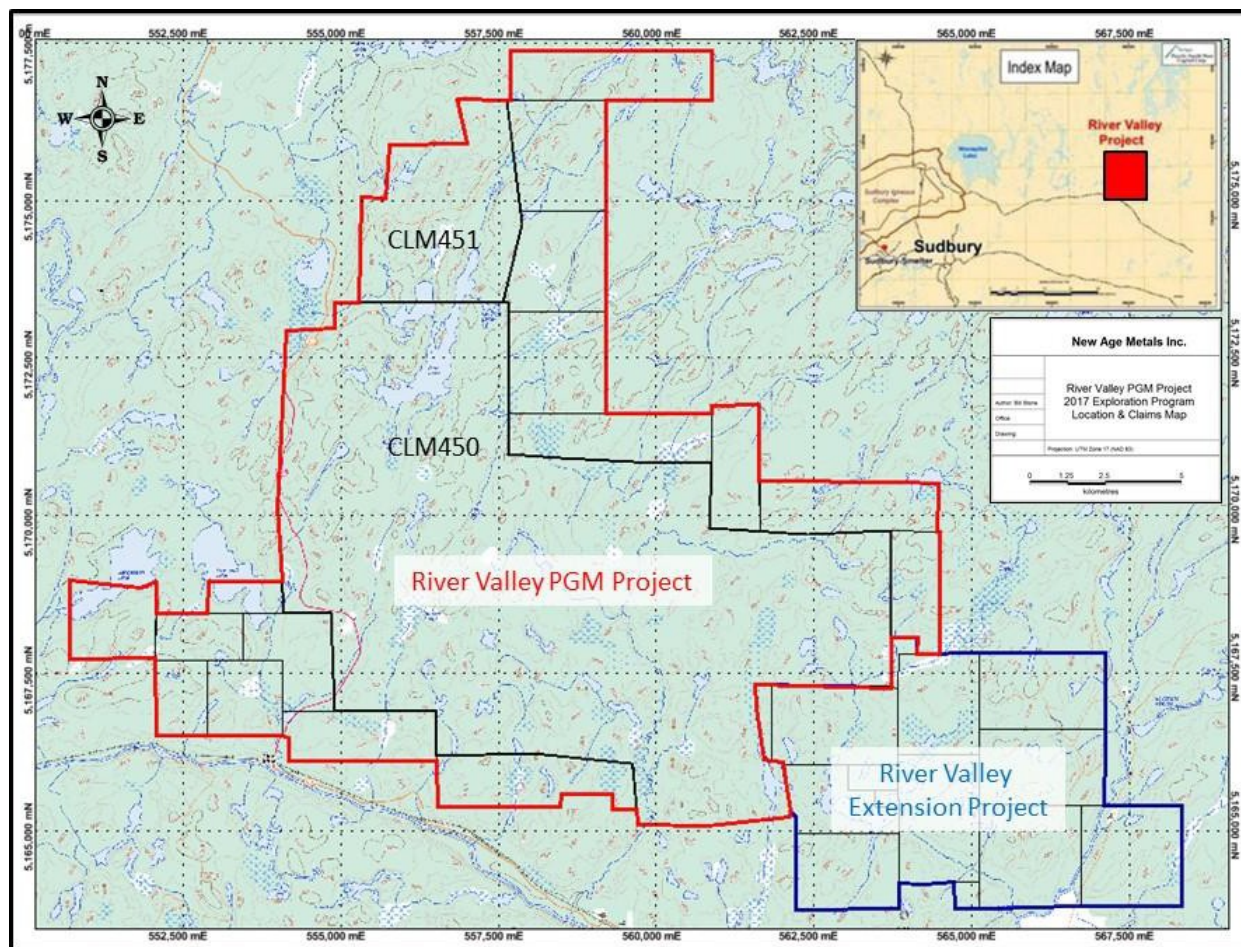

Figure 1. Location and claims maps for the River Valley PGM Project near Sudbury, Ontario. Claims 450 and 451 are Mining Leases.

3. Description of 2017 Exploration Activities

The 2017 Drilling Program consisted of drilling fifteen NQ size diamond drill holes between July and October 2017 under Exploration Permit PR-13-10095R. The diamond holes were drilled on footwall Targets Pine Zone/T2 and T3 (Figure 2&3). One hole was drilled in the Banshee Lake (Figure 4) area to test a chargeability high detected there, for a total of 4088.2 metres. The holes were drilled by Jacob & Samuel Drilling Ltd., a 51% Metis Nation of Ontario owned drill contracting company. Holes PZ-17-01 to PZ-17-08 were drilled to test the lateral and up dip extent of the Pine Zone T2 target. Holes T3-17-01 to T3-17-06 were drilled to test the down dip extent of the Pine Zone. Hole BL-17-01 was drilled to test an IP Chargeability high off the contact in the footwall in an environment similar to the Pine Zone but further South along the contact in the Banshee Lake area. Dip tests were taken approximately every 50 metres with a REFLEX tool. Core logging and sampling were done on a property located in the town of River Valley and rented by NAM. After logging, the sections of core to be sampled were delimited with a grease pencil, and then split using a diamond saw. Half the core total of 1166 split core samples from the 15 2017 drill holes were submitted to SGS for multi-element assay analysis. Each sample placed in a plastic bag with appropriately numbered tag corresponding to a sampling interval also placed in the bag. That same number was also printed on the outside of the bag as a cross check. A quality control sample consisting of a silica blank or a reference material of known concentration was inserted into the sample stream every 20 metres. The samples were then put in rice bags and shipped to SGS sample preparation facilities in Sudbury, for crushing and sieving. The samples were then sent to SGS laboratory in Lakefield for assaying. The pulps and rejects have been returned to NAM for storage at its compound in River Valley. The core boxes were labeled and tagged before being placed in core racks set up in the back lot of the rental property where it is readily accessible. SGS Laboratories analyzed 1166 samples of diamond drill core including inserted reference materials and silica blanks using ICP and Fire Assay. Assay Certificates and Assay Results are included in Appendices 2 and 3.

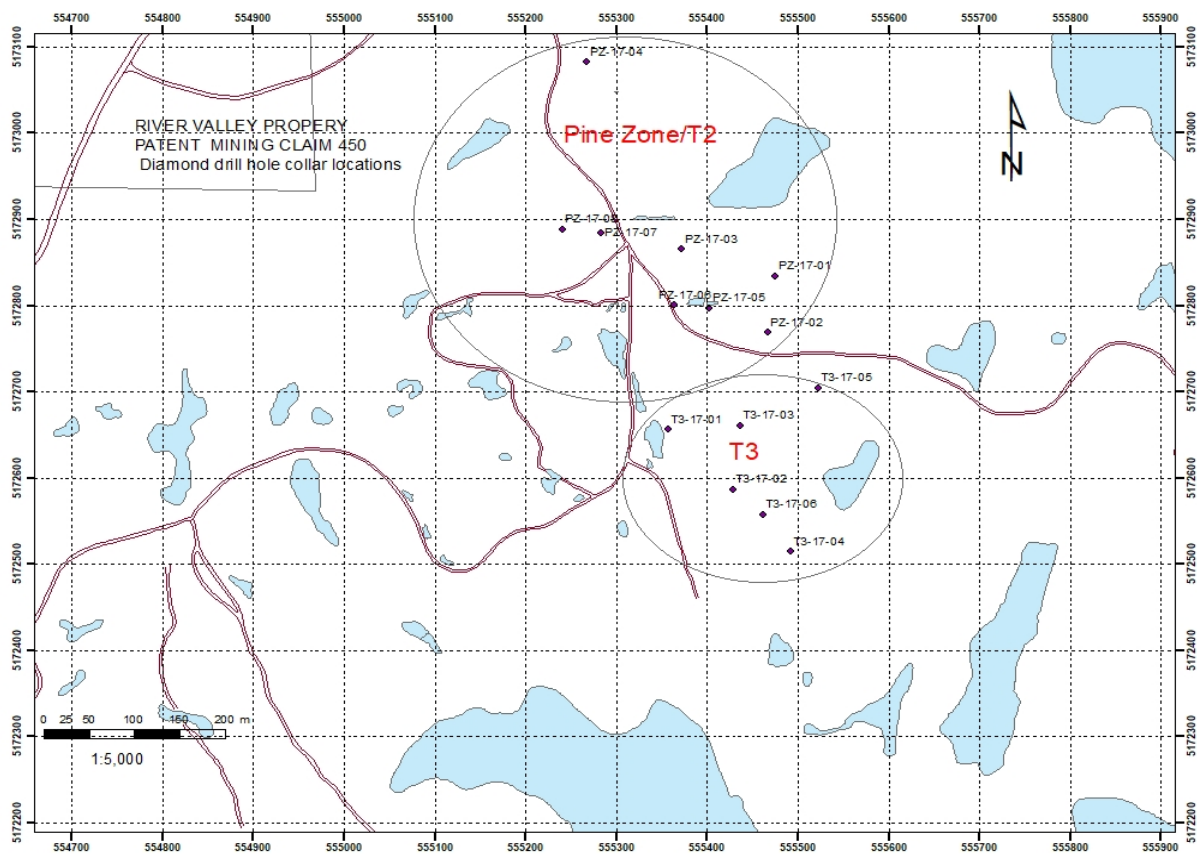

Figure 2. Property map showing the locations of 2017 diamond drill holes and Target areas.

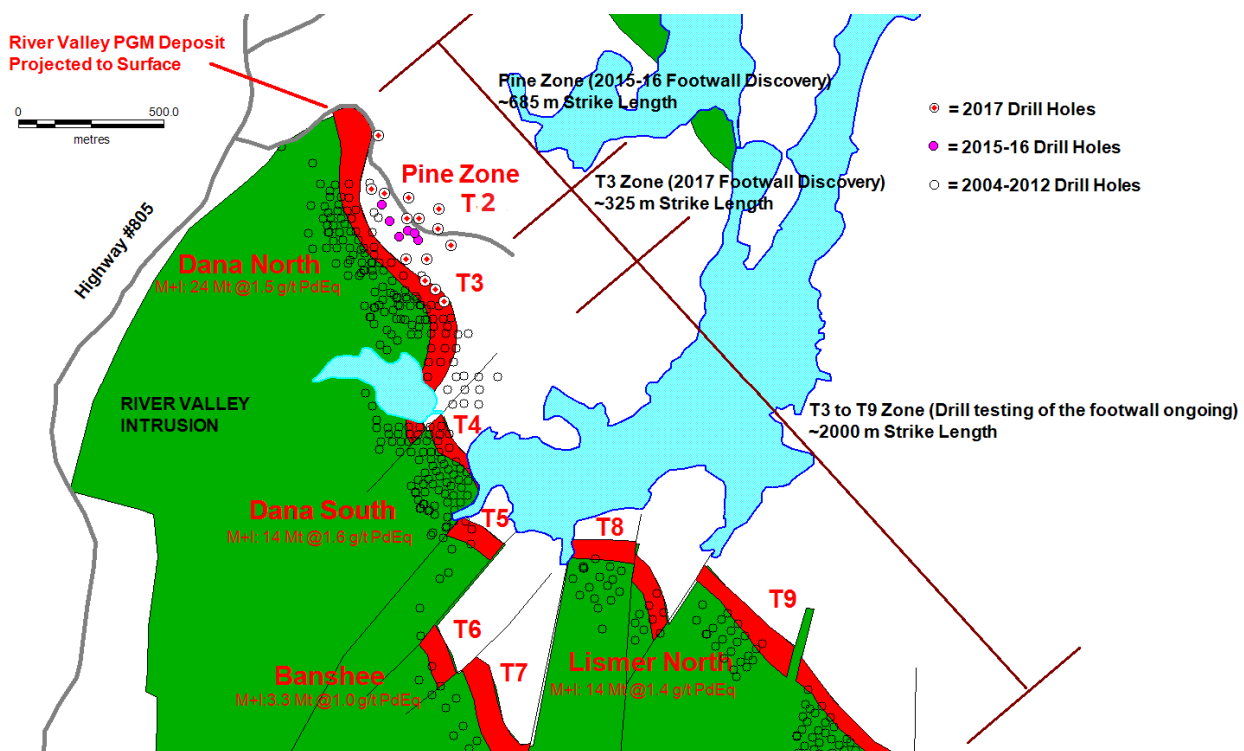

Figure 3. Geological map showing the locations of historical drill hole locations and 2015-2017 drill locations on the Pine Zone/T2 and T3 exploration areas. Other possible exploration targets (T4-T9) are also shown.

Figure 4. Banshee Lake area drill hole targeting similar Footwall IP Chargeability high.

4. **Results**

All but 2 of 15 drill holes intersected favorable rocks and 8 intersected significant PGM mineralization (Table 1- 2). The significant new drill assay results include: 2.45 g/t Pd+Pt over 28 metres from 4 metres downhole including 7 g/t over 3 metres in T3-17-04; 2.04 g/t Pd+Pt over 4 metres from 196 metres downhole in T3-17-01; 2.52 g/t Pd+Pt over 2 metres from 290 metres in hole T3-17-02; 2.6 g/t Pd+Pt over 2 metres from 265 metres downhole in hole T3-17-03; 2.58 g/t Pd+Pt over 10 metres from 182 metres downhole in PZ-17-06; 2.98 g/t Pd+Pt over 4 metres from 66 metres downhole in hole PZ-17-08. The Hole BL-17-01 drilled to test a footwall IP chargeability to the South failed to intersect any host rock that typically is associated with PGM mineralization in this deposit. Copies of the drill core logs, sample details, assay certificates and cross sections are provided in Appendices 1-4.

The 2017 drill program successfully expanded the PGM mineralization down and up dip and laterally along strike at Target T2 and T3 (Figure 3-4) and corroborated the geological model. The drill results demonstrate the potential for significant new near-surface mineralized zones in other previously overlooked and covered areas at the River Valley PGM Project and even farther to the south at the River Valley Extension Project (See Figure 3).

Table 1. Drill Hole Collar Locations and Orientations

Hole	UTM E	UTM N	Azimuth (°)	Dip (°)	Length (m)

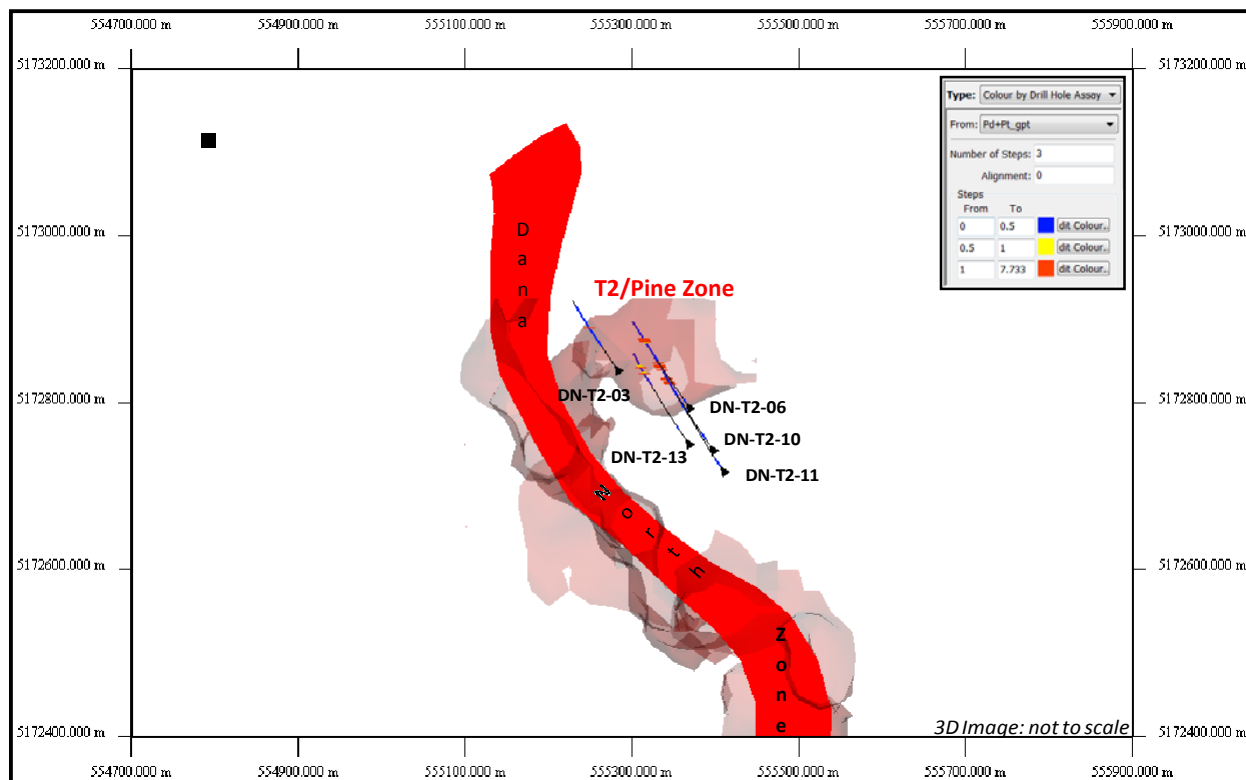

Figure 5. Geological plan view of the 2016 drill hole collars and traces. All the holes were collared and drilled on CLM450, which is a Mining Lease. For additional scale, the east-to-west extent of the Target T2/Pine Zone = 200 metres.

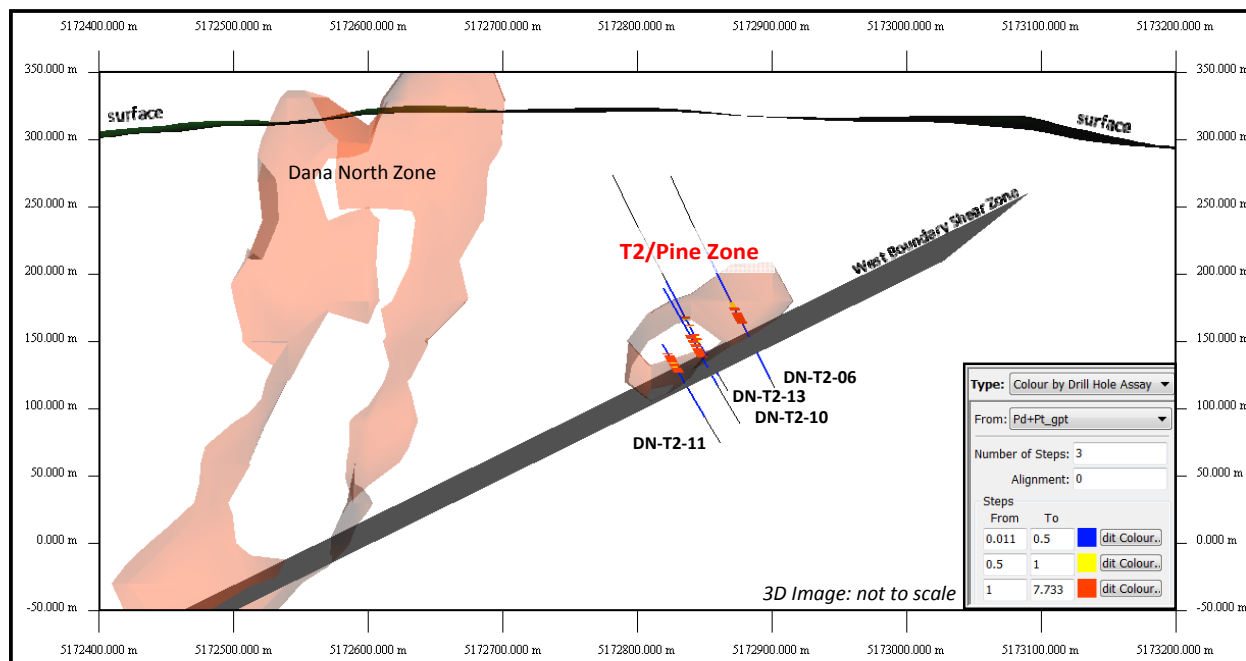

Figure 6. Interpreted geological cross section 555325mN looking westwards at the Pine Zone and Dana North Zone. For additional scale, the horizontal distance from DN-T2-11 to DN-T2-06 = 60 metres.

5. Recommendations

The Pine Zone itself remains open to expansion by drilling laterally along strike and up- and down-dip (Figure 5). The next steps in PGM exploration of the Pine Zone and other similar priority footwall targets areas at River Valley include three-dimensional geological modeling of the 2017 drill program results, performing new IP geophysical surveys in the Dana South and Banshee Lake area, and drill testing priority targets in 2018 that may be identified in these areas from the ensuing geophysics. Further drilling may be warranted in the Pine Zone after modeling of the geophysics. A drill program of approximately 20 holes is recommended. In addition, a program involving further field work and surface grab rock sampling is recommended to determine the extent of newly discovered mineralization located in the footwall to the Dana South Zone.

6. Digital Data

Copies of digital data for the drill holes are provided in Appendix 6.

Statement of Qualifications

RICHARD ZEMOROZ, Bsc.

I, Richard Zemoroz, Bsc., residing at 3064 Brunet Crescent, Val Caron, Ontario, do hereby certify that:

1. I am a Senior Project Geologist with New Age Metals Inc., based at 59 Burch's Lane, Thousand Islands, Rockport, Ontario POV 1E0.
2. I am a graduate of Lake Superior State University (Sault Ste Marie, MI) with a Bachelor of Science degree in Geology (1985). In addition, I have a Geology Engineering Technologist Diploma (1983) from the Cambrian College of Applied Arts and Technology (Sudbury, ON).
3. I have worked intermittently as a Geologist for a total of 17 years since obtaining my B.Sc. degree.
4. The information contained in this report and enclosed documents is based on personal observations, review of previous work, and supervision of the work reported herein.
5. I hold no interests in the properties or securities of New Age Metals Inc.

Dated this 4th day of January, 2018, Sudbury, Ontario

Richard Zemoroz, BSc.

Appendix 3: Drill Core Assay Certificates

Appendix 4: Logs & Cross Sections

CROSS SECTION: BL-17-01

Cross Section Details

DDH Co-ordinates			Orientation		Depth		
Easting	Northing	Elev	Azimuth	Dip	Total	Depth	Depth OB
555769	5171131	309	325	-60	356 m		3.48 m

Assays

All Assays in Grams per Tonne 3E
 Where 3E is Combined Pd+Pt+Au
 NSA= No Significant Assays

Stratigraphy/Lithology

- overburden
- foliated zone/fault/mafic dykes
- Huronian sedimentary rocks
- River Valley Intrusion: Breccia Zone
- River Valley Intrusion: Boundary Zone
- paragneisses
