# **ASSESSMENT WORK REPORT 2019-2021**

## **CROWN JEWEL PROPERTY - AMETHYST CREEK PROPERTY**

### **TARTAN LAKE AREA**

### **THUNDER BAY MINING DIVISION**

**CLAIMS: 107861, 211604, 325287, 264037, 171976, 164761**

**Author: Aki K. Siltamäki (prospector, claims owner)**

#### **Introduction**

The construction of new logging roads in the early 1990's in the Tartan Lake Area northeast of the city of Thunder Bay, Ontario made the area accessible for exploration. A few local prospectors, this author included, took advantage of the opportunity to prospect this newly accessible area. An occurrence of amethyst approximately 8.5 km east of Hwy 527 at an unnamed creek ('Amethyst Creek') was discovered along one of these roads (then new forest access road (Magone Rd.). It is unknown who made the initial discovery, but originally D. Christianson (deceased) of Thunder Bay held a single claim on the amethyst occurrence. No work was reported and the claim was allowed to expire.

Since that time, A. Siltamäki (this author) began prospecting the area for amethyst deposits. Numerous occurrences of amethyst, the first one in the fall of 1990 and then in subsequent years were found by him in the area. Claims were staked on the prospective ground and were worked and maintained over the years to evolve into what are now the Crown Jewel and Amethyst Creek properties.

Historic work has been filed as assessment work by this author and other amethyst mining claim operators in the area.

Mining for amethyst was previously done on a portion of the 'Amethyst Creek' deposit under a lease at the former Blue Star amethyst quarry and is still ongoing at the leased claim of Purple Haze amethyst mine. This mine is located on the eastern extension of the 'Amethyst Creek' deposit.

Amethyst is also currently mined under an aggregate resources permit at the Auralite amethyst mine.

## **Location and Access**

The mining claims are located on crown land approximately up to 40 km (driving) northeast of the City of Thunder Bay in unsurveyed territory north of MacGregor Township.

Access is by motor vehicle travelling east from Thunder Bay along Hwy 11/17 to Hwy 527, then north along Hwy 527 approximately 15 km to Magone Road, then >8 km east on Magone (Amethyst) Road to the Amethyst Creek Property. The access trail to claim 107861 of the Crown Jewel Property is 13 km east from Hwy 527; the trail to claim 211604 is a little further at >14 km, measured east from highway 527.

UTM coordinates for the claims are: Claim 107861 - NAD83 U16 354704E, 5389778N

Claim 211604 - NAD83 U16 355703E, 5390296N

## **Geology**

The area of the mining claims is predominantly underlain by Precambrian-age Archean felsic intrusive rocks (pink monzonite granite) of the MacKenzie Stock. Interspersed within the granite are small areas of metasedimentary rock (gray quartz-mica schist) where it is in contact with the granitic rocks. The metasedimentary rock unit is prevalent in the area north of the mining claims in the Escape Lake Road area.

The topography is rugged and hilly with abundant outcrop and elevations as high as 550 meters ASL.

Vegetation is mixed boreal forest and brush with overburden consisting of glacial till, gravel, boulders, humus, muskeg (in low ground). Some of the logged areas have been re-planted with evergreen softwoods, while some areas have been allowed to re-seed naturally.

The secondary (post-logging) growth is nearly 3 decades old.

## **Mineralization**

Amethystine quartz occurs along several north-east trending faults in the area. The quartz and amethyst are found as hydro-thermal deposits filling fractures in the granite as well as in small areas of the adjacent mica schist where it is in contact with the faulted intrusive rocks. Diverse colours of quartz (clear, white, purple (amethyst), smoky and green (prasiolite) are present in veins, crystallized in vugs and in brecciated zones.

Minerals identified as inclusions include: hematite, disseminated pyrite and chalcopryrite, rutile or (goethite, marcasite?).

Some minor malachite occurs as a thin layer in places, coating fractures where disseminated chalcopryrite was seen. The mineralized fault zone has been traced along outcrops for a distance of >2650 meters and up to 35 meters in width at claim 107861. Samples of mineral specimens, lapidary stone and landscape/garden rock have been collected from these amethyst deposits.

## **Current Work**

Physical (manual) Work:

claim 211604: digging test pits, collecting samples, trail-cutting and maintenance

claim 107861: digging test pits, collecting samples, trail-cutting and maintenance

Description of samples collected:

quartz/amethyst-bearing rocks with matrix of granite or mica schist

claim 171976: washout repair of main access road

claim 264037: trail-cutting, GPS traverse for trail plan to new proposed work site 1

claim 325287: trail-cutting, stripping and outcrop-washing at new work site 2

Transporting of samples was for storage at my country property.

## **Equipment Used**

**Transporting: GMC VANDURA 2500, YAMAHA BIG BEAR ATV**

**Work tools:** chain saw, brushing loppers, prospector pick, Geotul\*, shovel, hoe, water bucket for outcrop washing

GPS unit: Garmin *GPSmap 62s*

Camera : Canon *PowerShot A590is*

Samsung phone/camera
