INTRODUCTION

The following report will deal with the results of a preliminary prospecting program carried out on the Bad Gold Property on behalf of 2060014 Ontario Inc. The property consists of two, single cell mining claims located in the Bad Vermilion Lake Area, Kenora Mining Division. The work was carried out on a contract basis by Vision Exploration and all work was supervised by Steve Anderson.

A total of 4 travel days from Crystal Falls to Atikokan and 1 field day were spent by two individuals prospecting the subject claims in an attempt to locate and sample the historic Golden Crescent Showing. A total of 4 grab samples were taken from the property, all of which were sent for gold assay. The purpose of this program was to locate the historic showing as well as any areas of geological interest in order to obtain basic geological information on the property. The information obtained from this work program will be used to aid in the planning of future work programs. This work was carried out between July 25th to 29th, 2022.

This report will deal with the results of the preliminary prospecting program carried out on the above-mentioned property.

BAD GOLD PROJECT
Location Map
Figure #1

LOCATION AND ACCESS

The Bad Gold Project consists of 2 contiguous single claims located in the north-central portion of Bad Vermilion Lake Area, Kenora Mining Division (Figure #2).

The property is located approximately 250km West Northwest of the city of Thunder Bay or 75km West of the town of Atikokan. Access to the work area was gained by taking Hwy 11 West from the town of Atikokan for approximately 75km. to where a gravel road heads south. This road can be travelled by truck for 1k, at which point an ATV can be used for an addition 600m. From this point the claims were accessed by foot.

PERSONNEL

The following people were directly involved in carrying out the preliminary prospecting on the Bad Gold Project.

CLAIMS

The claims covered by this program consist of 2 contiguous, single cell mining claims located in the Bad Vermilion Lake Area, Kenora Mining Division Mining Division. (Figure #3) The claims are recorded 100% in the name of 2060014 Ontario Inc. and are as follows:

<u>Claim #</u>	<u>Cells</u>	<u>Due date</u>
551050	1 cell	2023-06-05
551049	1 cell	2023-06-05

WORK PROGRAM

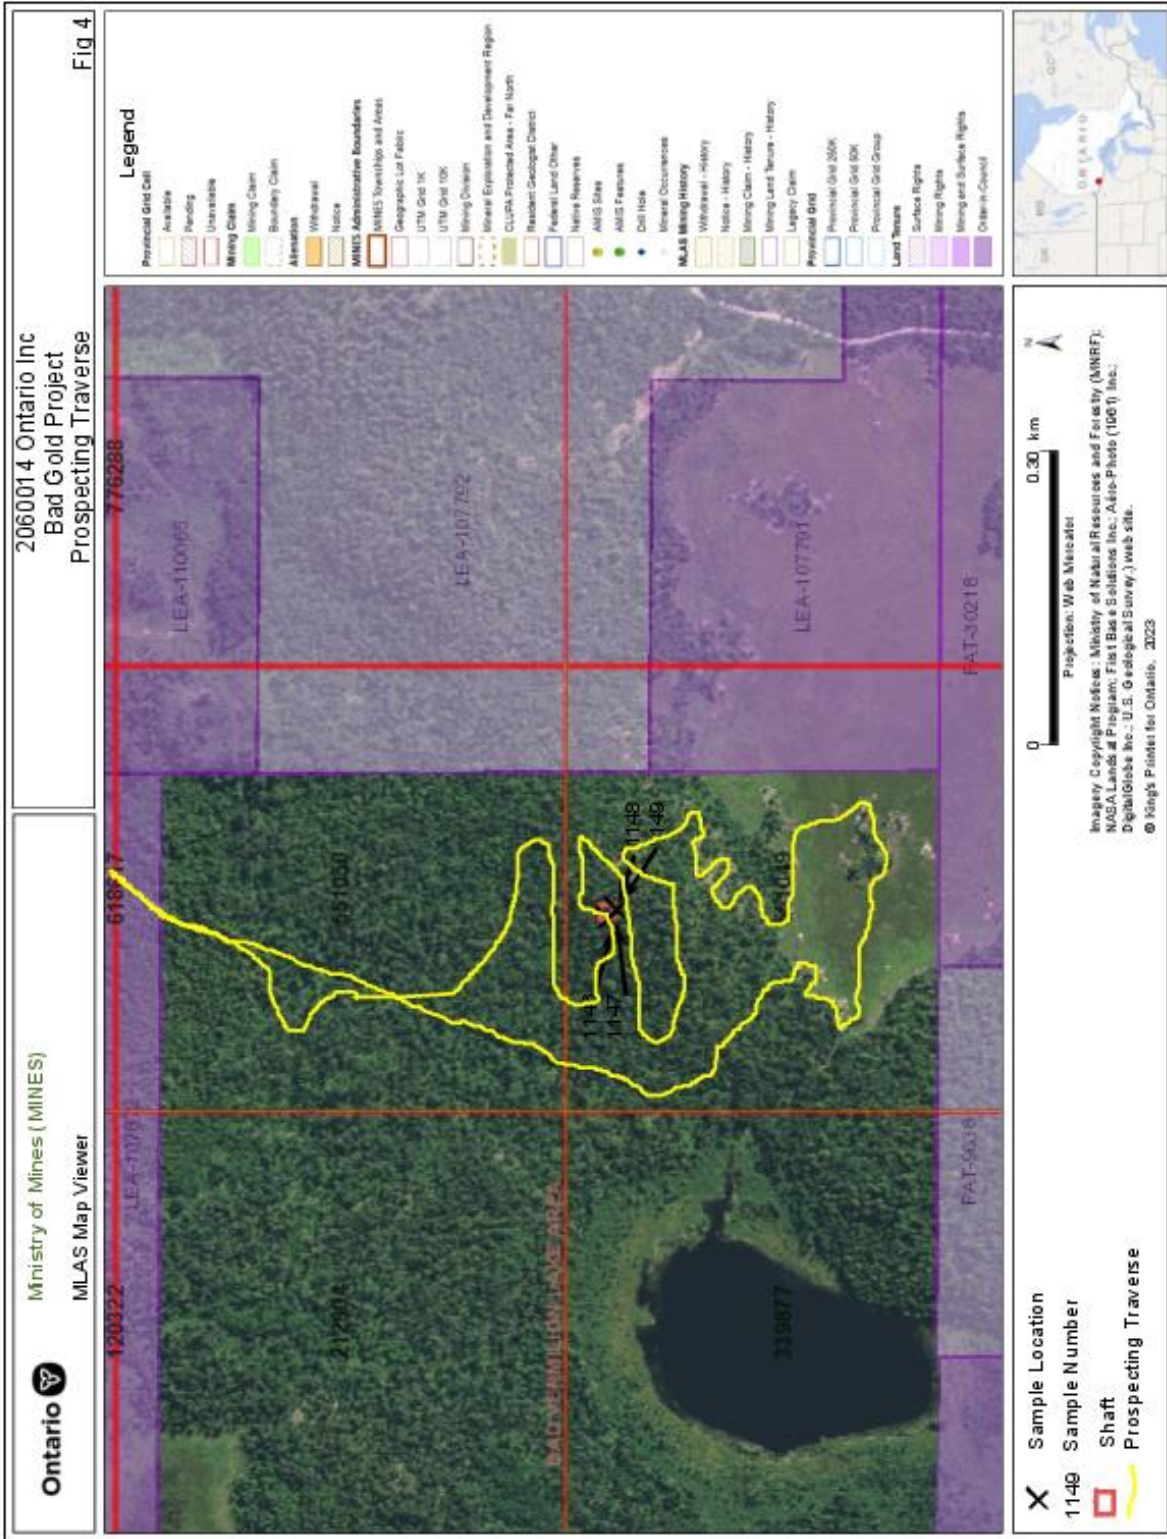

The current work program involved spending 4 days travelling from Crystal Falls and 1 day prospecting on the subject claims. The purpose of this program was to locate the historic Golden Crescent Showing as well as obtain basic geological information on the property which will be used to plan future work programs.

SURVEY RESULTS

A total of 1 day was spent on the property by a prospector and helper obtaining geological samples and information. In general, the area prospected was shown to be underlain by granitic rocks. A total of 4 samples were taken from around an old shaft. The assay results can be found under appendix A of this report.

Day 1 prospecting

This day was spent prospecting claims 551050 and 551049. The area traversed showed the claims to be underlain by granitic rocks. An old shaft was located. A small dump was present, and it appears to have been sunk on a 1-2 foot wide vertical quartz vein with sulphide staining. A total of 4 samples were taken from the dump around the old shaft. The walls of the shaft were vertical and as a result the in-place quartz vein could not be sampled safely. The assay results were not very encouraging and can be found under appendix A of this report.

RECOMMENDATIONS AND CONCLUSIONS

The prospecting program carried out on the Bad Gold Project was successful in locating the historic Golden Crescent Showing. The geology underlying the claims was found to be granitic rocks. Although the assay results were not very encouraging, the main quartz vein within the shaft could not be sampled.

Additional prospecting should be carried out on the property, particularly on the old shaft located. An attempt should be made to somehow, safely sample the quartz vein within the shaft. A small line-cutting and geophysical program may help determine the extent of the quartz veining.

CERTIFICATION

I, Steve Anderson of Crystal Falls, Ontario hereby certifies that:

1. I hold a three-year Geological Technologist Diploma from Sir Sandford Fleming College, Lindsay, Ontario, obtained in May 1981.
2. I have been practising my profession since 1979 in Ontario, Quebec, Nova Scotia, New Brunswick, Newfoundland, NWT, Manitoba, Saskatchewan and Greenland.
3. I have been employed directly with Asamera Oil Inc. Urangellschaft Canada Ltd. Nanisivik Mines Ltd., R.S. Middleton Exploration Services Ltd., Rayan Exploration Ltd and I am currently the owner of Vision Exploration.
4. I have based conclusions and recommendations contained in this report on knowledge of the area, my previous experience and on the results of the fieldwork conducted on the property during July 2022

Dated this 4th day of June 2023
At Crystal Falls, Ontario.
