010

G. K. O. S.
OP 90-

Ministry Mother Development & min

This is the results of my
OPAA Program for 1990-
The total amount was \$97.

My Budget Proposal has
changed from the original list
of areas, because of what was
found during prospecting.
Project #2 NODA MONTCAIN TRAP
RECONNAISSANCE was changed. It
spent 2 days in the area and
the amount of our burden is just
to heavy. Myself and partners
made 2 option agreements as a
result of the grant, and found
numerous other showings. This
information for the prospectors is
very helpful. and I hope it
continues. I would like to
express my thanks to all

the people at the Semmins
office for their help.

Thank You

George Ross

QUARTZ VEINS ARE 200 FT NORTH
OF MASSIVE SULPHIDE SHOWING AND THE
NO. ONE TRENCH.

Howwood massive sulphides.

While prospecting a large Bossar zone at the contact of the granites? in Howwood trip myself and partners uncovered massive sulphides. at first only Pyrrhotite was located but after scratching away we started to find calcopyrite and also bands of Sphalerite. We cut a grid and did some mag and U.G.F. and on surface we traced the zone for over 1/2 mile a total of four trenches were made at different places on the zone. Also 200 ft north of the zone four gts veins containing pyrite galena and calcopyrite were uncovered I trenched and sampled each vein for gold but results were nil. I did not run any samples for assay on the massive sulphide zone because the copper and zinc were visible so I let the Manning Company do the assaying. Results were up to 4% zinc and 1% copper with .3 silver per oz. prospecting was done to the south but rock was granite.

Many companies were shown the zone all expressed interest in it. An option agreement was signed with Asarco Canada. for 33 claims. Blasting and line cutting are now complete and Asarco plans to drill this winter.

GIFFORD SHOWING (HORWOOD TWP)

Myself and Partners have 10 claims covering the old Gifford showing from the 1930's. The showing is in a large shear traced for over 2000 ft. it is from a few ft wide to 100 ft. all work was concentrated in the one area of the shear in a stock work of quartz veins. The last work was done in 1983 ORLANDO Mines drilled three holes the best results were 6 ft of 0.05% gold per ton assays were as high as 3.49% per ton in the original trenching from the 30's. Our work consists of funding and mucking and sampling the trenches to validate the old sampling. ~~seventeen~~ samples were taken from the old trenches and gold values do occur. The area needs much more work to test the length of the shear. Mechanical stripping and IP would be of great value. as the shear zone is only exposed in very few places. Also more prospecting is warranted. The ~~ten~~^{ten} samples were sent to Orlando Mines for assay. because they were interested if we got results.

Hollo Swep

While prospecting in Hollo Swep
myself and Partner found a quartz vein
containing quite calcopyrite and bornite
We traced the vein over 250ft. striking
East west it was up to 10ft wide
with small parallel veins. Unchecked
assays were 1 1/2% copper and .02 gold.
The mineralization consists of Blobs and
seams of massive bornite pyrite and calc.
Because of shallow overburden I had the
vein stripped with a bull dozer. We
trenched different places across the vein and
washed it. Gold values are low but because
of the length and width of the vein it
may have potential at depth Plan to
have mining companies look at it this
spring. Slopas Agassay dishes are next to the vein
The host rock is Basalts. The vein goes into
~~over~~ heavy overburden at each end

## When examining Nickel copper showing

While prospecting near Limer Uron Formation  
came across Disseminated sulphides pyrrhotite  
chalcopyrite and Pentlandite grab sample 43  
gave 2% nickel and 1/2% copper. As a  
result 43 claims were staked also covering  
an old nickel showing from the fifties  
and a molybdenum showing found by myself and  
partner D. Moir. We made a total of  
eight trenches across the zone it is 150  
ft long and up to 30 ft wide. We also  
had an excavator shovel strip for two days  
we attempted to follow the zone and also  
to uncover other ultramafic outcrops in the  
area. Numerous mining companies sampled  
the showing and expressed interest in it. A  
deed was made with Sammin's Nickel  
for the 43 claims. They have done a grid  
on the property and a drill program is  
to follow.

# GARNET QUARTZ CARB. PROPERTY

While prospecting in Garnet twp. found a qtz carb. zone about one mile south from Rose twp. quartz veins in the zone are from eight inches to two ft wide and carry 2% pyrite and minor calcite in places also shering is common. To the south there is another zone about three hundred ft away. This may be the same zone but overburden splits the two. The wall rocks are Basalts to the north and sediments to the south. Faulting is evident and carbonatization is present. The qtz veins in the south zone are folded and dragged. I have taken 12 samples and treched in several locations assays have been disappointing. Both zones cannot be traced more than 200 ft in length because of overburden. Next summer this property may warrant more work because of the size of the zone, and so little out-crop is exposed. E.G. MECHANICAL STRAPPING

**DATE OF ISSUE**  
**NOV 12 1998**  
 PROVINCIAL RECORDING  
 OFFICE - SUDBURY

**W** AREA DEEMED IN NEED OF PROTECTION BY THE CROWN AND WILL REMAIN WITHDRAWN INDEFINITELY.

**R3** AREA DEEMED IN NEED OF PROTECTION BY THE CROWN AND WILL REMAIN WITHDRAWN INDEFINITELY.

**R4** SKYLINE RESERVE

**NOTICE**  
 Pursuant to Section 35 of the Mining Act, R.S.O. 1990, the MINING AND SURFACE RIGHTS of the area shown as SKYLINE RESERVE and the land covered by the waters of LAKE TEMAGAMI as indicated on this map will be RE-OPENED TO PROSPECTING AND STAKING OUT. This Order comes into effect on **October 27, 1998 at 9:00 a.m. Eastern Standard Time, which is equivalent to 9:00 a.m. local time.** These lands will be subject to Ontario Regulation 356/98 made under the Mining Act. ALL CLAIM STAKING ACTIVITY IN THIS AREA is subject to this new regulation. **MAJOR AMENDMENTS TO NORMAL STAKING PRACTICES HAVE BEEN IMPLEMENTED FOR THIS AREA.** Consult and understand these amendments prior to carrying out any staking in this designated area. For further information please contact the Provincial Recorders Office at 1-888-415-0844.

**PLEASE NOTE: THE ISLAND ON LAKE TEMAGAMI ARE WITHDRAWN AND WILL NOT BE OPEN TO PROSPECTING AND STAKING OUT**

**NOTICE**  
**WORK PERMITS FOR MINERAL EXPLORATION ACTIVITY EFFECTIVE September 15<sup>th</sup> 1998**

The area shown as SKYLINE RESERVE and the land covered by the waters of LAKE TEMAGAMI on the map will be subject to Ontario Regulation 349/98 made under the Lands Act. Depending on the type and timing of exploration work you may require a Work Permit. For further information please contact Gerald Meyer, Regional Resident Clerk, 1755-567-5242 or Jim Ireland, Regional Manager at 1705-255-1612.
