2 Introduction

This report details Palladium One's 2020 winter drill program on its 100% owned Tyko Ni-Cu-PGE project, located near White River, Ontario. The program consists of 14 diamond drill holes totalling 1123 meters drilled designed to test the Smoke Lake electromagnetic (EM) anomaly.

High-resolution drone-based magnetic and ground based loop time domain survey (TDEM) surveys, done previously in the year, refined the anomaly resulting in the discovery of massive magmatic sulphides returning 8.7% Ni_{Eq}* over 3.8 meters (6.6% Ni, 3.7% Cu, 1.5g/t PGE)

3 Terms of Reference

This report was prepared at the request of Palladium One Mining Inc. for the use of filing assessment as required under the Ontario Mining Act.

4 Disclaimer

This report is based on information from Palladium One Mining's (then known as Tyko Resources Inc.) NI-43-101 report written by Alan Albut (Albut, 2010), as well as assessment reports, private reports, and general geological reports and maps. The author takes no responsibility for the information provided in such reports.

5 Property Description and Location

The property is located in Northwestern Ontario, Canada, approximately 275 km east-northeast of Thunder Bay and 28 km south-east of Manitowadge (Figure 5-1). It is located within NTS 42C/13NW and 42C/14NE, in UTM Zone 16 (NAD 83), or Latitude 48°56'14", Longitude 85°32'54"W. The property is centered at approximately 606,300mE and 5,421,500mN.

The Tyko Property consists of 1192 unpatented claims (Figures 5-2). A list of all claims can be found in Appendix I. Table 5-1 indicates the claims on which drilling work was performed. The claims are registered in the name of Tyko Resources Inc. On February 25, 2016, Nickel One Resources Inc. announced the acquisition of Tyko Resources Inc. and through this transaction took possession of the Tyko Cu-Ni-PGE property and all of the claims held within it. On May 3rd, 2019 Nickel One Resources announced that the company' name will be officially changed to Palladium One Mining Inc. ("Palladium One").

6 Accessibility, Local Resources and Infrastructure

The property is predominantly accessible by logging roads originating from Manitouadge and White River, which have increased seasonal access to the eastern and western property extents. More remote sections of the property are best accessed by helicopter. The drive to White River from Thunder Bay is approximately 400 km east on Trans-Canada Highway 17.

White River has a population of roughly 1000 and has services and infrastructure required to operate a modern mineral exploration program. White River is capable of providing modern housing and lodging along with basic educational, medical, recreational, and shopping facilities.

The local economy is traditionally upheld by railway and forestry activities. This allows for labour, industrial supplies and services for mining to be locally sourced with limited availability. Thunder Bay, Ontario, is the closest major city center that can supply a vast range of geological, exploration and mining-related equipment and services.

7 Climate and Physiography

White River is situated within a region of subarctic continental climate that is moderated by Lake Superiors lake effect. Climate data for White River is sourced from Environment Canada. Mean daily temperatures range from 17.5°C in July to -22.8°C in January. Daily recorded highs and lows have reached 39.4°C in July 1975 and -45.0°C in January 1982, respectively. Mean total precipitation is 859.3 mm, which includes 563.6 mm of rainfall and 295.6 mm of snowfall. The highest amount of rainfall occurs in July (average 107.4 mm), while snowfall generally peaks in January (average 64.2 mm).

The Tyko property has an undulating terrain with low to moderate relief. Approximate elevations range from 340 meters to 460 meters above sea level. Low lying areas commonly occur as small bogs, meandering rivers and streams that drain into White Lake and White River, which ultimately drain into Lake Superior. The majority of the property was originally covered by glacial overburden, wetlands, and water, while outcrop can commonly be found on lake shores and some cut blocks.

Situated in the Northern Coniferous section of the Boreal Forest Region of Northwestern Ontario, the Tyko property is characterized by mixed wood forest stands of black and white spruce, balsam fir,

aspen and birch. Jack pine stands can occur in well-drained, coarse sandy soil along with areas that have been replanted.

Wildlife in the region include wolf, lynx, bobcat, fisher, marten, wolverine, river otter, least weasel, short-tail weasel, mink, snowshoe hare, red squirrel and beaver. Numerous species of wild birds are known to occur in the region. Many of the lakes and rivers in the region will have sport fish.

8 Geological Setting

The Tyko project is in the eastern Wawa Subprovince located in the Superior Structural Province (Williams et al., 1991). Minimal government mapping programs and historic mineral exploration in the area have taken place. Regional-scale mapping (Milne, 1968) indicates a dominance of compositionally granitic to tonalitic rock resulting from the older Black Pic Tonalite Gneissic Batholith and the younger granitic Dotted Lake Pluton in the southwest of the property.

Mapping and prospecting carried out by Spence (2000) show that the granites typically contain mafic to ultramafic xenoliths, with some bearing Ni-Cu-PGE mineralization. Xenoliths are well represented at the Tyko Main Showing and can be subdivided into groups. The most important of the subdivisions are the medium- to coarse-grained, dark green ultramafics and mafics varying from hornblendite to biotite-hornblendite to hornblend gabbro. These xenoliths are the host to the majority of Ni-Cu mineralization on the Tyko property. A smaller portion of mineralization, but often associated with the highest grade, can be found in coarse-grained pyroxenite fragments.

The mafic-ultramafic Bulldozer Intrusion is also located in the Tyko property. This intrusion is similar to the Tyko Main Showing in that it is heavily brecciated by granitic rocks and has locally-hosted Cu-Pd mineralization. Little exploration has been conducted on the Bulldozer Intrusion and no mapping has occurred.

The Archean rock units are cut by Proterozoic diabase dykes; Matachewan (NW trending), Biscotasing/Abitibi (NE trending), and Marathon (N trending) swarms (Figure 8-1).

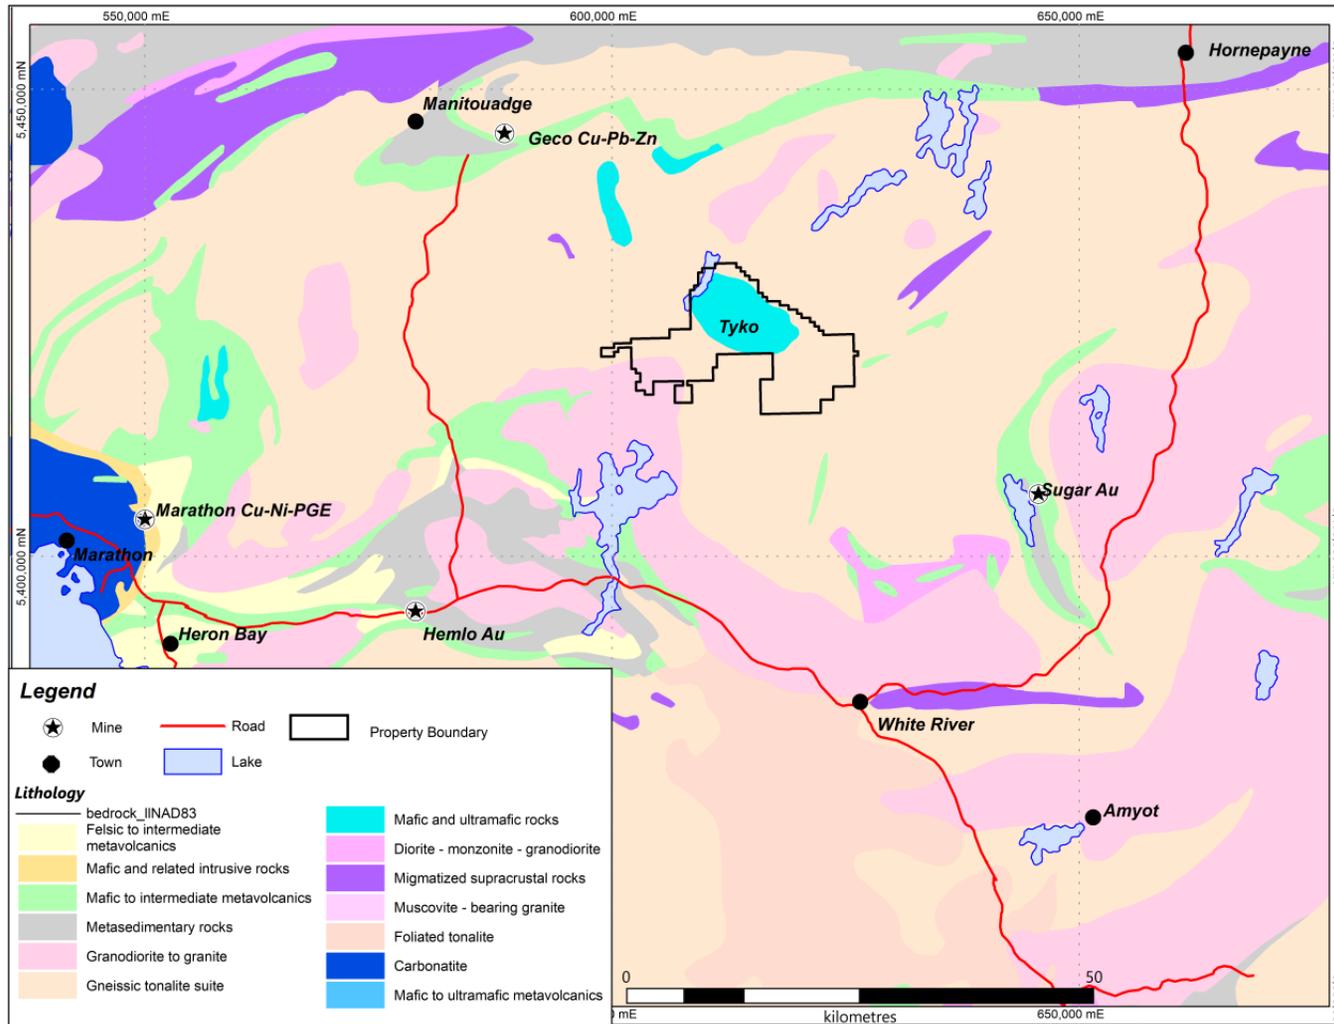

Figure 8-1 – Simplified Regional Geology map with Tyko property boundary

9 History of Exploration on the Property

Previous work done by industry and government geologists on the property is listed below. Detailed exploration work at Tyko since its discovery in 1999 includes stripping, channel sampling, mapping, ground magnetics, VLF-EM, and IP/resistivity.

- 1989 – Noranda Exploration Co. Ltd. conducted a large-scale, Aeodat helicopter-borne magnetometer and EM survey which included much of the Manitouwadge, eastern Schreiber-Hemlo, and Dayohessarah greenstone belts.
- 1999 – Brian Mealey and Ian Spence prospected the Tyko area which resulted in the discovery of the main Tyko Cu-Ni-PGE showing in Fall of 1999. The discovery samples contained 4528 ppm Cu, 6896 ppm Ni, 1085 ppb Pd, and 840 ppb Pt (Spence, 1999).
- 1999 – OGS Resident Geologist samples return 3.82% Ni, 0.86% Cu, 624 ppb Pd, and 444 ppb Pt (Schneiders, 2000).
- 1999 to 2000 – Freewest Resources Canada Inc. optioned the property and performed a helicopter-borne magnetic and electromagnetic survey by AEROQUEST Ltd. Two separate IP surveys were completed by GEOSIG Inc. and JVX Inc. along a cut grid. Geological mapping and hand-trenching were completed in the summer of 2000 (Spence, 2000; MacTavish, 2000).
- 2005 – North American Palladium (NAP) conducted a prospecting program on the property during the periods June 1 - June 20 and August 6 - August 15. This program was designed as a ground follow-up to an airborne magnetic/electromagnetic survey as well as uncovering and sampling the RJ showing (Rickard, 2006).
- 2006 – NAP employees were on the property September 10 to do a follow-up on a magnetic/electromagnetic target that was not investigated during the 2005 field season (Rickard, 2006).
- 2006 – NAP completed a 29.1 km cut grid in the western portion of the Tyko property and an IP survey was completed following this grid. To evaluate the main Tyko showing and an IP anomaly corresponding to the RJ showing, a 711 m diamond drill program was undertaken. Drilling results achieved values of 1.093% Ni, 0.765% Cu over 4.15 m and 1.021% Ni, 0.579% Cu over 1.46 m, which were intersected in holes TK-06-001 and TK-06-002 at the Main Tyko showing, respectively. The area surrounding the RJ showing revealed Ni and Cu values of 1.065% Ni, 0.511% Cu over 4.08 m (TK-06-003), 1.195% Ni, 0.506% Cu over 2.0 m (TK-06-004) and 1.046% Ni, 0.466% Cu over 6.2 m (TK-06-005) (Rickard, 2006). For a complete list of assays of the drilling results see North American Palladium's Prospecting-Geology-Geophysics-Drilling Report by Jason Rickard dated December 4, 2006 (Nielsen, 2007).
- 2007 – NAP contracted Lunic Exploration to cut a 17.3 km grid on the western portion of the property cross-cutting the grid cut the previous year. An IP and magnetic survey were again carried out over-top of this new grid. Geophysics was then followed by a 1519 m diamond drill program to further evaluate the IP anomalies associated with the RJ showing (Nielsen, 2007).

- 2011 – Tyko Resources Inc. completed several geophysical surveys including Airborne geophysical surveys consisting of 751 km flown over the Tyko property by AeroQuest (Harper, 2011). Surveys completed include Total Magnetic Intensity (TMI) and AeroTEM IV electromagnetics. A ground-based B-Field InfnitTEM II survey was conducted by Abitibi Geophysics over the grid covering both the Tyko and RJ showings (Martin Dubois, 2011), as well as a ground-based IP survey covering both the Tyko and RJ showings (Webster, 2011).
- 2012 – Tyko Resources Inc. completed an extension of the grid and extension of the IP survey to the south of the Tyko showing (Webster, 2012).
- 2016 – Nickel One Inc. completed helicopter supported drill program consisting of 14 BTW diamond drill holes totaling 1,780m testing the Tyko, RJ, and Bruce Lake anomalies.
- 2019 – Palladium One Mining Inc. completed a Ni-Cu-PGE prospecting program with the goals being to extend known mineralized showings and to follow up on untested airborne EM and Mag anomalies. 39 soil samples and 34 grab samples were taken. Samples were analyzed for Copper, Nickel and PGEs using fire assay, acid digestion and ICP-OES. Highlights include Ni-Cu signature returning up to 238ppm Ni and 106ppm Cu.

10 Current Program

The 2020 Tyko drill program consisted of 14 drill holes totalling 1,123 meters. This program was the first to drill test the Smoke Lake EM anomaly. 13 holes were drilled into the Smoke Lake electromagnetic anomaly and one hole (TK20-028) was drilled to test a separate magnetic anomaly interpreted to be related to the smoke lake anomaly. High-resolution drone-based magnetic and ground-based horizontal loop EM surveys, undertaken shortly before drilling, refined the anomaly resulting in the successful discovery of massive magmatic sulphides.

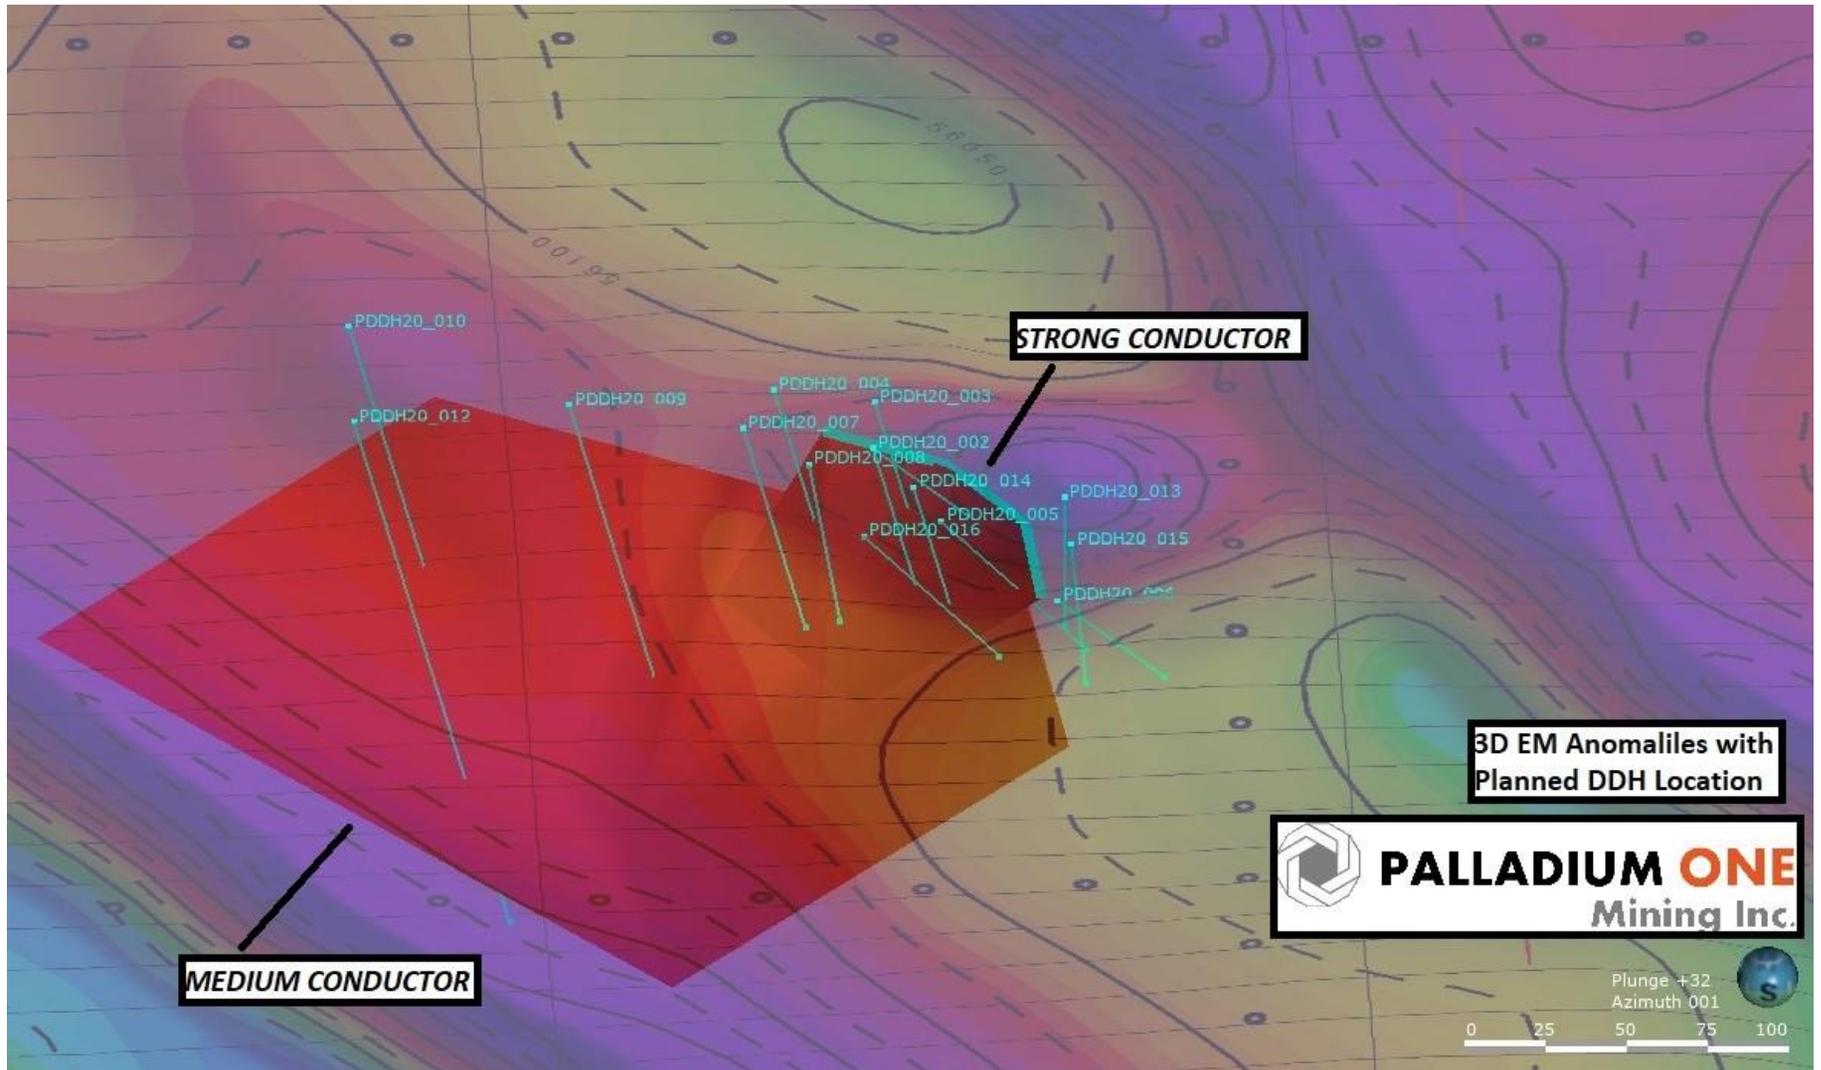

Figure 10-1 – 3D inclined view looking north with 1st Vertical Mag background showing planned 2020 drill holes.

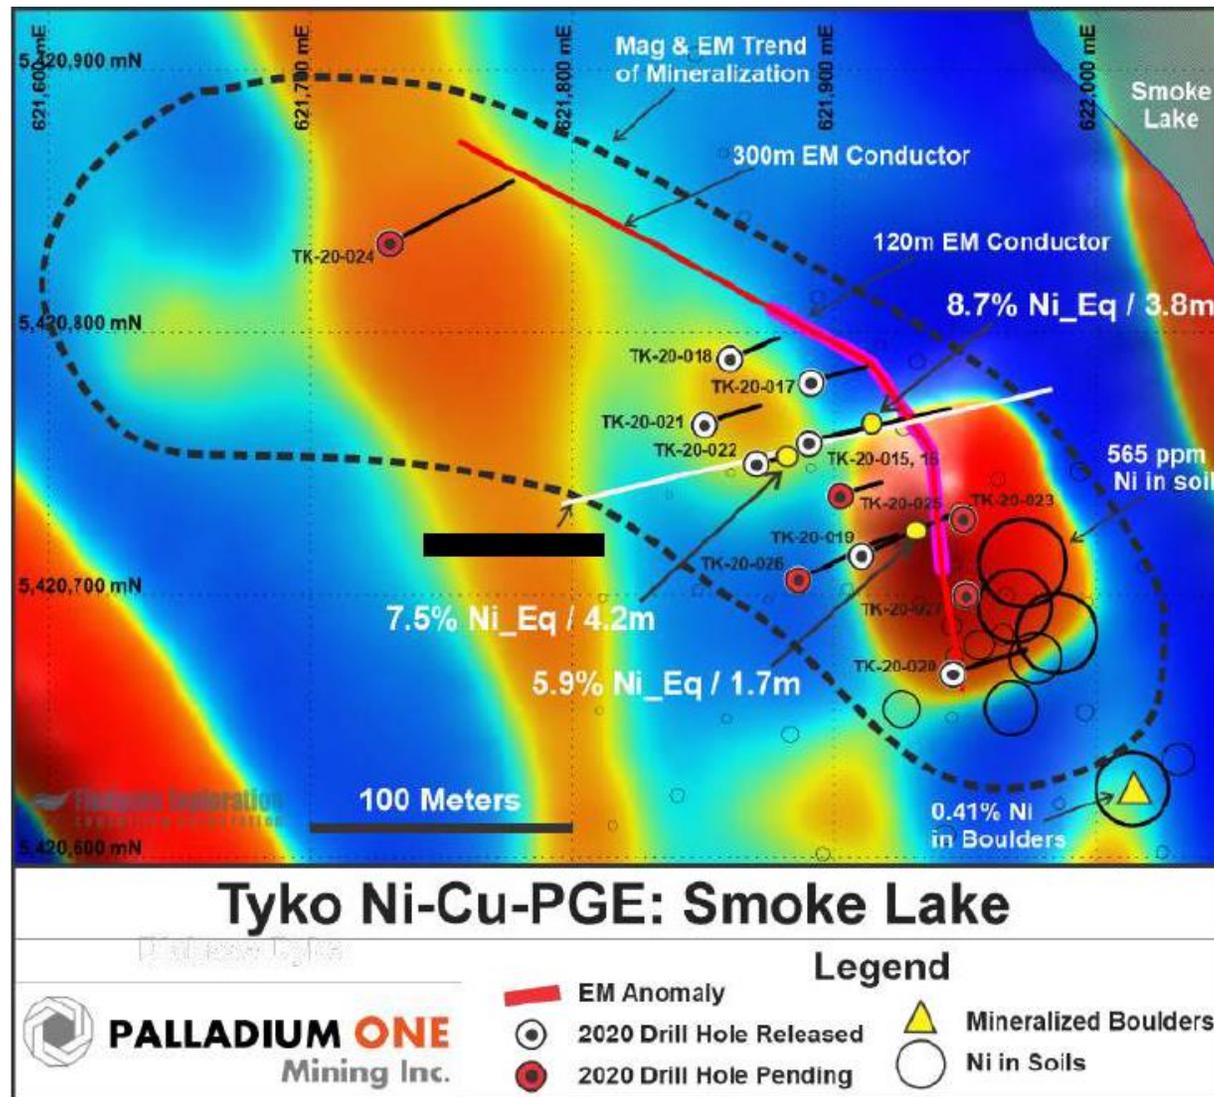

Figure 10-2 - Plan map of the Smoke Lake area with 1st Vertical Mag background showing soil samples and 2020 drill holes. The red line indicates the axial traces of the two closely spaced ground based horizontal loop EM anomalies.

10.1 Personnel

The program was designed based on recommendations from both Palladium One and Fladgate Exploration geologists. The drill program was managed and executed by Fladgate Exploration staff under the supervision of the Project Geologists. Logistics for the program began on October 28, 2020. Drilling started November 28, 2020 and was completed by December 14, 2020. Logging started December 02, 2020 and was completed December 17, 2020.

Table 10-1 – Personnel Log

Name	Working Title	Responsibilities	From/To Dates on Project
Neil Pettigrew	Senior Geologist	Program management	28-Oct-2020 to 17-Dec-2020
Kyle Pederson	Project Geologist	Core logging	2-Dec-2020 to 17-Dec-2020
Richard Brett	Geotechnician	Core cutting	2-Dec-2020 to 17-Dec-2020
Jordan Quinn	Project Geologist	Hole spotting, 3D modeling, drone surveying	28-Oct-2020 to 5-Nov-2020
Alex Hughes	Project Geologist	GIS mapping, report writing	28-Oct-2020 to 3-Nov-2020
Bonnie Craig	Administrative Assistant	Logistics	28-Oct-2020

10.2 Drilling

The program consisted of 14 diamond drill holes totaling 1123 meters drilled, all of which were drilled by drilling contractors 3M. Holes were spotted with a Garmin 64. Final collar locations were found using SSXBlue. Core was cut and stored in a converted car wash in White River, ON. Logged and cut core was later moved via flatbed truck and unloaded with a fork-lift at the long-term MNM storage facility in Conmee, ON.

11 Sampling, Analytical Methods, and QA/QC

Core Logging procedure followed the common practice used for exploration drill programs. Data collected included overburden and casing depth, meter marks and box meterage, core photos, core photos, geological descriptions and sample intervals. Data management for the project was organized directly into Fladgate laptops. All core logging and sampling information was collected and entered into Geotic core logging software.

Sample intervals were marked out on the core and recorded before placing sequential barcoded ActLabs sample tags. Sample length ranged from 0.3 meters to 1 meter with respect given to lithology contacts. 3-meter shoulder samples were taken on major mineralized intervals and 1–2-meter shoulder samples were taken on minor mineralized intervals. All samples were cut using a Husqvarna core saw. The core was cut along the top of the foliation of the rocks. The backside of the core remains in the box while the front side of the core was put into individual sample bags with the corresponding sample ticket. All individual sample bags were labeled and put into rice bags where they were transported to ActLabs in Thunder Bay.

Actlabs analysed the samples for PGEs using a 30 g fire assay with an ICP-OES finish and for Ni, Cu, and Co using 0.25 g by 4-acid digestion with ICP-OES finish. Ni, Cu and Co samples over 0.5 wt% were re-analysed using 2.5 g by 4-acid digestion with ICP-OES finish. All samples >0.25% Ni were analysed for total sulfur.

Certified standards, blanks and crushed duplicates are placed in at a rate of one QA/QC sample per ten core samples. Results are analyzed for acceptance at the time of import. All standards associated with the results in this assessment report were determined to be acceptable within the defined limits of the standard used.

12 Results

The Smoke Lake focused drilling consistently yielded exceptionally high-grade, nickel-copper, massive sulphide intersections. Drilling indicated a mineralized ultramafic body at surface, transitioning to massive sulphides which dip shallowly (~32°) to the southwest. The massive sulphides occur as a consistent sheet with a possible fault near its base. The lithologies at Smoke Lake closely resemble those found at both the Tyko and RJ showings, located 17-kilometers to the west.

Key highlights from the drill program are summarized in Table 12-1.

Table 12-1 – Tyko 2020 Drilling Significant Intercepts

<i>Including</i>	37.2	37.8	0.6	11.82	261	9.65	3.69	1.48

13 Conclusion and Recommendations

The winter drill program yielded delivered very consistent high-grade results (Table 12-1). Drilling and geophysical surveys done to date indicate a mineralized ultramafic body at surface, transitioning to a massive sulphide that dips shallowly to the southwest. This massive sulphide was found to occur as a consistent sheet with a possible fault near its base.

A new ground EM survey with the loop located over the lake is recommended as the 2020 EM survey did not have the loop in the correct position to couple with the Smoke Lake EM conductor. A down hole EM survey is also recommended to further delineate the extent of the Smoke Lake massive sulphide mineralization.

Once the results of the new EM surveys are received an additional ~2,000m drill program is recommended to trace the massive sulphide mineralization to depth.

In addition a large, 100m spaced Airborne Mag and EM survey such as the GEOTEM system is recommended to cover the entire Tyko property to search for additional Smoke Lake EM conductors, which can form very discrete mag and EM anomalies.

Thunder Bay, Ontario
Canada

CERTIFICATE OF THE AUTHOR

I, Alexander Hughes, do hereby certify that:

1. I am an employee of Fladgate Exploration Consulting Corporation, the geological consulting firm tasked with this report.
2. I am a member in good standing of the Association of Professional Geoscientists of Ontario (APGO #10625).
3. I am a graduate of the Lakehead University (Hons. B.Sc., 2017).
4. I have practiced geology for 4 years in Northwestern Ontario, Canada.
5. I have no previous involvement with the property that forms the subject of this Technical Report.
6. I am not aware of any material fact or material change with respect to the subject matter of the Technical Report that is not reflected in the Technical Report, the omission to disclose which makes the Technical Report misleading.

Dated March 1, 2021

CERTIFICATE OF ANALYSIS

45 Soil samples were submitted for analysis.

The following analytical package(s) were requested:		Testing Date:
1C-OES-Tbay	QOP PGE-OES (Fire Assay ICPOES)	2020-07-09 18:30:04
1E3-Tbay	QOP AquaGeo (Aqua Regia ICPOES)	2020-07-09 09:25:28
1F2-Tbay	QOP Total (Total Digestion ICPOES))	2020-07-10 21:59:45

REPORT **A20-06662**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Total includes all elements in % oxide to the left of total.

Values which exceed the upper limit should be assayed for accurate numbers.

Report No.: A20-16012
 Report Date: 06-Jan-21
 Date Submitted: 14-Dec-20
 Your Reference:

Palladium One
 101-278 Bay St
 Thunder Bay Ontario
 Canada

ATTN: Neil Pettigrew

CERTIFICATE OF ANALYSIS

312 Rock samples were submitted for analysis.

The following analytical package(s) were requested:		Testing Date:
1C-OES-Tbay	QOP PGE-OES (Fire Assay ICPOES)	2020-12-17 14:00:47
1F2-Tbay	QOP Total (Total Digestion ICPOES))	2020-12-18 23:33:38
8-4 Acid-Tbay Total Digestion	QOP Total Assay (Code 8-4 Acid Total Digestion Assays)	2021-01-04 15:29:51

REPORT **A20-16012**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

Report No.: A20-16378
Report Date: 08-Jan-21
Date Submitted: 21-Dec-20
Your Reference:

Palladium One
101-278 Bay St
Thunder Bay Ontario
Canada

ATTN: Neil Pettigrew

CERTIFICATE OF ANALYSIS

12 Rock samples were submitted for analysis.

Table with 3 columns: Analytical package requested, Test name, and Testing Date. Rows include 1C-OES-Tbay, 1F2-Tbay, QOP PGE-OES (Fire Assay ICPOES), and QOP Total (Total Digestion ICPOES).

REPORT A20-16378

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report.

Notes:

Values which exceed the upper limit should be assayed for accurate numbers.

Main Lithology

Hole ID: TK20-015

Date Logged: 20-12-02

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	4.25	Overburden (Unsubdivided)	15	OB
4.25	16	Foliated; Tonalite	FOL; 10aa	Well foliated Tonalite. Trace Py associated with contacts of minor 10AC units
16	16.75	Gabbro (unsubdivided)	9d	mgr. dark grey larger block
16.75	18.27	Granite breccia; Equigranular	10acx; EQUI	Mix of foliated 10AA and non foliated 10AC units with 2 minor mafic bands (blocks?)
18.27	26.47	Tonalite; Foliated	10aa; FOL	Mgr. to CGR light to med grey with strong foliation. Non magnetic
26.47	30.04	Tonalite breccia; Foliated	10aax; FOL	MG to CG and med grey with strong foliation. Inclusions of 10AC and mafic fragments. LC is sharp and distinct at about 75 deg TCA

30.04	30.54	Mineralized hornblendite	7hm	Fgr dark green grey with strong chlorite and biotite alteration. 5-8% fgr blebby to net textured Py and Pn and Cpy, Very soft and variably moderate to strongly magnetic based on % of sulfides.
30.54	32.35	Mineralization	15a	Well mineralized Semi massive to massive Sulfides. Sulfides make up 40-80% of rock with mostly Po Py/(30-40%) and lesser Cpy (5-10%) and Pn(5%). Cpy appears to be stringer and bands within the more massive or blebby Po/Py/Pn.
32.35	37.72	Tonalite breccia; Foliated	10aax; FOL	Tonalite Bx, 10% brecciated strongly altered mafic to ultra mafic fragments. 1-2% fgr diss and stringer Py, Weak localized magnetics.
37.72	38.2	Amphibolite	7c	Dark green grey with 1-2% fgr stringer Py
38.2	44.2	Tonalite breccia	10aax	Tonalite with 20% blocks, consisting mostly of mafic fragments. Trace Py with blocks and along edges of blocks. Mod to strong foliation at 70 deg TCA.
44.2	57.7	Tonalite; Foliated	10aa; FOL	Cgr, med to light whitish grey. occasional mafic fragments constitute less then 10% of rock. No significant sulfides. Mod foliation at 65 to 75 deg TCA.
57.7	61.6	Granite; Equigranular	10ac; EQUI	Cgr light pinkish grey with inclusions of tonalite and granodiorite, making up less then 15% of rock. Non magnetic. Trace Py associate with contacts and within 1 diorite/granodiorite block.
61.6	63.57	Felsic to Intermediate Intrusive Rocks (Unsubdivided)	10	Breccia zone of 10AAx 10AC and a finer grained 10AB. No major sulfides. Non magnetic.

63.57	69.05	Tonalite; Foliated	10aa; FOL	Cgr light grey with mod foliation at 70-80 deg tca. Minor inclusions of 10AB. Non magnetic
69.05	69.9	Feldspar porphyry; Porphyritic	10e; PORPH	Mgr med grey with distinct feldspar porphyries up to 5 mm in dia. Notable stringer/ vein associated Py with cpy near LC. Non magnetic except on stringers.
69.9	77	Tonalite; Foliated	10aa; FOL	Cgr light grey with no major sulfides, except from 69.9 to 70.1 where there are stringers associated with UC. Non magnetic, moderate foliation at 60-65 deg TCA.

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
26	27.44	Granite	10ac	Cgr pink non foliated non magnetic
27.44	29.04	Tonalite breccia; Foliated	10aax; FOL	Mgr to Cgr, med grey to pink and dark blue grey. Unit is a mix 10AA,10AC and Mafic fragments. 3% sulfides (Pn, Po, Py and Cpy) as distinct bands and or stringers associated with the mafic/ultramafic bands/clasts. Unit is variably foliated at 60-80 deg TCA. Magnetic in/near sulfides.
29.04	29.8	Mineralization	15a	Stringer to semi massive Py, Po, Pn (2-3%) and Cpy (2-5%) within a very soft and altered ultramafic. Strongly foliated at about 45-50 deg TCA.
29.8	32.8	Foliated; Mineralization	FOL; 15a	Massive sulfides. 30-40% Py, 20%Po, 5-15%Pn and 10%Cpy. Mod fol locally at 50-55 deg tca. Strongly magnetic.

32.8	43.1	Tonalite breccia; Foliated	10aax; FOL	Mgr, Med to loc dark grey with 15% inclusions of mafic/UM fragments. Common stringers of Py, Po and Cpy in the first 1m of unit. Weak localized magnetics associated with mafic fragments and sulfides.
43.1	77	Tonalite; Foliated	10aa; FOL	Cgr Light grey with common inclusions of granite to granodiorite which show less foliation. Non mineralized and non magnetic. Localized Potassic alteration associated with veins and pegmatitic dikelets as at 65.5 and 74m. Foliation is weak and localized at 75-80 deg TCA.

Main Lithology

Hole ID: TK20-017

Date Logged: 20-12-03

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.88	Overburden (Unsubdivided)	15	OB casing to 1.5m
0.88	18.45	Tonalite; Foliated	10aa; FOL	Cgr white to light grey with weak Fo near 75-85 deg TCA. Occasional mafic fragments and felsic diklets making up to 10% of core over 3m locally. Non magnetic. Tace Py associate with small veins and larger fragments.
18.45	28.6	Tonalite breccia; Foliated	10aax; FOL	Cgr light grey with common mafic and ultramafic fragments making up 20-40% of core over 3m runs. Weakly foliated at 75-90 deg tca. 1-2% fgr stingers and block associated Py and Po between 18.45 -22, increasing to 2-3% from 22-23m, associated with blocks, increasing down hole and in association with the concentration of blocks. Lower 30cm contains up to 10% sulfides, that appear to be remobilized.
28.6	31.13	Mineralization; Foliated	15a; FOL	fgr blue grey serpentine and chloritic groundmass with stringer to massive sulfide(Po, Py, Cpy and Pn)s. Unit appears to be foliated at 60 deg TCA. There is a Py rich Qz vein running 60 deg tca from 30.50-30.65. Locally has blocks of Tonalite as at 29.85-29.00.

31.13	34.05	Tonalite breccia; Foliated	10aax; FOL	Mgr to Cgr, light to medium grey with Common mafic and Um fragments making up 25-30% of core. Tonalite shows weak foliation at 80 deg TCA. 2-4% sulfides from 21.12-33.5 as fgr stringers in Tonalite, and as diss and blebs within the fragments. Weak magnetics, associated with sulfides and fragments within the Bx.
34.05	53	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with moderate FO at 80 deg TCA. Non magnetic, non mineralized, Minor granodiorite/granite intrusions and rare mafic fragments make are less then 60 cm and make up less then 10% of rock over 3m. Notable pink K alt around granitic intrusion near 36m. Notable seds looking block near 47m, is weakly magnetic.
53	60	Tonalite breccia; Foliated	10aax; FOL	Cgr med grey with common inclusions of mafic clasts. Fragments compose roughly 20% of core. Increase in hornblende within the Tonalite and increased in fgr Po and lesser Py in these areas. Probably 1-2% fgr Py Po, and weak localized magnetics. Occasionally clasts are close together and make up 3-5% sulfides over 1m as between 56 and 57m. Weak irregular foliation at 65-80 deg TCA.
60	89	Tonalite; Foliated	10aa; FOL	Mgr. medium grey with occasional mafic fragments and small granitic dikes. Weak localized magnetics associated with fgr dis Po near and in the mafic bands. Weak foliation is variable at 65-80 deg TCA. Minor increase in Po and mafic fragments below 85m to EOH.

Main Lithology

Hole ID: TK20-018

Date Logged: 20-12-06

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.75	Overburden (Unsubdivided)	15	OB. Casing to 1.5m
0.75	3.13	Equigranular; Granodiorite	EQUI; 10ab	CGR Pinkish grey and lacks FO of Tonalite below. Contact is noted by veins and colour change. Non mineralized, non foliated and non magnetic.
3.13	21.5	Tonalite breccia; Foliated	10aax; FOL	Cgr, light grey to white with common inclusions of mafic material, dikes and small granitic dikes. Fragments and dikes consist of 20-25% or the rock and locally up to 40% over 1-2m. No major sulfides associated with the blocks. Blocks appear more silicate rich then normal. Non magnetic, no mineralized and weak to mod foliation locally at 75-80 deg TCA
21.5	30.7	Tonalite; Foliated	10aa; FOL	Cgr light grey with mod FO at 75 deg tca. Unit is notably lacking the dikes, and fragments of unit above. No major sulfides, non magnetic.
30.7	31.1	Granite	10ac	Cgr light pink. Non foliated non magnetic non mineralized.

31.1	36.61	Tonalite breccia; Foliated	10aax; FOL	Cgr light to medium grey with common mafic fragments up to 20 cm and common 3-15cm wide Vcg pegmatitic veins/dikes. Trace to 1% fgr stringer Py and Cpy in lower 30 cm, otherwise trace Py associated with blocks. Mod Fo runs 65-70 deg TCA
36.61	37.6	Mineralization	15a	fgr dark grey black with strong chl, bt and talc alteration near UC and LC. Semi massive to massive sulfides from 36.72-37.35m. Taken as 1 sample as upper and lower sections would have been too small to sample separately, Mod Fol runs 75 deg TCA. Notably well altered and moderately magnetic.
37.6	40.54	Tonalite breccia; Foliated	10aax; FOL	Cgr medium to light grey with common inclusions of UM a Mafic fragments. Fragments look recrystallized and often lack foliation. Trace to 1% fgr stringer sulfides from 38-38.6m associated with mafic bands/ inclusions. Moderate foliation locally 65-75 deg tca. Unit is locally weakly magnetic.
40.54	62.1	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with notable decrease in abundance of inclusions. Inclusions make up 10% of rock and consist mostly of mafic fragments and small felsic pegmatitic veins/diklets. Notable foliation changes between 42-44m where it goes from 65 at 42 to 45 near 43,5 then back to 70 near 44.5m. Unit could be described as Bx locally as near 48-53m; however, it lacks any significant sulfides.
62.1	77	Granite	10ac	Cgr pink and grey. Unit lacks foliation of Tonalites and has increased pinkish K spar. Unit has significant inclusions of more tonalitic composition and locally has weak to mod FO at 75-80 deg TCA. Non mineralized and non magnetic. Rare 5-15 cm mafic dikes as near 77m.

Main Lithology

Hole ID: TK20-019

Date Logged: 20-12-07

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	1.5	Overburden (Unsubdivided)	15	OB casing to 1.5m
1.5	9.1	Granite breccia	10acx	Cgr pinkish grey with common inclusions of Tonalite and mafic intrusive. Non magnetic and non mineralized.
9.1	14.28	Tonalite breccia	10aax	Cgr light grey to locally pinkish grey with common inclusions of small granite veinlets and mafic dikes. Unit noted by colour change and weak foliation at 55-65 deg tca. Trace sulfides as fgr stringer and associated with mafic.
14.28	25.06	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with common dikelets of pegmatitic material up to 15cm wide. Non mineralized, non magnetic and weak to locally moderate foliation running 60 deg tca. Notable change in FO from 14.28-16 and 21 to 23m where in both places it appears to flip. LC denoted by colour change, increase in inclusions and a localized loss of apparent FO.

25.06	28.65	Tonalite breccia; Foliated	10aax; FOL	Tonalitic to granitic breccia. Cgr pink grey to white grey with common inclusions of granitic blocks, and mafic. Could be called granitic breccia due to prevalence of granitic components. Weak to moderate FO within the tonalites at 65-75 deg TCA. Strong association of magnetics to massive sulfides. Stringers appear to be only weak to moderate magnetic while massive is strongly magnetic.
28.65	32.35	Mineralization	15a	Dark green grey to brassy. Fgr to mgr, well mineralized to massive sulfide. In areas of lesser sulfide mineralization as at the top of the unit ground mass is fgr with strong chi and bt alteration. 15-20% fgr stringer and diss Sulfides from 28.65-29.05 with notable inclusions of felsic material to 29.05, 29.05-30.35 is semi massive to massive sulfide of Py (30%), Po (35%) and Cpy (5%), from 36.35-end of unit is well mineralized stringers to semi massive sulfides of about 5-10% Py, 5-10% Po and 3-5% Cpy. Unit shows a weak foliation locally at 45-50 deg tca, most notable in areas with banding of the sulfides.
32.35	33.34	Tonalite breccia; Foliated	10aax; FOL	Cgr light grey with common inclusions of mafic fragments making up to 15% of core. Trace to 1% stringer sulfides decreasing down hole, and associated with fragments. Weak to mod FO at 65-70 deg TCA. UC is noted by a larger Qz vein laying under the mineralized zone. LC is noted by decrease in frequency and abundance of fragments/mafic dikes.
33.34	51.2	Tonalite; Foliated	10aa; FOL	Cgr light grey with moderate foliation at 70 deg TCA. Non mineralized and only weakly magnetic locally associated with vein associated stringers of sulfides as at 50.3m.
51.2	52.23	Late Mafic Dyke (Unsubdivided)	14d	fgr to mgr dark green grey. 2 late mafic dikes with minor Tonalite between the 2. Sharp contacts at 45-50 deg tca.
52.23	72	Tonalite; Foliated	10aa; FOL	Same as unit above the small mafic dikes. Notable minor Granitic bands from 63.77-64.35 and from 71.18 to EOH. Hole ended at 72m due to block error by drillers at 38m and burnt bit (drillers thought they were at 77 but were at 71.

Mineralization**Hole ID: TK20-019****Date Logged: 20-12-07****Geologist(s): K. Pederson**

From (m)	To (m)	Title	Code	Description
25.06	28.65	Pyrite 3%; Pyrrhotite 1%	Py03; Po01	Associated with blocks well mineralized to massive sulfide. 15-20% fgr stringer and diss Sulfides from 28.65-29.05 with notable inclusions of felsic material to 29.05, 29.05-30.35 is semi massive to massive sulfide of Py(20%),Po(15%) Pt (7%)and Cpy(15%), from 36.35-end of unit is well mineralized stringers to semi massive sulfides of about 5-10% Py,5- 10% Po and 3-5% Cpy. Unit shows a weak foliation locally at 45-50 deg TCa, most notable in areas with banding of the sulfides.

Main Lithology

Hole ID: TK20-020

Date Logged: 20-12-05

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.68	Overburden (Unsubdivided)	15	OB casing to 1.5m
0.68	23.5	Tonalite; Foliated	10aa; FOL	Cgr med grey with occasional mafic and felsic dikes, less than 50 cm. Common bands of darker matrix as near 12.75m Weak localized magnetics associated with fragments. Non mineralized. Larger VCG granitic/pegmatitic dike near 21.6-21.85m.
23.5	24.58	Tonalite breccia; Foliated	10aax; FOL	Same as above but with 15% fragments, slightly darker and trace Py stringer near 24m. Mod FO at 80 deg TCA.
24.58	25.04	Late Mafic Dyke (Unsubdivided); Equigranular	14d; EQUI	Dark grey fgr non foliated with weak to mod magnetics. 1-2% fgr diss and vein ass Py. LC noted by veins, Grainsize change and abundance of carbonate.

25.04	25.65	Lamprophyre Dyke (unsubdivided); Equigranular	14c; EQUI	Mgr dark grey to black with sharp UC and LC. Common mgr to cgr carbonate. non foliated, non magnetic
25.65	26.25	Ultramafic Metavolcanic Rocks (Unsubdivided); Foliated	1; FOL	60 cm block of UM within the mafic intrusive, next to Lamp dike. Unit is weakly foliated at 50-55 deg tca, with 2-3% diss to blebby Po and Py. LC is sharp and distinct, running against FO.
26.25	27.66	Late Mafic Dyke (Unsubdivided); Equigranular	14d; EQUI	Late Mafic dike. Non foliated, non to locally very weakly magnetic. Trace to 1% fgr diss and vein ass Py. LC is at 27.44, but included minor 10AA in lower 16 cm to avoid diluting lower sample.
27.66	28	Foliated; Mineralization	FOL; 15a	Fgr Black, semi massive to massive sulfides over 0.4m, weathered and very dark. Very dense, soft and weakly magnetic
28	29.4	Ultramafic Metavolcanic Rocks (Unsubdivided); Foliated	1; FOL	fgr dark green grey with strong chl, amp alter. Minor inclusion of 10AA near 29.10m. 3-5% fgr Diss Py Po as discrete stringers and blebs. Weak Fo 75-85 deg TCA. Weak localized magnetics.
29.4	32.08	Tonalite breccia	10aax	Fgr to Cgr med to dark grey with common mafic/ultramafic fragments making up to 40% of rock. This area appears to be strongly influenced by the upper and lower ultramafic units., containing common inclusions and variably foliation. 3% fgr stringer and block associated Py and Po. Weak magnetics associated with the UM blocks.

32.08	38.72	Ultramafic Metavolcanic Rocks (Unsubdivided)	1	Fgr dark blue grey with strong Chl, Bt and Talc alteration. overall, 5-10% fgr blebby, stringer and locally net textured sulfides. Areas of very very soft Rock are completely Talc and chl as at 37.25 seem to be weathered and devoid of sulfides. Minor inclusions and veins as at 34.10-34.2 and 36.97 to 37.20m.
38.72	46.05	Tonalite breccia; Foliated	10aax; FOL	Cgr med grey with common inclusions of UM and M fragments and dikes making up to 35-40% or rock (abundance decreasing between 41m) and 44m). Trace to locally 2% Fgr block and stringer Py and lesser Po and possible Cpy. Weak Fo at 75% tca. Small lamp dikes from 44-44.75 and is fgr, strongly altered and carbonate rich, it runs against FO and has broken UC and LC.
46.05	50	Tonalite; Foliated	10aa; FOL	Cgr light grey with minor incl of mafic fragments. Mod Fo at 75-80 deg TCA.

Main Lithology

Hole ID: TK20-021

Date Logged: 20-12-07

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.64	Overburden (Unsubdivided)	15	OB casing to 1.5m
0.64	8.36	Tonalite; Foliated	10aa; FOL	Cgr light grey with rare minor mafic bands. Weak to mod FO at 70 deg TCA
8.36	14.55	Tonalite breccia; Foliated	10aax; FOL	Cgr light to med grey. Same as unit above but with 20-30% mafic dikes, clast and minor vcgr granitic diklets. Weak localized magnetics associated with the mafics. Unit is non mineralized. Weak to moderate localized Foliation at 70 deg TCA.
14.55	34.58	Granite breccia	10acx	Cgr to vcgr pinkish grey with up to 25% inclusions of mafic dikes, blocks and tonalite. Tonalite blocks show irregular FO. No major sulfides, weak magnetics associated with some mafic blocks. Notable pink red alteration in lower 2-3m of core.

34.58	47.76	Tonalite; Foliated	10aa; FOL	Cgr light grey to grey with moderate pervasive FO at 65-70 deg tca. Occasional mafic blocks and felsic dikes make up about 10% of unit (could locally be called 10AAX over units less than 2m. Trace block associated Py from 34.58-46m, from 46-47.55 there is maybe 1% sulfides as fgr stringers. Lower 15cm contains 5-10% stringer sulfides, but has notable felsic matrix, which is grading into a darker grey. LC is not well defined and masked by sulfide mineralization, and broken core.
47.76	48.95	Mineralization	15a	Dark grey/black to brassy, Ground mass is strongly altered and there are clear Qz nodules as at 48.15 and 48.35. Clear non mineralized fragment near 48.25. Unit is Stringer to semi massive Py (10-15%) Po (15-20%) and 2-3% Cpy from 47.76- 48.25, then becomes Semi massive to massive with 20-25% Py, 20% Po, 5-10% Pn and 10% Cpy from 48.25-48.95 (slight decrease in sulfides below 48.8 and increase in Chl and Bt)
48.95	80	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with mod FO at 65 deg TCA. Trace to 2% locally as fgr stringers. Sulfides most evident in upper 2.5m in notably darker bands, with increased Hb and Bt. VCG pegmatitic dikes become more abundant and lager from 58m-66m, along with minor late mafic dikes. Locally could be called a 10aax as between 59-62.5 where mafic blocks make up to 20% of core by length.

Main Lithology

Hole ID: TK20-022

Date Logged: 20-12-08

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.87	Overburden (Unsubdivided)	15	OB casing to 1.5m
0.87	9.53	Granite breccia	10acx	Cgr light pinkish to whiteish grey. Includes 30% mafic fragments/dikes, and common inclusions of the tonalite. No major sulfides, generally not magnetic except for blocks as near 2.5m, and 3.5-4m and at 7m, Blocks are generally more magnetic towards the inside of the mafics, and less magnetic towards their margins. LC is denoted by colour change and prevalence of FO.
9.53	15.47	Tonalite breccia; Foliated	10aax; FOL	Cgr light grey with moderate FO at 65-75 deg TCA. Common inclusions of variably magnetic blocks. Non mineralized. Blocks make up 20% of core overall.
15.47	25.83	Tonalite; Foliated	10aa; FOL	Cgr light grey with a notable decrease in abundance of mafic blocks. Magnetic mafic blocks are still evident but make up less then 15% of rock. Moderate FO at 60-65 deg tca as at 20m. Non mineralized except for trace to 1% Py locally associated with blocks and veins.

25.83	26.75	Felsic Dyke (Unsubdivided); Equigranular	14a; EQUI	Late felsic dike, non foliated equigranular sharp contacts.
26.75	34	Tonalite; Foliated	10aa; FOL	Cgr light to med grey SAA
34	46.79	Tonalite breccia; Foliated	10aax; FOL	Cgr med to light grey with moderate FO at 70 deg TCA. Common inclusions locally of mafic blocks and minor pegmatitic veins/dikes. Blocks make up 15-20% of core length locally but are locally absent over 3 m. Trace to 1% Py associated stringer and blocks of mafics/UM from 34-54, 45-46.79 2-3% fgr stringer Py Po Cpy increase as you approach LC. LC is broken core. Weak magnetics associated with blocks and stringers.
46.79	50.98	Mineralization	15a	Very dark grey to black groundmass, and brassy to bronzy sulfides. Very well mineralized massive to locally semi massive sulfides. Sulfides are typically 75% or more of rock. Where ground mass is evident it is dark grey black with strong chlorite near margins and less so towards the middle of the unit (Cooked?). 10-15% Po 25% Py 5-10% Pn and 5-10% Cpy overall. Sulfides do not show the flowing/foliated texture they had in other holes, and have more pristine looking inclusions of UM material as near 79m and 49.48.5-48.65m. Lower 30cm is very chlorite rich and very soft/broken core (faulted?).
50.98	56	Tonalite breccia; Foliated	10aax; FOL	Cgr to med grey with common inclusions of mafic dikes and blocks. 1-3% fgr stringer sulfides in upper 65 cm, going to trace to 1% below that. Mafic dikes and blocks make up to 15-20% of rock by length. Weak magnetics associated with mafic and stringers of sulfides. weak variable foliation at 55-70 deg tca.

Main Lithology

Hole ID: TK20-023

Date Logged: 20-12-08

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	1	Overburden (Unsubdivided)	15	OB casing to 1.5m
1	5.3	Foliated; Tonalite breccia	FOL; 10aax	Cgr light to med grey with weak to mod FO at 45-60 deg TCA. Common inclusions of mafic and UM making up to 15% of the rock. Common sub m granitic inclusions as at 3m. There is also a Qz vein running along core axis from 4.8-5.0m. with 2-4% sulfides associated with vein from 4m to 5.3m.
5.3	5.71	Hornblendite	8a	Dark blue grey with weak FO at 45 deg TCA. 3-5% fgr stringer to diss along FO sulfides. Weakly magnetic in areas of increase sulfides.
5.71	6.4	Hornblendite Breccia; Veins (Unsubdivided); Mineralization	8ac; 12; 15a	Well mineralized Hornblendite blitzed by a Qz/Qz carb veins. Well mineralized with 5-10% fgr Py and Po. Moderately

				magnetic and veins running 40-45 deg TCA.
6.4	6.75	Mineralization	15a	Massive sulfides associated with vein near LC. 40% Py 30% Po 5% Pn and 5-10% Cpy. LC is noted by small vein and drop in sulfides.
6.75	7.21	Mineralized hornblendite	7hm	Fgr dark blue grey with 10% diss to stringer sulfides from 6.75-7.10 m, Massive Py Po from 7.1-7.21m. Possible fault zone as all fracture faces have gauge.
7.21	8.58	Veins (Unsubdivided)	12	Bold white qz vein with 2-3% Py inside the min envelope. May rep vein seen at the base of min in other holes.
8.58	8.92	Magnetic; Mineralized hornblendite	MAG; 7hm	fgr dark blue black with 10% fgr diss Py Po and possible Cpy as blebs or stingers along FO. Mod FO at 40-45 deg TCA.
8.92	12.75	Massive magmatic sulphide; Magnetic	8d; MAG	Brassy, fgr to cgr with 80-90% sulfides composed of Py Po Pn Cpy and possible Millerite at 10m. This unit is strongly magnetic and lacks the flow textures seen in sulfides above. LC is denoted by a Bx zone with veins. Notable barren zone 10.47-10.65m.
12.75	27	Tonalite breccia; Foliated	10aax; FOL	Cgr light to med grey with common inclusions of UM and mafic blocks (more UM in upper 2m). Weakly magnetic locally, associated with the blocks. 2-3% sulfides in upper 1m associate with stringers and blocks. Moderate FO at 40-50 deg TCA. Common 3-45cm wide mafic dikes, and rarer pink Vcg pegmatitic intrusions.

27	39	Tonalite	10aa	Cgr light grey with rare cm scale mafic dikes, or blocks, non mineralized and moderate foliation at 40-45 deg tca. Common pegmatitic granitic dikes up to 30 cm as at 32.5 and 35m, 37.2m and 37.34m. occasional mafic dikes up to 30cm. Weak magnetics associated with smaller mafic blocks
39	39.53	Late Mafic Dyke (Unsubdivided)	14d	LMD sharp UC and LC at 50 and 60 deg tca.
39.53	47	Tonalite	10aa	Same as above the minor mafic dike.

From (m)	To (m)	Lithology	Code	Description
0	1	Overburden (Unsubdivided)	15	OB casing to 1.5m
1	5.8	Tonalite; Tonalite breccia; Foliated	10aa; 10aax; FOL	Cgr light grey to grey. Locally foliated at 60 deg tca. Includes 10-15% mafic blocks and dikes, as well as 15-20% granitic sections. Non mineralized and weak magnetics associated with the mafic dikes and inclusions.
5.8	6.95	Granite	10ac	Cgr pink granite to granodiorite. Lacks foliation of unit above.

6.95	19.15	Granite breccia	10acx	Cgr whiteish to pinkish grey. Common inclusions of mafics (10-15%) tonalite (15-20%) as well as clear late mafic dikes. Possible block of seds material near 14.5m, which is very silicified. Weak magnetics associated with the (typically) smaller blocks as at 17.75m, Unit locally shows a foliation within the tonalites at 40-60 deg tca (irregular). Non mineralized and non magnetic except as described above.
19.15	34.48	Tonalite	10aa	Cgr light grey, with rare inclusions of mafics as a 25m. Moderate foliation at 65-75 deg tca, but is irregular near blocks. Non mineralized and not magnetic except near mafic inclusions and dikes.
34.48	38.45	Granite; Equigranular	10ac; EQUI	Cgr pinkish grey equigranular. Lacks the strong potassic alteration seen with other later felsic intrusives. Sharp UC and LCA at 80 and 45 deg tca respectively. Not foliated
38.45	40.75	Granite breccia; Equigranular	10acx; EQUI	Mix of tonalite and small granitic dikes. Sitting between 2 larger granitic dikes.

40.75	42.66	Granite; Equigranular	10ac; EQUI	SAA
42.66	46.75	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with 2 small mafic blocks making up 5-10% of core. Non mineralized, non foliated and moderate FO at 70-75 deg TCA.
46.75	49.42	Late Mafic Dyke (Unsubdivided); Equigranular	14d; EQUI	Dark grey to black late mafic dike Sharp UC and LC at 45-50 deg tca, running against general FO. Non mineralized and weakly to moderately magnetic. LAMP?
49.42	61.95	Tonalite	10aa	Cgr light to med grey with minor inclusions of mafics and rare granitic dikes less than 30cm. Moderate pervasive FO at 75 deg TCA, except near 51- 54m where it appears, we have drilled a fold as the FO flips then returns to normal. Non mineralized and only weak magnetics associated with the mafic fragments/dikes.
61.95	70	Tonalite breccia; Foliated	10aax; FOL	Cgr, light grey with common inclusions of mafic dikes and blocks. Moderate FO at 65-70 deg TCA, non mineralized and weakly magnetic locally, associated with blocks of mafics.

70	71.02	Hornblendite	8a	fgr to mgr Dark blue grey mafic. weakly magnetic, non mineralized and sharp contacts at 80 deg tca. recrystallized hornblende.
71.02	79.45	Tonalite; Foliated	10aa; FOL	Cgr white to light grey with rare inclusions of mafic blocks. Moderate to stronger pervasive FO at 60-65 deg TCA. Non mineralized and non magnetic except for near blocks. LC is along FO and noted by increase in bands of blocky mafics.
79.45	82	Tonalite breccia; Foliated	10aax; FOL	Same as above but with a noticeable increase in % of mafic bands. Mafic bands make up to 20% of core and are notably smaller in width then in other sections. Blocks appear to be typically less then 15cm along core axis.
82	103.7	Tonalite breccia; Foliated	10aax; FOL	Background is same as unit above however the blocks have become less numerous but larger. Mafics make up 20% of rock but are notably larger in the 20-50cm range. LC has a notable loss of fragments below 103.70m.

103.7	107	Tonalite	10aa	cgr light grey to pinkish grey. foliated with strong reddish staining. Trace to 1% stringer sulfides associated with mafic bands. Lacks the blocks of unit above but seems to have a darker colour and more mafic bands and strings (coming from unit below?) Weak localized magnetics and weak foliation at 65 deg TCA.
107	109	Tonalite breccia; Mineralization	10aax; 15a	Cgr light to med grey with 30-40% inclusions of UM clasts. 3-5% Py Po stringer in tonalite and blebs and stingers in mafics, locally concentrated around the blocks. Moderate magnetics, and variable foliation at 50-65 deg TCA.
109	109.58	Mineralization; Foliated	15a; FOL	Fgr, dark black/bronzy massive Po. 70-80% fgr magnetic sulfides, 5% Py, 70-75%Po, some Cpy. Unit is very dark and looks remobilized.
109.58	109.94	Fault zone (gouge, lost core); Hornblendite Breccia; Mineralization	11c; 8ac; 15a	Fault zone at base of massive sulfides Not this unit is veined, brecciated hornblendite with 10-15% fgr Po as fgr bands and vein

					associated. LC is noted by loss of veining and more competent rock.
109.94	111.5	Tonalite; Foliated		10aa; FOL	Cgr light grey to white with 1-2% fgr stringer sulfides, more abundant near UC. Mod to strong FO at 70deg TCA. LC is sharp at 45 deg TCA.
111.5	114.35	Granite		10ac	Cgr pinkish grey. non mineralized and not magnetic.
114.35	125.26	Tonalite; Tonalite breccia; Foliated		10aa; 10aax; FOL	Cgr white to light grey with mod FO at 65 deg TCA. Common mafic blocks of irregular shape make up 5-10% of core from UC to 120m, blocks are variably magnetic otherwise non magnetic and non mineralized.
125.26	125.85	Granite		10ac	Cgr Pinkish grey, equigranular non foliated, non magnetic and non mineralized.
125.85	126.53	Tonalite breccia; Foliated		10aax; FOL	Light grey Tonalite to tonalite Bx, inclusions of mafics, qz veins and small granitic dikelets. Mod Fo at 79 deg TCA,
126.53	127.7	Mafic Metavolcanic Rocks (Unsubdivided)		2	Dark blue grey altered mafic block. Non mineralized and weakly magnetic.

127.7	160.78	Tonalite; Foliated	10aa; FOL	<p>Cgr white to light grey with mod FO at 65-70 deg tca. Occasional mafic blocks make up less than 10% of core. Non mineralized and non magnetic. Rare 20-50 cm cgr granitic dikes as at 143.8 and 157.75. Note that FO appears to bend around 10-AC dike at 157.75 and contacts on the minor unit run opposite directions. Tonalite has deformed around the granitic rock (this may help explain other random foliations observed in other holes.) Occasional vcgr pegmatitic dikes become evident below 154.5m and are typically 5-20 cm in length.</p>
160.78	163.85	Granodiorite; Equigranular	10ab; EQUI	<p>Cgr light to med grey with no apparent foliation or mineralization and not magnetic. Lacks the pink k spar of the granites above.</p>

163.85	194	Tonalite breccia; Foliated	10aax; FOL	<p>Cgr to mgr light grey with distinct blue mafic bands making up 30-40% of the core. Common 5-15cm qz veins are rare pegmatitic dikelets. Strong pink/red potassic alteration from 169-173m, reacts very strongly to HCl (Strongest alteration from 171-173m). Blocks are randomly oriented and are variably magnetic. Trace Po locally as fgr diss within the blocks. Qz veins are notably devoid of sulfides. Note there are several larger non mineralized blocks of Mafic/UM as between 179-180m. These larger blocks are weakly magnetic. Strong veining from 181-185, in area of increase prevalence of blocks. veins make up 25% of rock in this area and blocks make up 30%.</p>
194	200	Tonalite; Foliated	10aa; FOL	<p>Cgr white with minor bands of mafics, this rock is strongly foliated at 45-50 deg TCA. Non mineralized, non magnetic. Rock has more gneissic banding then block textures observed up hole and elsewhere.</p>

Main Lithology

Hole ID: TK20-025

Date Logged: 20-12-11

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	0.98	Overburden (Unsubdivided)	15	OB
0.98	2.3	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with weak FO at 70-75 deg TC. Includes a minor mafic dike. Non mineralized and non magnetic.
2.3	4.56	Tonalite breccia; Foliated	10aax; FOL	Cgr grey to light grey, 3-4 large blocks of felsic to mafic composition making up over 550% of rock. Non mineralized and Non magnetic except for first block near 2.3m. Block near 3m looks more like a dike with sharp parallel contacts at 40-45 deg tca.

4.56	23.34	Tonalite; Foliated	10aa; FOL	Cgr light grey to locally light pinkish grey with weak to moderate FO at 60-65 deg TCA. Rare inclusions of mafics make up less than 10% of rock by length. Rare pink pegmatitic veins give the pink colour locally. Non magnetic and non mineralized.
23.34	26.9	Tonalite breccia; Foliated	10aax; FOL	Cgr light grey with 15% mafic and seds fragments. Moderate Fo at 65 deg TCA. Non mineralized and non magnetic. Notable increase in dark Hb bands. LC noted by loss of fragments.
26.9	35.4	Tonalite; Foliated	10aa; FOL	Cgr light to med grey with rare inclusions of Mafic clasts. Non mineralized and non magnetic. Mod FO at 65-70 deg TCA. LC noted by increase in % sulfides and blocks.
35.4	36.59	Tonalite breccia; Foliated	10aax; FOL	Cgr to mgr light grey to blue grey. Tonalite Bx to Hornblendite Bx where Um blocks become more prominent towards LC. Tonalite shows a weak FO at 70-75 deg TCA. 3% fgr stringer and block associated sulfides (Py Po Cpy), increase towards LC.

36.59	38.78	Mineralization; Massive magmatic sulphide	15a; 8d	<p>Mineralized zone of massive to locally semi massive sulfides. Notable qz vein from 36.7-36.9 is late and bold. 65-100% sulfide Common radiating circular masses within the sulfide are probably pentlandite and notably less magnetic than surrounding sulfides. (see near 37-37.4m), Unit is 60-80% Po and Py with and 5% Cpy and these circular Pentlandite eyes making up another 10-15% (locally up to 20%). Notably Pn eyes are less magnetic than background sulfides and Cpy appears more evident in the sulfides that show remobilization as above the vein at 36.7 and below 38.5m LC is noted by the vein and the fault below it.</p>
38.78	39.2	Veins (Unsubdivided); Fault zone (gouge, lost core); Mineralization	12; 11c; 15a	<p>This 50cm section is 30cm of vein above dark grey/black altered massive sulfides Faulted/ gouge materia from 39.08-39.2m. This unit represents the fault at the base of the massive sulfides as observed in other holes. LC is noted by loss of sulfides and decrease in veining. Sulfides are weathered to a dark black and are moderately to strongly magnetic,</p>

39.2	40.48	Mineralized hornblendite; Mineralized hornblendite	7hm; 7hm	Fgr to mgr dark blue grey with 3% fgr diss bleb and vein associated Py and Po, Unit is variably veined and end at the bottom of box 9.
40.48	51.26	Tonalite breccia; Foliated	10aax; FOL	Cgr light grey with several mafic and Um blocks with weak mineralization. Tonalite is weak to moderately foliated at 56-75 deg TCA. 1% overall Py Po with up to 3-4% within blocks. Weak magnetics associated with blocks and darker bands (melted blocks?). LC is denoted by decrease in abundance of blocks/mafic fragments.
51.26	62	Tonalite; Foliated	10aa; FOL	Cgr white to light grey with rare mafic fragments and occasional pink Vcgr pegmatitic dikes/veins below 59m to EOH. Weak to mod Fo at 60-65 deg tca. Non mineralized and non magnetic.

Main Lithology

Hole ID: TK20-026

Date Logged: 20-12-12

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
1.14	19.61	Tonalite breccia	10aax	Cgr light grey to pinkish grey with common mafic and seds blocks up to 80cm, making up 15-20% of core by length. Minor 10small granitic dikes and mafics that look more dike like then blocky. Non mineralized, non magnetic and weak to locally moderate FO at 765 deg TCA as at 18.75m.
19.61	21	Granite	10ac	Cgr pinkish grey, equigranular. Non mineralized, no foliated and non magnetic. Unit contains 15cm mafic dike at base.
21	27.5	Tonalite; Foliated	10aa; FOL	Cgr white to light grey with moderate FO at 65 deg TCA. Non magnetic, non mineralized and includes minor granitic pegmatitic dikes up to 30 cm long as at 22.55 and 25.3m. Rare mafic dikes or small blocks makeup up to 10% of core locally and show weak magnetics along margins.

27.5	49.47	Tonalite breccia; Granite breccia; Foliated	10aax; 10acx; FOL	Cgr light grey to pinkish grey. Tonalite makes up 50-60% of rock by length, granites 10-15% and mafic blocks and qz veins 20-25%. Common Small granitic dikes up to 2m, and mafic blocks and dikes make up 25% of rock. Variably non magnetic to weakly magnetic associated with the edges of some of the mafic blocks. Trace to 1% sulfides associated with the blocks.
49.47	56.53	Mineralized hornblendite	7hm	Dark blue grey with 5-10% fgr diss and vein associated sulfide. Locally up to 15-20% near veins. Unit is weakly to locally moderately magnetic. Notable increase in sulfides from 56 to end of unit. Note that there is clear movement along fractures below 54m
56.53	69.22	Foliated; Tonalite breccia	FOL; 10aax	Cgr med grey tonalite with significant granite and mafic blocks. Could go granite bx with tonalite or tonalite bx with granite. Trace to 2% localized sulfides as stringers and diss associated with the mafic and UM blocks to 60m. Weak FO is irregular at 50-75 deg TCA. Non to locally weakly magnetic and non mineralized except as noted above. LC is a lamp running at 20 deg TCA.
69.22	70	Lamprophyre Dyke (unsubdivided)	14c	fgr dark grey with strong gauge from 69.7 to end of unit. End of unit is in gauge and broken core and 70m mark is used as an estimate.
70	71	Granite	10ac	Cgr light pinkish grey, equigranular, non foliated non mineralized and non magnetic except at UC

Main Lithology

Hole ID: TK20-027

Date Logged: 20-12-12

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	1.5	Overburden (Unsubdivided)	15	OB casing to 1.5m
1.5	13.03	Tonalite breccia	10aax	Cgr light grey to pinkish grey Tonalite Bx to Granitic bx. 15-20% mafic and UM blocks, and 20% non to weakly foliated granitic intrusions. Blocks are variably magnetic and contain up to 2% diss and contact associated sulfides. Moderate FO locally within the tonalite is 60-70 deg TCA.
13.03	17.08	Mineralized hornblendite	7hm	Dark blue grey with 5% fgr diss and stringer sulfides, locally up to 10% over 20cm in area with more stringers and veins.
17.08	18.79	Granite	10ac	Vcgr whitish pink granite. Notably vcgr and non mineralized.
18.79	21.68	Mineralized hornblendite	7hm	Same as above. slightly more sulfides, maybe 10% overall.

21.68	24.85	Tonalite; Foliated	10aa; FOL	Cgr light grey with mod FO at 70 deg TCA. Non mineralized, non magnetic.
24.85	28.6	Tonalite breccia; Mineralization; Foliated	10aax; 15a; FOL	Sane as above but with blocks of UM material containing 5% stringer and 15% block associated semi massive sulfides. Unit is denoted by sulfides and blocks, otherwise same as above and below.
28.6	29.45	Hornblendite	8a	fgr to mgr dark blue grey with 3-5% fgr diss Py and Po in bands along a weak FO at 50-5 deg TCA. Weakly magnetic locally.
29.45	31.72	Tonalite breccia	10aax	Cgr light grey with 20% mineralized UM blocks. Tonalite is rather dead but UM blocks contain 3-5% fgr diss to stringer Po and Py. Blocks are weakly magnetic. Tonalite shows a moderate FO at about 60 deg TCA.
31.72	50	Tonalite; Foliated	10aa; FOL	Cgr white to light grey with rare inclusions of UM material less than 20 cm as at 40m, and small granitic dikes as near 44m. Non mineralized and non magnetic. Unit is well foliated at 45-60 deg TCA.

Structure

Hole ID: TK20-027

Date Logged: 20-12-12

Geologist(s): K. Pederson

From (m)	To (m)	Title	Summary	Description	Angle
20.5	21.68	Fault Gouge	FLTG	Increased sulfides in areas with fault gouge and slip plains on core. Gauge is prominent from 20.5-20.6 and 21.6-21.68.

Main Lithology

Hole ID: TK20-028

Date Logged: 20-12-15

Geologist(s): K. Pederson

From (m)	To (m)	Lithology	Code	Description
0	11.7	Overburden (Unsubdivided)	15	OB
11.7	19.68	Tonalite breccia; Foliated	10aax; FOL	Cgr light to med grey with common inclusions of mafic and UM blocks making up to 35% of core near Lower contact. Unit is non magnetic except for mafic blocks where are weakly magnetic, non mineralized with weak to moderate localized foliation at 55-60 degrees TCA.
19.68	22	Hornblendite Breccia	8ac	dark grey to blue grey with significant veining and inclusions of odd biotite rich bands (seds?). 1-2% fgr diss and vein associated sulfides.
22	31.85	Biotite-rich Hornblendite (>10%)	8ab	fgr to mgr blue grey to dark blue grey with significant Bt. Unit contains variable 2% sulfides. Weakly veined, no carbonate. Relic gabbroic textures 228-29m.

31.85	35	Fault zone (gouge, lost core)	11c	Fault zone significant lost core and a mix of hornblendite, mafic intrusive and felsic dike material. Broken core, slip plains at 40 deg tca and gauge abundant near 35m at 55-60 deg TCA.
35	36.04	Granite	10ac	Cgr to vcgr light pink granitic intrusion. Non foliated and no mineralized.
36.04	38	Biotite-rich Hornblendite (>10%)	8ab	Dark grey fgr biotite hornblendite. 2% fgr diss Py and Po to 38m. Unit is very soapy and contains significant silvery fibrous minerals (serpentine?)
38	42.06	Hornblendite	8a	Dark blue grey fgr to mgr with strong pervasive silica. Weak banding and strongly magnetic. Barren of sulfides. Much more competent than other blocks and may be due to pervasive silica.
42.06	46.13	Granite breccia	10acx	Cgr light pink to pink. Mafic and UM blocks make up 30% of rock by length. Granite is nonfloated, non mineralized and non magnetic. Blocks at 44-46 contain up to 5% sulfides as fgr diss and vein associated. LC is denoted by drop of fragments.
46.13	53.35	Granite	10ac	Cgr non foliated nonmineralized pink granite.
53.35	58.68	Granite breccia	10acx	Same as unit above but includes up to 20% blocks of mafic material. no mineralized, weakly magnetic and non foliated.
58.68	63.8	Late Mafic Dyke (Unsubdivided); Amphibolite	14d; 7c	fgr blue grey late mafic dike with weak carbonate alter. Could be a large rafted block as the unit above and below are more gratic Bx then granites, and to contacts are veined. Unit is mafic vs ultra mafic.
63.8	73	Granite breccia	10acx	cgr light grey to pinkish grey. Mafic and UM components make up 10-15% pf core and inclusions of foliated Tonalite are common. Non mineralized and non magnetic. Drillers dopped box 14 and lost the core from 70.60 to 71.30m

73	101	Tonalite; Granodiorite	10aa; 10ab	Cgr white to light grey with common bands of granite to granodiorite, rare vcgr dikes and pegmatitic veins and rare mafic blocks. Non mineralized, non magnetic and moderate foliation at 70-80 degrees TCA. Common qz veins.
