1.0 INTRODUCTION

This report was prepared to summarize exploration work performed by Great Bear Resources (GBR) on the Dixie Lake and West Madsen properties during the spring and fall of 2017. Expenditures of \$89,839 are being submitted for assessment credit, incurred for approximately fourteen weeks of field work prospecting, re-logging and re-sampling between the dates of April 19th, 2017 and October 29, 2019. Assessment report writing occurred before December 30th, 2017. All work was supervised by Bob Singh (P.Geo).

2.0 LOCATION, ACCESS AND PHYSIOGRAPHY

The Dixie Lake property is in northwestern Ontario and is centred at UTM coordinates 0456882E/56342140N (NAD 83 Zone 15N) on NTS map sheet 052K13. The town of Red Lake is located 26 kilometres to the northwest of the Dixie Lake property and the property holdings are within the Dixie Lake, Bruce Lake, Faulkenham Lake and South of Byshe townships (Figure 1).

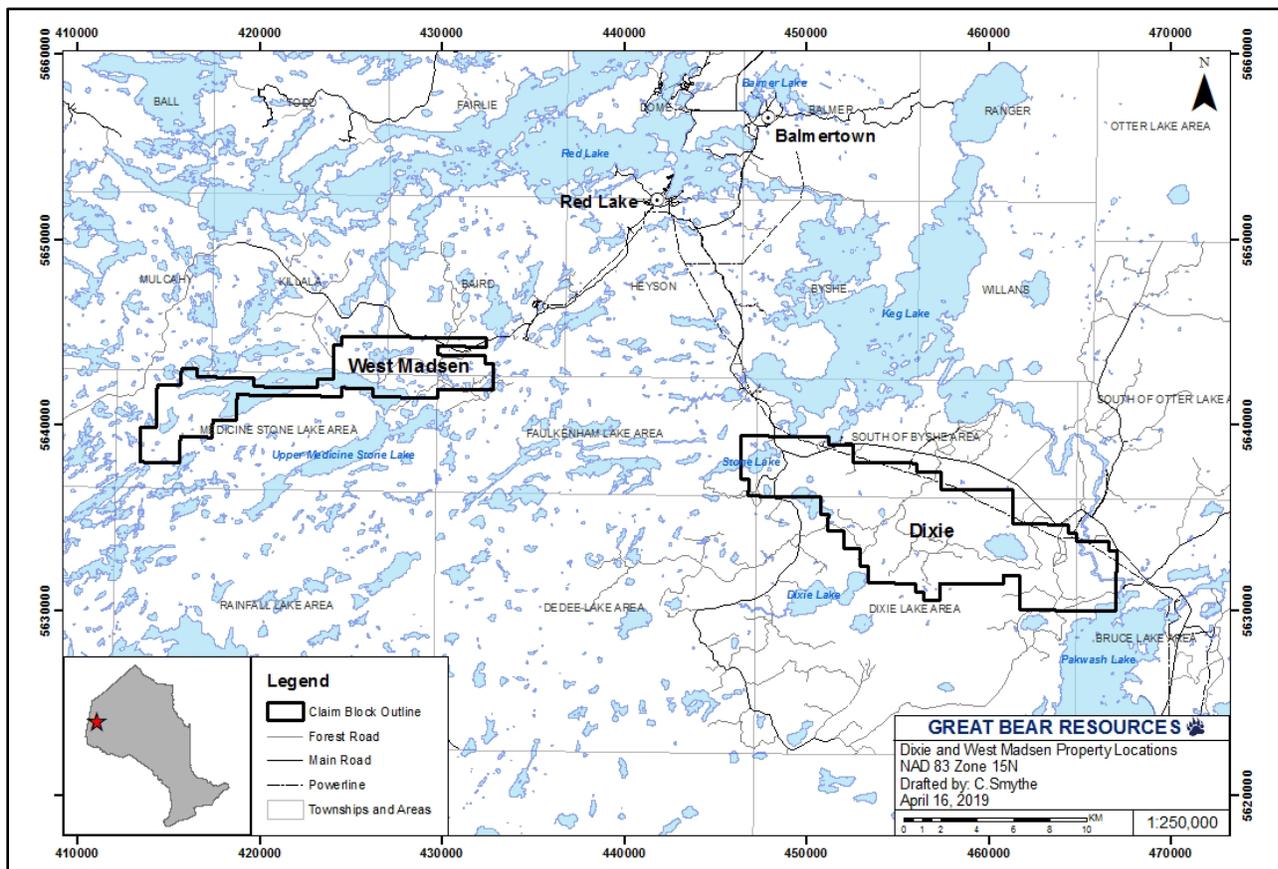

Figure 1: Dixie Lake and West Madsen Property Location Map.

The Dixie Lake property is situated between Stone Lake and Pakwash Lake, primarily south of Highway 105. Access to the property is 26 kilometres from the town of Red Lake via Highway 105, then 1.4

kilometres to the southwest along Tucyk Road. Several historic forest service roads from Tucyk Road provide direct access to much of the Dixie Lake property. This area is covered with a mainly mature boreal forest consisting predominantly of black spruce and lesser stands of poplar, birch, jack pine, and balsam. Large areas on the property have been deforested over the years and have been replanted with spruce and pine. The topography of the area is characteristic of the southern part of the Canadian Shield with low rolling hills and intervening lowlands with lakes, muskeg and marshes. Relief on the property is subdued with elevations ranging from 350 to 400 metres. There is little outcrop in the area of the property (Tims, 2005).

The West Madsen property is also located in northwestern Ontario, centered at coordinates 0423126/5642140 on NTS map sheet *052L16*. The town of Red Lake is located 14 kilometres northeast of the property. The property holdings are within the Baird, Killala, Faulkenham Lake and Medicine Stone Lake Townships (figure 1).

The West Madsen property is a newly identified geological continuity of the greenstone belt within the Balmer and Confederation assemblages, which are host to the adjacent, historical Madsen and Starrett Olsen Mines. Recent logging road construction has significantly increased vehicle access to the properties.

The West Madsen property is located between Upper Medicine Stone Lake and Flat Lake approximately 15 kilometres southwest of the town of Red Lake along Highway 618. Several secondary roads from Highway 618 provide access throughout the property.

3.0 CLAIMS AND OWNERSHIP

The Dixie Lake property has an area of approximately 96 square kilometres consisting of 494 mineral claim units (Figure 2). The Madsen property is approximately 44 square kilometres consisting of 229 claim units (Figure 3). All mineral claims lie within the Red Lake Mining Division. The mineral claims comprising the property are presented in Table 4. All claims are currently in good standing with Great Bear Resources as the recorded owner.

Great Bear Resources is purchasing a 100% interest in the Dixie Lake Gold project, Red Lake, Ontario. In July 2017, the company entered into a purchase agreement with Newmont Mining to acquire Newmont's 33% stake in the project for \$80,000 in total cash payments over 4 years. In September 2017, the company acquired an additional 26 mineral claims and today the Dixie Lake property covers 9600 hectares. Through the purchase of Newmont's interest, Great Bear will have a 100% interest in the expanded project and all royalties relating to these claims (GBR News Release July 17, 2017).

In August 2017, Great Bear Resources signed a purchase agreement to acquire 100 percent ownership of an expanded West Madsen gold project in the Red Lake gold district. The total remaining payments to acquire a 100% interest in the West Madsen property is \$124,000 over four years plus payment of 100,000 common shares of Great Bear Resources. All royalties at the Madsen project are being purchased for payment of 200,000 common shares of Great Bear Resources. The project comprises two claims blocks Madsen Block A and Madsen Block B. The Block A is now directly contiguous to Pure Gold Mining's Madsen property and both blocks are approximately six kilometres by three kilometres in size, for a total area of 4376 hectares (GBR News Release August 30, 2017).

4.0 EXPLORATION WORK PERFORMED

During the Spring and Fall of 2017, Great Bear Resources (GBR) personnel completed a re-logging and re-sampling program on the Dixie Lake Property and a prospecting program on the Dixie Lake and West Madsen Property.

Dixie Lake Property

In the Spring of 2017 Great Bear Resources initiated a historic core re-logging and prospecting program. This focussed on re-sampling historic drill core and prospecting on the Dixie Lake Property to collected data to assist with planning a follow up diamond drill program (summer 2017). 388.9 metres of historic core was relogged, 309 drill core samples were collected, 42.8 km was traversed for prospecting with 11 grab samples collected.

Relog Property

Geologists for Great Bear Resources completed the ground work and selected 388.9m of core from five historic holes to relog and resample (Table 1 & **Error! Reference source not found.**).

Table 1: Collar information for relogged drill holes.

Historic drill core was located at an outdoor storage area and transferred to a secure core shack in Red Lake, Ontario where the core was relogged and sampled. Partial intervals from DL-09-02, DL-09-03, DL-11-05 and DC-11-07 and the complete hole for DC-08-02 were relogged. A total of 388.9 metres were relogged and 309 samples were collected and shipped to Activation Labs in Dryden Ontario. Gold standards, blanks and duplicates were inserted approximately every 50 samples.

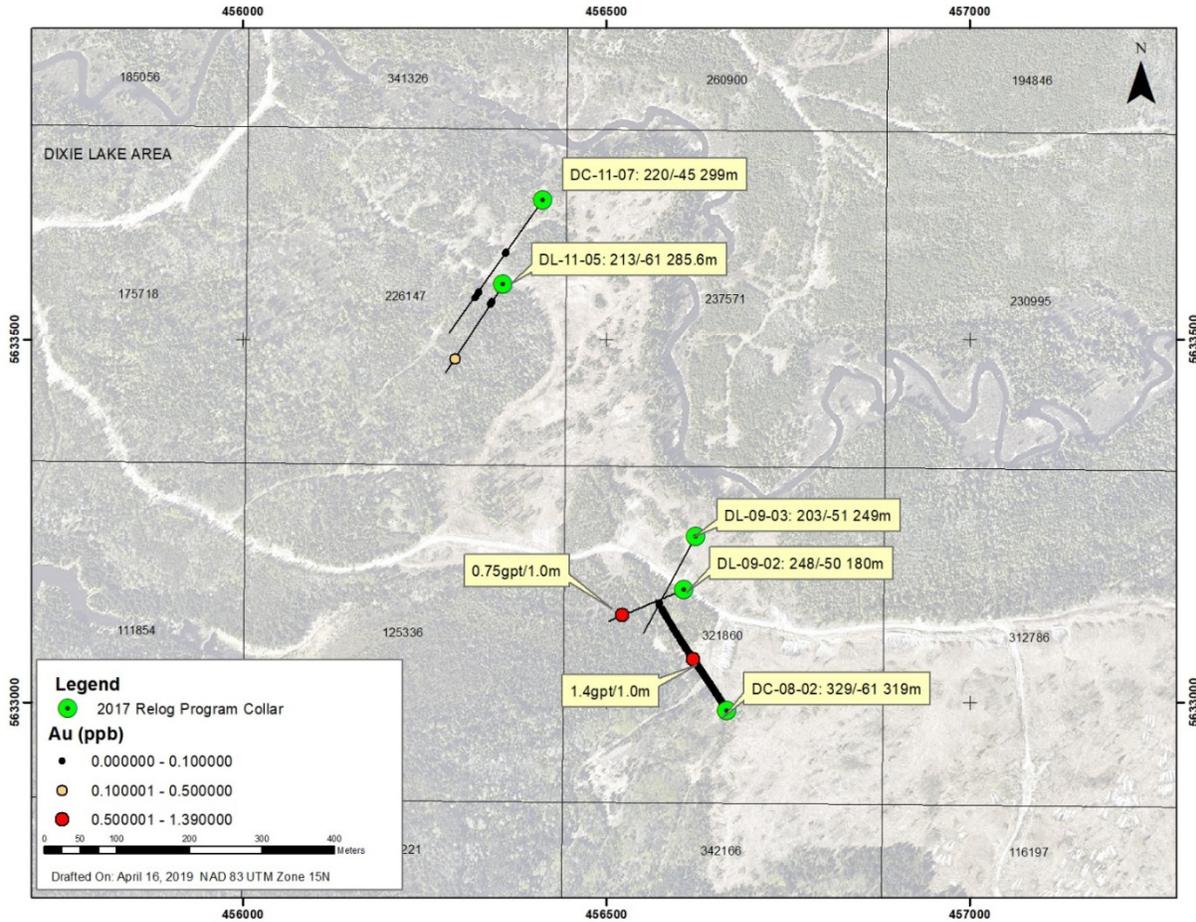

Figure 4: Plan Map of Relogged Holes

Relogging of the core verified that the quality of the historic logs was accurate (though no log for DC-11-07 was found). The quality of historic sampling could have been improved by choosing smaller sample intervals, consistent locking and orientation of the core so the samples were cut perpendicular to the vein/foliation and consistent selection of one half of core for sampling. Of note, boxes for DC-08-02 are incorrectly labeled as DL-08-02.

DC-08-02:

DC-08-02 was drilled by Grandview Gold to test previous intercepts of the New South Zone. It collared in relatively unaltered pillowed basalts till 189 metres with increased deformation and strain from 140 metres to 160 metres. It continued to 235 metres through strongly magnetic argillite with 5% pyrite. From 235 metres to 318 metres was massive basalt (no obvious selvages) with an increase in bleached, sericite altered hairline fractures and a small interval of argillite from 292 metres to 297 metres. The hole ended in a clastic, sedimentary unit with large sub-round ankerite altered fragments.

Prospective veins were observed at 109.2 metres to 109.8 metre and 290.3 metres to 290.4 metres. From 109.2 metres to 109.8 metres were two prospective quartz veins at the lower contact between a massive, mafic intrusive and pillow basalts. The veins were 50° to core axis and mineralized with 1% pyrrhotite, pyrite and chalcopyrite. These veins were sampled by Grandview Gold in a 1.0 metre wide sample that returned 0.04 gpt Au. The vein at 290 metres was previously compared by Grandview geologists to gold

bearing veins in DC-08-01R that returned 18.25 gpt Au over 2.11 metres. Visually this was a prospective vein however it did not return any significant results. Of note, this vein was at a high angle to core axis compared to most veins intersected in DC-08-02. This hole was resampled top to bottom (277 samples). The most significant gold result from the resampling of this hole was 1.39g/t over 1.0 metres (sample H994121: 168.0 metres to 169.0 metres). This sample consisted of massive basalt with a 1.0 centimetre wide quartz-calcite-pyrite vein at 20° to core axis.

DL-09-02:

DL-09-02 was drilled by Grandview Gold in 2009 to target the western extension of gold bearing veins intersected at the New South (NS) Zone. Historically two anomalous intercepts returned 1.99 gpt Au over 2.4 metres (135.6 metres to 138.0 metres) and 2.85 gpt Au over 2.3 metres (148.2 metres to 150.5 metres). Relogging of this interval (136.8 metres to 150.1 metres) confirmed prospective quartz veining hosted by pillow basalt. Relogging noted <0.5% fine-grained, disseminated arsenopyrite adjacent to veining. Seven samples were collected (4338-4344) to have continuous sampling between the historic anomalous intervals. The most significant result was 0.75gpt over 1.0 metre (sample 4342: 145.2 metres to 146.2 metres). This is 1.0 metre up hole from the historic 2.85 gpt over 2.3 metres.

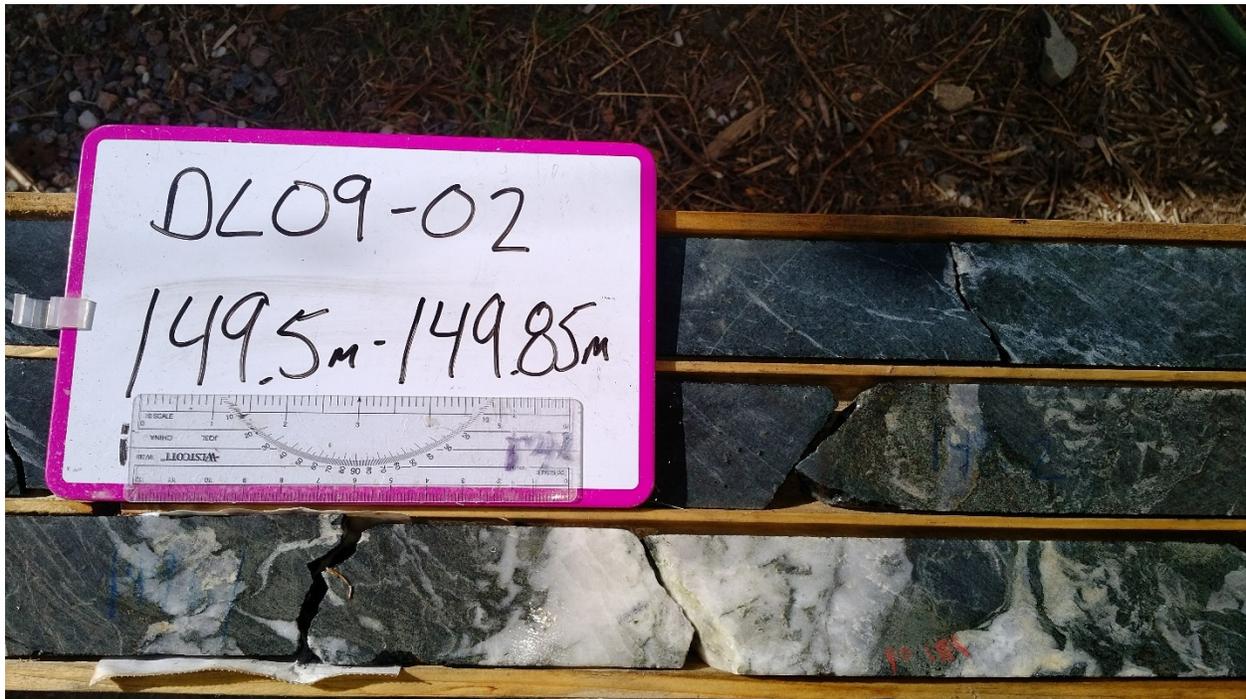

Figure 5: Prospective Quartz Veining from DL-09-02.

DL-09-03:

DL-09-03 was drilled by Grandview Gold targeting the New South (NS) Zone 60 metres northwest of DL-09-02. Historic significant results included 5.35 gpt Au over 1.4 metres (178.8 metres to 180.2 metres) containing quartz veining hosted by basalt. Grandview Gold geologists interpreted these veins to be the same as intersected in DL-09-02. Five samples were taken to complete analysis around this interval (171.0 metres to 179.8 metres) no significant results were returned.

Figure 6: Prospective Quartz Vein from DL-09-03.

DL-11-05 & DC-11-07:

DL-11-05 and DC-11-07 were drilled by Grandview Gold targeting the 88-04 extension. DC-11-07 had intersected anomalous results from sulphidized argillites including 2.43 gpt Au over 4.0m and 6.08 gpt Au over 1.0 metre. Field selection of core intervals from these two holes did not bracket the previous anomalous intervals but included twenty samples of strongly recrystallized basalt. No significant results were returned.

Prospecting Program:

Dixie Lake Property

A prospecting and reconnaissance program was completed over the Dixie Lake Property. Approximately 42.8 kilometres was traversed throughout the property by truck, quad and foot and 11 samples were collected (Table 2).

Overall the property has great accessibility with current and historic logging roads throughout. The area of planned summer 2017 drilling has excellent access and ground conditions are good with minor boggy, low lying areas. Dixie Creek can be utilized as a water source. Field crews mapped various historic forest service roads until winter conditions began. There is minimal outcrop with the majority of it being located in the northeastern portion of the property. It consists mostly of metamorphosed sedimentary and felsic intrusive. Eleven outcrop samples were collected and analyzed returning negligible gold values (table 2).

Table 2: Grab Samples Collected on the Dixie Lake Property

Sample ID	Easting	Northing	Rocktype	Cell #	Au ppb	Sample Description
279101	458768	5635504	Clastic	214206	< 5	Greenish grey weathered, greenish grey fresh, thinly laminated, very fine grained bedded sedimentary rock(?) Possibly volcanic (tuff?) or sedimentary unit with packages of fine grained volcanic rocks. No visible volcanic textures. Quartz grains visible, blobs of felsic and "squished" mafics. <1% quartz veining. No visible sulphides. Sampled for rock type.
279102	455626	5637197	Felsic Dyke	132392	< 5	Buff weathered, pink fresh dyke. 40% quartz crystals up to 5mm. 60% potassic feldspar up to 3mm. No mafics observed. Dyke is approx 15cm wide (with pinching/swelling/splitting). Contains trace blueish-silver metallic micaceous mineral up to 1cm in crystal diameter. Very flaky, SOFT, non-magnetic. Intruding into dark greenish-grey, laminated, cherty/siliceous, very fine grained clastic host rock.
279103	455433	5637249	Clastic	243808	< 5	Buff grey with rusty patches, greenish grey fresh, very fine grained massive rock with pyrite+quartz veining. Cubic pyrite: 1.00%, 1.00-2.00mm. Minor epidote alteration. Locally foliated/banded. May be mafic volcanic band in unit that is dominantly well foliated/bedded fine grained clastics.
279104	455406	5637264	Magnetite + Silica + Chlorite Altered Rock	243808	< 5	Dark grey weathered, greenish grey silica-chlorite altered rock. Strong, pervasive magnetism. Magnetite: cubic, disseminated and in tiny stringers. Pyrite: 0.10-1.00%, disseminated. Strong, pervasive silica + chlorite altered amphibole. Adjacent rock is well laminated, very fine grained clastics (possible tuff). Bleached. Abundant felsic dykes and quartz rich veins.
279105	456089	5634316	Silica Altered Rock	211438	8	Yellow + rusty orange weathered, light grey, strong, pervasive silica altered rock. Pyrrhotite: stringers, 1.00-3.00%. Very fissile/slaty. Vertically dipping, appears to have been trenched.

279106	456082	5634310	Silica Altered Rock	211438	5	Yellow + rusty orange weathered, light grey, strong, pervasive silica altered rock. Pyrite: blebby to massive, 5.00-10.00%. Pyrrhotite: veinlets/stringers, 0.10-1.00%. Not as strongly foliated as 279105. Locally vuggy. Weak-moderately magnetic (po?). Almost entire rock (float) taken - one small piece remains on site. Taken beside feature interpreted as historic trench.
279107	455942	5634398	Silica + Magnetite Altered Rock	183121	< 5	Rusty purple-orange weathered, greenish grey, garnet+quartz+magnetite altered rock (mSed?/clastic). Patchy, strong magnetism. Moderately foliated. Vitreous/smoky quartz veining up to 2cm. No visible sulphides. Garnets = red, up to 0.5cm. Abundant o/c in this area, mostly moss covered, could be further explored.
279108	455504	5634516	Quartz Vein	273668	< 5	Greyish white, vitreous (locally smoky) quartz vein/blowout in mafic volcanic rock. No visible sulphides. Irregularly shaped, up to 50cm wide (pinch and swell). Host rock described in 279109 (host rock sampled).
279109	455501	5634520	Mafic Volcanic	273668	< 5	Grey weathered, greenish grey, very fine grained mafic volcanic rock. Local very coarse grained amphibole (up to 2cm, acicular) with chlorite altered plagioclase (?). Pyrite: disseminated, 1.00%. Pyrrhotite: disseminated + stringers, 0.10-1.00%. Blocky fracture. Abundant quartz+carbonate veins makes weathered surface appear hydrothermally brecciated. Local weak foliation, dominantly massive. Very large outcrop (30m x 10m in the middle of the forest). Moss covered.
279110	453786	5633674	Quartz Vein	269495	< 5	2 cm wide smoky quartz vein in felsic volcanic host rock. Host rock: buff weathered, light greyish white, foliated fine grained felsic rock. Contains 5-10% flattened mafics (non magnetic, amphibole?). Groundmass contains quartz+feldspar. Quartz vein = patchy rusty weathered, locally vuggy with euhedral quartz crystals. Hematite staining. No visible sulphides.
279111	453786	5633674	Felsic Volcanic	269495	22	Buff weathered, light greyish white, foliated fine grained felsic rock. Contains 5-10% flattened mafics (non magnetic, amph?). Groundmass contains quartz+feldspar. Pyrite: cubic/disseminated, 1.00%. Appears QSP altered. Patchy, rusty weathering. contains isoclinal/tightly folded quartz veinlets.

West Madsen Property

A prospecting and reconnaissance program was completed over the West Madsen Property. Approximately 4.7 kilometres was traversed throughout the property by foot. A total of six samples were collected (Table 3).

The property is accessible by fishing camp (Medicine Stone Lake) and logging roads. Minimal outcrop was encountered. Six outcrop samples were collected and analyzed returning negligible gold values (Table 3).

I, R. Bob Singh, do hereby certify that:

1. I reside at 14080 Bear Creek Drive, Surrey B.C. V3W 8W5
2. I am employed by Great Bear Resources Ltd., headquartered in Vancouver, BC
3. I am a graduate from the University of British Columbia with a B.Sc. Geology degree (1991) and I have practiced my profession continuously since that time.
4. I am a member in good standing with the Association of Professional Engineers and Geoscientists of BC (#30401) and of the Association of Professional Geoscientists of Ontario (1863) both with a professional geologist status.
5. I have practiced my profession as a geologist for 26 years and have worked in the mineral exploration industry since 1986. I have done extensive geological work in Canada, U.S.A (Alaska, Nevada and California) as an employee of various exploration companies and as an independent consultant. My work has included a large variety of deposit styles, including diamond exploration, epithermal and mesothermal gold-silver, copper-gold porphyry, Volcanogenic massive sulphide, and orogenic sediment hosted gold systems. I have worked on properties at all stages of exploration, from grass root, to early stage exploration through advanced stage exploration.
6. I am currently the VP of Exploration for Great Bear Resources Ltd., I have reviewed the available data pertinent to the property and I believe the property to be of sufficient merit to justify additional work.
7. I have no direct or indirect interest in the property described herein and do hold options on securities of Great Bear Resources Ltd.
8. I am a Qualified Person and Independent of Great Bear Resources Ltd., as defined by National Instrument 43-101.

90.20 109.20 Mafic-dyke

Dark green, fine to medium grained, massive mafic intrusive. It is weakly foliated. Towards the lower contact the unit becomes more phenocrystic with mm scale quartz crystals. Lower contact defined by 10cm wide quartz vein 50° to core axis.

CERTIFICATE OF ANALYSIS

11 Rock samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-50-Tbay Au - Fire Assay AA(QOP Fire Assay Tbay)
Code 1F2-Tbay Total Digestion ICP(TOTAL)
Code Weight Report in Kg-Tbay Received Weights-Tbay

REPORT **A17-13021**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFICATE OF ANALYSIS

131 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-50-Dryden Au Fire Assay AA (QOP Fire Assay Dryden)

Code 1A3-50-Dryden Au - Fire Assay Gravimetric

REPORT **A17-05008**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

50 g of sample

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFICATE OF ANALYSIS

184 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1F2-Tbay Total Digestion ICP(TOTAL)

Code Weight Report-Tbay Received(kg) & Pulp(g) weights-Tbay

REPORT **A17-05204**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.

CERTIFIED BY:

A handwritten signature in black ink, appearing to be "Emmanuel Esemé". The signature is stylized and somewhat cursive, written over a horizontal line.

CERTIFICATE OF ANALYSIS

184 Core samples were submitted for analysis.

The following analytical package(s) were requested:

Code 1A2-50-Dryden Au Fire Assay AA (QOP Fire Assay Dryden)

REPORT **A17-05204**

This report may be reproduced without our consent. If only selected portions of the report are reproduced, permission must be obtained. If no instructions were given at time of sample submittal regarding excess material, it will be discarded within 90 days of this report. Our liability is limited solely to the analytical cost of these analyses. Test results are representative only of material submitted for analysis.

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.
