1 SUMMARY

Figure 1: Ontario Location map - Pen Property

Thunder Gold Corp (TGOL.V) formally known as White Metal Resources first staked Pen (Au) property, in 2019 in the general area of Geraldton with an additional 106 claims staked in 2022. The property has easy access off TransCanada Highway 11 and Kenogamissis Lake covers a large area of the claims to the east which is also a good source of access.

The Peninsula Gold Property lies within the east-west trending Beardmore-Geraldton greenstone belt of the Wabigoon Subprovince. This greenstone consists of three faults steeply north dipping series, each containing metasedimentary rocks unconformably overlying metavolcanic rocks (Tomlinson et al., 1994).

The mafic to intermediate metavolcanic rocks comprise three units which are referred to as the Northern, Central and Southern Volcanic Units (NVU, CVU, SVU). Each unit consists of varying proportions of massive lava flow, pillowed lava flows and mafic intrusions, with occasional intercalated, argillites and banded iron formation. The Peninsula Gold Property lies within the CVU unit.

The last hole drilled by Peninsula Gold in 1998 P-7 is described as a well silicified strongly magnetic pyrrhotite-arsenopyrite section from 53.9 m to 56.3 m with the best gold values averaging (weighted average) of 3.33 g/t/ Au across 2.6 m, including 0.45 m of 10.8 g/t/ Au and >20,000 ppm As. Several other sections between 30.8 m and 50.4 m also returned significant gold values ranging from 0.65 g/t Au to 3.24 g/t/ Au (0.6 m).

Silicification (quartz flooding) and arsenopyrite is associated with the higher gold values. The most consistent anomalous gold values are returned from locations where magnetic pyrrhotite also occurs with the quartz flooding and arsenopyrite.

Peninsula Gold Explorations performed work during 1996 and 1997. The work included a VLF and Magnetometer survey geochemical soil sampling and prospecting by F. Houghton. This was followed up in March 1998, by a combination of bulldozer stripping and backhoe trenching on ten predetermined locations of interest on the Property. During early April 1998 eight holes at seven locations were diamond drilled for a total of 403 meters.

In order to locate additional targets from the known area of Hole 98-P7 in the southeast of the property sample was carried out to determine if there would be new gold targets. Except for an Airborne Electromagnetic Very Low Frequency, Airborne Magnetometer which was submitted in 2008 and completed on just a small part of southern western part, all other work was done on the property in the 1990's, therefore prospecting with soil sampling was carried out to get a general overview of the claims on the western block.

Rock sampling, soil sampling and lake bottom sampling began on July 12, 2022 on the western claims for Pen Gold property and commenced on July 21, 2022. The total of 356 samples taken are 356 with 64 rocks samples, 23 lake bottom samples and 269 till samples all being assayed for Gold.

Michael Stares carried out prospecting and Clifford Hickman did both the prospecting and lake bottom soil sampling with Marcus Brisard and Matti Tiitto collecting till soil samples.

The worker-days for this project is as follows: 16 worker-days for the collection of till samples and 3 days for lake bottom with prospecting over 13 workers-days

All sample locations and maps are in Universal Transverse Mercator, (Nad 83, UTM Zone 16).

2 Property Description

The Peninsula Gold Property is located Approximately 2.5 hours east of Thunder Bay and around 2 km east of the town of Geraldton. It is comprised of 226 single cell claims totaling 4637 ha. The approximate center point of the property is 513,590m E and 5,509,470m N (Nad 83, UTM Zone 16). See Map 1 and appendix I for claims. See figure 2 for the outline of the property.

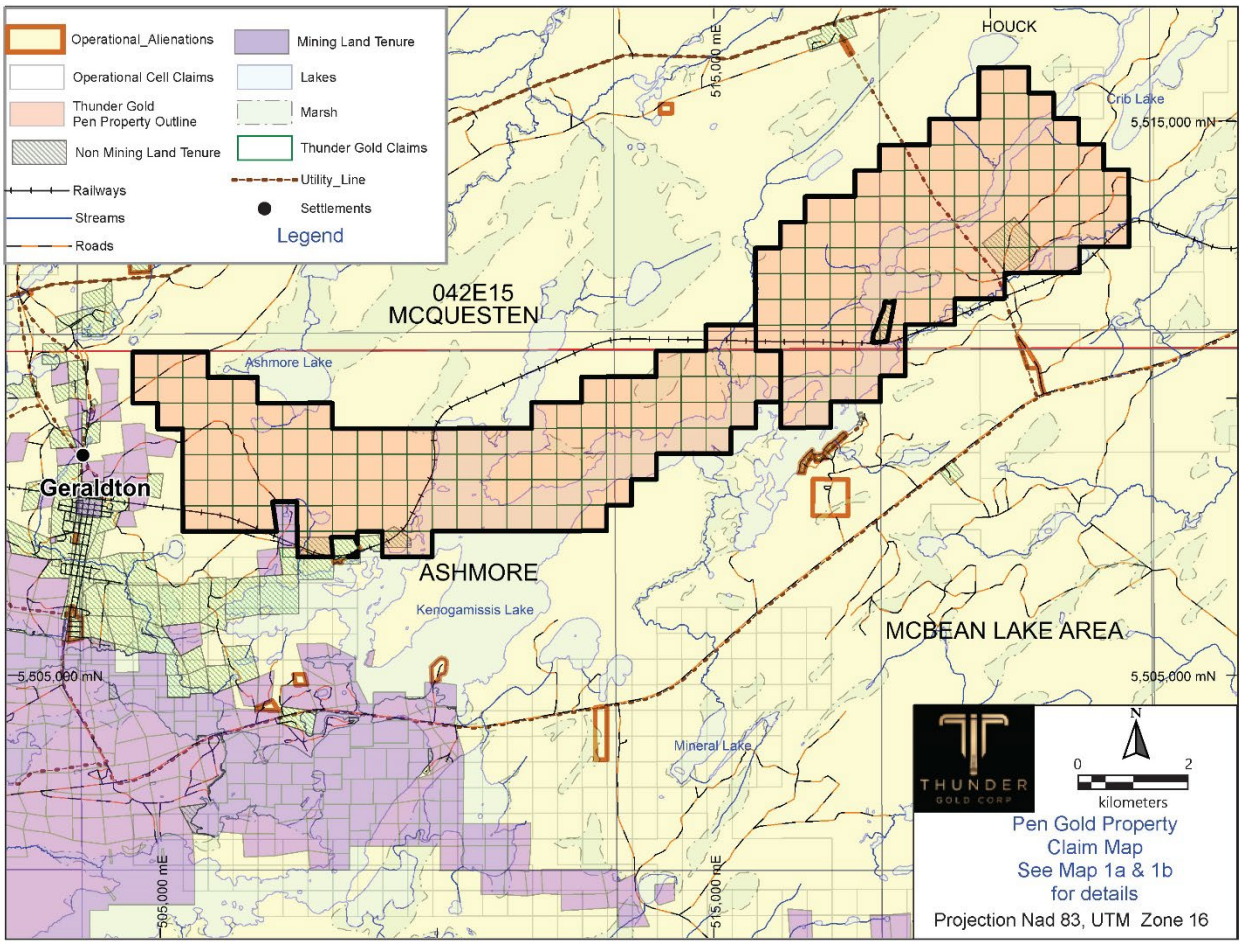

Figure 2: Outline of Pen Property

3 Location, Access and Topography

The property may be reached from a point on Highway 11, about 5 km east of Geraldton, at the Main narrows on Kenogamisis Lake and by boating or skidooing in winter 5 km northeast along the lake to the Pen Gold Property. The property is in both Ashmore, Haul and Mcbean Lake townships. The property is located within NTS block 042E10. The central point of the property is located approximately 513,590m E and 5,509,470m N, Zone 16, NAD 83. The town of Geraldton is located approximately 2 km east of the western boundary of the property. It can be accessed by driving approximately 2.5km south onto highway 584 off highway 11. The property is mainly covered with birch and poplar trees with minimal swamp which a large area of the property covered by Kenogamisis Lake. See Figure 3 for physiography of the property.

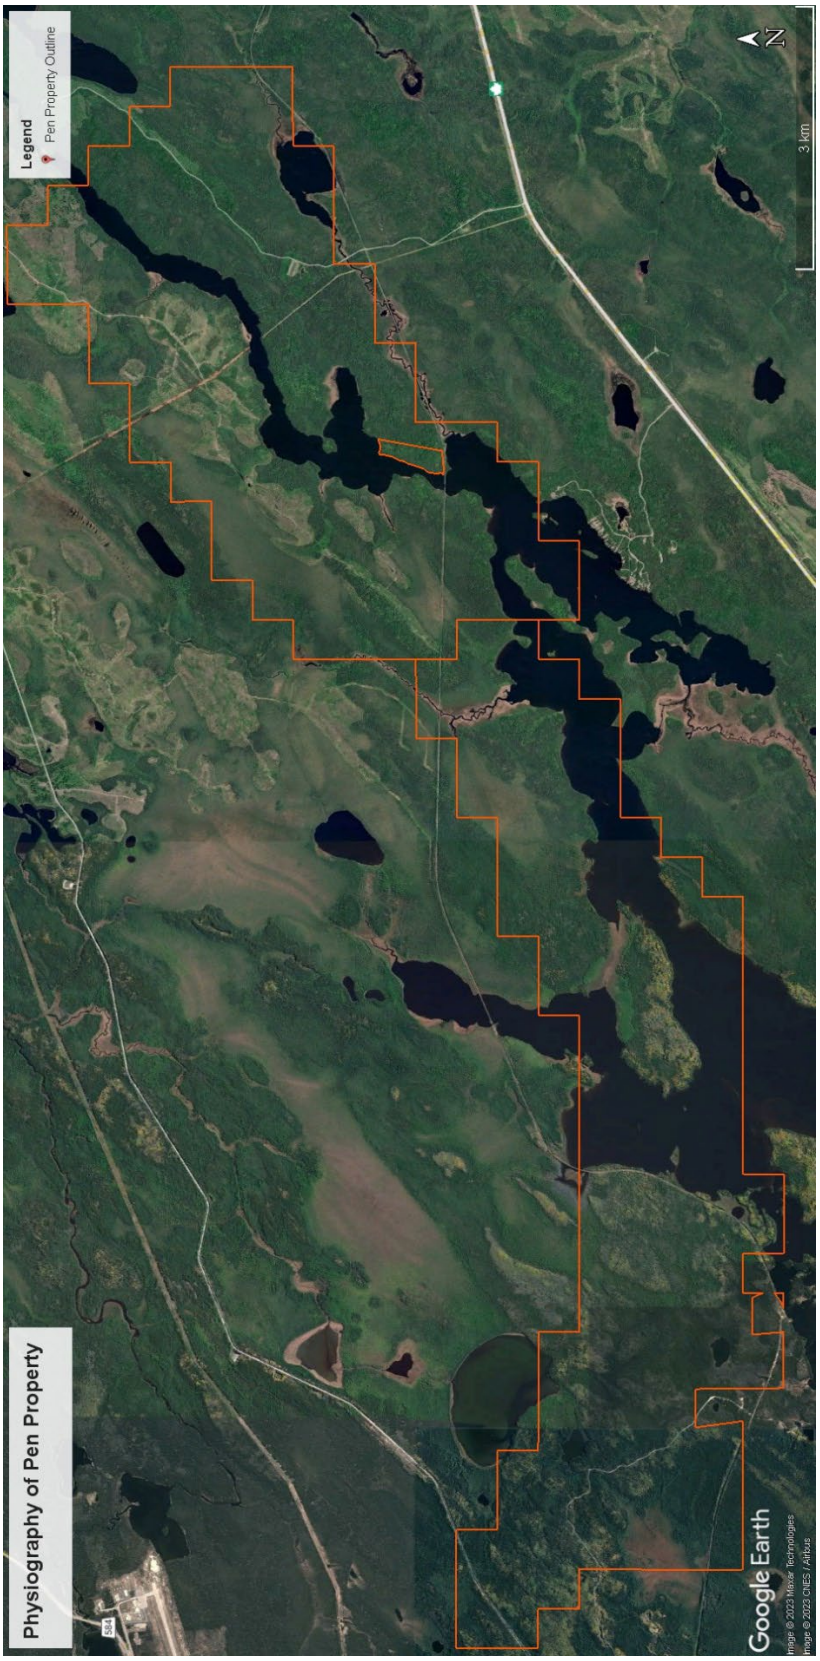

Figure 3: Google image showing physiography of Property.

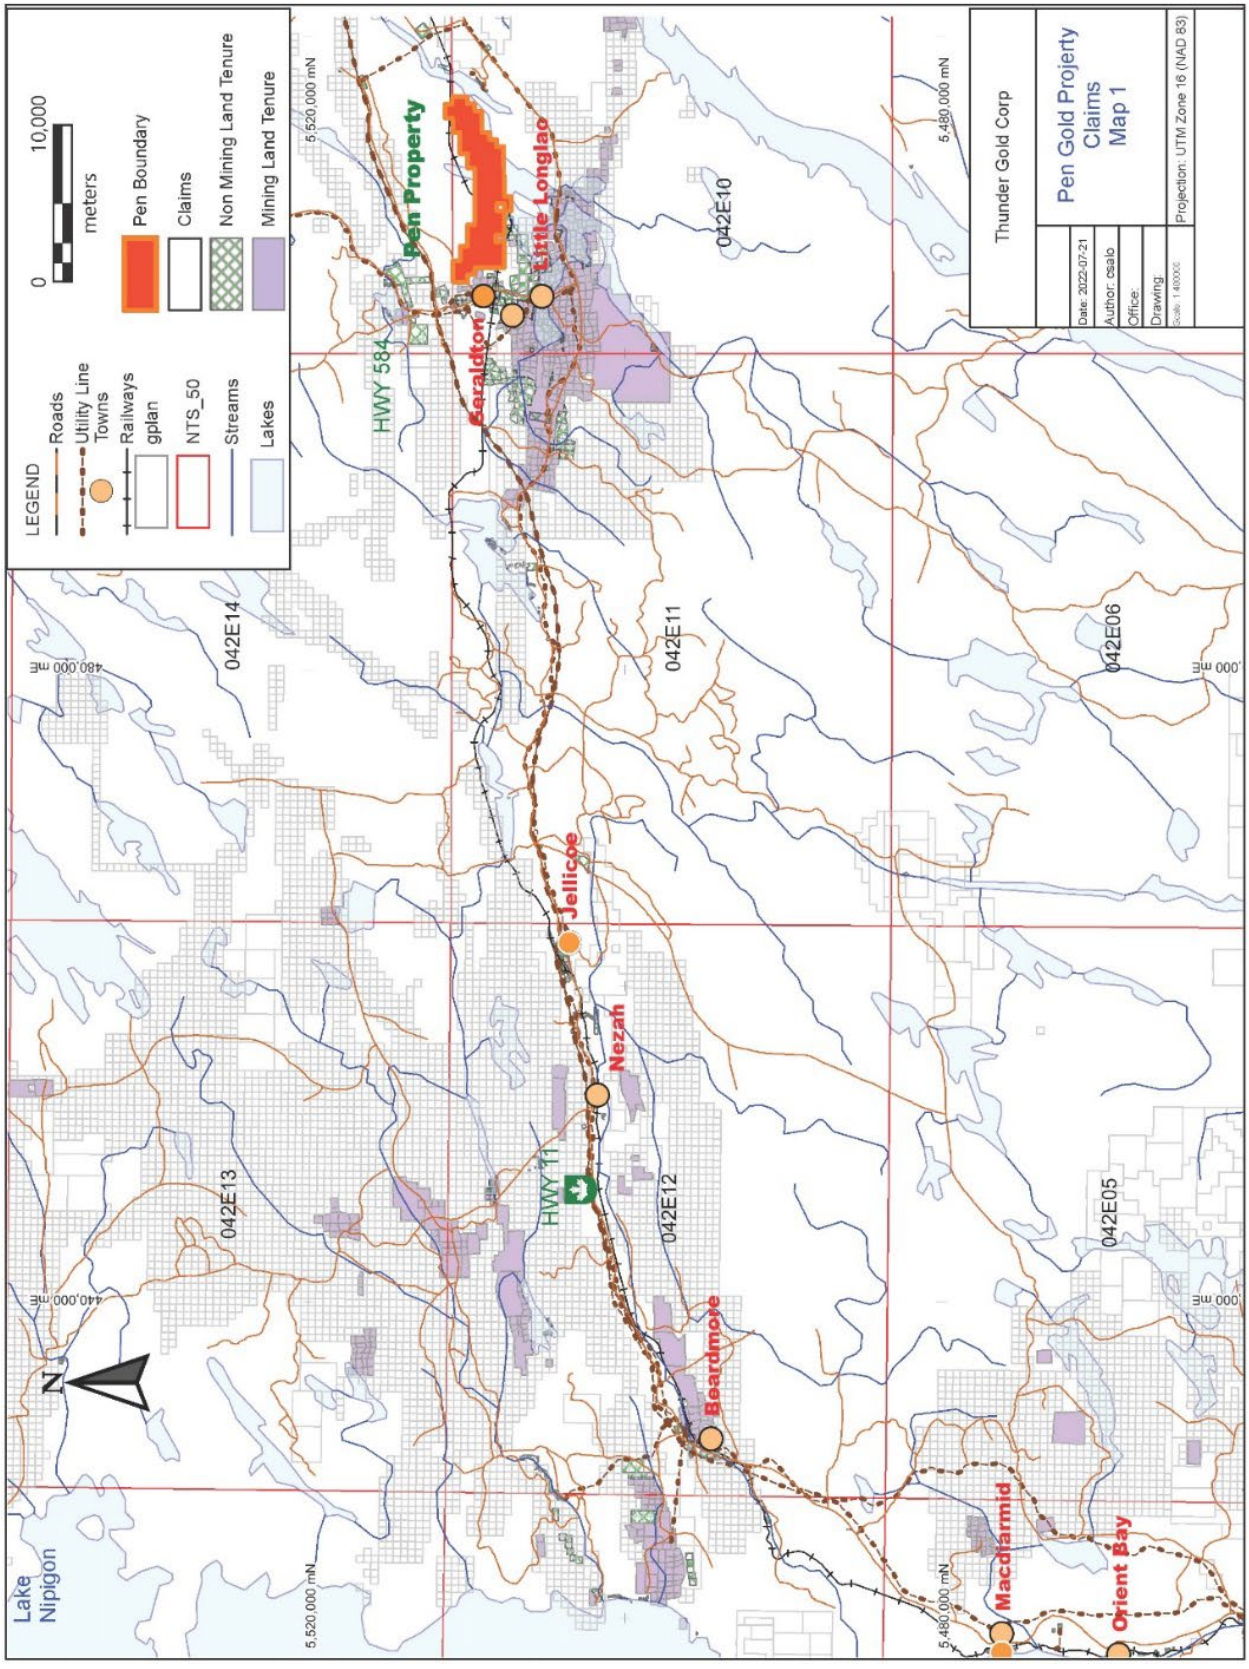

Figure 4: Regional location map

4 PREVIOUS WORK

The Pen property as it is in close proximity to several past gold producers in the "Geraldton Camp" it is likely that the area was prospected in the early 1930's. The earliest record of work on the property area was by Little Long Lac Gold Mines who conducted some type of magnetic survey and drilled 5 holes in the general at the south shore of the property. There is no record of these DDH results.
During 1997 prospecting by Houghton located several old trenches of 1940 to 1960 vintage were on the property. There is no record of these trenches. No record of other work exists until Peninsula gold Mines Ltd. established a winter grid in 1996 (the present grid) and conducted a VLF EM and magnetometer survey outlining several VLF EM conductors. Peninsula Gold Mines Ltd. also conducted some soil sampling, over the south-central part of the grid, which returned several anomalous gold values, from several locations, ranging from 50 ppb gold to 334 ppb gold. In 1997 prospecting was conducted by Frank Houghton to locate locations of interest for backhoe trenching and follow up drilling.

Little Long Lac Gold Mines, 1930's

Conducted a magnetic survey and drilled 5 holes at the south shore of the property. There is no record of these results.

Peninsula Gold Explorations Ltd., 1996 and 1997

Included a VLF and Magnetometer survey geochemical soil sampling and prospecting by F. Houghton.

Of the several locations exposed by mechanical stripping-trenching, the best gold value returns were obtained from a 6 m wide pyrite and aresenopyritic quartz stock-work zone (KK-E Zone) in foliated to sheared mafic volcanics trenched with best value of 5.45 g/t Au in returned grab sample in quartz flooded silicified rock.

Peninsula Gold Explorations Ltd., 1998,

Bulldozer stripping and backhoe trenching on ten predetermined locations of interest on the Property and early April 1998 eight holes were diamond drilled for a total of 403 metres.

5 Geological Setting

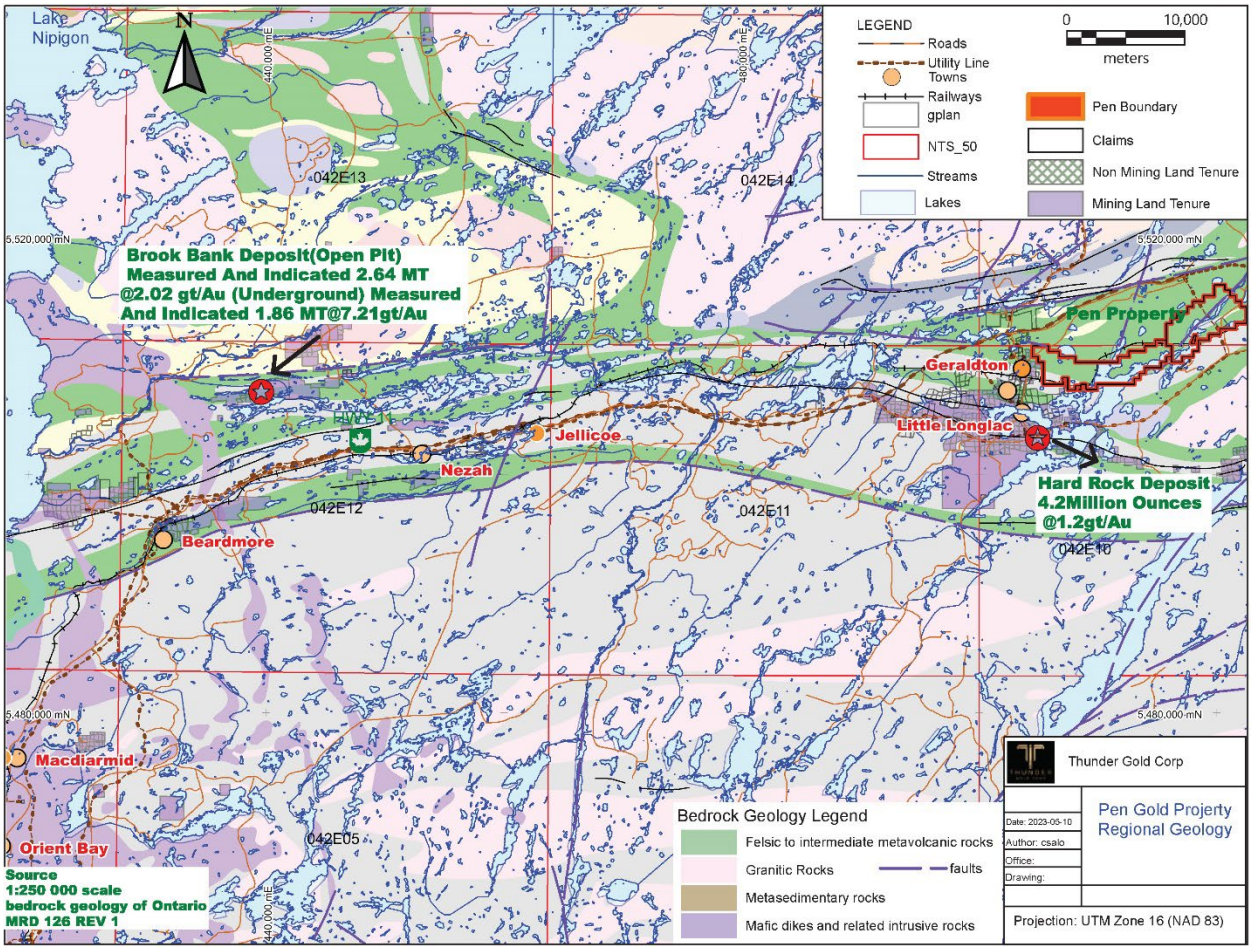

Figure 5: General Bedrock geology

5.1 PROPERTY SETTING AND REGIONAL GEOLOGY

The Peninsula Gold Property lies within the east-west trending Beardmore-Geraldton greenstone belt of the Wabigoon Subprovince. The greenstone best consists of three faults bounded, steeply north dipping series, each containing metasedimentary rocks unconformably overlying metavolcanic rocks (Tomlinson et al., 1994). The metasedimentary rocks young to the north and have an overall coarsening upwards trend (Devaney and Williams 1989).

From north to south, they are interpreted as having developed as alluvial fan, submarine fan and deep water turbidite sediments (Devaney and Fralick 1985; Barrett and Fralick 1985), with sediment supply form the developing Wabigoon in the north (Williams 1990). The mafic to intermediate metavolcanic rocks comprise three units which are referred to as the Northern, Central and Southern Volcanic Units (NVU, CVU, SVU). Each unit consists of varying proportions of massive lava flow, pillowed lava flows and mafic intrusions, with occasional intercalated, argillites and banded iron formation. The Peninsula Gold Property lies within the CVU unit.

The mineralogy of the Beardmore-Geraldton belt generally consists of a typical greenschist facies assemblage with various amounts of chlorite, epidote, albite, tremolite and actinolite, with or without quartz and calcite. The geochemistry of the metavolcanics varies between volcanic units. The NVU constitute a group of high iron tholeiites. The CVU is a group of high-iron tholeiitic andesite and tholeiitic dacites. The SVU is a group of high iron- tholeiites and tholeiitic andesites.

The region has a successful history of exploration activities which resulted in the discovery of numerous occurrences. Although there are no mines currently in operation, the belt boasts significant past production from several deposits. Recent exploration discoveries in the camp by several different companies has helped to renew interest in the Beardmore- Geraldton camp.

Recently there has been exploring on a large block of ground, mainly the Barrick property, which include the past gold producers Hardrock, Macleod Cockshutt, Mosher and Magnet deposits, all of which lie roughly on strike some five to fifteen kilometres west of the Peninsula Gold Property. Cypress is attempting to identify a reserve of 1,000,000 oz Au in one or several shallow open pits. Exploration programs are currently under way. Rox-mark Mines Limited is currently trying to expand upon a

potential reserve of 1,082,000 tons (grade unknown) in the Magnet mine. Rox-mark Mines Limited is currently trying to expand upon a potential reserves 1,082,000 tons (grade unknown) in the Magnet Mine. Rox-mark recently purchased the Northern Empire Mine and Mill in Beardmore. Exploration programs are also ongoing on other properties throughout the camp.

Most of the gold production in the Beardmore-Geraldton camp has come from the sedimentary rocks situated between the SVU and CVU. Large east-west trending deformation mineralization in complex shear zones, such as the Barton Bay deformation zone in Geraldton control many gold structures where drag folds develop in the deformation zones. Gold mineralization occurs primarily in quartz veins that parallel the major shear structures and occupy axial planar cleavage planes of pre-existing fold structures. Quartz vein stock work, pyrite and arsenopyrite accompany nearly all the gold deposits of this belt, as is the case in the 1998 backhoe exposed "North Trench" gold discovery at 1+50E, 0+30N and DDH 1998 P-7 on the Peninsula Gold Property. The gold and the associated sulphides were introduced late in the tectonic history of the camp, gold mineralization is not syngenetically related to the iron formation.

Although most production has come from the sediments located between the CVU and SVU, gold mineralization has been identified in all units. Gold mineralization in the Beardmore-Geraldton camp is structurally controlled by pre-existing fold structures rather than any particular stratigraphic unit. The majority of the Beardmore-Geraldton gold deposits are located in shear zones developed along pre-existing regional fold structures. These axial hinges are structural zones of weakness where shear structures preferentially develop. These shear zones act as conduits for hydrothermal fluids including gold mineralization.

5.2 GENERAL PROPERTY GEOLOGY

The property geology is defined by Pye (1951: Map No. 1951-2) which shows the property to be underlain by easterly trending mafic volcanics intercalated with many thin (less than 100 m wide) interlayers dioritic to gabbroic intrusions. These rocks are cut by numerous, generally northwesterly striking narrow diabase dikes. Two easterly trending faults and one northerly trending fault are also indicated on Map 1951-2. The south easterly striking fault apparently cuts across the area of the old trenches.

The 1998 bulldozer stripping, backhoe trenching exposures and diamond drilling results largely confirmed Pye's interpretation with the exception that dioritic to gabbroic interlayers appear to be massive coarse grained flow centres rather than intrusive units. Where observed, these coarse grain units grade into finer grain meta-andesite with no discernable chill margins. Pyritic and asenopyritic (at some locations), quart and quartz-calcite impregnated east westerly trending chloritic mafic volcanic shears occur at several locations on the property. Drill hole results indicate that magnetic pyrrhotite is also associated with the gold-bearing mineralization and is responsible, at least in some locations, for the magnetic high and low responses depicted in the magnetometer survey results: a very significant observation for planning future gold exploration targets in this area. Gold enrichment is generally greatest at locations of abundant arsenopyrite mineralization.

Non-mineralized or very weakly sulfide mineralized chloritic east-westerly trending shears are common. Foliation and chloritization is pervasive in most of the mafic volcanics.
In summary, the results of work completed to date indicate that significant gold enrichment occurs at those locations where quartz flooding, arsenopyrite and pyrrhotite are present along the east-westerly trending shear systems.

5.2.1 Historic Stripping results and conclusions

Of the several locations exposed by mechanical stripping-trenching, the best gold value returns were obtained from a 6 m wide pyrite and arsenopyrite quartz stock-work zone (KK-E Zone) in foliated to sheared mafic volcanics trenched from here the best value of 5.45 g/t Au was returned from a grab sample in quartz flooded silicified rock containing 10% pyrite and arsenopyrite (>20,000 ppm As). 5 other gold-bearing (over 1 g/t Au) grab samples from this location returned 1.00 to 1.85 g/t Au.

All the more significant gold-bearing locations in this trench contain an arsenopyrite association. This zone was later diamond drilled at four locations: DDH's P-2, P-3, P-4 and P-5, but the drill core samples returned only low gold values.

5.2.2 Historic Diamond Drilling Results and Conclusions

98- P7 drilled south to intersect a strongly magnetic (high-low) east-west trending zone under shallow overburden on the north shore of Kenogamisis Lake due to the close proximity to the lake shoreline, this location could not be stripped or trenched due to environmental regulation reasons.

A well silicified strongly magnetic pyrrhotite-arsenopyrite section from 53.9 m to 56.3 m returned the best gold values averaging (weighted average) of 3.33 g/t Au across 2.6 m, including 0.45 m of 1.8 g/t Au and >20,000 ppm As. Several other sections between 30.8 m and 50.4 m also returned significant gold values ranging from 0.65 g/t Au to 3.24 g/t Au (0.6 m).

Silicification (quartz flooding) and arsenopyrite is everywhere associated with the higher gold values. The most consistent anomalous gold values are returned from locations where magnetic pyrrhotite also occurs with the quartz flooding and arsenopyrite. This is very useful knowledge for planning future exploration in this area because, at least at some magnetic locations, magnetic pyrrhotite is apparently associated with gold enrichment.

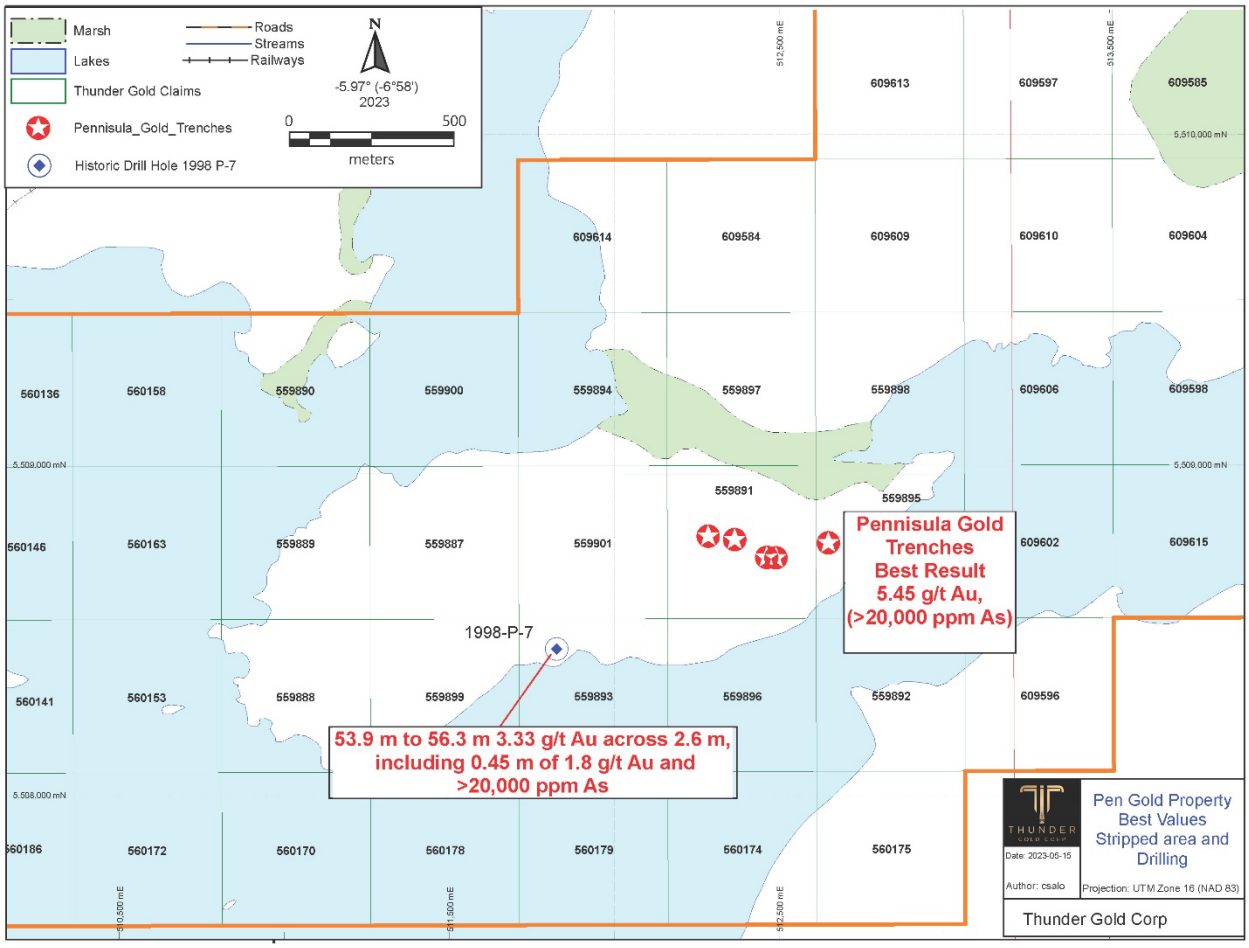

Figure 6: Best values from historic stripping and drilling

6 Exploration

Rock sampling, till sampling and lake bottom sampling began on July 12, 2022, on the western claims for Pen Gold property and commenced on July 21, 2022. The total number of samples taken are 356 with 64 rocks samples, 23 lake bottom samples and 269 till samples with all assayed for Gold.

Prospecting

4 Rock sampling collected located in the sheared iron formation had values which ranged from 4740 to 8950 Au ppb. The Lake bottom samples ranged from 9 to 95 Au ppb. For the till samples there were 8 greater than 50 up and up to 562ppb. See figure 7 for the locations of all these samples and appendix for the descriptions and results. See figure 7 for location map of highlights and appendix for all gold results.

The assays were dropped off at Actlab in Thunder Bay with the rock samples prepared as follows samples crush (< 7 kg) up to 80% passing 2 mm, riffle split (250 g) and pulverize (mild steel) to 95% passing 105 µm included cleaner sand and tested 1A2 Au Fire Assay and 1A3 Au Fire assay.

Table 1:Rock samples highlights of gold results.

Sample Number	Easting	Northing	Sample description	Outcrop	Subcrop	Float	Trench	Alteration	Sulfides	Strike	Au ppb
392752	511866	5508436	Iron Formation in sheared Mafic Volcanic	yes				Silicified, iron carb	5% py		8950

392787	513812	5509263	sheared Mafic/ Iron formation		yes			silicified, iron carbonate	20% Cubic Py		509
392788	513813	5509259	sheared Mafic/ Iron formation		yes			silicified, iron carbonate, qtz flooded	10% Py		209
392814	506756	5508489	mafic and possible banded iron formation	yes			yes	rusty silicious zone 6 inches wide	10% py		272

Lake bottom soils had results ranging from 9 to 95 Au ppb. See table below for list of samples. See map 3 for locations.

1. Qtz – Quartz
2. Po – Pyrrhotite
3. Py – Pyrite
4. Tr – trace
5. Carb – carbonate
6. Arsenopy – arsenopyrite

See appendix III for full list of samples and gold results.

Soil “Till” Sampling

The grid was laid out with waypoints with 200m spacing between lines and 50m between samples (no cut grid). The lines are laid out on Nad 83 grid system. 510900 is the first line, then every 200m increments. The samples are laid out on the northing waypoint as they end in 50's and 100m the soils were taken with a soil auger at B horizon. The auger would be cleaned off by hand between samples to eliminate cross contamination. They were packaged in 4 inch by 6 inch paper soil bags and dried out before being sent to the lab for analysis. All samples were tested for gold through fire assay at Act Labs (Code 1A2). 18 of those samples were also run for ICP (code 1E3). Sample numbers S200-S219. There were 26 samples that were unable to be assayed due to errors at the lab. Those sample numbers are as follows. S43, S54-55, S70-72, S76, S89-94, S107, S111-121, S208 and S211.

There were 4 areas of interest with the main on over drill hole 98-P7 with 10 lines were completed at 200m spacing every 50m for total of 5.46 line kilometres and running north south. Another area of till sampling was along the road for one line at 2.64 line kilometers. Another line was completed following the shoreline totaling 1.99 kilometres. A single line running North south was completed to on the western side of the property for 1.32 kilometres and another one to the east for 1.00 kilometres. This totals 11.41 kilometers for all tills.

See Map 3 for both the till sampling and lake bottom sampling locations and results.

The following explains why the samples were taken in various locations.

- S1-S55 and S84 to S145 are soils taken in a north-south grid over the peninsula to cover areas with known gold occurrences. Lines were spaced 200m apart with 50m stations.
- S57-S83 were soils taken to test a weaker broken up mag unit.
- S146-199 and S265-275 were soil taken to the side of a quad trail crossing over a known gold occurrence.
- S220-S264 were taken in a north south direction covering a weaker broken up mag unit that is trending east west.

The till Soils were dried (60ºC) and sieving (-177 µm), with the oversized discarded. These were tested 1A2 Au Fire Assay along with Aqua Regia "Partial" Digestion 1E3.

Lake Bottom Sampling

The lake sediments were collected on two lines with one for 3.77 kilometres running generally NNE and another generally north south for 0.65 kilometres for grand total of 4.42 kilometres.

For the lake bottom sampling a 16 foot boat with a 25hp motor and a lake bottom sampler was dropped to the bottom of the lake and retrieved the samples. The lake bottom sampler is a homemade 2 1/2 inch diameter tube, 2 folding flaps on the inside and is 24 inches long with a rope tied to one end. When the unit is dropped to the bottom of the lake. The flaps fold inside the tube as it rushes through the water and into the sediments. The rope is then poled tight and as the rope tightens and the unit is being pulled out of the sediments, the flaps close inside the tube to trap the sediments in the tube. This is repeated 2 -3 times at each sample site to retrieve enough material for the lab. sieving (-177 µm), with

the oversized discarded. These were tested 1A2 Au Fire Assay along with Aqua Regia “Partial” Digestion 1E3. See appendix IV for the Actlab schedule

The reasons for sampling being carried out in multiple areas is as follows:

- Samples 392771-392778 were taken to test weak conductors over what appears to be a folding magnetic unit.
- Samples 392791-392800 were taken roughly every 300m down strike of the Little Long Lac gold bearing drill hole.

See appendix IV for the Actlab schedule.

Table 2 :Lake bed samples sample locations and Au results in ppb

Sample No.	Easting	Northing	Sample Description	Depth	Au ppb

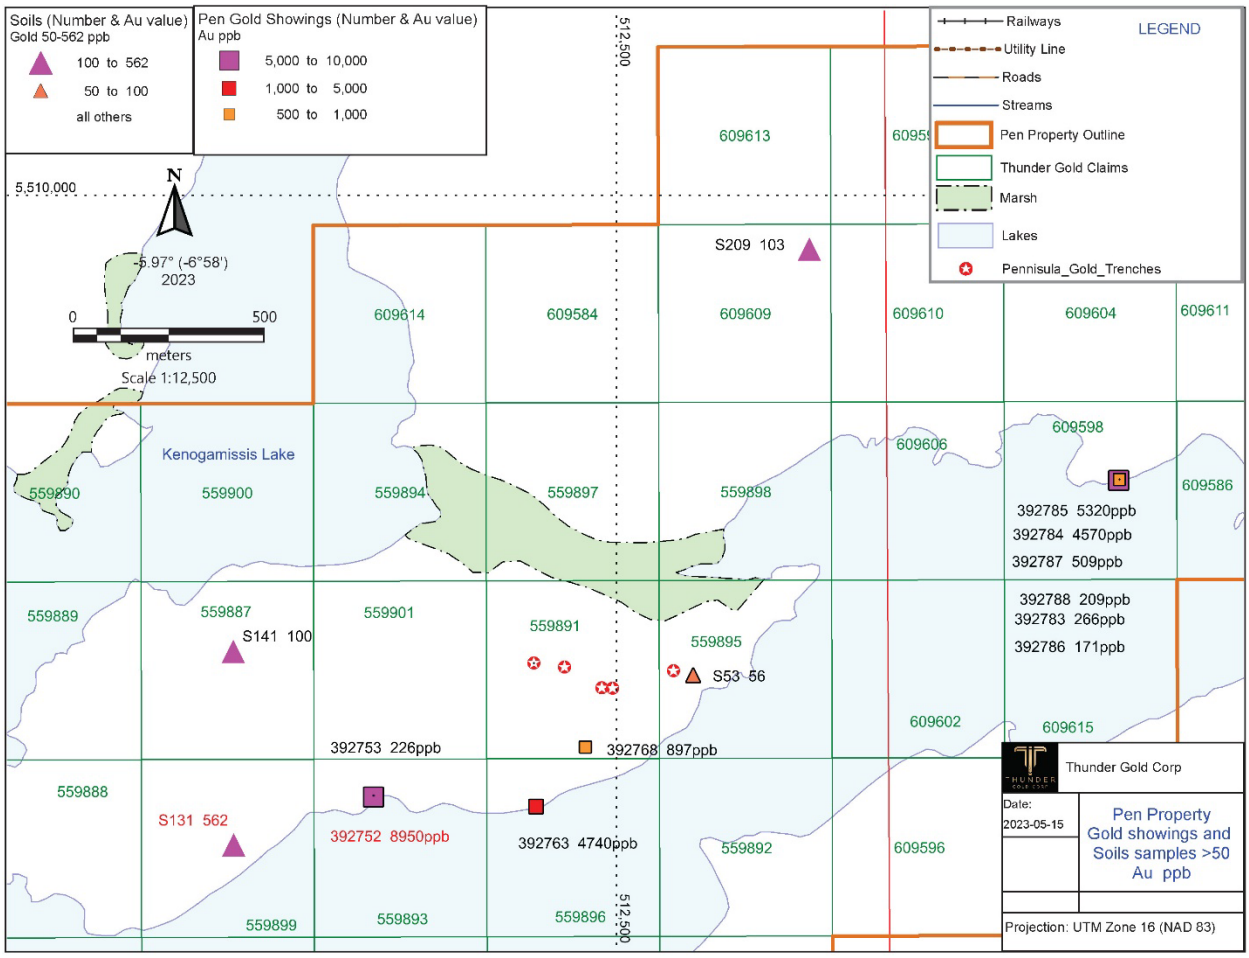

Figure 7: Gold showings rocks and soils. Sample 392752 at 8950 ppb is in the area of 98-P7 historic drilling.

7 RECOMMENDATIONS AND CONCLUSONS

The area as outlined in figure 7 shows that they were anomalous gold in both the soils and rocks, as well as in the area of the 98-P7 drill hole. The correlation of the Anomalous values in the till samples near this drill hole can maybe indicate it comes from a ore deposit and the weathering have increased element abundances above normal crustal levels. Much more work would be required to test this hypothesis.

Below are some recommendations:

1) The magnetic zone at DOH 1998 P-7 location should be detailed with close spaced magnetic traverses, followed by drilling on strike at 15 m intervals east and west of the 1998 drill hole.

2) Other magnetic locations, defined by the 1996 magnetometer survey, should also be further detailed and mechanically stripped and/or backhoe trenched to determine whether a pyrrhotite-arsenopyrite association exists at these locations. Where such locations are found they should be well sampled for assay.

3) The present grid should be extended westward to cover claim 1208515 with 50 m spaced lines over which a magnetometer survey should be conducted. Any magnetic zones that are encountered should be further magnetically detailed and exposed by mechanical stripping and/or trenching.

4) Drilling would follow to test, at depth, those locations where gold enrichment is indicated by the results of the above work, outlined under Nos. 2 and 3.

5) The eastern part of the property which was staked in September 9th, 2022 has little to no work done on it. Airborne geophysics with EM would be a start to located new targets. This should be flown over the complete property to a complete area covered instead of the smaller areas covered but previous and older surveys.

8 Qualifications

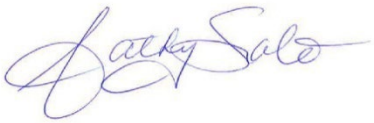
I Cathy Salo, of 475 Francis St. East, Thunder Bay, Ontario, do hereby certify that:

1. I hold a Bachelor of Science Degree in Earth Science (1989) from Memorial University of Newfoundland, St. John's, Newfoundland and Labrador.

2. I have practiced my profession in Ontario since 1989 and have been consulting for junior mining companies in Ontario since 2002 as the sole proprietary of Salo Geoscience Services.

3. I am a professional geologist.

Cathy Salo, P.Geo



Salo Geoscience Services

Date: May 18, 2023

APPENDIX 4

Quality Analysis ... *Innovative Technologies*

Report No.: **A22-10811**
Report Date: **26-Oct-22**
Date Submitted: **02-Aug-22**
Your Reference: **Pen Property**

Thunder Gold Corp.
684 Squier Street
Thunder Bay Ontario
Canada

ATTN: Wes Hanson

CERTIFICATE OF ANALYSIS

275 Soil samples were submitted for analysis.

The following analytical package(s) were requested:		Testing Date:
1A2-Tbay	QOP AA-Au (Au - Fire Assay AA)	2022-09-17 08:13:41
1E3-Tbay	QOP AquaGeo (Aqua Regia ICPOES)	2022-10-20 18:13:47

REPORT **A22-10811**

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.

Footnote: no material for sample S68 and S262. Samples with no result was Insufficient for further analysis.

Footnote: Sample S207, S208, S209, S210, S211, S212, S216, S217, S218 and S219 are insufficient for 1E3 analysis.

CERTIFICATE OF ANALYSIS

66 Rock samples were submitted for analysis.

The following analytical package(s) were requested:		Testing Date:
1A2-Tbay	QOP AA-Au (Au - Fire Assay AA)	2022-09-14 19:34:13
1A3-Tbay	QOP AA-Au (Au - Fire Assay Gravimetric)	2022-09-19 19:02:50

REPORT **A22-10813**

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

SCC Accredited LAB Accrédité CCN TM

CERTIFICATE OF ANALYSIS

23 Lake Sediments samples were submitted for analysis.

The following analytical package(s) were requested:		Testing Date:
1A2-Tbay	QOP AA-Au (Au - Fire Assay AA)	2022-09-16 12:38:37
1E3-Tbay	QOP AquaGeo (Aqua Regia ICPOES)	2022-10-20 18:13:47

REPORT **A22-10815**

Notes:

If value exceeds upper limit we recommend reassay by fire assay gravimetric-Code 1A3

Values which exceed the upper limit should be assayed for accurate numbers.

Sample Preparation

To obtain meaningful analytical results, it is imperative that sample collection and preparation be done properly. Actlabs can advise on sampling protocol for your field program if requested. Once the samples arrive in the laboratory, Actlabs will ensure that they are prepared properly. As a routine practice with rock and core, the entire sample is crushed to a nominal -2 mm, mechanically split to obtain a representative sample and then pulverized to at least 95% -105 microns (µm). All of our steel mills are mild steel and do not introduce Cr or Ni contamination. Quality of crushing and pulverization is routinely checked as part of our quality assurance program. Samples submitted in an unorganized fashion will be subject to a sorting surcharge and may substantially slow turnaround time. Providing an accurate detailed sample list by e-mail will also aid in improving turnaround time and for Quality Control purposes.

Rock, Core and Drill Cuttings		
Code	**Description**	**Price**
RX1	Dry, crush (< 7 kg) up to 80% passing 2 mm, riffle split (250 g) and pulverize (mild steel) to 95% passing 105 µm included cleaner sand	$12.80
RX1-ORE	Dry, crush Crush up to 90% passing 2 mm	add $2.25
RX1+500	500 grams pulverized	add $1.30
RX1+800	800 grams pulverized	add $2.35
RX1+1000	1000 grams pulverized	add $2.90
RX1-SD	Dry, crush (< 7 kg) up to 80% passing 2 mm, rotary split (250 g) and pulverized (mild steel) to 95% passing 105µm	$12.70
RX1-SD-ORE	Dry, crush up to 90% passing 2 mm	add $2.25
RX3	Oversize charge per kilogram for crushing	$1.35
RX4	Pulverization only (mild steel) (coarse pulp or crushed rock) (< 800 g)	$7.75
RX5	Pulverize ceramic (100 g)	$21.50
RX6	Hand pulverize small samples (agate mortar & pestle) (<5g)	$21.50
RX7	Crush and split (< 7 kg)	$5.80
RX8	Sample prep only surcharge, no analyses	$6.00
RX9	Compositing (per composite) dry weight	$4.85
RX10	Weight (kg) as received	$2.35
RX11	Checking quality of pulps or rejects prepared by other labs and issuing report	$11.50
RX14	Core cutting	On Request
RX15	Special Preparation/Hour	$80.00
RX16	Specific Gravity on Core	$16.75
RX16-W	Specific Gravity (WAX) on friable samples	$24.00
RX17	Specific Gravity on the pulp	$17.85
RX17-GP	Specific Gravity on the pulp by gas pycnometer	$18.90
RX18	Subsample split for 3rd party (up to 1kg)	$3.50

Note: Larger sample sizes than listed above can be pulverized at additional cost.

Our Sample Preparation pricing is all-inclusive including: sorting, drying, labeling, new reject bags, using cleaner sand between each sample and crushing samples up to 7 kg.

Soils, Stream and Lake Bottom Sediments, and Heavy Minerals		
Code	**Description**	**Price**
S1	Drying (60°C) and sieving (-177 µm) save all portions	$4.85
S1 DIS	Drying (60°C) and sieving (-177 µm), discard oversize	$4.75
S1-230	Drying (60°C) and sieving (-63 µm), save oversize	$6.25
S1-230 DIS	Drying (60°C) and sieving (-63 µm), discard oversize	$5.75
S2	Lake bottom sediment preparation crush & sieve (-177 µm)	$9.70
S3	Alternate size fractions and bracket sieving, add	$3.15
S4	Selective Extractions drying (40°C) & sieving (-177 µm)	$4.85
SGH-1	SGH drying (40°C) & sieving (-177 µm)	$4.85
S5	Wet or damp samples submitted in plastic bags, add	$2.25
S8	Sieve analysis (4 sieve sizes) coarser than 53 µm	$85.00
S9	Particle size analysis (laser)	On Request

Precious Metals Analysis

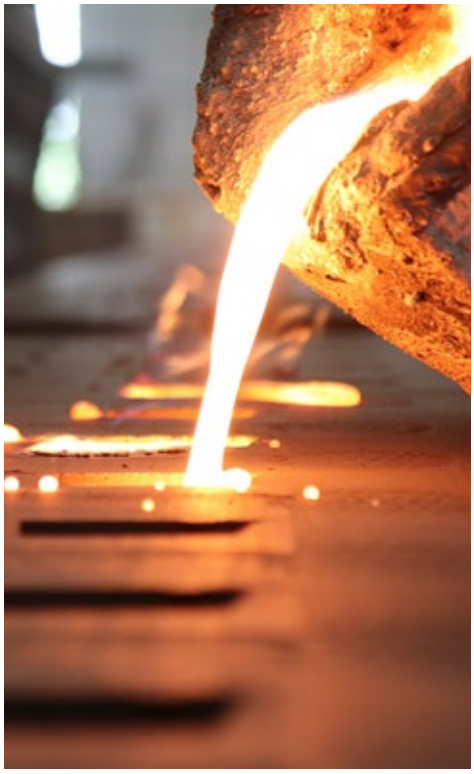
Gold and Silver Analyses - Geochem				
Code	Method	Sample Weight (g)	Metric Range (ppb)	Price
1A1	Au Fire Assay – INAA	30	1 – 20,000	$23.00
1A2	Au Fire Assay – AA	30	5 – 5,000	$19.85
1A2B-30	Au Fire Assay – AA	30	5 – 10,000	$20.25
1A2-50	Au Fire Assay – AA	50	5 – 5,000	$23.00
1A2B-50	Au Fire Assay – AA	50	5 – 10,000	$23.75
1A2-ICP	Au Fire Assay – ICP-OES	30	2 – 30,000	$21.00
1A2-ICP-50	Au Fire Assay – ICP-OES	50	2 – 30,000	$24.00
1A2-ICPMS	Au Fire Assay - ICP-MS	30	0.5 - 30,000	$28.75
1A6	Au BLEG - ICP-MS	1,000	0.1 - 10,000	$48.75
1A6-50	Au Cyanide Extraction - ICP-MS Ag or Cu add-on, for each additional, add	50	0.02 - 1,000	$16.50 $5.75
1A8-Au	Au Aqua Regia - ICP-MS	30	0.2 - 2,000	$22.00
1E-Ag	Ag Aqua Regia - ICP-OES	0.5	0.2 - 100 ppm	$8.50

Use of 50g sample for fire assay may not provide optimum recovery.
For proper fire assay fusion, Actlabs may reduce the sample weights to 15g or smaller at its discretion

Gold and Silver Analyses - Assay				
Code	Method	Sample Weight (g)	Metric Range (g/t)	Price
1A3-30	Au Fire Assay - Gravimetric	30	0.03 - 10,000	$26.00
1A3-50	Au Fire Assay - Gravimetric	50	0.02 - 10,000	$29.00
1A3-Ag (Au, Ag)	Au, Ag Fire Assay - Gravimetric	30	0.03 - 10,000 (Au) 3 - 10,000 (Ag)	$33.00
1A4 *	Au Fire Assay - Metallic Screen	500	0.03 – 10,000	$80.00
1A4-1000 *	Au Fire Assay - Metallic Screen	1,000	0.03 – 10,000	$91.00
8-Ag	Ag Fire Assay – Gravimetric	30	3 - 10,000	$29.00

* A representative 500 gram or 1000 gram (or customized) sample split is sieved at 149µm, with assays performed on the entire +149 µm fraction and two splits of the -149 µm fraction. It is important not to over pulverize the sample too finely; as tests have shown gold will plate out on the mill and be lost. When assays have been completed on the coarse and fine portions of the bulk sample, a final assay is calculated based on the weight of each fraction.

When submitting samples for precious metals analysis, please provide at least 2-3 times the listed sample weight to allow for quality control analysis



Gold, Platinum, Palladium and Rhodium

Code	Method	Sample Weight (g)	Range (ppb)				Price
			Au	Pt	Pd	Rh	
1C-Exploration	Fire Assay - ICP-MS	30	2 - 30,000	1 - 30,000	1 - 30,000	-	$28.00
1C-Research	Fire Assay - ICP-MS	30	1 - 30,000	0.1 - 30,000	0.1 - 30,000	-	$36.25
1C-Rhodium	Fire Assay - ICP-MS	30	-	-	-	1 - 10,000	$45.00
1C-Rhodium	Fire Assay - ICP-MS	30	-	-	-	5 - 10,000	$34.00
1C-OES	Fire Assay - ICP-OES	30	2 - 30,000	5 - 30,000	5 - 30,000	-	$24.00
1C-OES-ORE *	Fire Assay - ICP-OES	30	0.006 - 1000 g/t	0.001 - 1000 g/t	0.001 - 1000 g/t	-	$40.00

* If above 1000g/t, see Concentrate Testing

Platinum Group Elements

Code	Method	Sample Weight (g)	Range (ppb)							Price
			Os	Ir	Ru	Rh	Pt	Pd	Au	
1B1	NiS Fire Assay - INAA	30	2-20,000	0.1-10,000	5-50,000	0.2-20,000	5*-100,000	2-100,000	0.5-20,000	1-2 samples $382.00 3+ samples $192.00
1B2	NiS Fire Assay - ICP-MS	30	-	1-10,000	1-10,000	1-10,000	1-10,000	1-10,000	1-10,000	1-2 samples $382.00 3+ samples $192.00

* Detection limits for Pt are increased with high Au/Pt ratios and limits for other elements will be affected by abnormally high Au, Sb and Cu content. Samples with high Au can be reanalyzed by Code 1C exploration or research. Zn concentrates are not amenable to the nickel sulphide fire assay. Au results by Code 1B1 or 1B2 can be low by nickel sulphide fire assay. For accurate Au values, please request Code 1C-exploration.

Aqua Regia "Partial" Digestion

This digestion uses a combination of concentrated hydrochloric and nitric acids to leach sulphides, some oxides and some silicates. Mineral phases which are hardly (if at all) attacked include barite, zircon, monazite, sphene, chromite, gahnite, garnet, ilmenite, rutile and cassiterite. The balance of silicates and oxides are only slightly to moderately attacked, depending on the degree of alteration. Generally, but not always, most base metals and gold are usually dissolved.

Note: Results from acid digestions may be lab dependent or lab operator dependent. Actlabs has automated this aspect of digestion using a microprocessor designed hotbox to accurately reproduce digestion conditions every time.

Note: For Code Ultratrace 1, Code Ultratrace 2 and Code UT-1M, Au is semi-quantitative when using a 0.5g sample.

15g or 30g is recommend for soils, sediments and vegetation samples only.

Packages that involve 15g and 30g sample size will require RX10 (pulp weight report)

	ICP-OES (ppm)		ICP-MS (ppm)		ICP-OES + ICP-MS (ppm)
