INGRAM TWP REPORT

Diamond Drilling Report

OBJECTIVE:

The objective was to drill across a vein structure from previous work, which extended in a North-South direction. Assay results from this vein system returned high base metal values.

RESULTS:

Hole M-3-91, drilled 201' at 45° from an exposed outcrop of Nipissing Diabase, intersected numerous vein structures with Quartz, Chlorite, Calcite, and some mineralization. From 167.9' to 168.9', a Quartz structure, with massive and disseminated Chalcopyrite throughout, returned assay values of 7.72% Copper, 3.53% Lead, and 0.75% Zinc, with minor Gold and Silver values.

RECOMMENDATIONS:

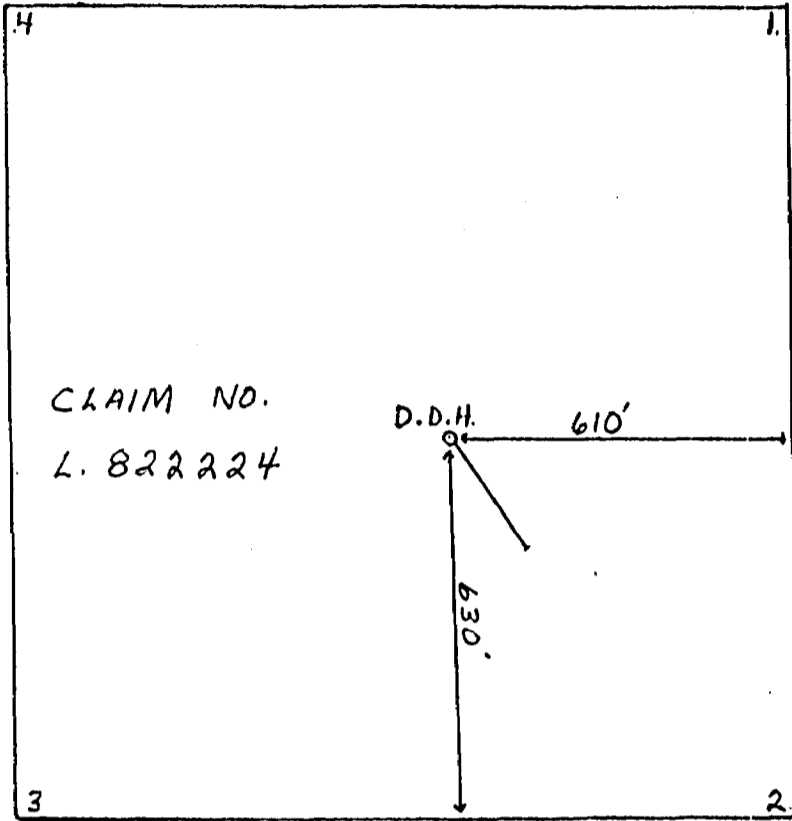

It is my recommendation that more shallow holes be drilled at four-hundred-foot intervals to test for continuity of the vein structure.

DATE: October 28, 1991
