1 Introduction

Between May 27th and July 11th, 2018 a diamond drill program was carried out on the Kasagiminnis Lake Property. Fifteen holes (Kas-18-01 to 15) totaling 1870 meters were drilled as part of a due diligence program to test and evaluate high grade historic gold intercepts and test mineralization extensions of key gold mineralization zones (the Kasagiminnis Gold Zone). These historic gold occurrences were previously drilled in 2011 by Manicouagan Minerals Inc.

Each of the fifteen holes during this program had reached its targeted depth successfully and encountered the Kasagiminnis Gold Zone. Gold mineralization in the Kasagiminnis Gold Zone occurs within a silicified zone containing disseminated sulphides (pyrite, pyrrhotite) alongside magnetite which was historically was called ‘iron formation’.

The Kasagiminnis Lake Property consists of a contiguous block of 50 mineral claims totaling 9.91km² situated in the Little Ochig Lake Area (G-2114).

Portions of this report have been copied from the NI 43-101 Technical Report titled “Technical Report on Three Gold Exploration Properties Pickle Lake Area, Ontario, Canada for Manicouagan Minerals Inc.” written by G.A. Harron & Associates Inc. and dated August 31st, 2009 and the Technical Report titled “Work Report of the 2011 Diamond Drilling Program, Kasagaminnis Lake Project Pickle Lake Area, Ontario” written by Bruce Mackie Geological Consulting Services and dated October 2011.

2 Terms of Reference

This Report was prepared at the request of Aridden Limited for the purpose of filing assessment work as required under the Ontario Mining Act.

Map projections are in UTM, North American Datum 83, Zone 15 and all referenced UTM coordinates are in meters in this project unless stated otherwise. Contractions are “mm” = millimeter, “cm” = centimeter, “m” = meters, “km” = kilometers, “g” = gram, “kg” = kilogram, “in” = inch, “ft” = foot, “lb” = pound, “oz” = troy ounce, “oz/ton” = troy ounce per short ton, “g/T” is grams per metric tonne, and “ddh” = diamond drill hole.

3 Disclaimer

The writer disclaims responsibility for portions of the current report that rely on information from historic assessment files and government maps and reports which may not have been prepared in compliance with modern standards.

4 Property Location and Description

The Kasagiminnis Lake Property is located in the Patricia Mining District in Northwestern Ontario approximately 25 kilometres southwest of the town of Pickle Lake, and approximately 15 kilometres west of Mishkeegogamang First Nation Community of New Osnaburgh (see Figures 1 and 2). The geographic centre of the property is located at 681818mE, 5682970mN (UTM, Zone 15, NAD83). The project covers portions of National Topographic Sheet (NTS) 52O/08.

On August 2nd 2017, Aridden Limited signed an option agreement with White Metal Resources Corporation (TSX-V: WHM) to acquire 100% of the Pickle Lake Gold Properties in Ontario, Canada. The proposed acquisition includes four separate gold properties the Dorothy-Dobie Lake Property, Kasagiminnis Lake Property, South Limb Property, and the Pickle Lake West Property.

As of the date of this report, the Kasagiminnis Lake Project consists of a contiguous block of 50 mining claims totaling 1,007 Ha. The Kasagiminnis Lake Property is part of a larger land package, the Pickle Lake Properties, held by Aridden Limited totaling 364 mining claims and encompassing the West Pickle Lake, South Limb and Kasagiminnis Lake projects. The Kasagiminnis Lake Project requires \$20,000 per year in mineral exploration assessment work to keep the claims current, and the larger Pickle Lake Properties requires \$118,000 per year in mineral exploration assessment work to keep all claims current.

4.1 Ontario Mining Lands Administration System

On April 10, 2018, Ontario converted its manual system of ground and paper staking and maintaining unpatented mining claims to an online system. All active, unpatented claims were converted from their legally defined location by claim posts on the ground or by township survey to a cell-based provincial grid. Mining claims are now legally defined by their cell position on the grid and coordinate location in the MLAS Map Viewer (<https://www.mndm.gov.on.ca/en/mines-and-minerals/applications/mlas-map-viewer>).

In the new MLAS system, registering a mining claim is now completed by paying a single registration fee of \$50 per cell. Assessment work requirements are \$400 per cell claim and \$200 per boundary claim or any claim that is encumbered. Unlike some other jurisdictions, the MLAS does not introduce any other requirement such as an annual claim renewal fee, or a graduated system for fees and assessment work.

Figure 1 - Regional Location Map

5 Access Infrastructure and Resources

The Kasagiminnis Lake Property is located within the Mishkeegogamang First Nations traditional lands. The property falls within the taa shi kay win land use planning area.

This property is accessible by helicopter from Pickle Lake (25 km northeast). Kasagiminnis Lake is shallow with abundant shoals however there are locations where a fixed winged aircraft can land on floats. During the winter one can land a fixed wing aircraft equipped with skis. There is an old winter road which could be rehabilitated however some stream crossings are required and would need to be permitted. Access to the job site for the recent drill program required helicopter transport from Pickle Lake.

The villages of Pickle Lake and neighbouring Central Patricia are the centre of commercial activity in the area. Amenities available in these villages include groceries, fuel, telecommunications, hotel accommodation, and charter aircraft services. The core cutting and logging was completed at the Pickle Lake airport at the North Star Air Base in the 'Back 40' lot. The major population center in the area is Thunder Bay, 235 km southeast of Ignace. This city provides significant cultural, social, commercial, educational and medical facilities in northwestern Ontario. Goods and services relevant to minerals exploration and mine production are readily available in Thunder Bay.

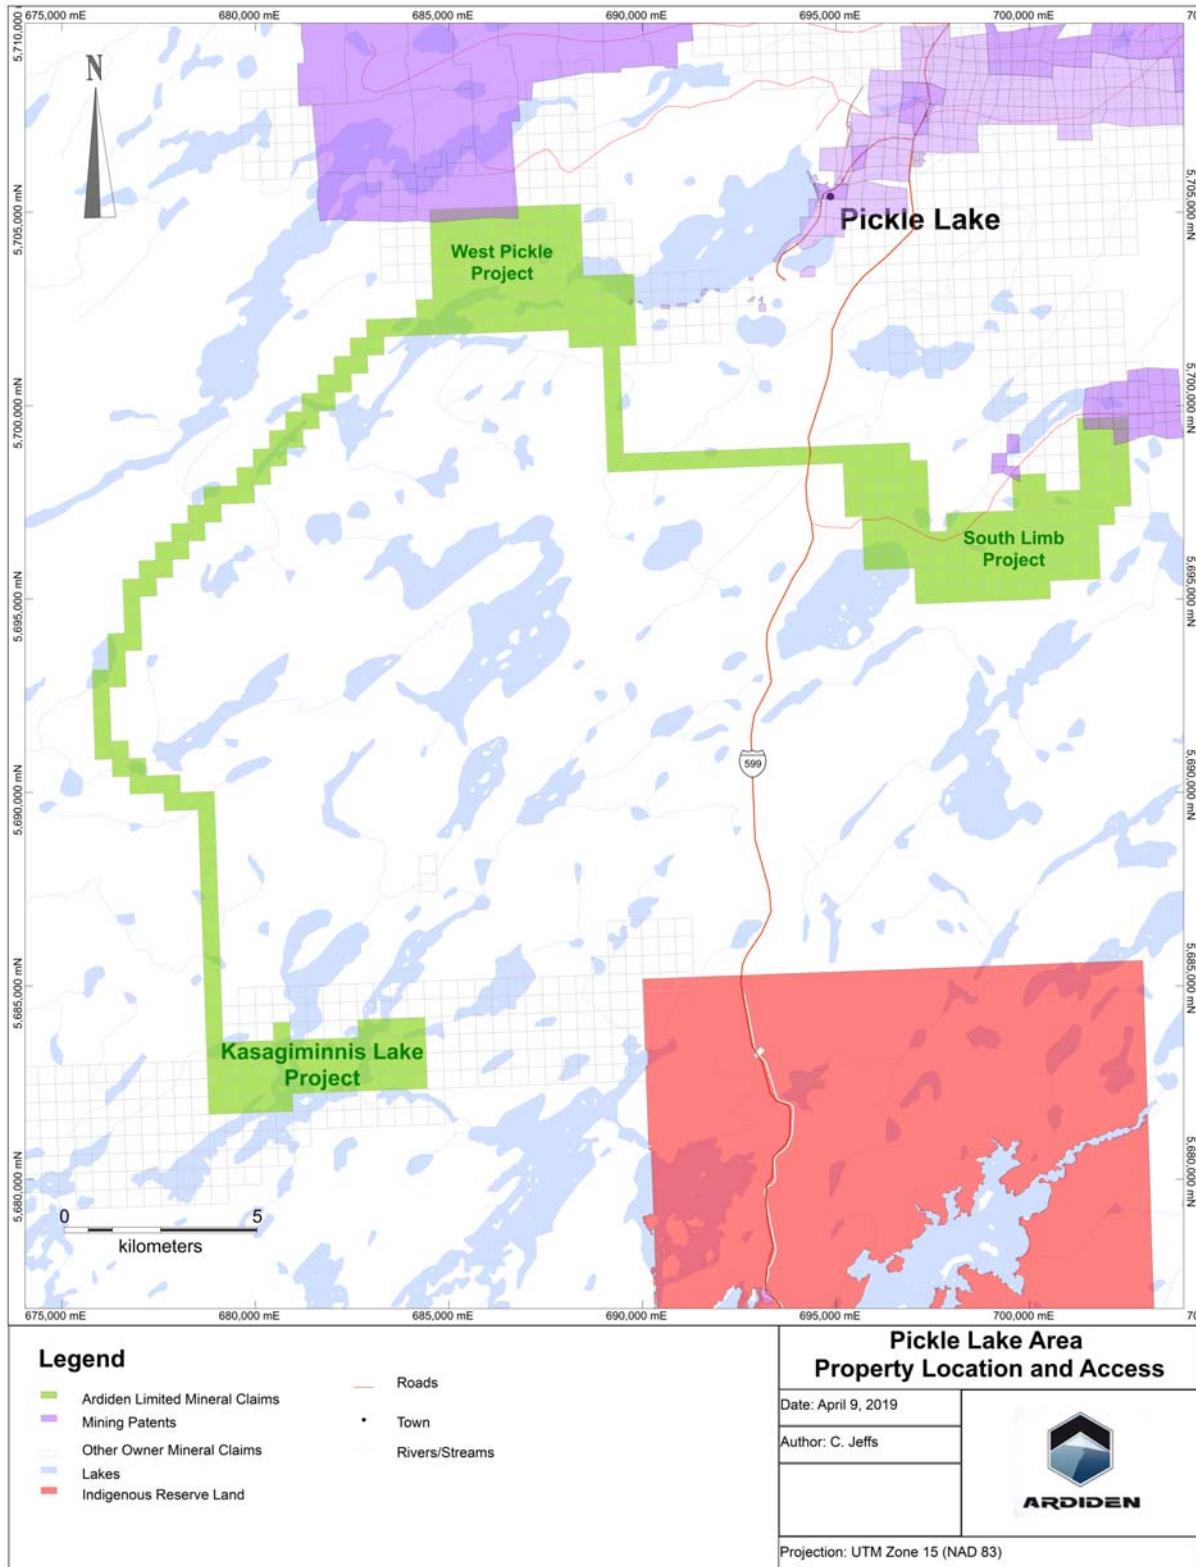

Figure 2 - Regional Location and Access

6 Climate and Physiography

Elevations on the Kasagiminnis Lake Project are generally within a 20m range from 390 to 410 m above sea level. The prevailing climatic conditions are typical of the northern Boreal forest, with cold winter months and warm summer months lasting from June through September. Weather conditions allow exploration activities such as diamond drilling and geophysical surveys to be conducted year-round.

7 Geological Setting

7.1 Regional Geology

The Kasagiminnis Lake Project is located in the western part of the Pickle Lake Greenstone Belt situated within the Uchi Domain which is located in the southern part of the North Caribou Terrane which in turn lies within the Uchi Subprovince of the Canadian Shield (see Figure 3).

The Uchi Domain represents an area where significant Neoarchean volcanism and tectonism resulted in the production of new continental crust both prior and synchronous to collision with the Winnipeg River Terrane to the south. As a result the Uchi Domain comprises Neoarchean volcanic-dominated supracrustal rock sequences, locally significant sedimentary rock accumulations and associated plutons that were built upon, or adjacent to the earlier Mesoarchean crust.

The “Pickle Lake Greenstone Belt” has been divided by previous workers in the past into a western portion; the Meen-Dempster Greenstone Belt (“M-DGB”) and an eastern portion; the Pickle Lake (“PLGB”) Greenstone Belt. This two-fold subdivision will be kept for the description below.

The Pickle Crow Assemblage is the oldest (>2860 Ma) lithologic sequence identified in the two greenstone belts. It is composed of mainly massive to pillow basalt intercalated with thin laterally continuous banded iron formation and small discontinuous lenses of intermediate volcanic rocks. All of these lithologies are intruded by quartz-feldspar porphyry sills, and mafic to ultramafic intrusions. The Pickle Crow Assemblage is interpreted as being deposited in a back-arc to emergent arc setting prior to ~2860 Ma. The isotopically enriched tholeiitic lower sequence may represent deposition on or near a thinned or juvenile continental margin. The compositionally diverse rocks of the upper sequence are interpreted as originating in a transitional arc to back-arc setting.

Rocks of the overlying Kaminiskag Assemblage (2842-2836 Ma) have been identified along the northern margin of the M-DGB and along the southeastern margin of the PLGB. Similar to the Pickle Crow Assemblage massive to pillow basalt lithologies dominate, and at least two interflow banded iron formations are also present. In the M-DGB the Kaminiskag Assemblage also includes a number of thin discontinuous units of dacite to rhyolitic tuff, whereas in the PLGB the felsic unit is thicker and continuous over 8 km.

The Kaminiskag Assemblage is characterized by LREE depleted tholeiitic basalt and calc-alkaline dacite to rhyolite with radiogenic Nd isotopic compositions. These petrochemical characteristics are typical of immature Archean arc related rocks that occur in younger convergent margin settings.

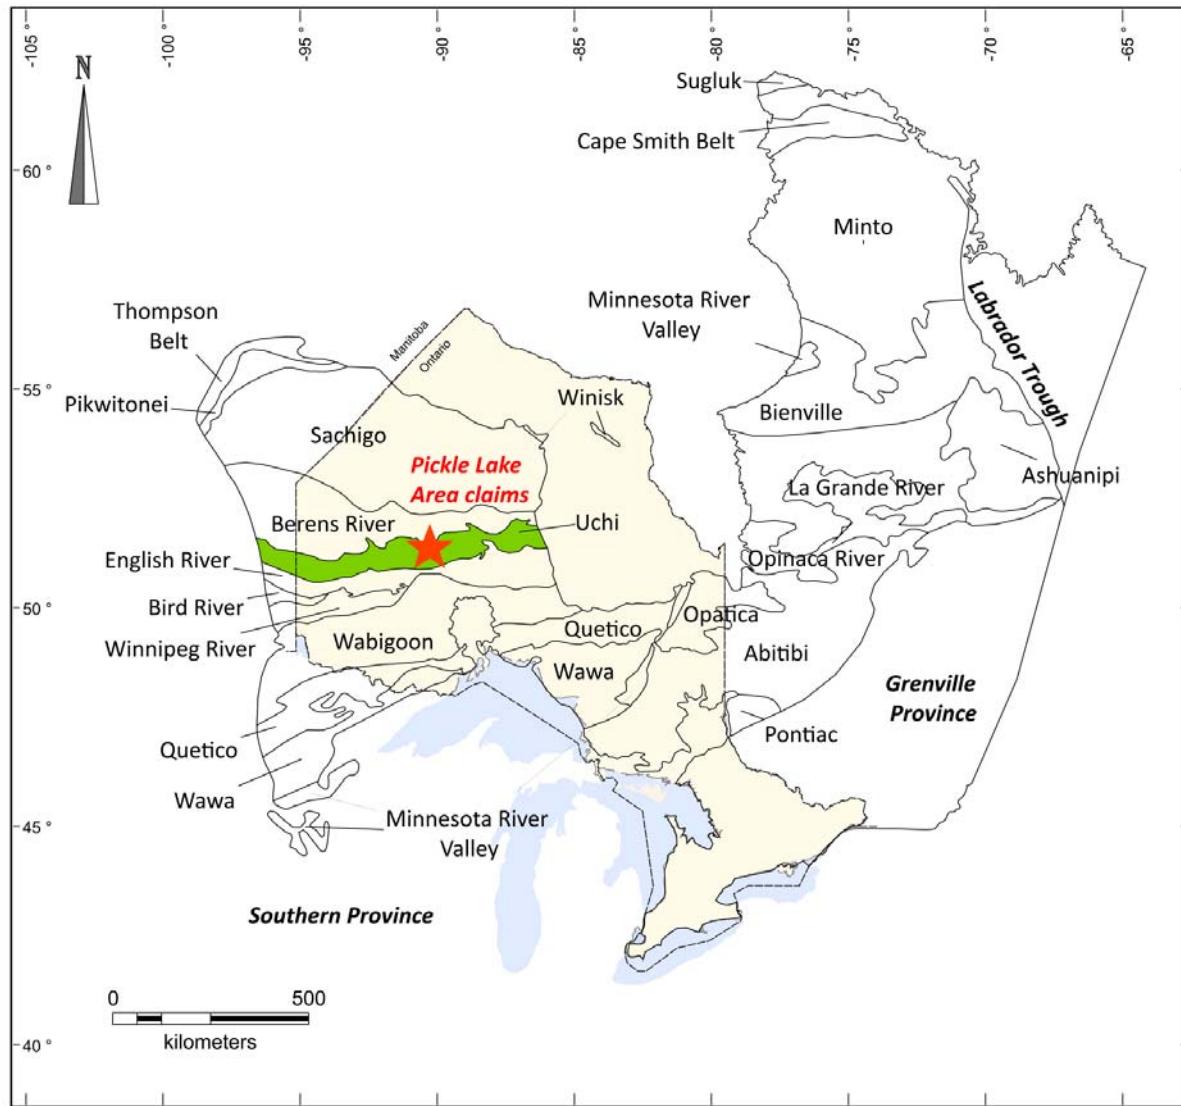

Figure 3 - Geological Subprovinces

The Meen Assemblage (2825 Ma) occurs exclusively in the M-DGB. This assemblage faces southwest, immediately overlying rocks of the Kaminiskag Assemblage and underlying a sequence of Confederation Assemblage rocks that are located to the southwest. The Meen Assemblage occurs as a tabular sheet with a 40 km strike length composed of monolithic pyroclastic rocks that are dominantly dacitic in composition with minor rhyolite. The upper portion of the assemblage locally contains sedimentary rocks (chert, marble, arenite and pyrite-graphite schist).

Confederation Assemblage rocks (2744-2730 Ma) are found in both the M-DGB and the PLGB. Most of the northeast portion of the Confederation Assemblage is composed of intercalated mafic and intermediate volcanic rocks, which are best exposed in the southeastern part of the PLGB, where the facing direction is to the southeast. In the eastern part of the PLGB the basal contact of the Confederation Assemblage with the underlying Pickle Crow assemblage is marked by abundant fragmental rocks. In the M-DGB the Confederation Assemblage consists of two bimodal volcanic cycles. Each cycle is composed of pillow to massive volcanic flows overlain by dacitic pyroclastic rocks. One of these cycles can be correlated between the M-DGB and the PLGB.

7.2 Geology of the Pickle Lake Greenstone Belt

The PLGB is an approximately 70 km long by 25 km wide area of supracrustal rocks and internal granitoid plutons surrounded by large granitoid batholiths (Figures 4 & 5). The supracrustal rocks have been deformed and metamorphosed to greenschist facies with amphibolite facies occurring as thermal areoles surrounding younger plutons. A recent revised interpretation of the regional geology forms the basis of the following description of the PLGB.

The PLGB is subdivided into three (tectono-stratigraphic) assemblages (Pickle Crow, > 2860 Ma; Kaminiskag, ~2836 Ma; Confederation ~2744 Ma). The northwest-facing Pickle Crow assemblage dominates the northwestern part of the PLGB. It comprises mainly massive to pillow basalt flows intercalated with thin laterally continuous banded iron formation and small discontinuous lenses of intermediate volcanic rocks, all of which are intruded by semi-concordant quartz-feldspar porphyry dykes of various ages. On the basis of petrochemical characteristics the Pickle Crow assemblage can be subdivided into a lower and an upper sequence. The lower sequence consists of tholeiitic basalt and rare calc-alkaline andesite which is spatially associated with iron formation. The upper sequence also consists of tholeiitic basalt intercalated with rare lenses of calc-alkaline andesite to dacite, but is distinguished from the lower sequence by a centrally located alkaline basalt unit.

Rocks of the PLGB are affected by three episodes of folding and regional metamorphism.

The McCullah Creek-First Loon Lake area of the PLGB is underlain by supracrustal rocks of three distinct tectonostratigraphic assemblages (Pickle Crow, Confederation and Kaminiskag).

The northern portion of the PLGB is underlain by a northeast-striking sequence of supracrustal rocks defined as the Pickle Crow assemblage (Figure 5). This assemblage is dominated by massive and pillow mafic volcanic flows with subordinate gabbroic sills. The mafic volcanic rocks are intercalated with thin laterally continuous banded iron formation and small discontinuous lenses of intermediate volcanic rocks. All lithologies are intruded by semi concordant feldspar porphyry dikes. Stratigraphy generally faces toward the northwest, except in areas of asymmetric folding. The minimum age of this assemblage is estimated to be 2860 Ma.

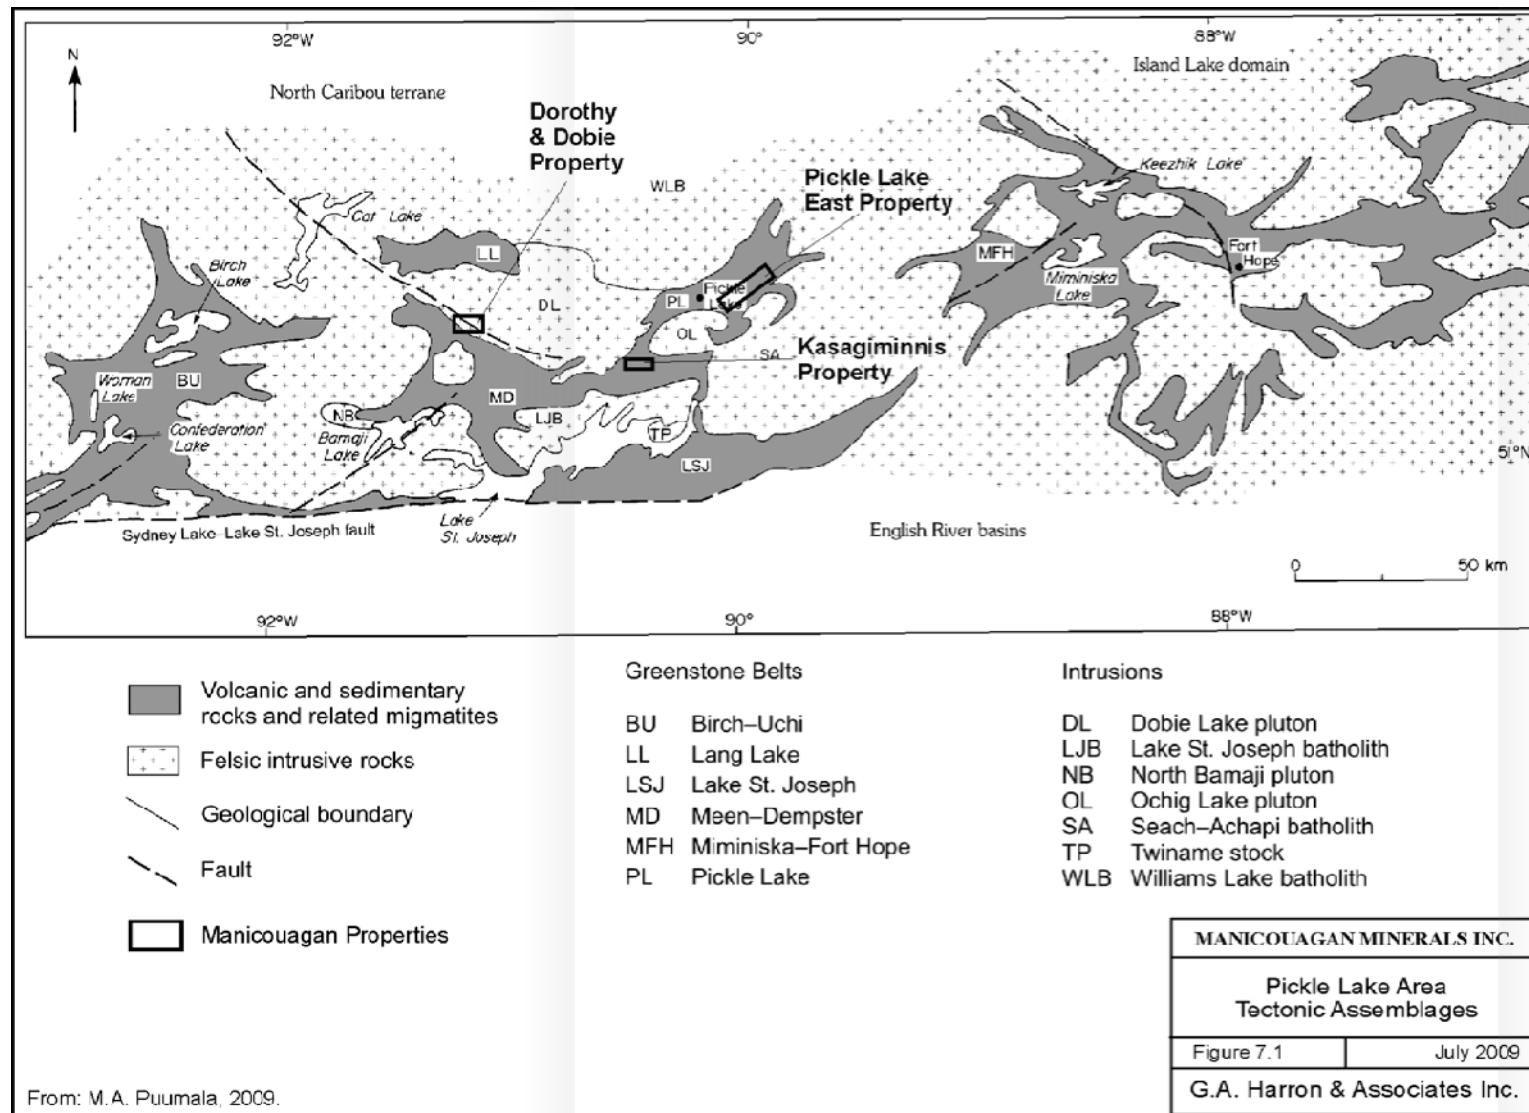

Figure 4 - Pickle Lake Area Tectonic Assemblages

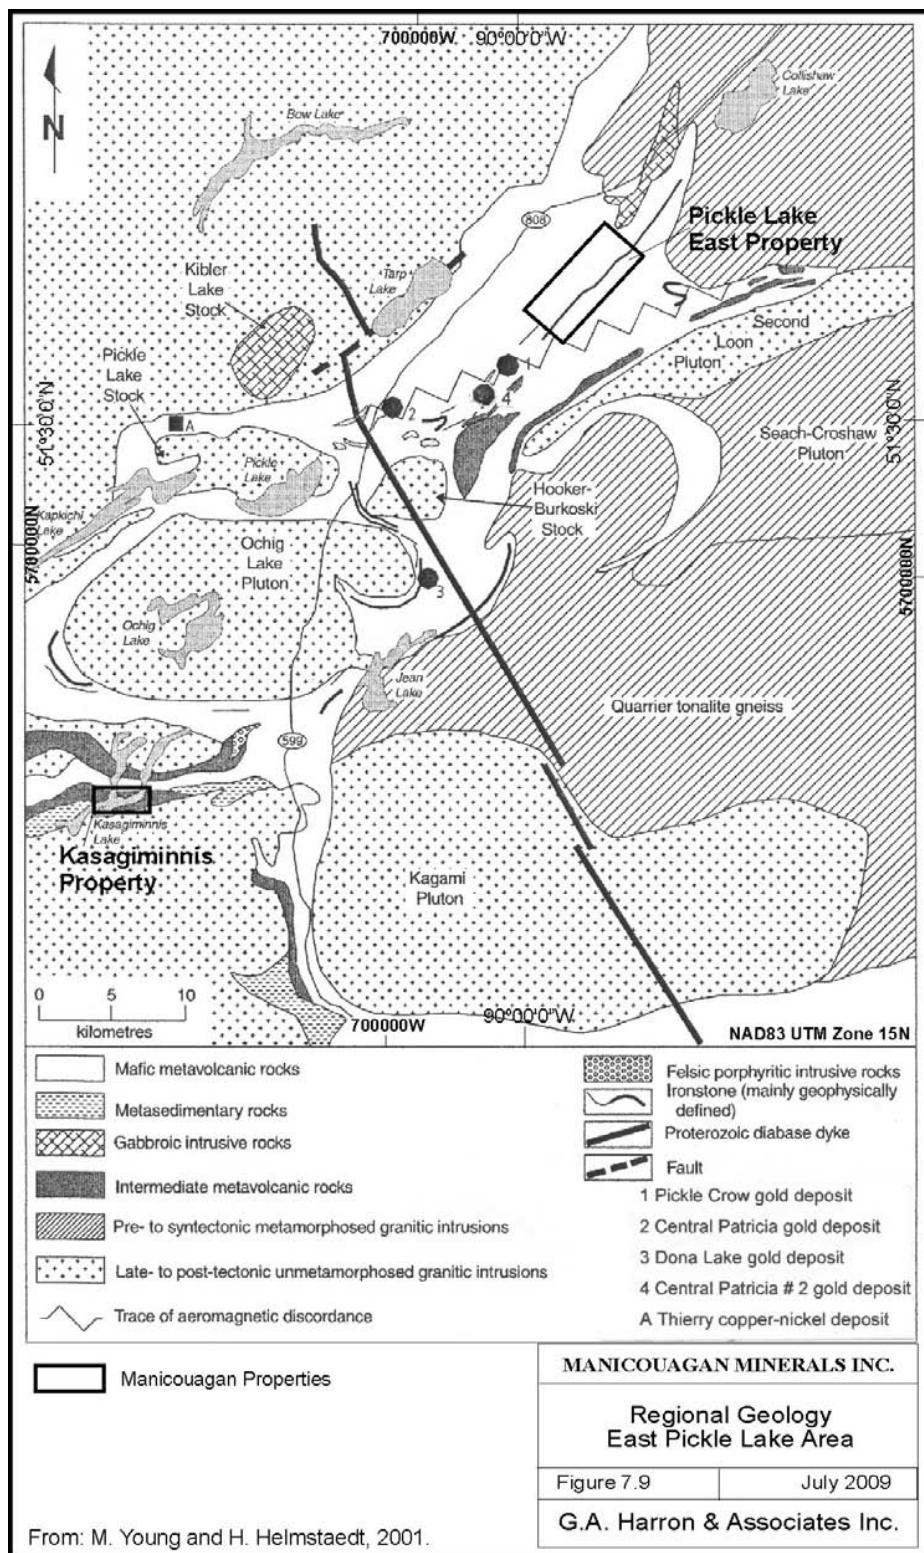

Figure 5 - Kasagiminnis Lake Area Geology

Rocks of the Kaminiskag assemblage (circa 2836 Ma) outcrop to the southeast of the Confederation assemblage. The Kaminiskag assemblage is dominated by mafic volcanic flows, with significant layers of felsic to intermediate volcanic ash flows. The mafic volcanic rocks are generally strongly foliated massive amphibolites, although minor amounts of ultramafic material have been reported. Minor amounts of banded iron formation are interbedded with the mafic volcanic rocks and thin layers of fine-grained clastic sediments are locally interbedded with the felsic to intermediate volcanic rocks. The main felsic to intermediate volcanic unit is a quartz-phyric dacite tuff that can be traced over a strike length of 8 km. This unit locally contains thin pyrrhotite rich massive sulphide lenses in chert.

The Kaminiskag assemblage is bounded to the southeast by granitic rocks of the Second Loon pluton, which imposes a contact strain and metamorphic aureole upon the adjacent supracrustal rocks. Generally, stratigraphy and foliation in the area are sub parallel, strike northeast and dip steeply to the northwest.

Strongly deformed rocks that exhibit extensive silica and carbonate alteration occur in the northwestern portion of the area, near the Kawinogans River. This deformation zone extends toward the southwest into the Pickle Crow Mine area. This deformation event may also be linked to the creation of the anticline-syncline pair in the Central Patricia and Pickle Crow areas. Axial surfaces strike southwest and dip steeply to the northwest, with moderate to steep northeast-plunging hinge lines.

The boundary between the Confederation (2744 Ma) and the Pickle Crow (2860 Ma) assemblages has been interpreted to occur northeast of First Loon Lake. A major structural discontinuity separates an "S" fold from a sequence of less deformed lithologies to the southeast, and south facing directions indicate Confederation assemblage lying unconformably on Pickle Crow assemblage rocks.

7.3 Kasagiminnis Lake Project Geology

The Kasagiminnis Lake property is located in the Dempster-Pickle Lakes greenstone belt which trends roughly east-west and joins the Pickle Lake belt to the east, and the Meen-Dempster Lakes belt to the west. The property is underlain by a complex sequence of southward younging mafic-to-intermediate flows, mafic-to-felsic pyroclastics, sediments and iron formation. This sequence has been intruded by numerous small gabbroic bodies, granite pegmatite dykes and minor felsite dykes. The portion of the belt exposed on the property has been compressed between two granitic bodies, the Kasagiminnis Lake and Carling Granite Plutons, on the north and south respectively, resulting in a narrowing of the belt to approximately one mile in width. High angle faults, interpreted from geological and geophysical data, crosscut the volcano-sedimentary sequence and trend northeast-southwest and northwest-southeast. Pervasive shearing and small scale folding is probably related to a regional tectonic event.

7.4 Alteration and Mineralization

The following is a description of the setting of the gold mineralization indicated from the historical drill results on the Kasagiminnis Lake Project from G. Herron 2009.

"The hanging wall unit is identified as a fine-grained dacite to rhyodacite tuff. Silicification and sericitization make the unit appear rhyolitic. The mafic volcanic tuff and (or) amphibolite unit may be

a sill-like intrusion or a thin mafic tuff. It contains 1 to 3% fine, disseminated, acicular magnetite. The unit grades into the mineralized zone where it is interlayered with lean chert-magnetite iron formation. The unit is auriferous where the magnetite is replaced by pyrrhotite. Magnetite and pyrrhotite are mutually exclusive of one another.

The footwall quartz-carbonate veinlet zone usually occurs within mafic volcanics, but locally incorporates minor iron formation. The quartz-calcite veinlets are similar to those that carry gold in the mineralized zone.

The footwall zone contains minor, secondary pyrrhotite and subeconomic concentrations of gold. The footwall mafic metavolcanics are tuffs and (or) flows, which appear to be similar to the mafic volcanic tuffs and (or) amphibolites of the hanging wall rocks, are foliated with a fine-to medium-grained porphyroblastic texture, but are otherwise featureless. To date, 25 diamond-drill holes have intersected the mineralized zone.

The mineralized zone is a 10-13 m wide interval of mafic volcanic tuffs interlayered with lean iron formation. The zone is sheared, silicified and contains garnets as well as 1 to 5% pyrrhotite, and occasional concentrations up to 50%. Gold content appears to have a sympathetic relationship with pyrrhotite. In a few cases quartz-carbonate veinlets rimmed by amphibole and grunerite contain visible gold. Grunerite is common throughout the mineralized section. Hanging wall rocks to the mineralized zone are fine grained silicified and sericitized dacite and rhyodacite tuff, containing disseminated red biotite flakes and rarely sulphide minerals. The footwall to the mineralized zone is a sequence of felsic tuffs or flows similar to the mafic tuffs and amphibolites of the hanging wall (Seim, 1993).

The internal structures present in the bedrock are not well understood, due to a paucity of outcrop. Some faults interpreted from magnetic surveys have been supported by mylonites and fault breccias intersected in drill cores. Faults trending both northeast and northwest have been identified and may represent a conjugate fracture system developed in response to emplacement of surrounding granitoid plutons”

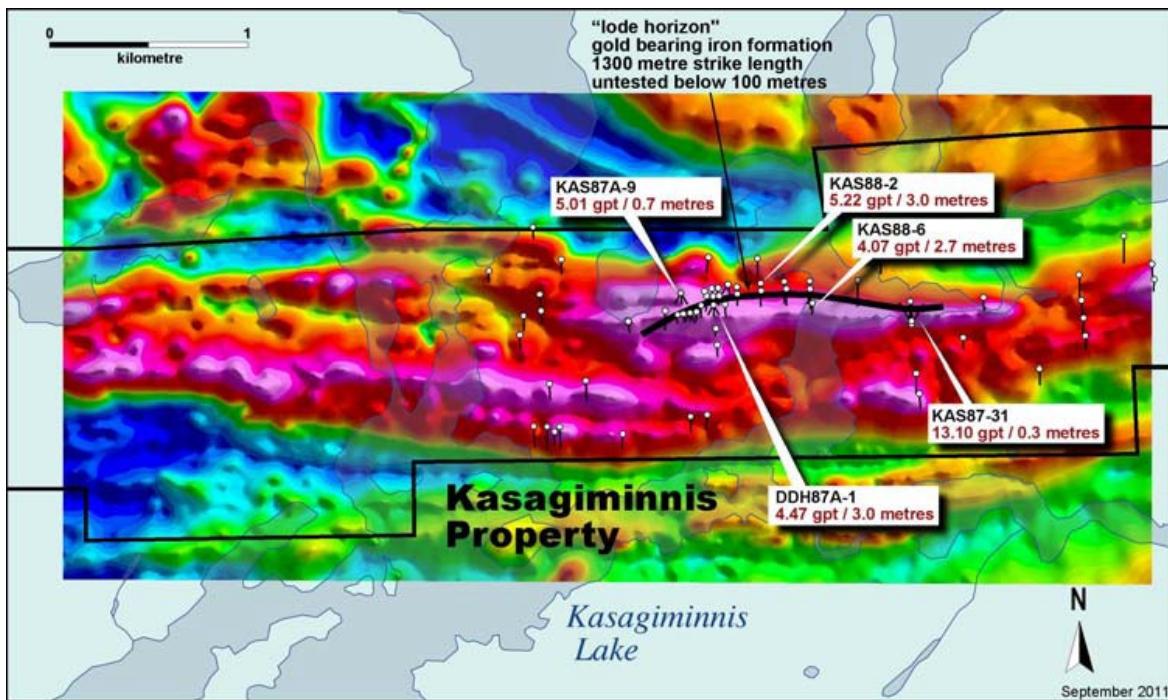

Figure 6 - Relationship between magnetite and gold mineralization (Herron, G.A. 2009)

8 History of Exploration on the Property

Exploration has been documented in the Kasagiminnis Lake area since the early 1970's as follows:

- 1970's UMEX completed regional airborne geophysics and subsequently drilled two anomalies in the Kasagiminnis Lake area. No assay results reported
- 1985 Moss Resources Ltd. Airborne VLF-EM and magnetic survey completed by Terraquest covering Kasagiminnis Lake property and some surrounding area
- 1986 Power Exploration completed geological mapping
- 1986-87 Power Exploration completed 39 drillholes totaling 12,424 feet. Drilling encountered significant gold mineralization including: 4.7' of 0.58 oz/t, 4.2' of 1.40 oz/t & 4.2' of 0.58 oz/t
- 1987 Power Exploration completed detailed geological mapping and ground geophysics with discovery of a mineralized vein 400 feet from previous drilling
- 1987-88 Power Exploration completed 49 drillholes totaling 19,971 feet and outlined a broad zone of gold mineralization over 3700 feet of strike extent
- 2004 McVicar Resources completed airborn magenetic survey

- 2007 Trillium North Resources mapped historic trenches found on the property
- 2009 Manicouagan Minerals completed an airborne magnetic survey.
- 2009 Manicouagan Minerals completed a small soil sampling program to test a geophysical anomaly and reported 41ppb au
- 2010 Manicouagan completed a B horizon soil sampling and mapping program.
- 2011 Manicouagan Minerals completed a drill program of 9 drillholes totaling 1,095 m. Significant results included; 7.9m of 7.24 g/t au and 1.9m of 12.7 g/t au

9 Current Program

Between May 27th and June 22nd, 2018 a diamond drill program was carried out on the Kasagiminnis Lake Project. Fifteen holes, Kas-18-01 to 15, totaling 1869 meters were drilled as part of a due diligence program to test and evaluate high grade historic gold intercepts and test mineralization extensions of key gold mineralization zones (the Kasagiminnis Gold Zone). These historic gold occurrences were previously drilled in 2011 by Manicouagan Minerals Inc. (KAS-11-08 and 09, KAS-11-04 and 05).

9.1 Personnel

Field operations were supervised by Caracle Creek International Consulting Inc. The drill program was supervised by Daniel Grabiec P.Geo and Justin Jonsson GIT. Exploration technician and labour was provided by Alex Pleson of Pleson Geosciences. The drill contractor for the drill program was Forage M3 Drilling Inc. from Hawkesbury, Ontario. The helicopter for the program was supplied by Forest Helicopters Ltd. from Kenora, Ontario. All these individuals and contractors satisfactorily carried out their respective duties. The program was based out of Pickle Lake, located approximately 20 kilometers northeast of the project area.

9.2 Diamond Drilling

Drill hole collars for this program were spotted next to historic holes as they were clearly marked with pickets and drill hole still intact from the 2011 drill programs. The drill was lined up using the Reflex Azimuth Pointing System (APS). Collar location coordinates were taken using the SXBlue Platinum DGPS with centimeter accuracy. The drillers used the point of intersection into the overburden as their zero metre mark. The DGPS points for this program were taken at the same zero metre mark as well where the casing first intersected the overburden. One hole, KAS-18-03 was originally abandoned due to difficult ground conditions but was completed later in the program. Only casing for KAS-18-10 and 12 were left in the ground, all other casing was pulled.

Azimuths for KAS-18-01-05, 07 &08 were taken with the APS while the drill was being oriented on the drill pad. Azimuths for KAS-18-06,09-15 were taken with the APS attached to the rods while the rods were sitting on bottom at end of hole with the rod clamps disengaged. Due to the difficult overburden conditions the casing could deflect and could cause the drill azimuth to vary 0 to 1.5 degrees east or west from the original drill lineup. Taking the azimuth test on the rods at the end of hole with the clamps disengaged gave us a more accurate test.

Drillhole collar information can be found in Table 1 below and drill Logs describing these holes are appended to this report (**Appendix I**).

Table 1 - Drill Collar Table

HOLE-ID	EASTING (m)	NORTH (m)	ELEV (m)	DEPTH (m)	AZIMUTH	DIP
KAS-18-01	682452	5683215	377.68	92.5	180.14	-62
KAS-18-02	682452	5683215	377.68	154	180.14	-78
KAS-18-03	682452	5683215	377.68	101.5	149.84	-50.6
KAS-18-04	682452	5683215	377.68	115	150.74	-62.2
KAS-18-05	682452	5683215	377.68	136	150.73	-70.6
KAS-18-06	682452	5683215	377.68	164.5	151.63	-77.5

KAS-18-12	682549	5683228	379.6	140.5	179.54	-74.1
KAS-18-13	682549	5683228	379.6	115	210.01	-51.2
KAS-18-14	682549	5683228	379.6	113.5	208.84	-61.8
KAS-18-15	682549	5683228	379.6	134.5	209.61	-70.6

10 Sampling and Analytical Methods

10.1 Diamond Drill Core Sampling Method and QA/QC

All core was transported from the drill site to a core shack in Pickle. Cores were then split by diamond saw in preparation for logging and sampling. A total of 879 samples were taken representing a total of 1015.7 meters of sampling. All samples were cut using a core saw. The core was cut along the top of the foliation of the rocks. The backside of the core remains in the box while the front side of the core was put into individual sample bags with the corresponding sample ticket. Starts and ends of sample intervals were cut perpendicular to core axis with the saw when not on a natural break. All sample intervals start with a sample ticket inserted and stapled at the beginning of the interval. Sample lengths range from 0.5 to 1.5 metres in length. The average sample length for the program was 1.16 meters. In general, one metre samples were taken in the main zone. Some variance occurred when trying to keep similarly mineralized zone rock together or not sampling over lithological boundaries. The largest sample intervals was kept to 1.5 meter intervals and were taken over what appeared to be waste rock. All individual sample bags were labeled and put into rice bags where they were transported to ActLabs in Thunder Bay via our own personnel or shipped on pallets via Manitoulin Transport.

There were 38 standards analyses within the sample stream for drillholes 18-01 to 18-15. Three standards were used, a high, medium, and low Au-bearing certified reference material from Oreas, Oreas 251, Oreas 209 and Oreas 216 .

There were 8 analyses of the high standard, and 6 analyses fell within 3 standard deviations of the certified value. One analysis failed quite low, while another failed high. All 24 analyses of the low and medium standards fell within 3 standard deviations of the certified value.

11% of the blank analyses returned Au values above detection, with values between 5 and 12 ppb Au, corresponding to between 3 and 6 times the detection limit.

Some of the duplicate analyses returned satisfactory results, while others did not.

The overall R² value for the linear trendline forced through the origin determined on a scatter plot between duplicate analyses was 0.76.

10.2 Sample Preparation and Analytical Methods

The samples were first analyzed using standard fire assay procedures with an AA/ICP finish. Assay results greater than 2.50 gram per tonne were re-run using a gravimetric finish. In addition to the standard quality control of the laboratory, a series of blanks and standards are inserted in every shipment for quality control purposes. A total of 45 standards were inserted in series to the rock samples. One of three alternating standards were added to the series every 25 samples (1.58g/t Au, 6.66g/t Au, 0.505g/t). A total of 45 blanks of ¼" crushed silica was also added in series every 25 samples. A total of 22 quarter duplicates were also added every 50 samples. A quarter duplicate was taken by cutting the half core in half again and inserting them into their own sample bag in sequence after one another.

Specific gravity was measured on site by company geologists for all samples sent to the lab. Five samples from all rock types were measured by the lab as a check to the geologists work.

Sampling and analysis during the Winter 2007 Exploration Program was performed on diamond drill core from all fourteen holes completed.

11 Results

Fifteen diamond drill holes (KAS-18-01 to 15) totaling 1869 meters were drilled on mining claims 319583 and 186270. The holes were drilled in a north-south direction as the target horizon generally strikes east west and dips steeply to the north.

Due to the cost associated with a helicopter supported drill program, all drilling was completed from two drill pads and the drill was turned on the pad to target the mineralized zone at approximately 25 metre intervals. KAS-18-01 to 10 were drilled on three orientations (150, 180, and 210 azimuth) on the first drill pad which was the same collar location as KAS-11-08 and 09. Drillholes KAS-18-11 to 15 were drilled on two orientations (180, and 210 azimuth) on the second drill pad which was collared approximately 10m north of KAS-11-04 and 05.

Overburden conditions, especially around Kasagiminnis Lake were difficult. Overburden depths ranged from 3 to 20 meters and often contained very large boulders mixed with sand, as a result KAS-18-03 was originally abandoned but was subsequently drilled after KAS-18-06.

Drilling was completed over a relatively small area and the geology observed in each hole was similar. The holes were collared into 15-30 meters of intermediate volcanics (historically called a

dacite). The presence of feldspar phenocrysts could indicate a volcanic tuff which gradually decreases in feldspar crystals down hole – indicating a possible younging direction down hole. The lower contact of this unit is very gradational and graduates into a mafic volcanic. Within this mafic volcanic, there is a consistent 0.5 to 1 meter wide, coarser grained mafic intrusive closer to the upper contact that is distinctively different than all other units and can be used as a stratigraphic marker. The lower contact of the Mafic Volcanic is generally silicified/bleached and occasionally mineralized for an area of 0.5 to 5 meters at the contact. Frequent zones of quartz flooding were intersected and rare shearing with the disseminated 1-2% pyrite/pyrrhotite. Following the mafic volcanic was a 10-20 meter wide, coarser grained mafic intrusive. Underlying the mafic intrusive is the target horizon, a strongly magnetic unit is the target horizon iron formation. This iron formation unit is not a typical banded magnetite chert unit and more closely resembles a lean iron formation with generally less than 5% visible magnetite. The iron formation begins with upwards of 15% red subhedral garnets. This unit notably had lesser amount of mineralization than iron formations without garnet. There was a fairly sharp drop off of garnets in the iron formation (15% to 0% garnets in less than 1-2 meter length).

The non-garnet iron formation ranged from 10-30m in length and was characterized by <10% magnetite crystals (<3mm subhedral; dark grey-black). This 10-30m area contains one or more areas that are 0.1 to 5 meters in length of mineralization. Mineralization includes quartz flooding with few significant (>1cm wide) quartz veins that contain sulphides. The quartz flooding typically introduces 1-5% finely disseminated pyrrhotite and pyrite and locally up to 10% semi-massive bands. The stronger the silicification, the higher the amount of sulphides can be observed.

Following the iron formation is another mafic intrusive, lithologically similar to the one directly above the garniferous iron formation however it is substantially more magnetic. The first 10-20m of this unit can have upwards of ten 0.1 to 1m wide iron formation units from the upper contact of this unit and gradually decreasing in width and occurrences down hole. The amount of magnetite in this unit is strongest near the upper contact and gradually lessens down hole. Notably KAS-18-10 has 0.1-1m wide coarse grained chlorite+biotite+magnetite+quartz ‘units’ throughout this mafic intrusive.

All drill holes during this program generally followed these stratigraphical units in this order and were subsequently shut down shortly after the end of the iron formation unit and into the mafic intrusive at the end of hole.

Table 2 - Current Program Significant Results

12 Interpretations and Conclusions

The summer 2018 drill program on the Kasagiminnis Lake Project successfully intersected gold mineralization in every drill hole. Drilling clearly demonstrated the relationship between an iron rich horizon and mineralization while it was also noted the horizon was not definitively a classic banded iron formation of chert and magnetite but lean iron formation with identifiable horizons of more or less magnetite within the unit.

Additional work is warranted along the eastern extension of the Kasagiminnis Gold Zone underneath Kasagiminnis Lake where historical drilling returned values including 9.33 gpt over 1.1 metres. In addition, some deeper drilling should be conducted on the western strike extension of the gold bearing zone including below KAS-18-10.

13 Recomendations

Based on the results of the current exploration program, a further two-phase exploration program is warranted on the Kasagiminnis Lake Project

13.1 Exploration Phase I

Further exploration on the Kasagiminnis Lake Project should include a continuation of the Summer 2018 Drill Program to test depth extents of mineralization. Elsewhere in the Pickle Lake Greenstone belt, iron formation related gold has been mined successfully to depths of down to ~4,000 feet at the Central Pickle mine.

13.2 Exploration Phase II

Contingent on the results of Phase I, further diamond drilling program is recommended to follow up on results from Phase I, and to test additional historic targets along strike to develop a larger, potentially economic, deposit size.

15 Statement of Qualifications

**Daniel Grabiec P.GEO
Certificate of Author**

I, Daniel Grabiec, P. Geo., residing at 45A Elizabeth St, Thunder Bay, Ontario, P7A 4J4 do hereby certify that:

- 1) Caracle Creek International Consulting Inc. currently contracts me as a consultant geologist.
- 2) I graduated with an Honours Bachelor of Science degree from Lakehead University in 2011.
- 3) I am a member of the Association of Professional Geosciences of Ontario (APGO No. 2628)
- 4) I have worked as a geologist for a total of 7 years since obtaining my B.Sc. degree.
- 5) I am responsible for the preparation of this report titled "Work Report of the 2018 Diamond Drill Program, Kasagiminnis Lake Project, Pickle Lake Area, Ontario"
- 6) I have visited the Property and supervised the diamond drill program.
- 7) I have been involvement with the property that forms the subject of this report since drilling commenced in May, 2018.

Dated the 10th April, 2019

Daniel Grabiec P.Geo.

CERTIFICATE OF THE AUTHOR

I, **Caitlin Jeffs**, do hereby certify that:

1. I am a Partner of Fladgate Exploration Consulting Corporation, the geological consulting firm tasked with this report.
2. I am a member in good standing of the Association of Professional Geoscientists of Ontario (APGO #1488).
3. I am a graduate of the University of British Columbia (Hons. B.Sc., 2002).
4. I have practiced geology for 17 years in a variety of settings, mostly in Northwestern Ontario, Canada, and Chile. I have specific experience in gold including managing multiple exploration programs in the Pickle Lake Greenstone belt over the past 12 years.
5. I have read the definition of "Qualified Person" as set out in the National Instrument 43-101 and certify that by reason of my education, affiliation with a professional association and past relevant work experience, I am a "Qualified Person" for the purposes of NI 43-101.

0	6	BW	Casing
6	101.5	BTW	Rods
Drill comments (issues, casing, gear in hole): Casing was removed after drilling. APS taken while orienting drill. This hole was first drilled after Kas-18-02; however, difficult overburden caused equipment failure and as a result 6m of rods/casing and a core tube were abandoned in the hole. We abandoned this hole originally, but decided to try again after Kas-18-06 with success.			
Geology comments: Intersected mineralized Iron Formation as expected			

GEOLOGICAL CORE LOG

Hole ID: KAS-18-03 EOH called by: Dan Grabiec

Date Logged: 10/June/18 EOH Reason: Drilled past mineralized Banded Iron Formation into barren Mafic Intrusive.

Geology comments: Intersected mineralized Banded Iron Formation			

GEOLOGICAL CORE LOG

Hole ID: KAS-18-07

EOH called by: Dan Grabiec

Date Logged: 16/June/18

EOH Reason: Drilled past mineralized Banded Iron Formation into Mafic Intrusive.

Geologist: JJ

20.70	56.70	36.00	MV	QZ	2	0.10		80% Green-grey strongly foliated/banded Mafic Volcanic with 20% grey Intermediate Volcanic bands (0.5-20 cm wide), distinguished via FS content (10% vs 25% respectively). Proportion of Intermediate Volcanic gradually decreases towards bottom of unit (45% vs 10%). Overall 30% aph mafic groundmass (green/black; could be BT/CH/HB) 20% QZ (0.5-2 mm; clear) 20% BT (aph to 1 mm; strong fol) 15% CH (aph to 2 mm; strongly fol; mostly in bands alternating with BT-rich zones in MV) 15% FS (0.5-3 mm; white; anhedral; boudinaged by foliation). 2% QZ and QZ/CB veins (0.1-40 cm; some w SER haloes - as in other holes SER is green/yellow. May be additional alteration mins). Tr dis/vein-hosted PY. Breccia zones w QZ/SER infill at 31.7-31.9 m and 54.4-54.5 m. 35% QZ veins w CH haloes at 22.2-25.3 cm (some HM haloes; 0.3% vein-hosted PY; includes 40 cm vein at 22.3-22.7 m)
56.70	59.60	2.90	MV			0.10		Grey-green strongly foliated/banded Mafic Volcanic. 35% aph mafic groundmass (green/black; could be CH/BT/HB) 25% QZ (clear; flooding/discontinuous veins along foliation) 20% CH (green; aph to 1 mm; strongly fol) 10% BT (brown; 0.2-1 mm; strongly fol) 5% FS (0.1-1.0 mm; white) 5% QZ and QZ/CB veins (SER haloes; few TM haloes). Tr dis PY. SER stockwork at 57.4-58.4 m and 59.1-59.6 m
59.60	60.10	0.50	MP					Dark grey/green moderately foliated non-banded Mafic Intrusive. Contacts crosscut foliation. 35% QZ (0.2-5.0 mm; clear; could be flooding) 25% aph mafic groundmass (green/brown; could be BT/CH/HB) 20% CH (aph to 1 mm; mod fol) 15% BT (brown/black; aph to 1 mm; weak to mod fol). 5% QZ/SER stockwork (some HM alt) Tr QZ/CB veins w SER haloes.
60.10	82.80	22.70	MV			0.10		Grey-green strongly foliated/banded Mafic Volcanic. Strongly silicified area at end of unit seen in holes 1-10 not present (weak silicification at 81.5-81.8 m looks somewhat similar). 40% aph mafic groundmass (green/black; could be CH/BT/HB) 20% QZ (clear; flooding/discontinuous veins along foliation) 20% CH (green; aph to 2 mm; strongly fol) 15% FS (0.1-1.0 mm; white; fine-grained and altered to light green/yellow in areas - may not be FS?) 5% BT (brown; 0.2-1 mm; weak to strong fol) 2% QZ and QZ/CB veins (0.1-8.0 cm; some CH/TM haloes). Tr GT (1-6 mm; red) Tr dis/vein-hosted PY; tr vein-hosted CP.
82.80	97.40	14.60	MIG			0.10		Green weakly to strongly foliated Mafic Intrusive. Coarser grained than above; mottled texture at top grades to strong foliation at bottom. 35% CH (0.5-7 mm; platy; weakly to strongly foliated; wrap around QZ) 30% QZ (flooding/discontinuous veins; form 1-10 mm discontinuous bands) 15% aph mafic groundmass (green/black; some CH; could also be BT/HB) 15% FS (0.2-1.0 mm; white; fine-grained and altered to light green/yellow in areas - may not be FS?) 5% BT (aph to 1 mm; brown; weakly foliated) 3% QZ and QZ/CB veins (0.1-3.0 cm veins; few SER haloes) Tr dis/vein-hosted PY.
97.40	99.60	2.20	MIG			0.30	0.50	Grey massive to weakly foliated Mafic Intrusive? (Coarse grained - could be Iron Formation/alteration texture - similar to massive unit seen in footwall in KAS-18-10) 40% of unit weakly to moderately magnetic. 50% QZ (appears to be chert and/or flooding) 20% CH (1-15 mm; green; massive to weak fol) 20% BT (1-5 mm; brown; not foliated) 5% MT (aph to 4 mm; equant). 5% FS (0.2-2 mm; white) 2% QZ/CB veins (1-4 cm). 0.5% dis/blebbly PO; 0.3% blebbly/vein-hosted PY.

CERTIFICATE OF ANALYSIS

70 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1C-OES-Tbay Fire Assay ICPOES (QOP Fire Assay Tbay)

Code 1E3-Tbay Aqua Regia ICP(AQUAGEO)

Code Specific Gravity Core-Tbay - Core

REPORT A18-07416 (i)

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

Note: Samples 789605 and 789626, 55 and 61 are INS- There may be presence of coarse Au in Sample 789632.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

70 Core samples were submitted for analysis.

The following analytical package(s) were requested: Code 4F-S Infrared

REPORT A18-07416 (i)

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

Note: Samples 789605 and 789626, 55 and 61 are INS- There may be presence of coarse Au in Sample 789632.

Quality Analysis ...

Innovative Technologies

Date Submitted: 19-Jun-18
Invoice No.: A18-07864
Invoice Date: 01-Aug-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Suite 6, 295 Rokeby Rd
Subiaco WA 6008
Australia

ATTN: Brad Boyle (inv/res)

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared

REPORT A18-07864

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Emmanuel Eseme , Ph.D.

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18
Invoice No.: A18-08010
Invoice Date: 27-Jul-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Level 1, 981 Wellington St.,
West Perth, 6005, Western Australia
Perth
6005
Australia

ATTN: Scott Jobin-Bevans

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared
Code Specific Gravity Pulp

REPORT **A18-08010**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Emmanuel Eseme , Ph.D.

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18

Invoice No.: A18-08011

Invoice Date: 07-Aug-18

Your Reference:

Ardiden Ltd.
Level 1, 981 Wellington St.,
West Perth, 6005, Western Australia
Perth 6005
Australia

ATTN: Scott Jobin-Bevans

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 4F-S Infrared
Code Specific Gravity Core - Core

REPORT **A18-08011**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18
Invoice No.: A18-08012
Invoice Date: 27-Jul-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Level 1, 981 Wellington St.,
West Perth, 6005, Western Australia
Perth 6005
Australia

ATTN: Scott Jobin-Bevans

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared

REPORT **A18-08012**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18
Invoice No.: A18-08013
Invoice Date: 30-Jul-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Suite 6, 295 Rokeby Rd
Subiaco WA 6008
Australia

ATTN: Brad Boyle (inv/res)

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared
Code Specific Gravity Pulp

REPORT A18-08013

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

Footnote: No material for sample with missing data

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Emmanuel Eseme , Ph.D.

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1C-OES Fire Assay ICPOES

Code 1E3 Aqua Regia ICP(AQUAGEO)

REPORT **A18-08021**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18
Invoice No.: A18-08025
Invoice Date: 01-Aug-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Suite 6, 295 Rokeby Rd
Subiaco WA 6008
Australia

ATTN: Brad Boyle (inv/res)

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared
Code Specific Gravity Core - Core

REPORT A18-08025

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Emmanuel Eseme , Ph.D.

Quality Analysis ...

Innovative Technologies

Date Submitted: 18-Jun-18
Invoice No.: A18-08029
Invoice Date: 01-Aug-18
Your Reference: Kas Lake Gold (Pickle Lake)

Ardiden Ltd.
Suite 6, 295 Rokeby Rd
Subiaco WA 6008
Australia

ATTN: Brad Boyle (inv/res)

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:
Code 1C-OES Fire Assay ICPOES
Code 1E3 Aqua Regia ICP(AQUAGEO)
Code 4F-S Infrared
Code Specific Gravity Core - Core

REPORT A18-08029

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

Emmanuel Eseme , Ph.D.

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-Tbay Au - Fire Assay AA (QOP Fire Assay Tbay)

Code 1A3-Tbay Au - Fire Assay Gravimetric (QOP Fire Assay Tbay)

Code Specific Gravity Core-Tbay - Core

REPORT A18-08372 (i)

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-Tbay Au - Fire Assay AA (QOP Fire Assay Tbay)

Code Specific Gravity Core-Tbay - Core

REPORT **A18-08376**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Footnote: Sample 790330 was insufficient for further analyses.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-Tbay Au - Fire Assay AA (QOP Fire Assay Tbay)

Code 1A3-Tbay Au - Fire Assay Gravimetric (QOP Fire Assay Tbay)

REPORT **A18-08379 (i)**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Footnote: Sample 790426 has insufficient sample left for analysis.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-Tbay Au - Fire Assay AA (QOP Fire Assay Tbay)

Code Specific Gravity Core-Tbay - Core

REPORT **A18-08412 (i)**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Footnote: Sample 790055 was insufficient for further analyses.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested: Code 4F-S Infrared

REPORT A18-08418

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

CERTIFIED BY:

CERTIFICATE OF ANALYSIS

35 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-Tbay Au - Fire Assay AA (QOP Fire Assay Tbay)

REPORT A18-08475

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Footnote: Sample 790480 was insufficient for further analyses.

CERTIFIED BY:

A handwritten signature in black ink, appearing to read "Emmanuel Eseme".
