LOG OF DRILL HOLE 4-B, HAMASON MINES LIMITED, INGRAM TP.

Drill Hole No. 4-B (Continuation of 4 & 4-A).

347 -360.5 Greywacke, well bedded, bedding at 50 degrees.  
360.5-365.5 Ditto, but broken core.  
365.5-404 Greywacke, dark gray with bedding at 45-50 deg.  
404 -420 Greywacke, paler and with less bedding than above.  
420 -428.2 Ditto, but has a few threads of quartz-carbonate vein matter, both parallel to and diagonal to the bedding. Veinlets are mineralized with pyrite plus a little chalcopryrite. Bedding angle changes to 40 deg.  
428.2  
428.2-456 Greywacke, massive and less fractured than above; very little veining; small veinlet at 443.5 shows pyrite and chalcopryrite.  
  
109' End of hole.

Note

The hole was drilled in the period of January-April, 1955. The total footage is 109' and the core diameter is 7/8". The core is stored at the camp of Kirkroyale Gold Mines Ltd., King Kirkland, Ontario. Other data are being filed by Mr. G. E. Harrison, c/o Hamason Mines Ltd., 65 MacPherson Ave., Toronto, Ont. The above logging was performed by W. Gerrie, Swastika Laboratories Ltd., Swastika, Ont.

Swastika, Ont.,  
April 15th, 1955.
