PHYSICAL PROSPECTING WORK CLAIM UNIT 1212547

The follow up work was done on this unit on May 27, 28, 29, by myself and Ron Montrieul. Work was done by hand with pick and shovel. On the 27th. Ron and I worked on a section of a garnet pyroxinite which is similar to others locally in the area. We worked on an area of 1M X 1M by up to 20cm deep. It outcrops sporadically along the edge of a hill. Good quality garnet is exposed here and averages about 30% or greater. It is a well formed fine grain type. This showing is located about 70M west of and 15M north of the Number 3 corner post of unit 1212547.

The same day we also looked over a hummock of peridotite located 100 M west of and 40M north of the number 3 post on unit 1212547. We stripped an area 3M X 1M X .5M. Minor Pyrrhotite visible.

On the 28th and 29th Ron and I worked a larger body of Gabbro-Peridotite 100M west of and 70M north of the number 3 post on Unit 1212547. This occurs as another intrusive hummock we were able to work along the west edge of this hummock and finally found a zone of fairly massive pyrrhotite that we had found in float along the creek at this spot. We hand stripped a 10M X 3M section up to 1M thick. We had to have this done for a visit from Outokumpu Mines and a visit by Mike Cosec.

Some pentlandite was also visible in the pyrrhotite at this location. Assay values were low however for nicked, copper and ~~nickel~~, PRECIOUS METALS
PICK AND SHOVEL.

Work was performed by G. Shouinard and Ron Montrieul over 3 days

\$15.00 X 10hrs=\$150.00 X 3 days = \$450.00 X 2 persons

Assessment work claimed \$900.00

**PHYSICAL WORK PERFORMED ON UNIT 1212159****May 30, 31st and June 1st.****2.18477**

Stripping with pick and shovel was done on two exposed hummocks. These hummocks appear to be part of the same intrusive fracture which is eroded by the creek.

One hummock on the north side of the creek was stripped in six (6) places by matock; no distinct layering or mineralisation was found here. An area of trees 10M X 2M was also cut on the east side of this hummock to aid in work on this site. Five exposures were made on the east side and one on the southwest corner. A larger gossaneous outcrop was stripped by hand and four round of surface blasting was also applied to the southeast corner, but no extensive mineralisation was found.

On the south side of the creek a second hummock of peridotite was worked on. Some follow-up stripping was done here one on the east side. This was the removal of a few centimetres of moss over light soil and small root system.

On the west side a larger area was stripped of heavier overburden soil up to 1M thick in one place and boulders up to 40cm in diameter from the weathered surface was removed by hand.

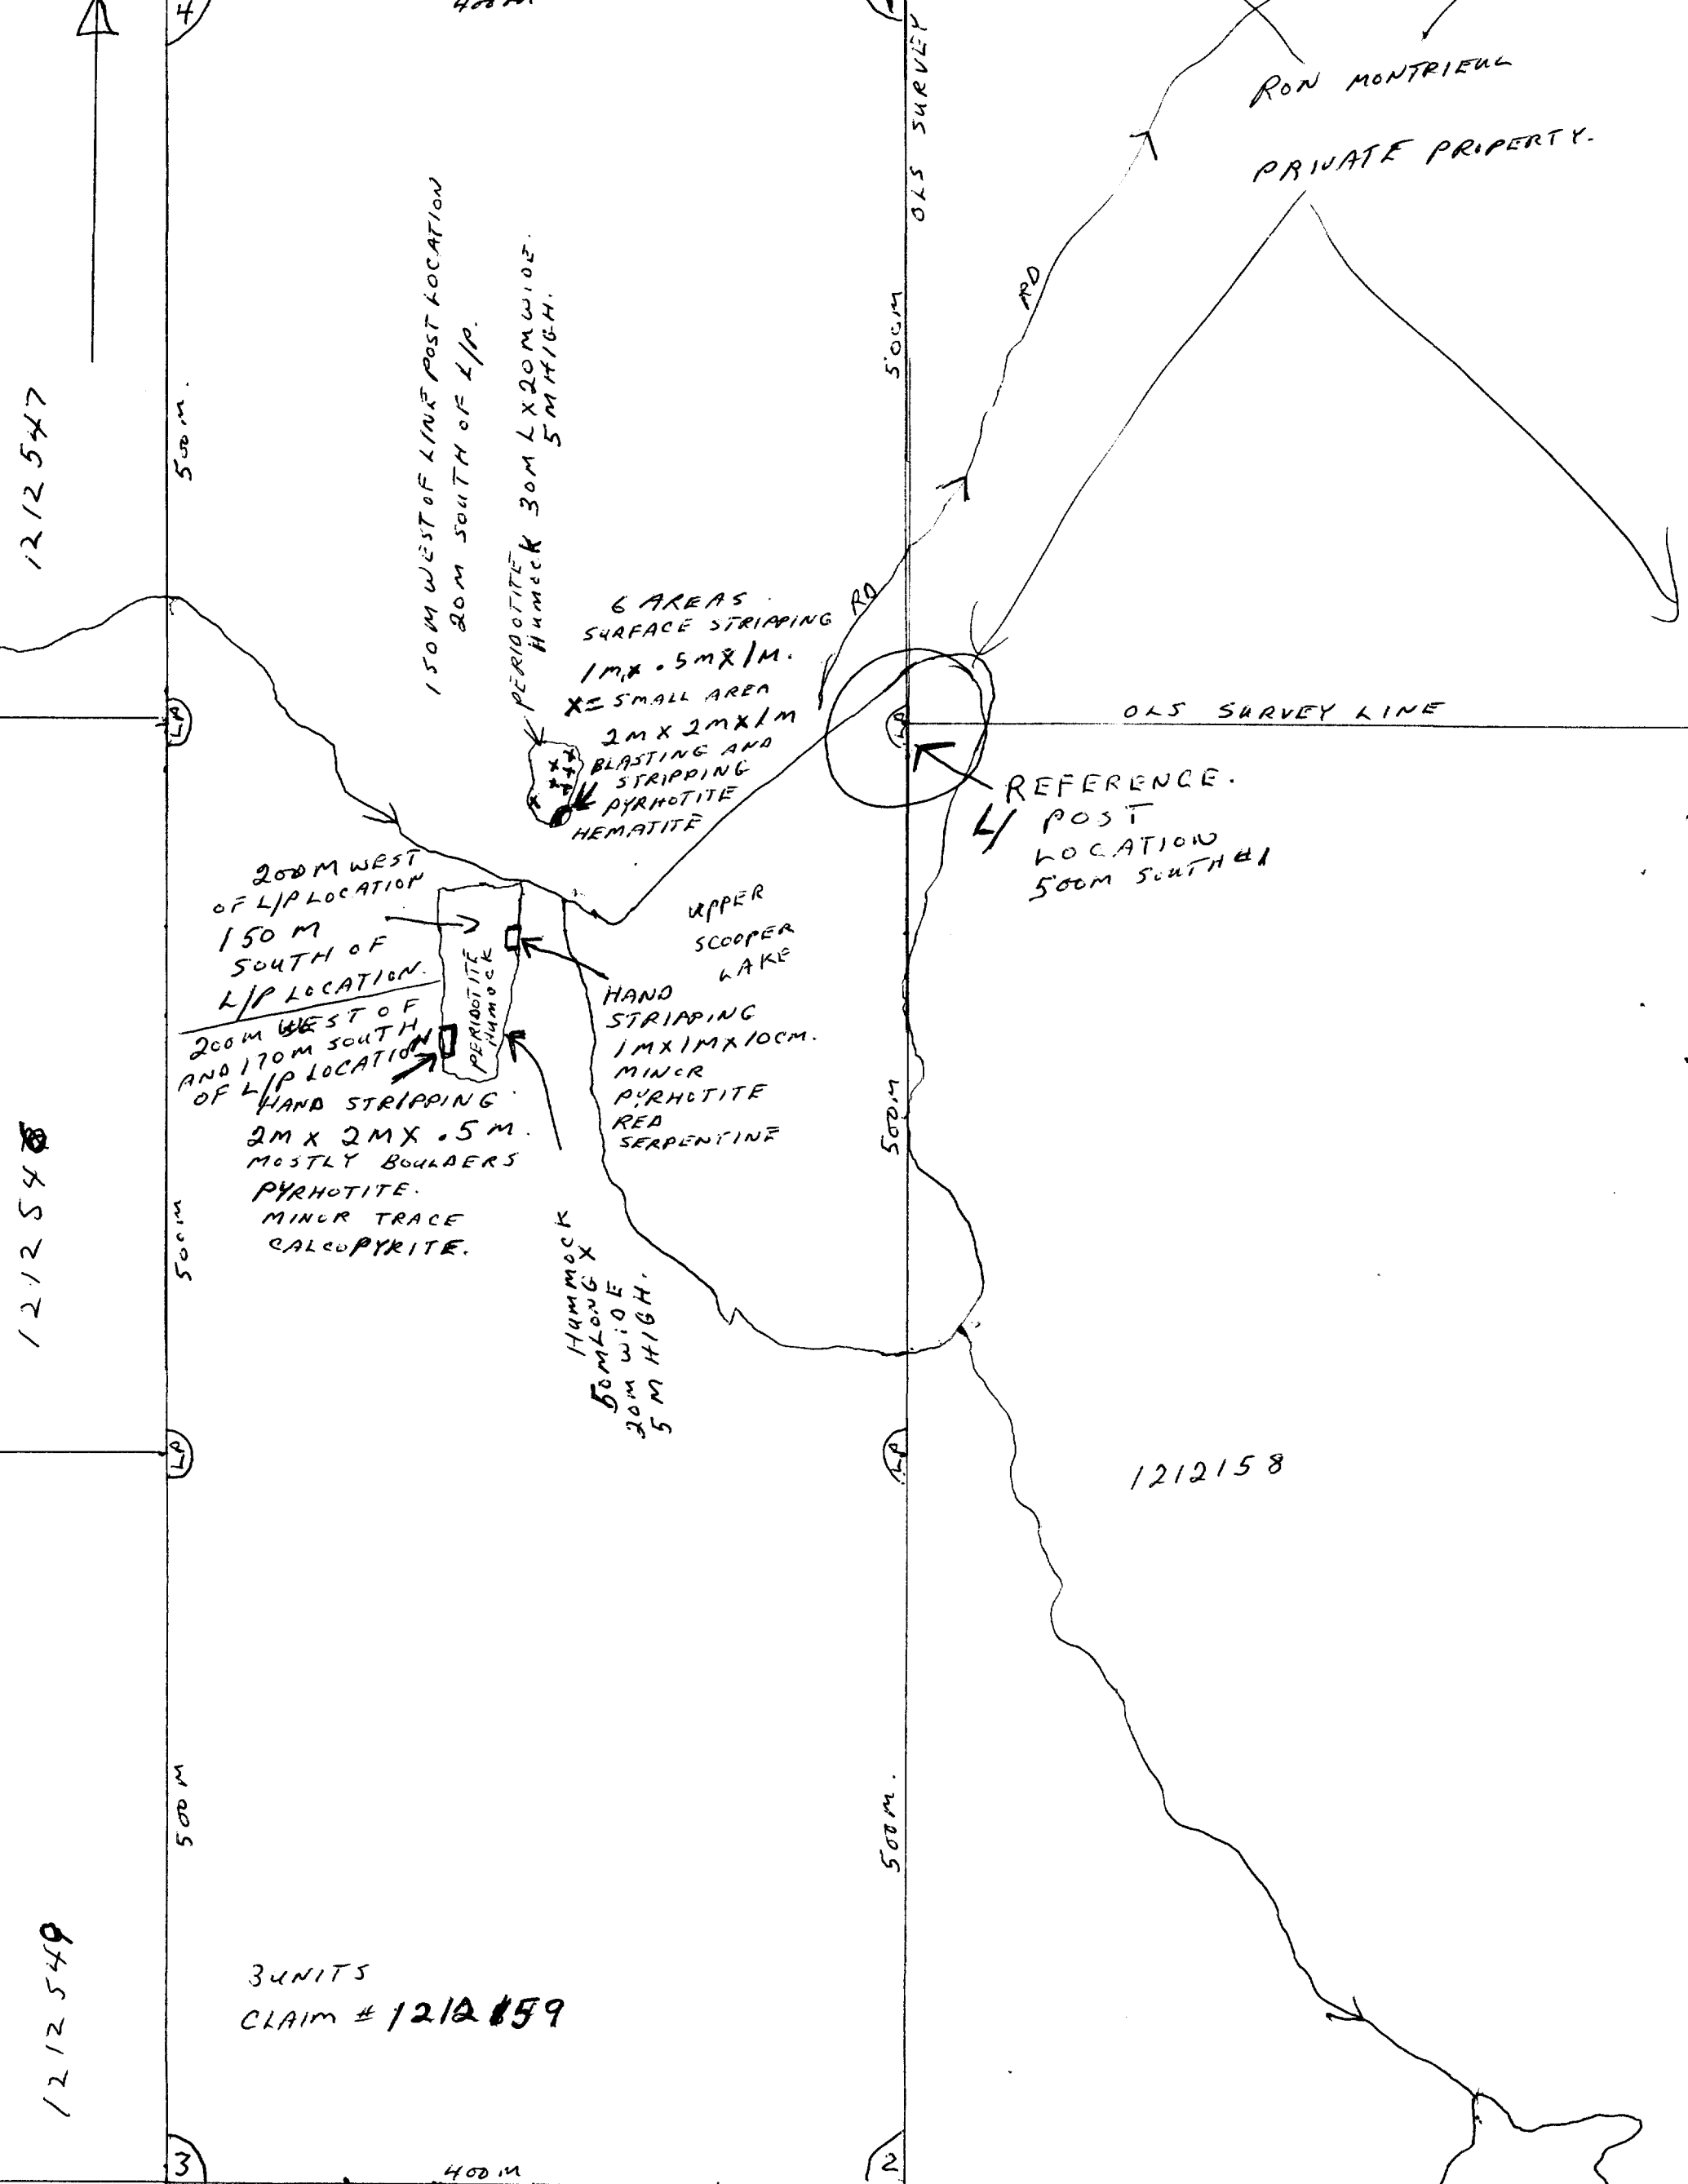

Little surface mineralisation was noted in any of the stripped areas. Most consistent were levels of pyrrhotite at all locations.

Mike comes tomorrow, June 2nd and Paul Davis of Outokumpu on June 3rd. I wish we had time to drill and blast.

PHYSICAL WORK

PROSPECTING Claim Unit 1212158

31107MM2001 2.18477

MATTAPAN

030

This claim unit is located on lots 19, 20, 21 concession 12 Mattawa Twp. It is located in the Sudbury Mining Division and is located on Claims Map (G1633). The unit consists of 121 hectares.

Over a three day period May 22, 23, 24 Ron and I performed follow up prospecting work on a previous survey. A possible source of industrial garnet had been observed at 900 metres west of and 275 metres south of the Number 1 Claims post.

Two large 1 metre square blocks of massive garnet, and a little looking on the edge of a pyroxenite body showed more of the same quality of garnet. This body was traced 100 metres east and 100 metres west through the exposures observable. The exposures kept the same similar grade and quality, that could be used for water jet cutting and sandblasting. Sizes ranged from <1 m.m. to a maximum of 2 m.m. Very few larger grains were seen up to 4 m.m. which broke down to smaller crystals on crushing with axe and shovel.

Ron and I did trenching along the side of this outcrop with pick and shovel. Three areas were worked on during this time. Scraping away overburden of approx. 2M X 2M up to 1 metre deep in places exposed solid outcrops.

A varied beep mat walk along the outcrop area of 200 M. did not pick up any more outcrop under the overburden.

A high mag reading was found and trenched further south, but revealed an outcrop of gabbroic anorthosite. This was exposed in a 2 M X .5 wide X 15 cm. under sand overburden

A third location near an outcrop of garnet pyroxinite was checked and two areas 1 M X M X 10 cm were stripped of moss and sand. These areas also showed an area of good grade, well formed fine grained garnet, of visual 40 %. This is located about 900 M west of and 475 M south of the number one claim post. This showing lies flat on the lip of the xenolith.

This work was done on the 22, 23, and 24 of May, 1997.

We had 10 hours per day per person. Work was performed by:

Guy Shouinard and Ron Montrieul.

Time claimed is 60 hours X \$15.00 = \$900.00 for two persons.

G. Shouinard C37652.
R. Montrieul C38012.

PROSPECTING OF CLAIM UNIT 1212158

These claim units are part of a 121 hectare unit located on Lots 19, 20, 21 Concession 12 Mattawa Twp. in the Sudbury Mining Division. This is mapped on Claims Map F-1633. The claim units are at lot 46 degrees 25' N. Long 79 degrees 50' W on N.T.S. 31L/7 Mattawa. Ontario.

These units are held in joint by Guy Shouinard and Ron Montrieul.

Guy Shouinard

P.O. Box 413

Temagami, ON

P0H 2H0

Ron Montrieul

P.O. Box 164

Mattawa, ON

P0H 1V0

The following work was performed as part of a Regional Survey from May 8, 9, 10, 15, 16, 17, 18, 1997 and was done by Guy Shouinard and Ron Montrieul. The work included the running of lines spaced at approximately 100 meter spacings as well as the claim boundary lines.

Access to this property is provided by an old logging road that extends from the Snake Creed Rd. across Ron Montrieul's property. This road stops at the northwest corner of Smith's Lake. This road is accessible only by 4 wheeler R.V. in spring and summer or by snowmobile in winter. The Snake Creek Rd. turns north off Highway 533 20 KM northwest of the town of Mattawa.

A 400 meter walk from the northwest of Smith's Lake takes you south to the claim's line.

One assay was performed in the fall of 1996 (see insert) on the gabbroic anorthosite. This gave us a best of 5.62% TiO reading. Here this would amount to a small resource. Bands and pockets of biotite interrupt the continuity of the anorthositic body. Indeed these whole claim units are bound by large faults on three sides and is considered by us to be a metamorphosed xenolith block of variable composition.

The only other resource of economic interest was the identification of a couple of large pyroxenitic units containing well formed fine grained garnet in seams and masses grading usually from 30% to 90%. These areas fit in well with a similar garnet peridotite to garnet pyroxinite showing on the north side of Smith's Lake on Ron's property. There is a similar outcrop on claim unit 1212159 which comprises 3 units and is due west and in contact with this claim unit. A good tonnage of sand blast and water-jet cutting garnet could probably be realized here and at a very good grade. In fact the garnet in our area is to be looked at in the spring of 1998. We have seen good quality over 62 units. These areas are deemed in need of further physical tests at this time.

Nothing else of economic interest was found during this survey. There is far too much heavy overburden, especially to the east and on the west and south slopes.

A beep-mat was used across the area as shown on the accompanying sketch but the overburden here was still too thick and only one reading was encountered on a small shear lip which was cleared to show a seam of gabbroic anorthosite. Two other readings were checked under a sand and moss area next to a seamed garnet showing and was found to be the same garnet pyroxinite.

This xenolith is bound on the north, south and west by large faults and has steep slopes with heavy overburden and large rounded and broken boulders up to 90cm in diameter. This body then dips to the east at a 10 degree slope and grades into a lowland area.

The xenolith appears to show a high degree of metamorphic affect. Alternation minerals are pockets and layers up to 10cm of fine grained biotite in the anorthositic phases.

Observed cal-silicate units show a high degree of migmatization with metamorphic alteration garnet, biotite and phlogopite.

Pyroxinite bodies have a high degree of small well formed garnet. These are in light pink, medium to deep red mixed seams, up to 16 cm thick which grade into masses of 90% composition. A couple of large 1 metre square blocks found beside this body show garnet visually grading 50% over all, with zones to 90%. This body strikes 85 degrees N.NE. and dips to 10 degrees to the east. The south most pyroxinite on the edge of the xenolith lies flat and is covered by overburden. To the west and southwest below the line the fault zone a few sparse outcrops along Upper Scooper Lake show gneissic anorthosite and meta-sediments. At Lower Scooper an outcrop of variable gneiss is present. No peridotite was found on these units as is observable to the north of Smith's Lake and west of Upper Scooper Lake.

The creeks flowing south and west are filled with a mix of gravels, boulders and mixed sand and particles. Where creeks flow out of the lakes small swampy areas are

localised. The overburden is heavy in all areas as is typical of all of the claim units in our southern area. Most of the area is covered by mixed hardwood. There is a beautiful stand of beech trees to the east and covers about 800 metres of our claims and further.

6. Instructions for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

Associated Costs (e.g. supplies, mobilization and demobilization).			
Transportation Costs			
Food and Lodging Costs			
Total Value of Assessment Work			\$4800.00

RECEIVED
APR 17 1998
GEOSCIENCE ASSESSMENT OFFICE

Calculations of Filing Discounts:

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK $\times 0.50 =$ Total \$ value of worked claimed.

Note:

- Work older than 5 years is not eligible for credit.
- A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, Guillaume Shouinard, do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying Declaration of Work form as Recorded Holder. I am authorized to make this certification.

Dear Sir or Madam:

Submission Number: 2.18477

	Status
Subject: Transaction Number(s): W9870.00064	Approval
W9870.00065	Approval
W9870.00066	Approval
W9870.00067	Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. **WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.**

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice. Allowable changes to your credit distribution can be made by contacting the Geoscience Assessment Office within this 45 Day period, otherwise assessment credit will be cut back and distributed as outlined in Section #6 of the Declaration of Assessment work form.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact Lucille Jerome by e-mail at jeromel2@epo.gov.on.ca or by telephone at (705) 670-5858.

Yours sincerely,
