Summary

The Jackfish property is located within the Syine Township, on the north shore of Lake Superior in northwestern Ontario, approximately 250 km east of Thunder Bay (Figure 1). In total, the Jackfish property comprises 281 combined single and boundary cell mining claim covering an area of 3,769 hectares, held under option by Sanatana Resources Inc. from three separate parties. The property is accessed by bush trails off of the Trans-Canada Highway 17. All co-ordinates quoted in text or appearing on maps are either latitude and longitude or Universal Transverse Mercator (UTM) metres easting and northing using the North American Datum 83 (NAD83) Zone 16.

The property is located in the Wawa subprovince of the Superior Province of the Canadian Shield specifically the metavolcano-sedimentary Schreiber-Hemlo greenstone belt. The greenstone belt consists of metavolcanic and metasedimentary rocks into which the Terrace Bay batholith was emplaced. The property encompasses the eastern half of the Terrace Bay batholith. The Terrace Bay Batholith is host to numerous small historic gold and base metal occurrences and there is potential to find others, perhaps of economic significance in current times.

Historic mining and exploration on the property dates back to the late 19th century. Since then various companies explored in the area completing surveys, including geophysical surveys, mapping, trenching, sampling and drilling and discovered several mineral occurrences.

Between the dates of October 12 to 21, 2017 an unmanned aerial vehicle (UAV) based airborne magnetic geophysical surveys was undertaken by Stratus Aeronautics Inc. for Sanatana Resources Inc. over 65 cell mining claims of the Jackfish property. The model data was received on March 19, 2018. The purpose of the work was to delineate structures possibly hosting gold and basemetal mineralization within or at the contact with the Terrace Bay Batholith granodiorite rocks of the Schreiber- Hemlo greenstone belt. The raw data collected from the survey was subsequently processed and the corrected data used to generate a 3D inversion model of magnetic susceptibility by Campbell & Walker Geophysics Ltd. The model data was received on March 19, 2018.

This report presents the survey and modelling parameters and data and some qualitative interpretations that will help to guide future exploration work on parts of the Jackfish property.

Introduction

Between the dates of October 12 to 21, 2017 an unmanned aerial vehicle (UAV) based airborne magnetic geophysical surveys was undertaken over 65 cell mining claims of the Jackfish property near Terrace Bay, Ontario for Sanatana Resources Inc. ("Sanatana"). The purpose of the work was to delineate structures possibly hosting gold and base metal mineralization within or at the contact with the Terrace Bay Batholith granodiorite rocks of the Schreiber- Hemlo greenstone belt. The Terrace Bay Batholith is host to numerous small historic gold and base metal occurrences and there is potential to find others, perhaps of economic significance in current times.

The raw data collected from the survey was subsequently processed and the corrected data used to generate a 3D inversion model of magnetic susceptibility. The model data was received on March 19, 2018.

This report presents the survey and modelling parameters and data and some qualitative interpretations that will help to guide future exploration work on parts of the Jackfish property.

Property Location, Description and Access

The Jackfish property is located within the Syine Township, on the north shore of Lake Superior in northwestern Ontario, approximately 250 km east of Thunder Bay (Figure 1). In total, the Jackfish property comprises 281 combined single and boundary cell mining claim covering an area of 3,769 hectares, held under option by Sanatana and three other optionor groups; Alto Ventures Ltd., Rudy Wahl and Richards et al (including Wayne Richards, Francine Richards and James Hamel).

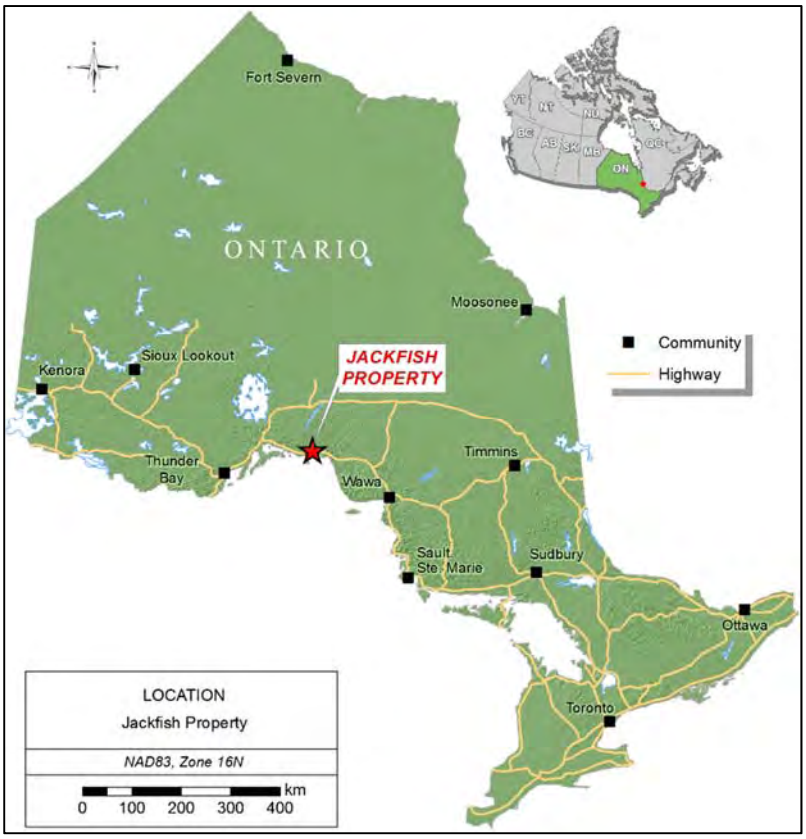

***Figure 1**: Property Location Map.*

The UAV magnetic survey area is centered on 504,734 mE 5,409,565 mN (NAD 83 Zone 16) or at Latitude 48° 50' 20.5"N Longitude 86° 56' 07.7"W within the property.

The property is accessed by travelling 20 km east of Terrace Bay or 63 km west from Marathon via Trans-Canada Highway 17. The mining claims are readily accessible off the Highway 17 by All-terrain vehicle (ATV) along bush trails.

The terrain around the property is quit rugged and vegetation cover is moderately thick. There is a sparse to moderate amount of bedrock outcrop on the property, mostly along cliffs and at highway road cuttings, but exposure in the forest is commonly masked by moss cover.

The UAV magnetic survey was conducted over the cell mining claims listed in Table 1 and shown on the map (Figure 2).

Property History

The exploration activity in the area of the Jackfish property started at the end of the 19th century sparked by the discovery of the Empress Mine in 1895 (Walker, 1967) in metavolcanic rocks of the Schreiber-Hemlo Greenstone Belt just north of the Terrace Bay Batholith. Relevant historical mining and exploration work conducted on the property, mostly sourced from assessment reports filed with the Ministry of Energy, Northern Development and Mines, is summarized in Table 2.

***Table 2**: Historical exploration work in the property area.*

Year	Company	Type of Work	Results	Assessment Report #
1882	Elgin Silver	Underground mining from 2 adits	No production data	42D15SW8353
1932	Siville-Ferrier Syndicate	Stripping, sampling	Up to 10.29 g/t Au over 0.91 m	42D15SW8353
1982	Micham Explorations Inc.	Magnetic and electromagnetic (VLF) surveys	No magnetic anomalies; several weak to moderate conductors	42D14SE1074
1983	Rose Resource Corp.	Magnetic and electromagnetic (VLF) surveys	10 EM conductors and no significant magnetic anomalies	42D15SE0128
1983	Wasabi Resources	Airborne magnetic and EM (VLF) survey	Identified 6 EM conductors	42D15SW0088
1983	Wasabi Resources	Ground proofing of airborne EM conductors	All 6 conductors sulfide iron formation with no Au values	42D15SW0066
1984	John Ferguson	Magnetic and electromagnetic surveys	No significant mag; 2 weak VLF anomalies	42D15SW0121
1984	Goldhurst Resources	Magnetic and electromagnetic surveys	No significant mag; 11 very weak EM conductors	42D15SW0116
1984	Goldhurst Resources	Drilling, 4 drill holes; total 305.1m (1001 feet)	Drill hole 84-04: 2.87 g/t Au over 2.44 m including 6.07g/t Au over 0.91m and 0.96g/t Au over 1.22m	42D15SW0118
1985	Micham Explorations Inc.	Mapping, trenching, sampling (58 rock samples)	Highest assay 13.54 g/t Au in quartz vein at N Siville showing outside of Jackfish claims	42D15SW0114
1985	Micham Explorations Inc.	Soil sampling (1521 samples)	Two anomalous areas: Empress structure W Siville showing; Mocan valley structure	42D15SW0115
1985	Micham Explorations Inc.	Diamond drilling 4 drill holes 482.9m (1584.2 ft)	Highest assays 1166 ppb Au over 1.52m; 1588 ppb Au over 1.83m, 44.23 g/t Au over 0.61 m	42D15SW0117
1986	John Ferguson	Stripping, de-watering, trenching; sampling	Highest assay 13.03 g/t Au; 4,075 g/t Ag	42D15SW0504
1986	John Ferguson	Magnetic and electromagnetic surveys	No significant results	42D15SW0111
1987	John Ferguson	Soil sampling	No significant results	42D15SW0106
1987	Forerunner Resources	Mapping, stripping, trenching, sampling	Highest assay 93.24 g/t Au; 109.03 g/t Ag; 1.2% Cu; 7.85% Pb	42D15SW0505
1987	Micham Explorations Inc.	Diamond drilling 10 drill holes 1674m	No assays recorded	42D15SW0109
1988	Beardmore Resources	Trenching, soil sampling, bedrock sampling	Highest assays: 21.05 g/t Au plus 13.3 g/t Ag and 11.45 g/t Au plus 0.2 g/t Ag	42D15SW8353
1989	J.R. Hamel	Sampling	Highest assay 93.26 g/t Au, 82.79 g/t Ag	42D15SW0110
1991	J.R. Hamel	Stripping and sampling	Highest assay 21.05 g/t Au and 26.06g/t Ag	42D15SW0102
1992	Beavercreek Exploration (J.R. Hamel)	Drilling 2 drill holes 28.04 m (92 ft)	Highest assay 12.21 g/t Au over 1.52 m	42D15SW0002
1994	Beavercreek Exploration (J.R. Hamel)	Drilling 5 drill holes 45.1 m (148 ft)	Best result: 0.51 g/t Au over 3.05 m	42D15SW0001
1995	George Daniels et al.	Stripping, trenching, sampling, line cutting, VLF survey	16.39 g/t Au on claim #1207882 Santoy Lake; 15.77 g/t Au Syine Twp. Historic claim #1224852	42D15NW0009
1996	Big Lake Geological Consulting on behalf of J. Ferguson	Mapping, sampling	Highest assays from trench 14.3 g/t Au and 16.39 g/t Au	42D15NW0038

Year	Company	Type of Work	Results	Assessment Report #
1996	George Daniels	Prospecting, stripping, trenching	Highest assays from trench 21.94 g/t Au	42D15NW0028
1996	Rudolph Wahl et al.,	Rock sampling (100 samples); soil sampling	No significant results	42D15SW0008
1997	Landis Mining Corp.	Evaluation of previous exploration activity in the area	20 lb composite grab sample: 22.97 g/t Au over 3.05 m from Empress structure	42D15SW2002
1998	George Daniels	Sampling	Highest assays from Jon's showing 1.45 g/t Au	42D15SW2003
1999	Cameco Gold Inc.	Line cutting; mag., IP; trenching; re-logging & re-sampling	DDH 441087-9: 8.07 g/t Au; 93.8 g/t Ag over 0.52 m; DDH 44184-7: 7.09 g/t Au; 19.8 g/t Ag over 1.4 m	42D15SW2010
2000	George Daniels	Trench cleaning, minor blasting	No results	42D15SW2013
2004	Brian Fowler	Line cutting; mag; prospecting, sampling (21)	Highest assay 324 ppb Au	42D15SW2024
2005	Phoenix Matachewan Mines	Prospecting sampling (19 rock samples)	Highest assay 262 ppb Au	20000001155
2007	Wayne Richards	Prospecting, mapping, stripping, sampling (4 samples)	No Au assays; two samples >100 g/t Ag	20000003831
2007	Alto Ventures Ltd.	Mapping, prospecting and sampling (47 rock samples)	Highest assay 2,278 ppb Au	20000002005
2008	Alto Ventures Ltd.	Drilling 2 drill holes 332 m on Empress structure	0.66 g/t Au over 2.3 m	20000003772
2009	Rudolph Wahl	Prospecting, mapping, sampling (22 samples)	No significant results	I20000004525
2010	Galahad Metals	Soil sampling (619 samples), mapping trenching, sampling (89 samples)	26.8 g/t Au and 119 g/t Ag; 24.7 g/t Au and 40.4 g/t Ag at creek showing	20000005783
2010	Bond et al.	Prospecting, mapping, rock samples (63 samples) and lake sediment samples (7 samples)	309 and 459 ppb Au	20000006073
2010	Bond et al.	Drilling 2 holes 240 m	No significant results	20000006073
2012	Rudolph Wahl	Prospecting, mapping, sampling (30 samples)	1.9 g/t Au sample # 997103	20000007183
2012	Hamel et al.	Prospecting , mapping, sampling (11 samples), diamond drilling	No significant results	20000007081, 2.53866
2014	Alto Ventures Ltd.	Bedrock sampling (21 samples)	No significant results	20000008044

Regional Geological Setting

The property is located in the Wawa subprovince of the Superior Province of the Canadian Shield specifically the metavolcano-sedimentary Schreiber-Hemlo greenstone belt (Figure 3).

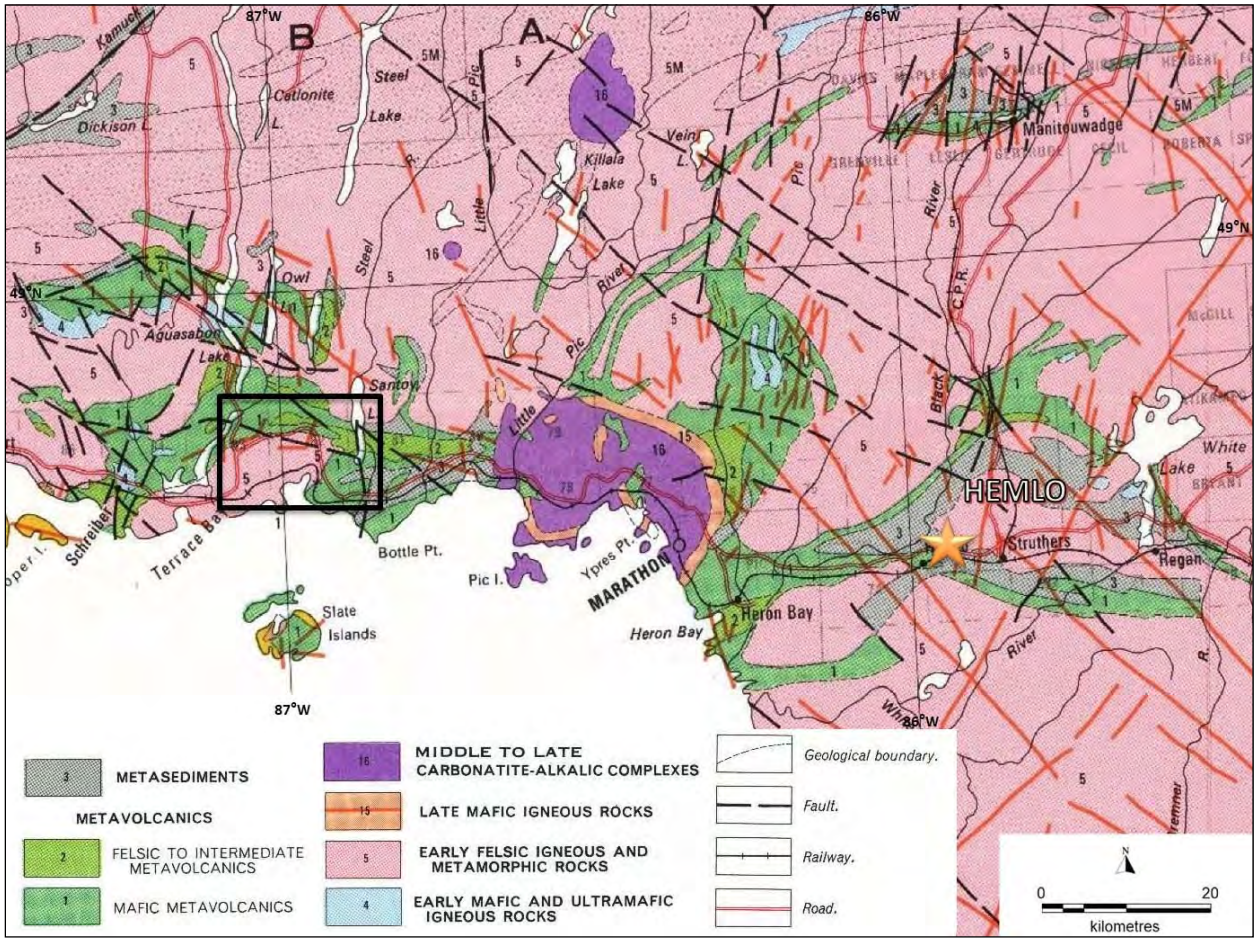

***Figure 3**: Regional Geological Setting Map (after Ayres et al, 1970).*

Property Geology and Mineralization

The Jackfish property straddles the eastern margin of the Terrace Bay Batholith where the granodiorite rocks of the intrusive come into contact with the greenstone belt sequence of the Scheiber Hemlo belt in a combination of an intrusive and structural setting. The various rock types that have been observed or interpreted to underlie the area are depicted on the property geology map in Figure 4.

Gold, silver and base metal mineralization is known to occur and has been mined historically from quartz-carbonate veins in three different settings across the region; as lenses or stringers within shear zones of the greenstone belt, as networks parallel to the contact between the batholith and supracrustal rocks and as fracture fill within the batholith. These styles of orogenic gold deposits are the key targets of focus for

exploration activities on the Jackfish property. The more prominent historical workings and currently active mineralized showings are shown on Figure 4.

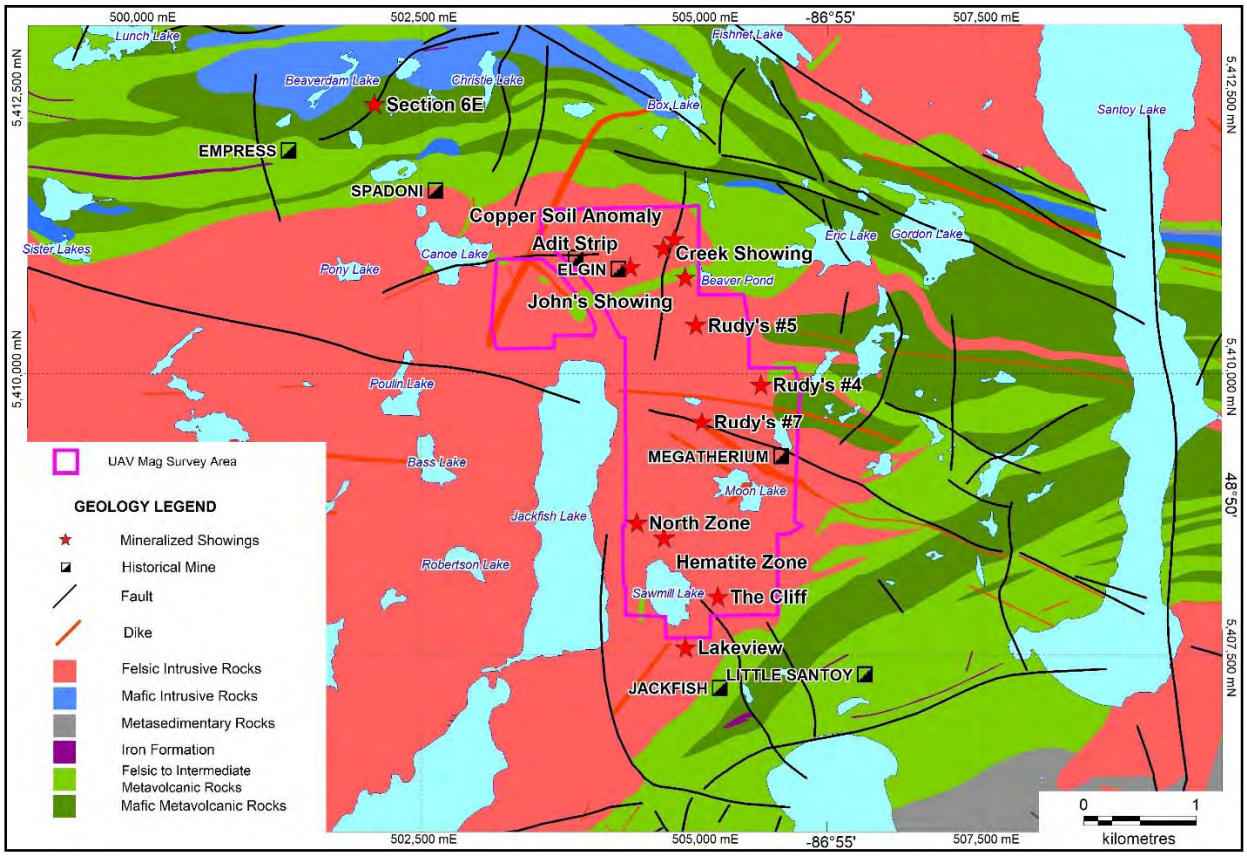

***Figure 4**: Property Geology Map (after Walker, 1967).*

Exploration Work

An unmanned aerial vehicle (UAV) based airborne magnetic geophysical surveys was undertaken over 65 cell mining claims of the Jackfish property. The purpose of the work was to delineate structures possibly hosting gold and base metal mineralization within or at the contact with the Terrace Bay Batholith. This method was chosen because of the UAV's ability to fly at lower altitude and speed compared to manned aircraft, thus collecting higher resolution data at an excellent signal to noise ratio for a lower cost per line kilometre rate.

The data acquisition was carried out on the property from 12 to 21 October, 2017 by Stratus Aeronautics Inc. utilizing a third generation prototype multi-rotor UAV platform with a fixed boom mounted Geomatics Cesium G-822A magnetometer (detailed specifications provided in Table 3). Readings of magnetic intensity were collected along pre-programmed flight lines 50 metres apart at a rate of 10 hertz. Heading and altitude were controlled by the UAV's avionics system as well as differential GPS and radar altimeter.

A base station was maintained daily throughout the survey located near Sawmill Lake recording local diurnal fluctuations of the magnetic field for correction purposes.

***Table 3**: Geomatics Cesium G-822A magnetometer Specifications.*

OPERATING PRINCIPLE:	Self-oscillating split-beam Cesium Vapor (non-radioactive)
OPERATING RANGE:	20,000 to 100,000 nT
OPERATING ZONES:	The earth's field vector should be at an angle greater than 6° from the sensor's equator and greater than 6° away from the sensor's long axis. Automatic hemisphere switching.
SENSITIVITY	<0.004 nT/√Hz rms. Typically 0.02 nT P-P at a 0.1 second sample rate (90% of all readings falling within the P-P envelope) using CM-201 Mini-Counter
HEADING ERROR:	<0.15 nT over entire 360° polar and equatorial spin. Not specified on 823B
ABSOLUTE ACCURACY:	Better than 3 nT throughout range
OUTPUT:	Cycle of Larmor frequency = 3.498572 Hz/nT, RS-232 data at 9600 baud, concatenated data streams from up to 6 sensors
MECHANICAL:	
SENSOR:	2.375" (60.32 mm) dia., 6.25" (158.75 mm) long, 12 oz (339g) without cable, 24 oz (680 g) with cable
SENSOR ELECTRONICS:	2.5" (63.5 mm) dia., 11" (279.4 mm) long, 29oz 822g)
CABLES:	
Sensor to sensor driver / counter:	109" (2.77 m) standard. Cable length can be increased by 43" (1.10 m) for a total length of 152" (3.87m).
Sensor driver to external counter:	33' (10m) standard. Cable length can be increased up to 164' (50 m)
Sensor driver / counter to Power/data junction	25' (7.6m) standard. Cable length can be increased up to 200' (61 m)
OPERATING TEMPERATURE:	-30°F to +122°F (-35°C to +50°C)
STORAGE TEMPERATURE:	-48°F to +158°F (-45°C to +70°C)
ALTITUDE:	Up to 30,000 ft (9,000 m)
WATER TIGHT:	Sealed for up to 2 ft (0.9 m) water depth
POWER:	24 to 32 VDC, 0.75 amp at turn-on and 0.5 amp thereafter
ACCESSORIES:	
Standard:	Power/RS-232 multi-conductor cable (electronics to power/data junction box with 9 pin RS-232 connector and power lugs), lengths to be specified, spare O rings, operation manual and carrying case
Optional:	Birds, Stingers, Wingtips, Avionics, GPS receivers

A total of 125.4 line kilometres were flown, including six tie lines to help with levelling. The raw data was subsequently processed for diurnal variations locally in the magnetic field, flight height changes and heading corrections and levelled across the different days of data collection. The data is provided in Appendix 1. An image of total magnetic intensity and the survey flight lines in relation to the property cell mining claims are shown on Figure 5.

The corrected UAV magnetic data was subsequently used to generate a 3D inversion model of magnetic susceptibility by Campbell & Walker Geophysics Ltd. Inversion modelling was undertaken to provide an overall three dimensional representation of the variations in magnetism in the subsurface that may be interpreted to reflect changes in geology due to lithological contacts, structural breaks or alteration and mineralization.

Some further processing of the total field magnetic data was carried out prior to inversion. This processing involved upward continuation, band pass filtering and down sampling by using Fast Fourier Transform methods on the gridded magnetic data with Geosoft's Oasis Montaj software. Upward continuation a distance of 25 metres attempts to minimize line effects due in part to irregular flight heights during the survey. The band pass filter applied had cut offs of 75 and 1400 metres and removes long spatial wavelength regional trends as well as supressing smaller wavelength anomalies that could not be modelled well by the inversion mesh. The data was down sampled to one reading per 25 m along the survey line.

The resultant data was inverted using Geosoft's VOXI Magnetic Vector Inversion software. The model mesh consisted of 25 x 25 x 12.5 metre voxels. Multiple inversions were carried out in order to find a model that fit the observed data within the allocated noise threshold while not adding unnecessary features to the model. The final model is the amplitude of the magnetization vector normalized to the induced field strength measurable in units equivalent to SI magnetic susceptibility.

The model data was received on March 19, 2018. An image of the model viewed with a partial cutaway and overlain with a vertically offset map of key features of the Jackfish property is provided in Figure 6.

Interpretations

Imagery of the UAV magnetic data provided much more detail of the complexity of the boundary between the Terrace Bay Batholith and the supracrustal rock sequence of the greenstone belt. At least two of the more significant gold showings, Rudy's #5 and #7, are now confirmed to occur right at southeast – northwest trending margins of the batholith. Others like the Cliff, Hematite and North Zones are located well inside the intrusion, although there may be a northeast trending roof pendant or structurally emplaced fragment of greenstone rocks separating the Hematite and North Zones. These findings are significant as they help to plan further field programs to trace the gold showing trends under cover.

Unrelated to mineralization, but potentially impacted the extent of some mineralized trends, the west-northwest linear remnantly magnetized features that cut the magnetic image into sections, are now confidently interpreted to be Keewenawen related dykes possibly occupying normal faults realted to the mid continental rift. The 3D inversion model suggests a fairly steep southerly dip to these dykes, although a throw to the faults (if any) cannot be determined from the model. Assuming there has been some post

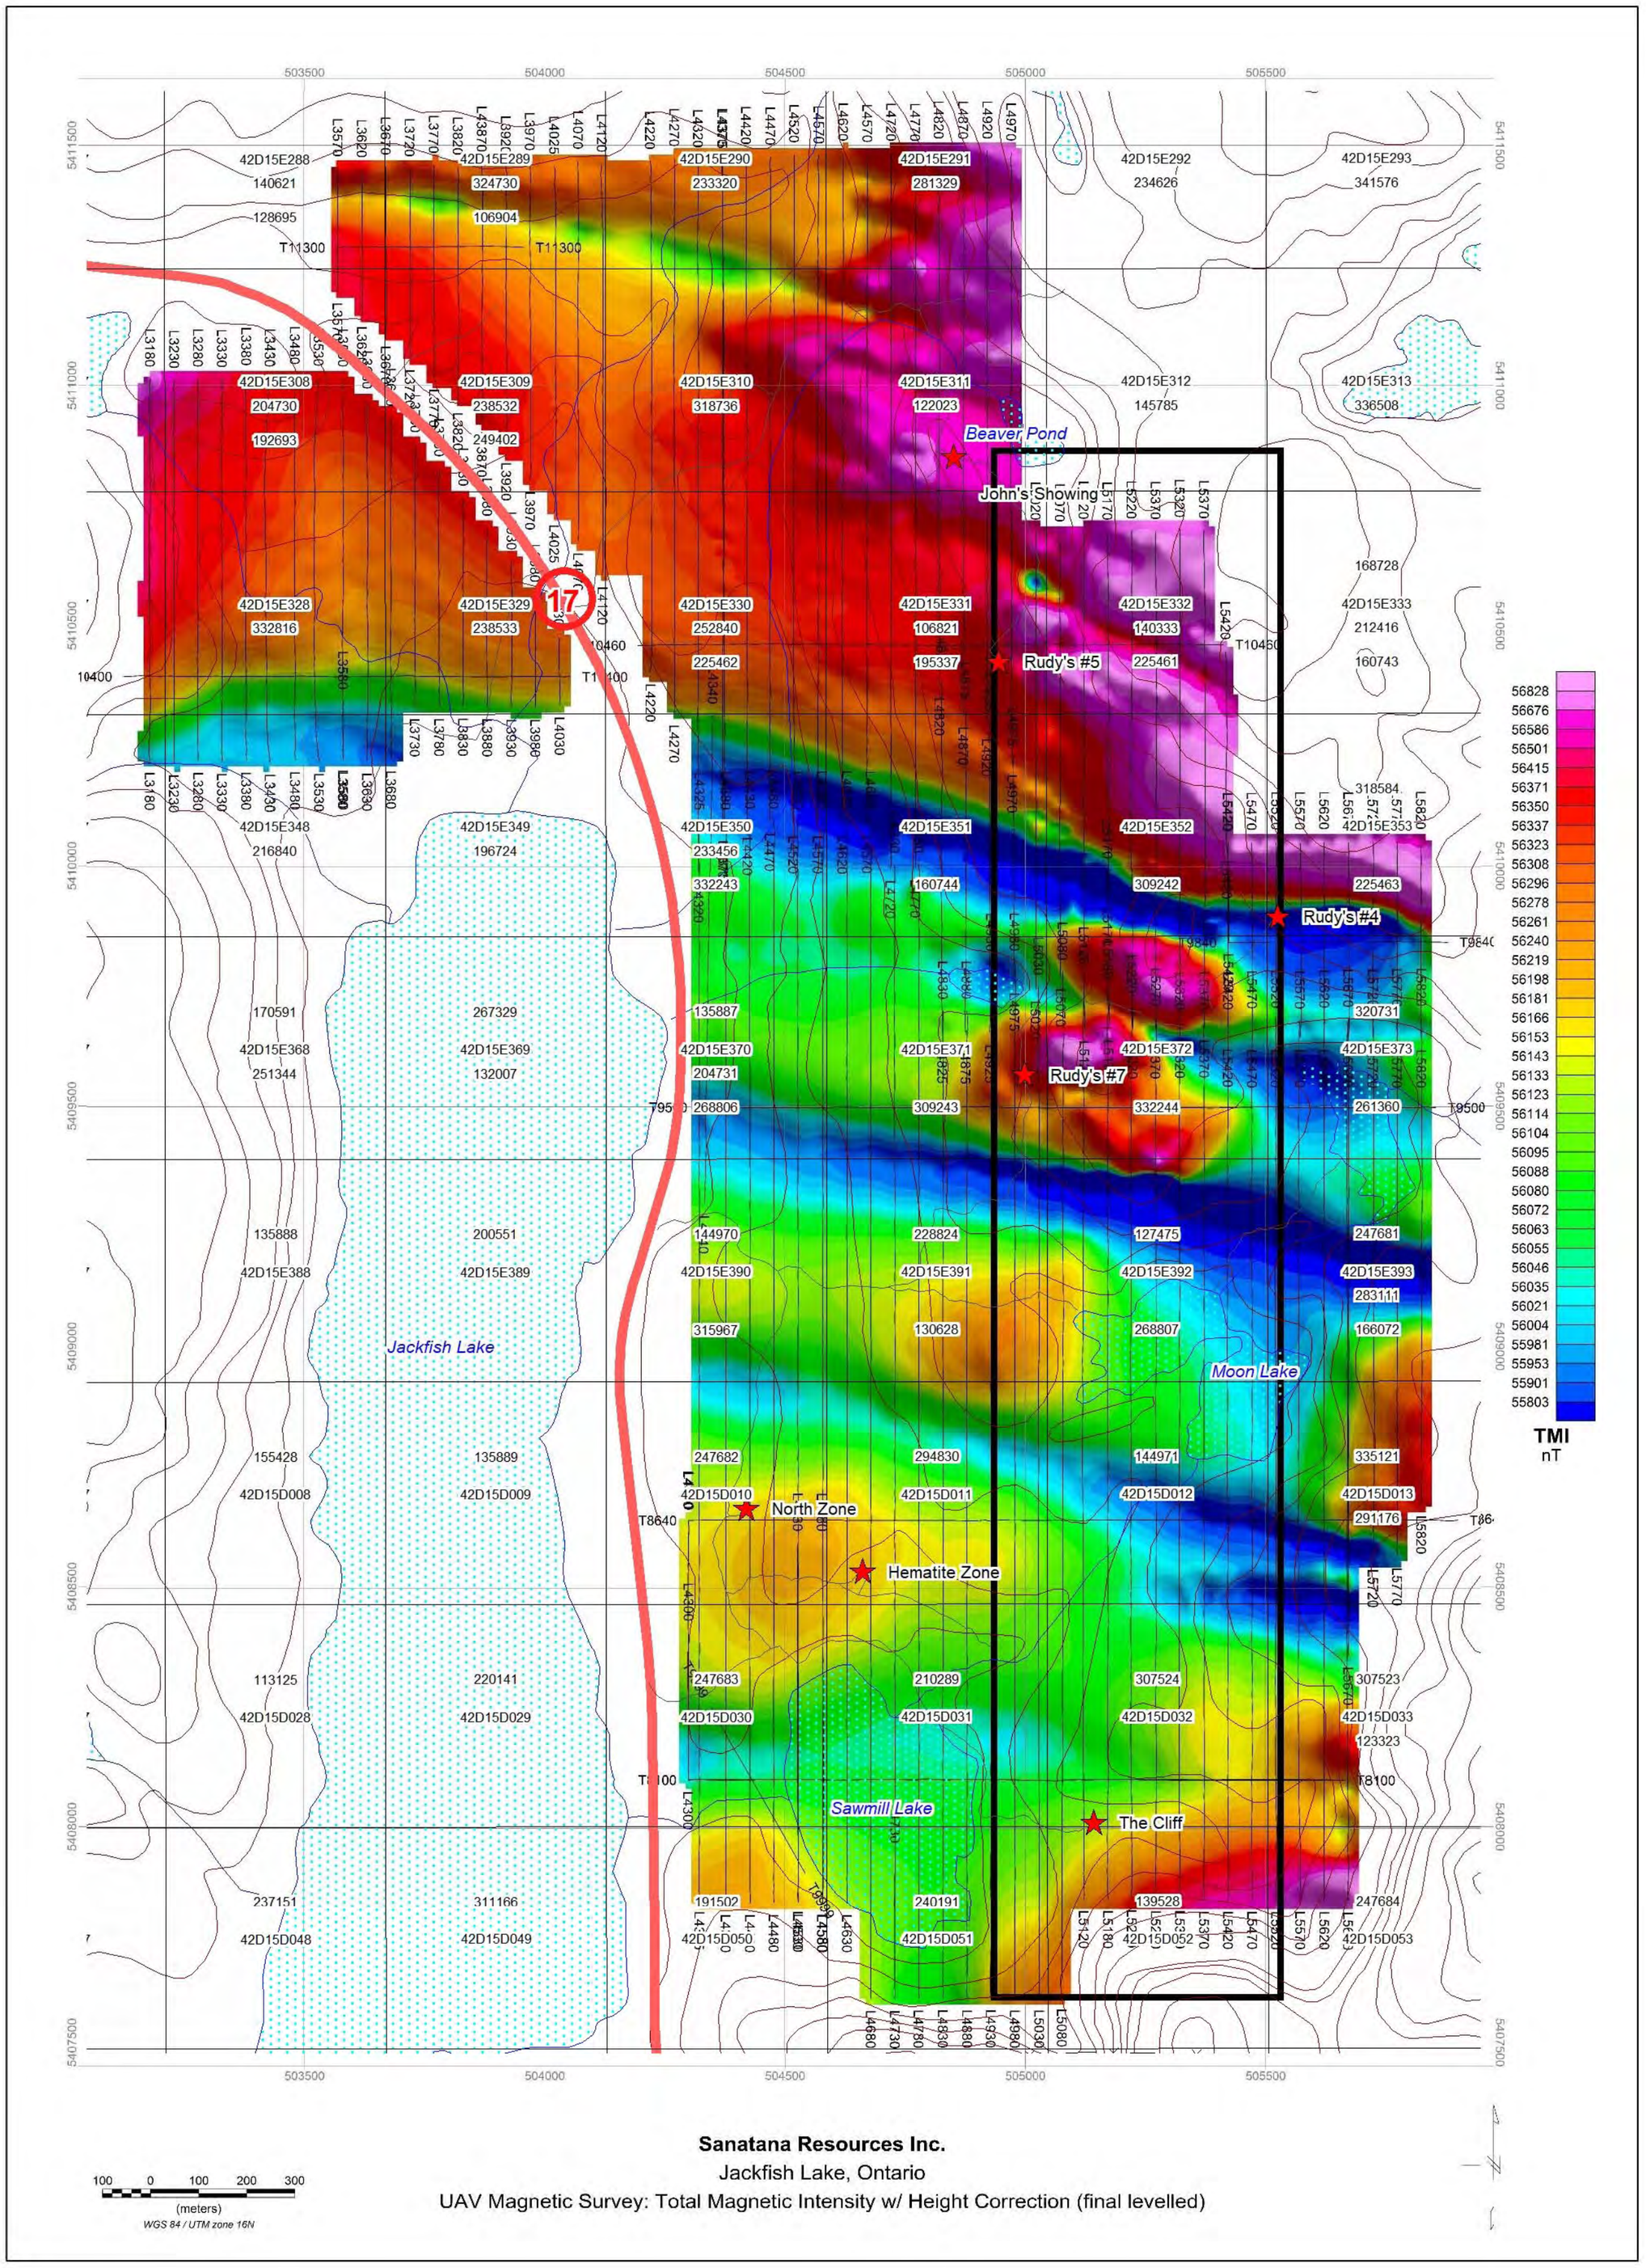

Figure 5: *UAV Magnetic Survey Image of Total Magnetic Intensity.*

mineralization movement will mean caution must be taken as to where mineralized trends may go to as these structures are approached when planning follow up work programs on the ground.

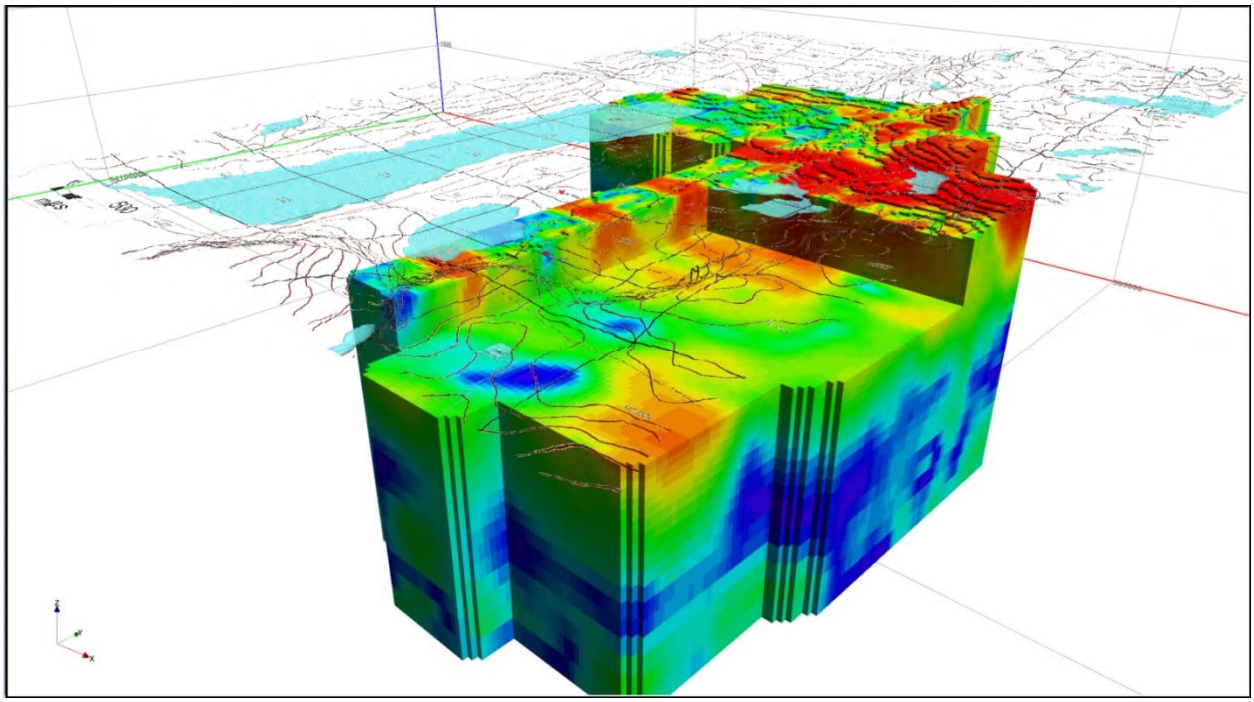

Figure 6: *UAV Magnetic Survey Image of Inversion Voxel Model.*

Conclusions and Recommendations

The UAV magnetic survey proved to be a time and cost efficient method of geophysical data collection over a small area and at a close line spacing, especially compared to a ground magnetic survey that would have required a significant amount of line cutting and survey hours to achieve the same coverage in the rough terrain. It was unlikely that a helicopter based system would even mobilize to the field to carry out such a small survey and the flight height would have been greater for pilot and vehicle safety in such an area of variable topographic relief.

The resultant survey data and 3D inversion model were considered very good quality for the type of survey and will be invaluable in planning future field work programs. Based on the interpreted trends at Rudy's #5 and #7 it is recommended to follow up these showings with surface mapping if possible or some test stripping in places that seem amenable to exposing bedrock by stepping out in either direction to the northwest and southeast no more than 50 metres at a time as the resolution of the magnetic data dictates. Other showings like the Cliff, Hematite and North Zones will require some other predictive exploration method to pin down the trends, perhaps an electromagnetic geophysical method or simply expanding the outcrop stripping or test stripping in close proximity as much as is allowed by permitting. This work could be achieved within the next summer field season for a budget of C$50,000.

Statement of Qualifications

Troy Gill
908-925 West Georgia Street
Vancouver, BC, V6C 3L2
Telephone: 604-762-0380
Email: troy@sanatanaresources.com

I, Troy Gill, do hereby certify that:

1. I am employed as Exploration Manager for Sanatana Resources Inc.

2. I am responsible for the Report titled "Assessment Report on Airborne Magnetic Geophysical Surveying and Inversion Modelling on the Jackfish Property, Syine Township, Thunder Bay Mining Division, District of Thunder Bay, Ontario, NTS 42D15" dated December 6, 2018, and prepared for Sanatana Resources Inc.

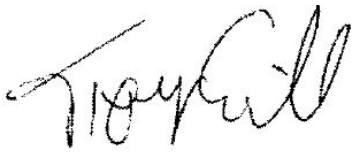
3. I hold the following academic qualifications: B.Sc. Geology (1993), University of Wollongong, NSW, Australia.

4. I am a member in good standing of the Australian Institute of Geoscientists (MAIG).

5. I have worked on a range of commodities including Au, Cu, Ni, diamonds, coal and iron ore in various geological settings in Australia and Canada since 1993.

6. This Report is compiled from data collected by or on behalf of Sanatana Resources Inc. in 2017 and 2018. I supervised the data acquisition associated with this Report and I was involved in the data interpretation presented in this Report.

Dated this 6th Day of December, 2018.



_____

Troy Gill, B.Sc., MAIG.

Exploration Manager, Sanatana Resources Inc.

Cost Statement and Expenditure Distribution

The main costs involved for acquiring the magnetic data were of course the UAV survey itself and the inversion modeling. These two items were paid on invoices (Appendix 2) as a total charge for performing the work. Support of the field survey was provided by Sanatana and involved due diligence supervision of data acquisition including travel and accommodation as well as two days field assistance (Appendix 2) helping maintain the UAV system. All the costs are summarized in Table 4.

***Table 4**: UAV Magnetic Survey and Inversion Modeling Summary Costs.*

Item	Description	Cost
Stratus Aeronautics Inc.	All-inclusive price for UAV magnetic Survey acquisition and data processing.	$40,000.00
Campbell & Walker Geophysics Ltd.	2 days consultation fee @ $1,100 per day generating the inversion model.	$2,200.00
Troy Gill	Company field supervision of UAV magnetic survey 7 days @ $500 per day.	$3,500.00
Wayne Richards	Field assistance to the UAV survey crew maintaining the field program 2 days @ $350 per day.	$700.00
Westjet Airlines	Air travel to and from the property for Troy Gill	$1,212.24
Jackfish Cottages	1 week accommodation for Troy Gill during the survey.	$594.65
Field Transport	2 days of ATV and 6 wheeler rental assisting the UAV survey.	$290.00
Total		**$48,496.89**

Because the survey and modeling and support were charged as a total cost, the expenditure has been distributed across all the 43 cells covered by the survey as a unit price of 1/43 of the total cost where a single cell mining claim (21 total) receives one whole unit and a boundary cell mining claim (44 total) receives one half of a unit. The distribution of expenditure across the cell mining claims covered by the survey is shown in Table 5.

***Table 5**: Distribution of Survey and Modeling Expenditures across Cell Mining Claims.*

Appendix 1: UAV Magnetic Survey Data

UAV Aeromagnetic Levelling and Gridding

Jackfish Project,

Sanatana Resources Inc.

Database Fields:

EASTING	NUTM16, WGS84 (trimmed)
NORTHING	NUTM16, WGS84 (trimmed)
TIME	seconds past midnight, UTC
HEIGHT	GPS height, ellipsoid
LASERALT	laser altimetry
LAT	Geodetic, WGS84
LONG	Geodetic, WGS84
MAG	rawmag
BASEMAG	basemag
DC	diurnal correction (56250 - basemag)
MAGDC	rawmag + dc
magdc_lev	levelled magdc, no height correction
MAGDC_HT	height-corrected magdc
magdc_ht_lev	height-corrected and levelled magdc
EASTING_BAK	NUTM16, WGS84 (original)
NORTHING_BAK	NUTM16, WGS84 (original)
