INTRODUCTION

Between the period of July 17, 1997 and September 3, 1997, a total of 1,155 'B' horizon soil samples were collected on a portion of the Tannahill Project. The Tannahill Project is situated 35 kilometers (km) northeast of Kirkland Lake Ontario, within Tannahill, Elliot, Clifford, and Ben Nevis townships of the Larder Lake Mining Division. The purpose of the soil survey was to determine if the survey method could successfully identify and delineate a known gold bearing structure on the property. The soil survey successfully identified the gold bearing structure, with the highest sample of the survey returning **223 PPB Au**. In addition to identifying the known gold bearing structure, several additional targets were identified. Further exploration including trenching and diamond drilling is recommended to follow up on the known gold bearing structure and the other identified targets.

LOCATION AND ACCESS

The Tannahill Project is located 35 kilometres northeast of Kirkland Lake Ontario (**Figure 1**), in Tannahill, Clifford, Elliot and Ben Nevis townships of the Larder Lake Mining Division. NTS 32 D/5. 48° 22' 80° 45', UTM 592500 E 5359500 N. Access to the Tannahill Project is gained by travelling approximately 15 km south along the Esker Lake Hwy 672 from the Hwy 101-672 intersection. Travel east for approximately 7.2km along logging road R-39.

PROPERTY

The Tannahill project consists of 47 claims (226 units) comprising 3,616 hectares, **Table 1**. The claims are situated within Tannahill, Clifford, Elliot, and Ben Nevis Townships of the Larder Lake Mining Division.

PREVIOUS WORK

Previous exploration in the area is limited. In 1931, V. Jordan staked the southwestern corner of Tannahill Township, 1980 metres northwest of Pinaws Lake. Surface trenching was and prospecting was completed. V. Jordan did not report any further work.

In 1935 J. McClosky staked and optioned the property to Erie Canadian Mines Limited. Minor trenching and sampling was completed. Gold bearing quartz veins and syenite porphyry dikes cutting volcanic rocks are present. Quartz veins associated with a shear zone returned assays up to 29.00 gm/t Au. Erie Canadian did not report any further work on the property. The claims were brought to Lease status and prospected periodically, however no information is available on this work.

In 1991 G. Bastarache completed an IP survey, limited stripping and completed one diamond drill holes (96m). The drill hole intersected massive mafic flows, and feldspar porphyry dykes. Minor sulphides were reported. In 1995 two diamond drill holes (273.1 m) were completed. The drilling intersected massive flows, narrow silicified mineralized sections, diorite intrusions and feldspar porphyry. G. Bastarache did not report any further work.

In 1996 Otis J./Pacific Mariner Completed linecutting magnetometer surveys and limited IP surveys on claim L 1202567, L 1202561, L 1200395. The companies changed their names Abitibi Mining Corp. and Sedex Mining Corp. respectively.

Between 1996 and 1997 diamond drilling was completed in six separate phases for a total 6,171.16 metres. The majority of drilling was focussed on delineating the strike and dip extent of the Upper and Lower Zones. 11 holes tested a number of IP anomalies, which failed to intersect significant gold mineralization. Results and details of this work are included in Assessment Report on Diamond Drilling 1998. In 1997 a trenching program was completed over a portion of the property in order to delineate the gold bearing structure. Please refer to Assessment Report on Trenching 1999 for details of this work.

REGIONAL GEOLOGY

The Tannahill Project is hosted in the Archean aged Blake River Group of the Abitibi subprovince. Volcanics rocks of the area are classified chemically as tholeiitic and calc-alkaline. They include a wide spectrum of rock types ranging from basalts to rhyolites. Intrusive rocks include gabbros, diorites and feldspar porphyries with scattered rare diabase dykes. Mapping in the region has identified a number of east west trending fold axis that lead to the repetition of units in a north south direction. Both the volcanics and intrusions have a relatively low magnetic signature, which makes interpretation from magnetic surveys difficult. Two Producing Mines and a number of sub-economic deposits exist in the Gold camp. They are summarized below in the following **Table 2**.

Table 2. Gold Production Holloway Gold Camp

Deposit	Company	Reserves	Production
Holt-McDermott	Barrick Gold	3,526,000 tons @6.9 gm/t Au	509,827 oz
Holloway J.V.	Battle Mountain & Teddy Bear Valley	4,961,000 ton @6.7 gm/t Au	
Golden Harker	Golden Harker	500,000 tons 0.16 oz/t	
Iris		790,000 tons 0.07 oz/t	
Garcon		350,000 tons 0.19 oz/t	
Buffonta		400,000 tons 0.15 oz/t	12,319

PROPERTY GEOLOGY

The Tannahill project is underlain by a wide sequence of calc-alkaline flows of predominantly basaltic and andesitic composition. The flows are generally massive, pillowed, or flow brecciated. Locally the flows are massive with a crystalline texture, and resembles a gabbroic intrusion. A large coarse grained syenite intrusion is situated in the southern portion of the project. A number of narrow syenite dykes radiate outwards from this intrusion, crosscutting stratigraphy. The syenite intrusion and the associated dykes are strongly magnetic and provide the only magnetic contrast in the volcanic sequence.

Drilling to date on the Tannahill Gold Zone has identified two close spaced parallel highly prospective north dipping gold bearing structures (2nd order structures) related to a large vertical structure (1st order structure). The gold bearing structures (Lower Zone and Upper Zone), consist of pervasive quartz-carbonate-albite alteration with 5-10% disseminated pyrite with variable quartz veining. Gold is hosted in sections of the pervasive alteration which contain greater than 5% quartz veins. The zones strike in a northeast/southwest direction and dip to the north at 60°.

The Lower Zone has returned the higher gold grades to date, including visible gold in four holes, and holds the greatest exploration potential. The Lower Zone shows continuity along strike and consistency in grade. It has been successfully intersected along 300 metres of strike length at the 25 and 50 metre levels, and may remain open in both

directions. Grades and widths above the 50 metre level are generally 0.35 - 3.25 gm/t over widths ranging between 0.60 - 3.0 metres. At depth the zone widens significantly and the grades increase dramatically (**Figure 2**). Three holes below the 75 metre level along 100 metres of strike length have excellent widths with high gold grades (**5.16 gm/t / 5.0 metres** in T-96-9, **4.80 gm/t / 5.00 metres** in T-96-11, and **7.02 gm/t / 3.7 metres** in T-96-15). The Lower Zone intersects the 1st order vertical structure at approximately the 125 m vertical level. Gold mineralization has been identified in the 1st order vertical structure, however grades and widths are generally sub-economic. To date a total of 6,172 metres has been completed on the project .

SOIL SURVEY

Between the period of July 17, 1997 and September 3, 1997, a total of 1,155 'B' horizon soil samples were collected over a portion on the property. The survey was focussed along a known gold bearing structure, identified in a previous diamond drill program, and VLF survey. Samples were collected at 12.5m spacings along 3 km of strike length of a VLF anomaly coincident with a known gold bearing structure. An orientation survey was initially run over an area of the property where the gold bearing structure is known to outcrop an surface. From the results of this survey the 'B' horizon was determined to be the most effective sampling medium, with a sample interval of 12.5m. Results of the survey are enclosed on **Map 2** with sample numbers on **Map 1**. Assay certificates are enclosed in **Appendix I**.

The soil survey successfully identified the gold bearing structure at a number of locations. The best response extends from L 4+00 W / 4+50 N through to L 7+00 E / 7+00 N a total length of 1,100 metres. The highest result from this anomaly was **173 PPB Au**. A very continuous anomaly extends from L 14+00 W 0+75 N through to L 10+00 E / 2+50 N.

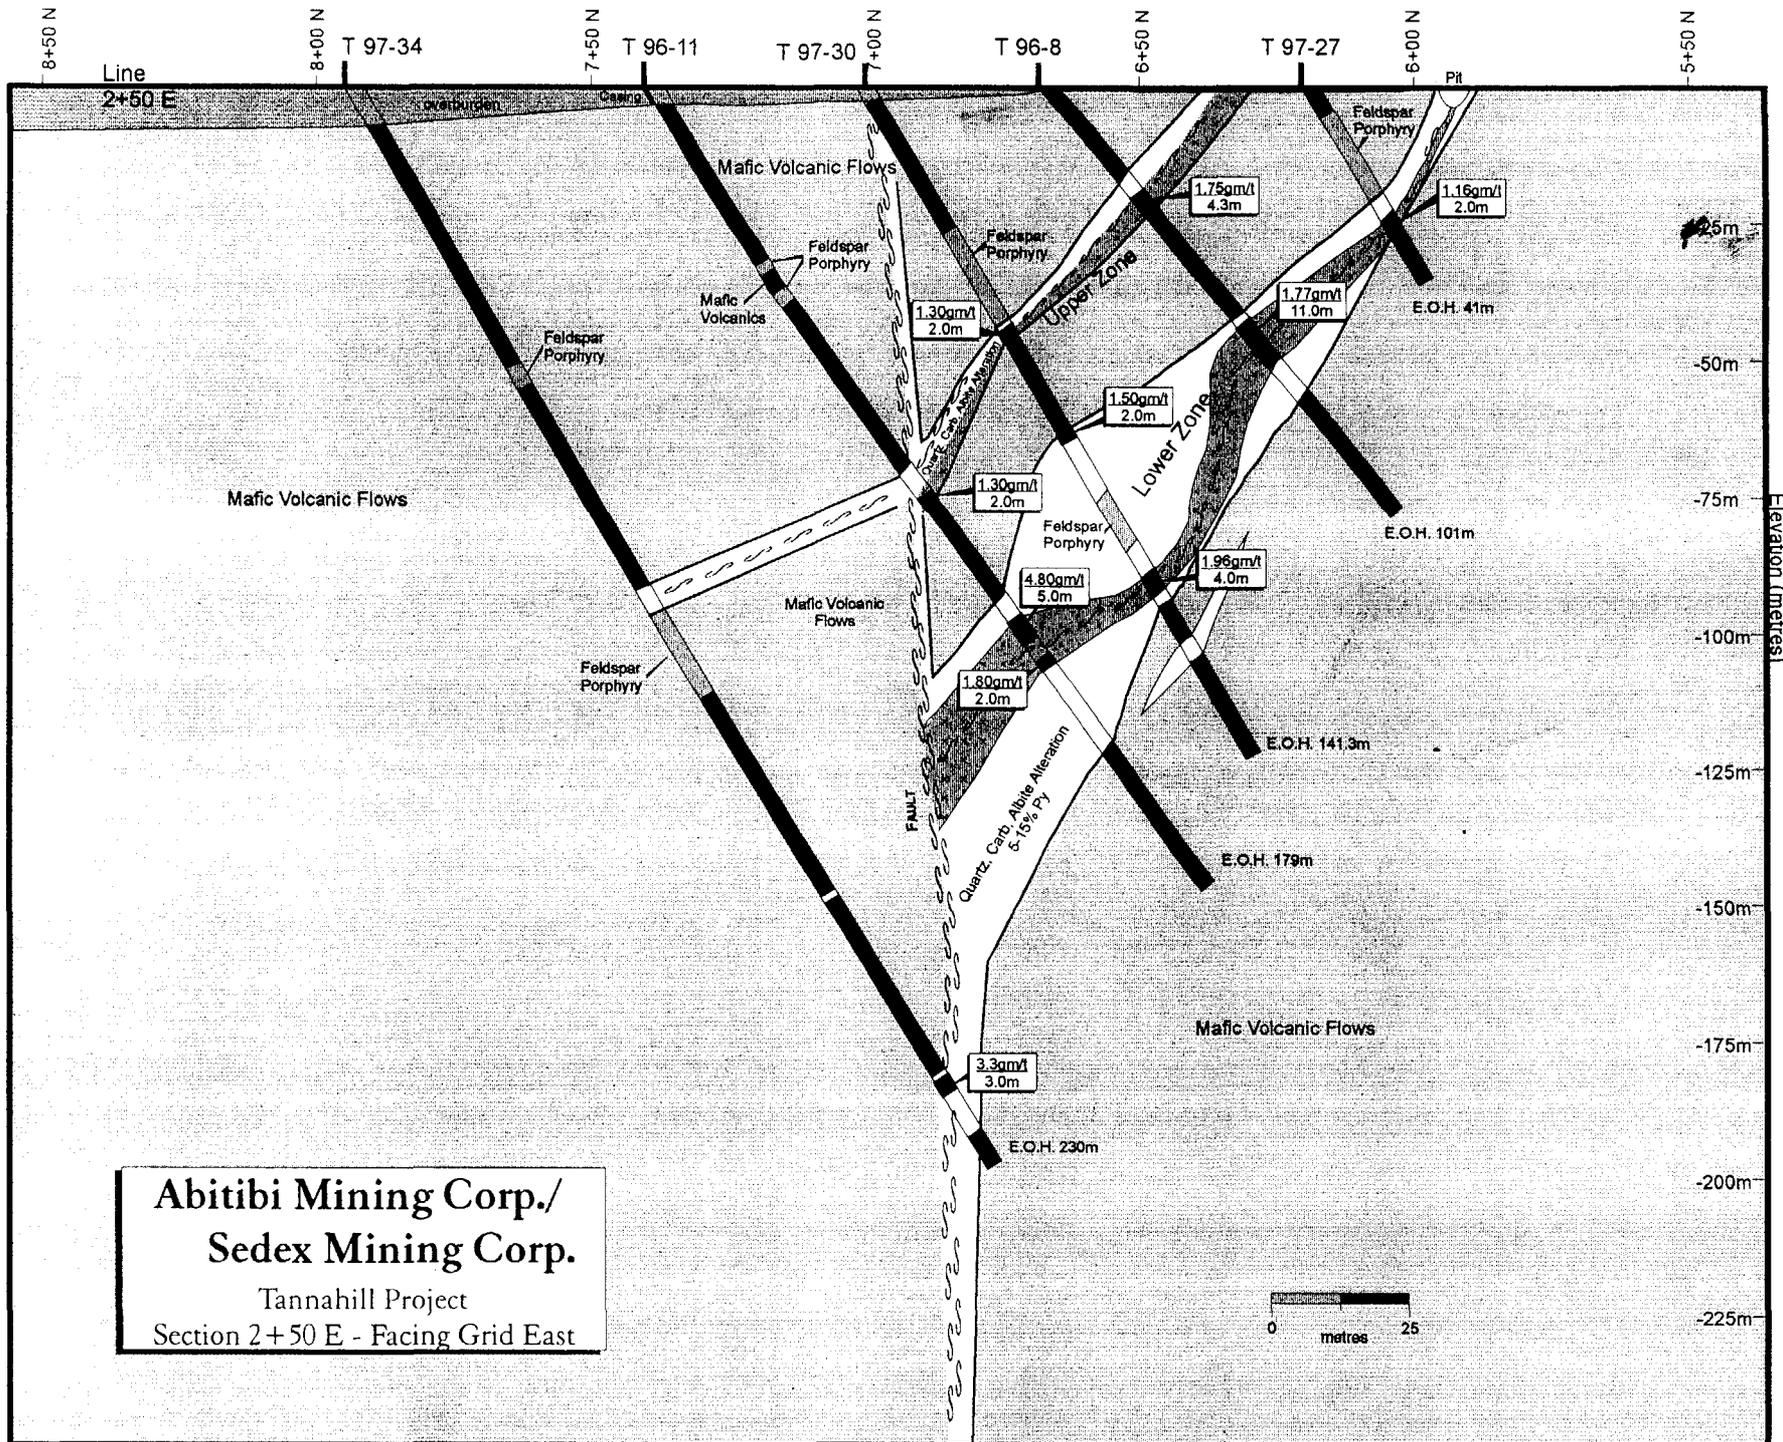

Figure 2

This anomaly shows very good strike continuity (better than the main zone), and appears extend along strike in both directions beyond the limits of he survey. The highest assay result from this anomaly was **45 PPB Au**. Several irregular shaped anomalies were also identified, notably on L 3+00 E / 2+00 S. This anomaly is significant because it is coincident with a highly magnetic syenite intrusion. The highest assay from the entire survey of **223 PPB Au**, was situated at L 3+00 E / 8+75 S.

RECOMMENDATIONS

Further work is recommended for the Tannahill Project. Back-hoe mechanical trenching is recommended to further evaluate the soil geochemical anomalies. The first priority should be the main zone structure along strike to the northeast and southwest. The additional anomalies should first be prospected and then trenched. Diamond drilling will be dependant upon the results of the prospecting and trenching.

CERTIFICATE OF QUALIFICATIONS

I, **Todd Keast**, of 1204 Grace Ave., Porcupine, Ontario, do hereby certify that:

1. I am the author of this report.
2. I am a graduate of the University of Manitoba, Winnipeg, Manitoba, having received an Honors Bachelor of Science (Geology), in 1986.
3. I have practiced in the field of mineral exploration since 1987, for a number of exploration companies throughout Manitoba, Ontario, and Quebec.
4. I am a Fellow of the Geological Association of Canada.
5. I am a member of the Canadian Institute of Mining and Metallurgy.
6. I am a Professional Geoscientist registered with the Association of Professional Engineers and Geoscientists of the Province of British Columbia.
7. I have not received nor do I expect to receive any interest in the Tannahill Project.

Dated at Porcupine, Ontario this 25th day of February 1999.

A handwritten signature in cursive script that reads "Todd Keast". The signature is written in black ink and is positioned below the date.

Todd Keast, B.Sc., FGAC

INTRODUCTION

The Tannahill Project is situated 35 kilometers (km) northeast of Kirkland Lake Ontario, within Tannahill, Elliot, Clifford, and Ben Nevis townships of the Larder Lake Mining Division. During the period between August and September of 1997, a total of 1,470 linear metres of trenching were completed, with a total of 206 grab samples collected from the trenches. The purpose of the trenching program was to expose a known gold bearing structure previously identified in drilling, VFL surveys and soil surveys.

Trenches were planned along a substantial strike extent (1,200 m) of the structure. The trenching program successfully identified the gold bearing structure at a number of locations, with the highest sample returning **9.09 gm/t Au**. In addition several soil anomalies were trenched, with the highest assay of **1.71 gm/t Au** returned. Further exploration including additional soil surveys and diamond drilling is recommended to follow up on the known gold bearing structure and the other identified targets.

LOCATION AND ACCESS

The Tannahill Project is located 35 kilometres northeast of Kirkland Lake Ontario (**Figure 1**), in Tannahill and Elliot townships of the Larder Lake Mining Division. NTS 32 D/5. 48° 22' 80° 45', UTM 592500 E 5359500 N. Access to the Tannahill Project is gained by travelling approximately 15 km south along the Esker Lake Hwy 672 from the Hwy 101-672 intersection. Travel east for approximately 7.2km along logging road R-39.

PROPERTY

The Tannahill project consists of 47 claims (226 units) comprising 3,616 hectares, **Table 1**. The claims are situated within Tannahill, Elliot, and Ben Nevis Townships of the Larder Lake Mining Division.

PREVIOUS WORK

Previous exploration in the area is limited. In 1931, V. Jordan staked the southwestern corner of Tannahill Township, 1980 metres northwest of Pinaws Lake. Surface trenching and prospecting was completed. V. Jordan did not report any further work.

In 1935 J. McClosky staked and optioned the property to Erie Canadian Mines Limited. Minor trenching and sampling was completed. Gold bearing quartz veins and syenite porphyry dikes cutting volcanic rocks are present. Quartz veins associated with a shear zone returned assays up to 29.00 gm/t Au. Erie Canadian did not report any further work on the property. The claims were brought to Lease status and prospected periodically, however no information is available on this work.

In 1991 G. Bastarache completed an IP survey, limited stripping and completed one diamond drill holes (96m). The drill hole intersected massive mafic flows, and feldspar porphyry dykes. Minor sulphides were reported. In 1995, two diamond drill holes (273.1 m) were completed. The drilling intersected massive flows, narrow silicified mineralized sections, diorite intrusions and feldspar porphyry. G. Bastarache did not report any further work.

In 1996 Otis J./Pacific Mariner Completed linecutting magnetometer surveys and limited IP surveys on claim L 1202567, L 1202561, L 1200395. The companies changed their names Abitibi Mining Corp. and Sedex Mining Corp. respectively.

Between 1996 and 1997 diamond drilling was completed in six separate phases for a total 6,171.16 metres. The majority of drilling was focussed on delineating the strike and dip extent of the Upper and Lower Zones. 11 holes tested a number of IP anomalies, which failed to intersect significant gold mineralization. Results and details of this work are included in Assessment Report on Diamond Drilling 1998. In 1997 a soil geochemical survey in conjunction with a VLF survey were completed over a portion of the property in order to delineate the gold bearing structure. Please refer to Assessment Report on Soil Surveys 1999 for details of this work.

REGIONAL GEOLOGY

The Tannahill Project is hosted in the Archean aged Blake River Group of the Abitibi subprovince. Volcanics rocks of the area are classified chemically as tholeiitic and calc-alkaline. They include a wide spectrum of rock types ranging from basalts to rhyolites. Intrusive rocks include gabbros, diorites and feldspar porphyries with scattered rare diabase dykes. Mapping in the region has identified a number of east west trending fold axis that lead to the repetition of units in a north south direction. Both the volcanics and intrusions have a relatively low magnetic signature, which makes interpretation from magnetic surveys difficult. Two Producing Mines and a number of sub-economic deposits exist in the Gold camp. They are summarized below in the following **Table 2**.

Table 2. Gold Production Holloway Gold Camp

Deposit	Company	Reserves	Production
Holt-McDermott	Barrick Gold	3,526,000 tons @6.9 gm/t Au	509,827 oz
Holloway J.V.	Battle Mountain & Teddy Bear Valley	4,961,000 ton @6.7 gm/t Au	
Golden Harker	Golden Harker	500,000 tons 0.16 oz/t	
Iris		790,000 tons 0.07 oz/t	
Garcon		350,000 tons 0.19 oz/t	
Buffonta		400,000 tons 0.15 oz/t	12,319

PROPERTY GEOLOGY

The Tannahill project is underlain by a wide sequence of calc-alkaline flows of predominantly basaltic and andesitic composition. The flows are generally massive, pillowed, or flow brecciated. Locally the flows are massive with a crystalline texture, and resemble a gabbroic intrusion. A large coarse grained syenite intrusion is situated in the southern portion of the project. A number of narrow syenite dykes radiate outwards from this intrusion, crosscutting stratigraphy. The syenite intrusion and the associated dykes are strongly magnetic and provide the only magnetic contrast in the volcanic sequence.

Drilling to date on the Tannahill Gold Zone has identified two close spaced parallel highly prospective north dipping gold bearing structures (2nd order structures) related to a large vertical structure (1st order structure). The gold bearing structures (Lower Zone and Upper Zone), consist of pervasive quartz-carbonate-albite alteration with 5-10% disseminated pyrite with variable quartz veining. Gold is hosted in sections of the pervasive alteration which contain greater than 5% quartz veins. The zones strike in a northeast/southwest direction and dip to the north at 60°.

The Lower Zone has returned the higher gold grades to date, including visible gold in four holes, and holds the greatest exploration potential. The Lower Zone shows continuity along strike and consistency in grade. It has been successfully intersected along 300 metres of strike length at the 25 and 50 metre levels, and may remain open in both directions. Grades and widths above the 50 metre level are generally 0.35 - 3.25 gm/t over widths ranging between 0.60 - 3.0 metres. At depth the zone widens significantly and the grades increase dramatically (**Figure 2**). Three holes below the 75 metre level along 100 metres of strike length have excellent widths with high gold grades (**5.16 gm/t / 5.0 metres** in T-96-9, **4.80 gm/t / 5.00 metres** in T-96-11, and **7.02 gm/t / 3.7 metres** in T-96-15). The Lower Zone intersects the 1st order vertical structure at approximately the 125 m vertical level. Gold mineralization has been identified in the 1st order vertical structure, however grades and widths are generally sub-economic. To date a total of 6,172 metres of drilling has been completed on the project

The vertical 1st order structure correlates with a VLF geophysical response, which correlates to the position of a major fault structure. Gold mineralization is controlled by the 1st order structure

TRENCHING PROGRAM

During the period between August and September of 1997, a trenching program was completed on the Tannahill Project. A total of 1,470 linear metres of trenching was completed in 20 separate trenches, with a total of 206 samples collected for gold analysis. The purpose of the trenching program was to expose a known gold bearing structure previously identified in diamond drilling programs, VFL surveys, and soil surveys. Trenches were planned along 1,200 metres of strike extent. The trenching program successfully identified the gold bearing structure, at a number of different locations with the highest sample of the survey returning **9.09 gm/t Au**. In addition several soil

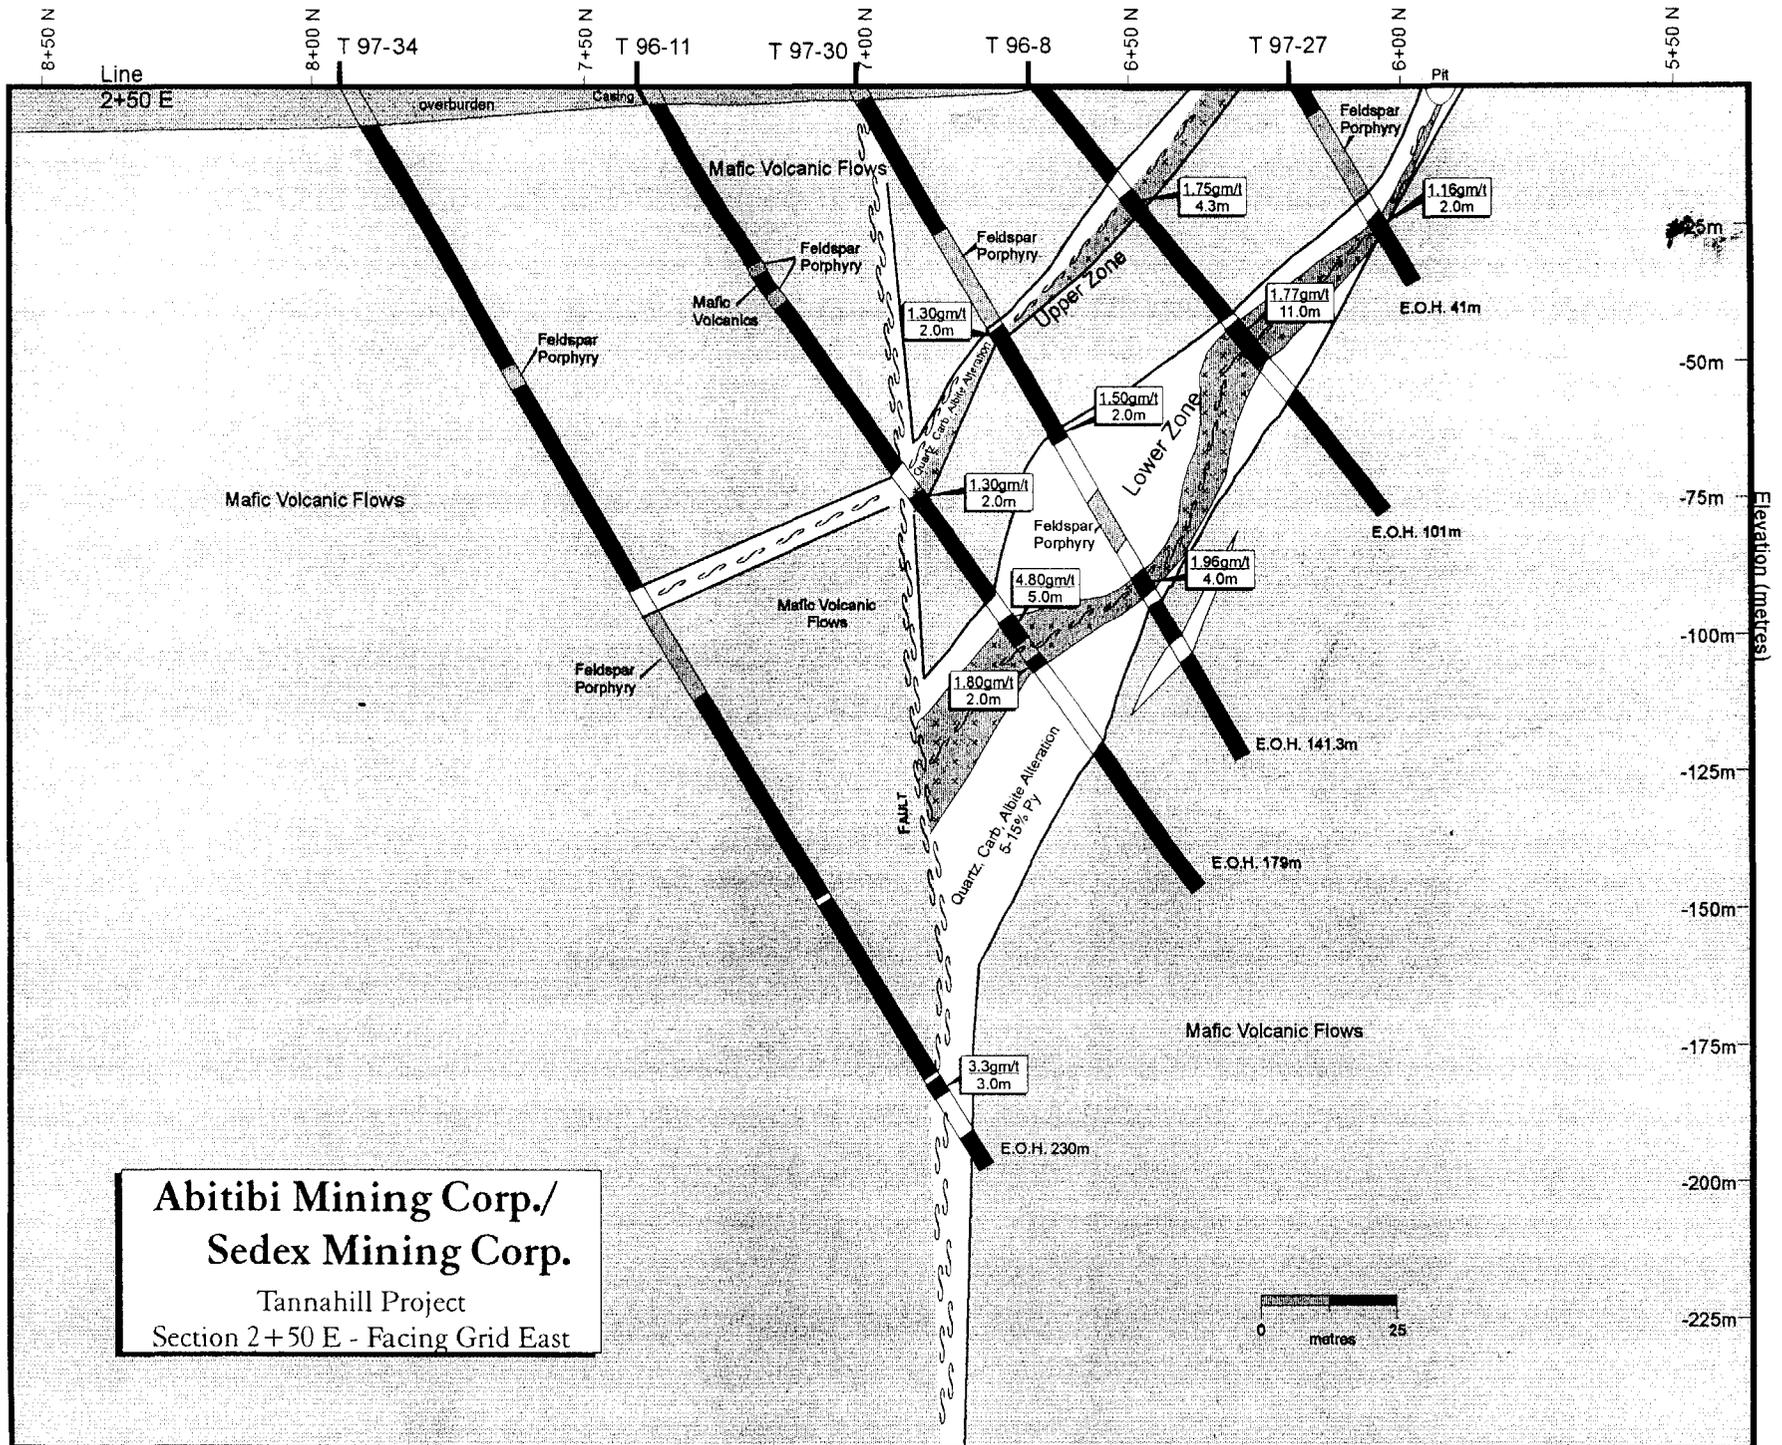

Figure 2

anomalies were trenched. Assays from one of the trenched soil anomalies returned **1.71 gm/t Au**. Sketches of the individual trenches are included in the back pocket. Assay results from the trenches are included in **Table 3**. Assay certificates are included in **Appendix I**.

RECOMMENDATIONS

Further exploration including additional soil surveys and diamond drilling is recommended to follow up on the known gold bearing structure and the other identified targets.

CERTIFICATE OF QUALIFICATIONS

I, **Todd Keast**, of 1204 Grace Ave., Porcupine, Ontario, do hereby certify that:

1. I am the author of this report.
2. I am a graduate of the University of Manitoba, Winnipeg, Manitoba, having received an Honors Bachelor of Science (Geology), in 1986.
3. I have practiced in the field of mineral exploration since 1987, for a number of exploration companies throughout Manitoba, Ontario, and Quebec.
4. I am a Fellow of the Geological Association of Canada.
5. I am a member of the Canadian Institute of Mining and Metallurgy.
6. I am a Professional Geoscientist registered with the Association of Professional Engineers and Geoscientists of the Province of British Columbia.
7. I have not received nor do I expect to receive any interest in the Tannahill Project.

Dated at Porcupine, Ontario this 22nd of February 1999.

A handwritten signature in black ink that reads "Todd Keast". The signature is written in a cursive style with a long horizontal stroke extending to the right from the end of the name.

Todd Keast, B.Sc., FGAC

Ministry of Northern Development and Mines

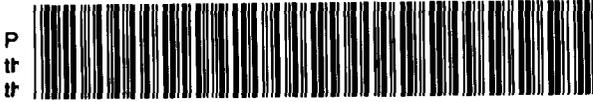

Declaration of Assessment Work Performed on Mining Land

Mining Act, Subsections 65(2) and 66(3), R.S.O. 1990

Transaction Number (office use)

W9980.00290

Assessment Files Research Imaging

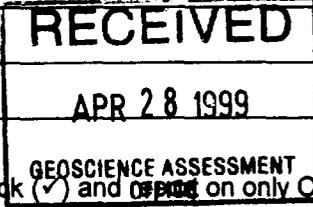

32D05NE2012 2.19439 TANNAHILL 900

Sections 65(2) and 66(3) of the Mining Act. Under section 8 of the Mining Act assessment work and correspond with the mining land holder. Questions about them Development and Mines, 3rd Floor, 933 Ramsey Lake Road, Sudbury.

Instructions: - For work performed on Crown Lands before recording a claim, use form 0240. - Please type or print in ink.

1. Recorded holder(s) (Attach a list if necessary)

Name: THOMAS OBRADOVICH, Client Number: 177382, Address: 1 BLOOMFIELD RD., KIRKLAND LAKE, ON P2N 1A1, Telephone Number: (705) 567-6883, Fax Number: (705) 567-6873

2. Type of work performed: Check (✓) and circle on only ONE of the following groups for this declaration.

Geotechnical: prospecting, surveys, assays and work under section 18 (regs) [] Physical: drilling stripping, trenching and associated assays [x] Rehabilitation []

Work Type: SOIL SURVEY, TRENCHING, ASSAYS, Office Use, Commodity, Total \$ Value of Work Claimed: 15,897, Dates Work Performed: 17 07 97 To 3 09 97, Mining Division: LL, Resident Geologist District: KKK

Please remember to: - obtain a work permit from the Ministry of Natural Resources as required; - provide proper notice to surface rights holders before starting work; - complete and attach a Statement of Costs, form 0212; - provide a map showing contiguous mining lands that are linked for assigning work; - include two copies of your technical report.

3. Person or companies who prepared the technical report (Attach a list if necessary)

Name: TODD KEAST, Telephone Number: 705 235-2540, Address: 1204 GRACE AVE SOUTH, PORCUPINE, ON

4. Certification by Recorded Holder or Agent

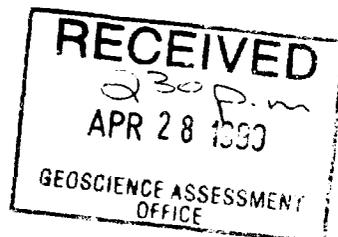

I, BOB BAILEY, do hereby certify that I have personal knowledge of the facts set forth in this Declaration of Assessment Work having caused the work to be performed or witnessed the same during or after its completion and, to the best of my knowledge, the annexed report is true.

Signature of Recorded Holder or Agent: Bob Bailey, Date: APRIL 23/99, Agent's Address: 174 RENEE PLACE, TIMMINS, ON P4P 1E8, Telephone Number: 705-268-9686, Fax Number: 705-360-5866

18. L-1110716	1		400		
Column Totals		15,897	2400	6807	5688

I, BOB BAILEY (Print Full Name), do hereby certify that the above work credits are eligible under subsection 7 (1) of the Assessment Work Regulation 6/96 for assignment to contiguous claims or for application to the claim where the work was done.

Signature of Recorded Holder or Agent Authorized in Writing: Bob Bailey Date: April 23/99

6. **Instructions for cutting back credits that are not approved.**

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

For Office Use Only

Received Stamp	Deemed Approved Date	Date Notification Sent
	Date Approved	Total Value of Credit Approved
	Approved for Recording by Mining Recorder (Signature)	

Personal information collected on this form is obtained under the authority of subsection 6 (1) of the Assessment Work Regulation 6/96. Under section 8 of the Mining Act, this information is a public record. This information will be used to review the assessment work and correspond with the mining land holder. Questions about this collection should be directed to a Provincial Mining Recorder, Ministry of Northern Development and Mines, 3rd Floor, 933 Ramsey Lake Road, Sudbury, Ontario, P3E 6B5.

Work Type	Units of work Depending on the type of work, list the number of hours/days worked, metres of drilling, kilometres of grid line, number of samples, etc.	Cost Per Unit of work	Total Cost
BACKHOE			\$3643
GEOLOGIST-PROJECT MANAGEMENT + REPORT WRITING			\$7276
ASSAYS			\$1740
LABOUR - 2 MEN			\$4804
Associated Costs (e.g. supplies, mobilization and demobilization).			
Transportation Costs			
Food and Lodging Costs			
Total Value of Assessment Work			\$15,897

Calculations of Filing Discounts:

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK x 0.50 = Total \$ value of worked claimed.

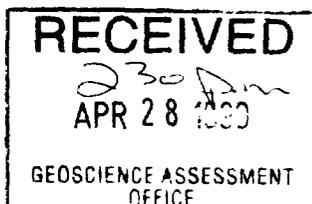

Note:

- Work older than 5 years is not eligible for credit.
- A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, BOB BAILEY (please print full name), do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying Declaration of Work form as AGENT I am authorized to make this certification.
(recorded holder, agent, or state company position with signing authority)

Dear Sir or Madam:

Submission Number: 2.19439

Status

Subject: Transaction Number(s): W9980.00290 Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice. Allowable changes to your credit distribution can be made by contacting the Geoscience Assessment Office within this 45 Day period, otherwise assessment credit will be cut back and distributed as outlined in Section #6 of the Declaration of Assessment work form.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact Bruce Gates by e-mail at bruce.gates@ndm.gov.on.ca or by telephone at (705) 670-5856.

Yours sincerely,
