Abstract

Under advice of a metallurgist, we crushed a large sample of material from the Gold showing GPS 517252mE, 5190045mN. The purpose was to determine if the gold is tied up in the sulphides. The material was crushed to 100 mesh. On sample #1674821 was taken from the crushed material. We then panned a large portion of the material and produced a gravity concentrate sample #1674822. The results confirmed that the gold appears to be associated with the sulphides even though no gold is visible. The samples were taken last fall in Aylmer Township on legacy claim 4203306, single cell 177357 UTM 51725ZmE, 5190045mN.
