Note: Certificate data underlined are recommended values; other values are proposed except those preceded by a "(" which are information values.

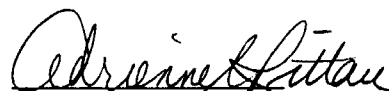

Barite, gahnite, chromite, cassiterite, zircon, sphene, and magnetite may not be totally dissolved.

Clients are advised to obtain assays for Ag>100 ppm and Pb>5000 ppm due to potential solubility problems.

Values for Cu, Ni, Zn, Mo greater than 1% should be assayed if accuracy better than +/-10-15% is required.

Values above 1% are for informational purposes only and should not be relied upon for promotional or ore reserve calculations. Assays are recommended for this purpose.

Sulphur will precipitate in samples containing massive sulphides.
