INTRODUCTION

The following report will deal with the results of a preliminary prospecting program carried out on the Finlayson Lake Property on behalf of 2060014 Ontario Inc. The property consists of five, single cell mining claims located in the Finlayson Lake Area, Thunder Bay Mining Division. The work was carried out on a contract basis by Vision Exploration and all work was supervised by Steve Anderson.

A total of 4 travel days from Connaught to Atikokan and 1 field day were spent by two individuals prospecting along a logging road that runs through the northern portion of the claim group. A total of 3 grab samples were taken from the property, all of which will be sent for assay. The purpose of this program was to locate any areas of geological interest as well as obtain basic geological information on the property. This work was carried out between October 18th to 24th, 2022.

This report will deal with the results of the preliminary prospecting program carried out on the above-mentioned property.

FINLAYSON LAKE PROJECT

Location Map

Figure #1

LOCATION AND ACCESS

The Finlayson Lake Project consists of 5 contiguous single claims located in the central portion of Finlayson Lake Area, Thunder Bay Mining Division (Figure #2).

The property is located approximately 180km West Northwest of the city of Thunder Bay or 130km East Northeast of the town of Fort Frances. Locally, the claims are located 18km North of the town of Atikokan. Access to the work area was gained by taking Hwy 622 North from the town of Atikokan for approximately 18km. to Hardtrack Road, which heads east from the Hwy. If one follows this road east for 3.1km, Sawbill Road branches off and continues east for 4.3km at which point it provides access to the northern portion of the claim group. This is a seasonal road that can be accessed by 2-wheel drive vehicle.

PERSONNEL

The following people were directly involved in carrying out the preliminary prospecting on the Finlayson Lake Project.

PREVIOUS WORK

The first phase of exploration to be conducted by the claim holder.

The claims that are the subject of this report have had the following reported historic work carried out.

1897: New Golden Twins Mines

Shaft to 63 feet

Shaft to 16 feet

1968: K.G. Fenwick

Geological mapping

CLAIMS

The claims covered by this program consist of 5 contiguous, single cell mining claims located in the Finlayson Lake Area, Thunder Bay Mining Division Mining Division. (Figure #3) The claims are recorded 100% in the name of 2060014 Ontario Inc. and are as follows:

<u>Claim #</u>	<u>Cells</u>	<u>Due date</u>
538151	1 cell	2023-01-01
752310	1 cell	2024-10-19
752311	1 cell	2024-10-19
752312	1 cell	2024-10-19
752313	1 cell	2024-10-19

WORK PROGRAM

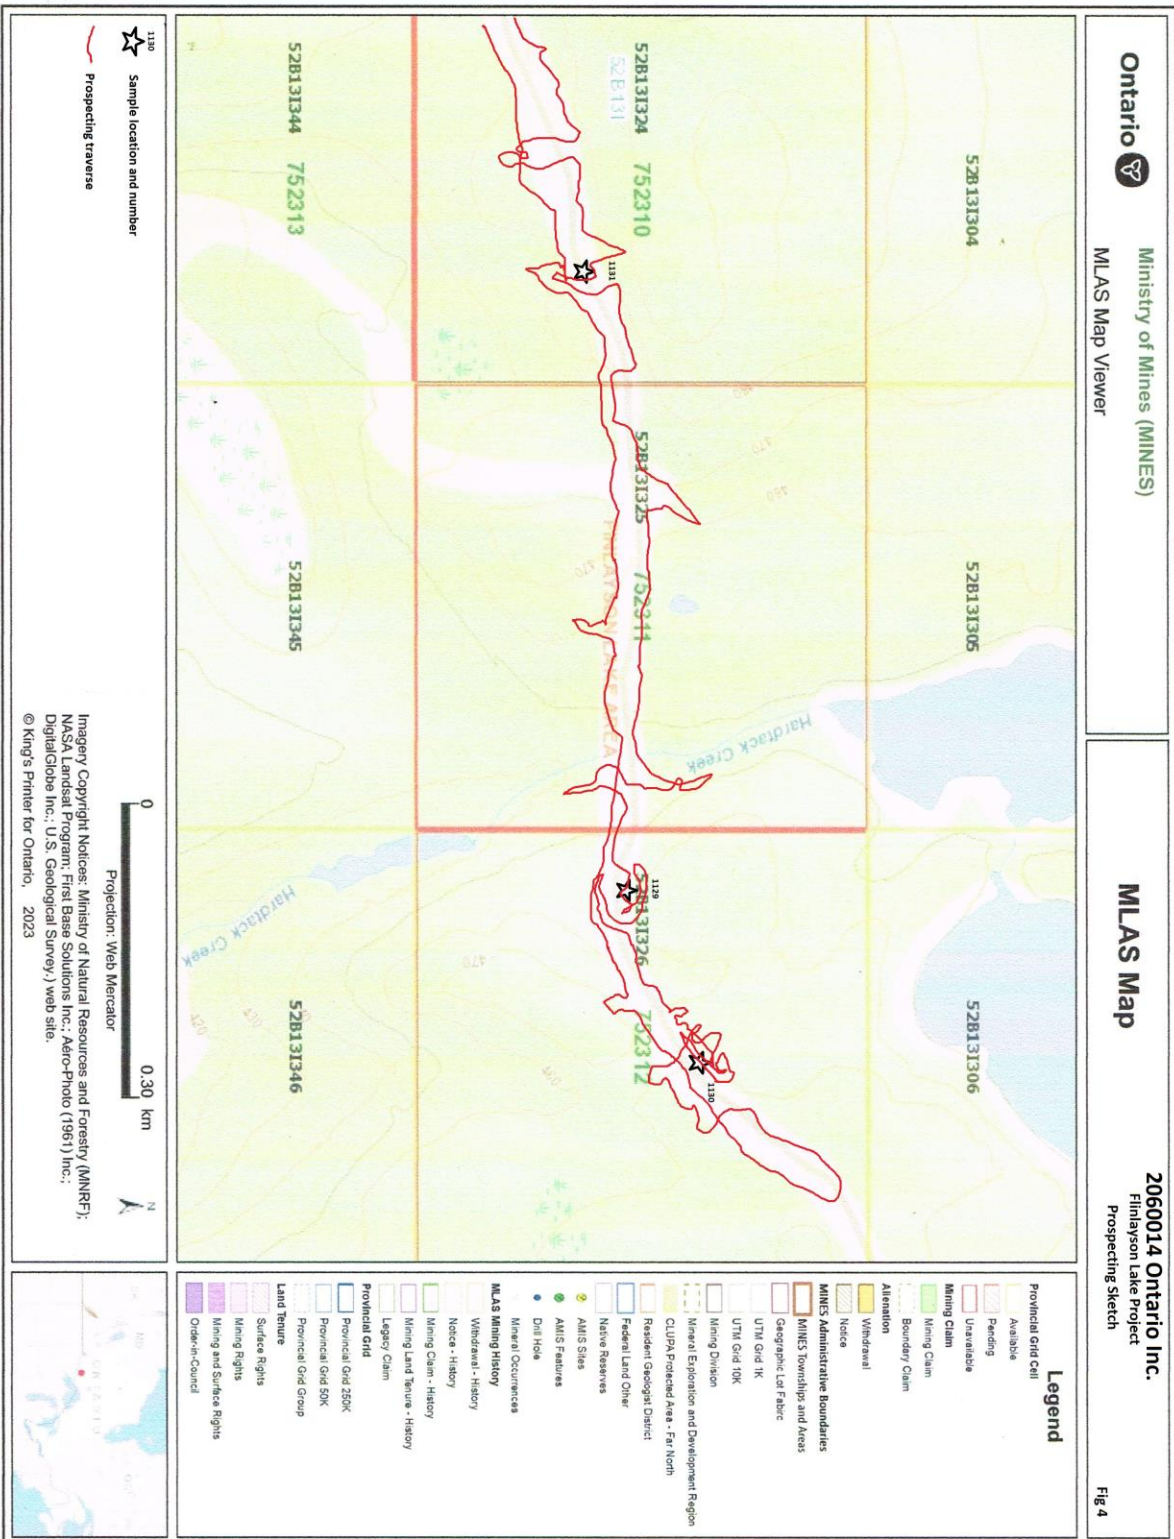

The current work program involved spending 4 days travelling from Connaught and 1 day prospecting on the subject claims. The purpose of this program was to obtain basic geological information on the property which will be used to plan future work programs. One day was spent prospecting along a roadway that extends east-west through the northern part of the claim group.

SURVEY RESULTS

A total of 1 day was spent on the property by a prospector and helper obtaining geological samples and information. In general, the area prospected was shown to be underlain by a mafic basalt and hornblende schist. A total of 3 samples were taken.

Day 1 prospecting

This day was spent prospecting along a road which cuts through claims 752310, 752311 and 752312. Claims 752310 and 752311 hosted a number of basalt outcrops with some minor quartz veining. The strike was approximately 70 degrees with a near vertical dip. Claim 752312 showed a hornblende schist with a number of quartz veins. This schist also strikes at roughly 70 degrees and has silicious sections that contain 1-2% sulphides. A total of 3 samples were taken for assay.

RECOMMENDATIONS AND CONCLUSIONS

The prospecting program carried out on the Finlayson Lake Project was successful in determining the subject property hosts a geological environment favourable for gold deposition. Three samples were taken with minor sulphides, all 3 are being sent for Au assays. The assay results were not available at the time of writing and will be submitted once they are received.

Additional prospecting should be carried out on the property, particularly on claim 538151. This claim reports 2 historic shafts (previous work) that should be investigated. If any assays return anomalous values in gold a magnetometer and induced polarization surveys should be carried out. After this, all data available should be compiled and if warranted, a diamond drill program be carried out.

CERTIFICATION

I, Steve Anderson of Crystal Falls, Ontario hereby certifies that:

1. I hold a three-year Geological Technologist Diploma from Sir Sandford Fleming College, Lindsay, Ontario, obtained in May 1981.
2. I have been practising my profession since 1979 in Ontario, Quebec, Nova Scotia, New Brunswick, Newfoundland, NWT, Manitoba, Saskatchewan and Greenland.
3. I have been employed directly with Asamera Oil Inc. Urangellschaft Canada Ltd. Nanisivik Mines Ltd., R.S. Middleton Exploration Services Ltd., Rayan Exploration Ltd and I am currently the owner of Vision Exploration.
4. I have based conclusions and recommendations contained in this report on knowledge of the area, my previous experience and on the results of the fieldwork conducted on the property during October 2022

Dated this 30th day of December 2022
At Crystal Falls, Ontario.
