REVERSE CIRCULATION OVERBURDEN
DRILLING PROGRAMME

by
CHARLES W. PEGG. P.ENG..

2101
63-1277

Toronto, Ontario.

November 15, 1987.

RECEIVED

MINERAL LANDS SECTION

1. INTRODUCTION:

The Border property was staked on behalf of Charles W. Pegg and adjoined a group of claims held by him in the adjacent Perron and Desmeloizes townships, Quebec.

The property was optioned to Keld'Or Resources Inc. of Vancouver who engaged Overburden Drilling Management of Nepean, Ontario to supervise a reverse circulation drilling programme of the glacial overburden to determine whether there was a likelihood of gold deposits on the claims. This programme was carried out by Heath & Sherwood Drilling in July and the subsequent concentrating of the till samples by Overburden Drilling Management and analysis of the concentrates by Bondar-Clegg took until late September 1987.

2. ACCESS & LOCATION:

The location of the property which straddles the Ontario-Quebec border, is shown on Fig.2. It is north of Lake Abitibi and lies a few miles north of the Cochrane - La Sarre highway connection.

It is better reached from the Quebec side since a gravel road 2 miles north of St. Lambert extends westerly along the Perron-Desmeloizes township boundary to the Ontario border. (See Fig.1).

3. PROPERTY:

The property is shown in Fig.1. The 46 claims in Hepburn township are listed below:-

L 906000
L 906489 - 906500 inclusive.
L 906301 - 906305 "
L 921301 - 921306 "
L 921308 - 921327 "
L 917097 & 917098.

The claims lie in the Larder Lake Mining Division.

4. GEOLOGY & GEOPHYSICS:

The Border Property, located a few miles west of the Normetal Mine, lies in a belt of rocks that includes volcanics, sediments and iron formations. They can be followed from the Vior gold prospect (see Fig.3) west to Normetal, then northwest through the Border Property to Tweed Township, Ontario where they swing abruptly east and contain a series of gold deposits such as "Newmont", Inco-Golden Knight and Teck's "Golden Hope" (Casa Berardi area) & Agnico Eagle (Joutel). This belt has a length of some 250 miles and it has more than its share of gold deposits.

The Border property was staked because of its location in this belt, the presence of strong magnetic and electromagnetic anomalies (see Fig.5) and of some encouraging reverse circulation work which found anomalous amounts of gold in the same stratigraphy 20 miles to the east, just south of the Normetal Mine.

The geology of the Ontario property and geophysics and geology of the Quebec part of the property can be seen in Fig.4.

5. THE REVERSE CIRCULATION DRILL PROGRAMME:

The holes were drilled by Heath & Sherwood in July 1987, the holes being spotted and till samples collected by personnel employed by Overburden Drilling Management of Nepean, Ontario. The till samples were later passed over a vibrating table in the Overburden Drilling laboratories and concentrated by a series of magnetic, heavy media and panning techniques. The number of gold grains and their character whether rounded, abraded or "delicate" were finally determined by counting and classifying them by examination under a microscope. The concentrates were eventually sent to the Bondar-Clegg laboratories for analysis for copper, zinc, arsenic and gold.

The locations of the holes on the Ontario part of the property are shown on Fig.6.

The logs of the holes are appended to this report, as are the laboratory sample logs and a record of the gold grains recovered from each till sample. Following these are the Bondar-Clegg geochemical lab reports of the gold, copper, zinc and arsenic contents of the concentrates derived from the till samples.

6. DISCUSSION OF RESULTS:

Of the holes on the Ontario side only two holes show "delicate" gold grains i.e. those of local derivation. These are holes 41 with two delicate grains and hole 51 with one delicate grain. The other holes showed abraded gold grains only and these are considered to have come from many miles.

The drill programme on the Ontario claims therefore is of negative interest and no follow-up is warranted.

7. COST OF THE PROGRAMME:

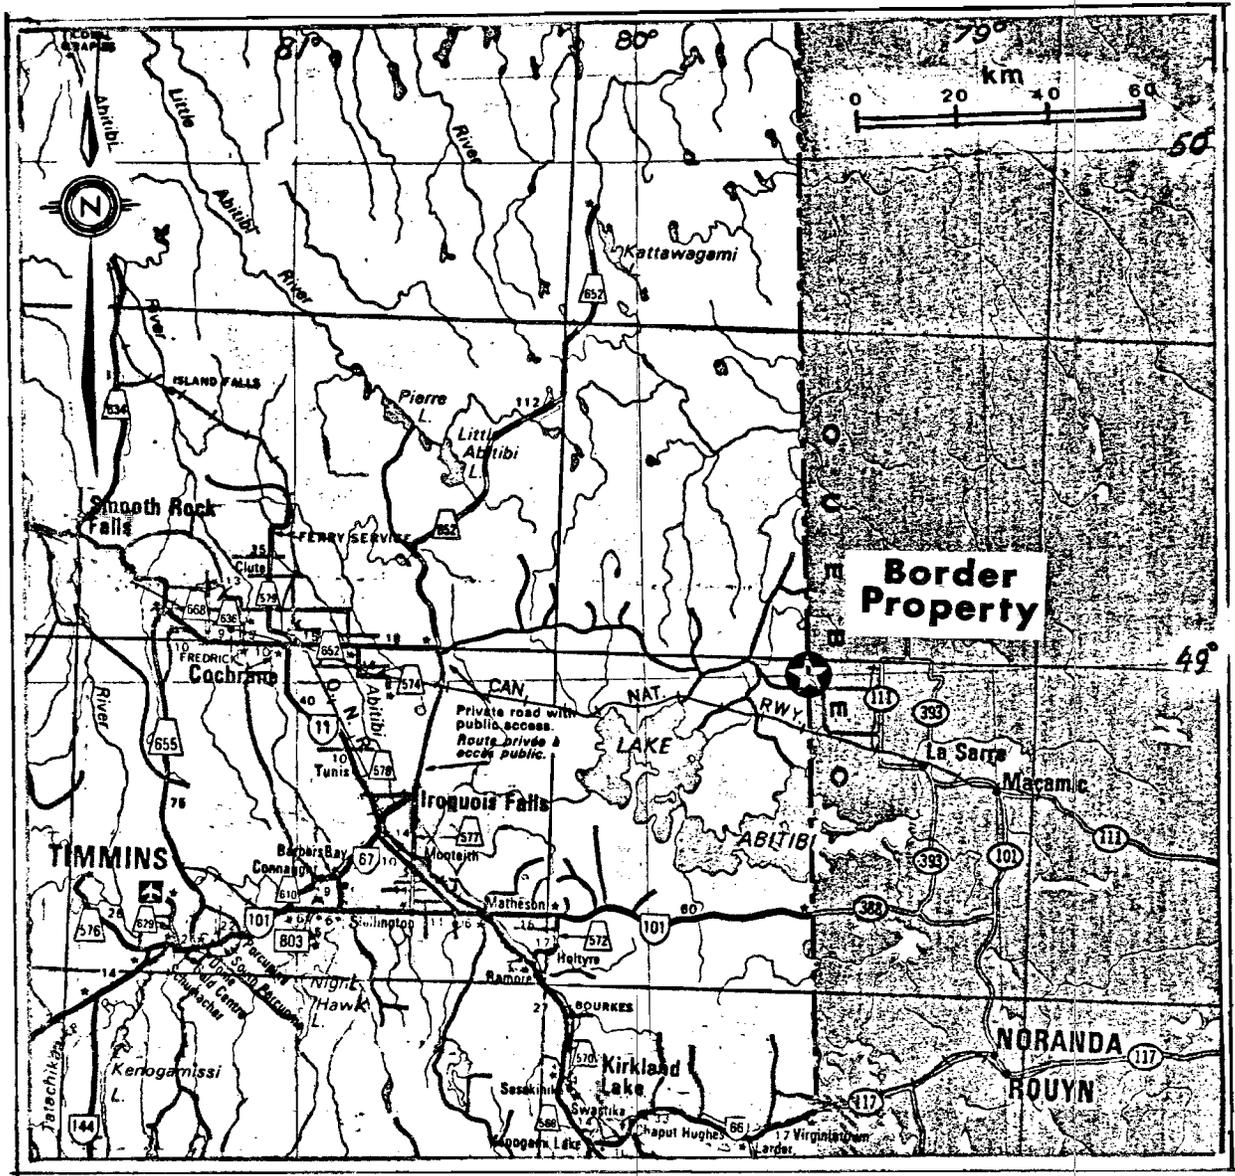

| | |
|-----------------------------|--------------------|
| Drilling Cost..... | \$40,194.75 |
| Supervision & Lab costs ... | 11,953.69 |
| Assays | 1,571.50 |
| | ----- |
| | <u>\$53,719.94</u> |

which is equivalent to 3581 man days.

Yours very truly,

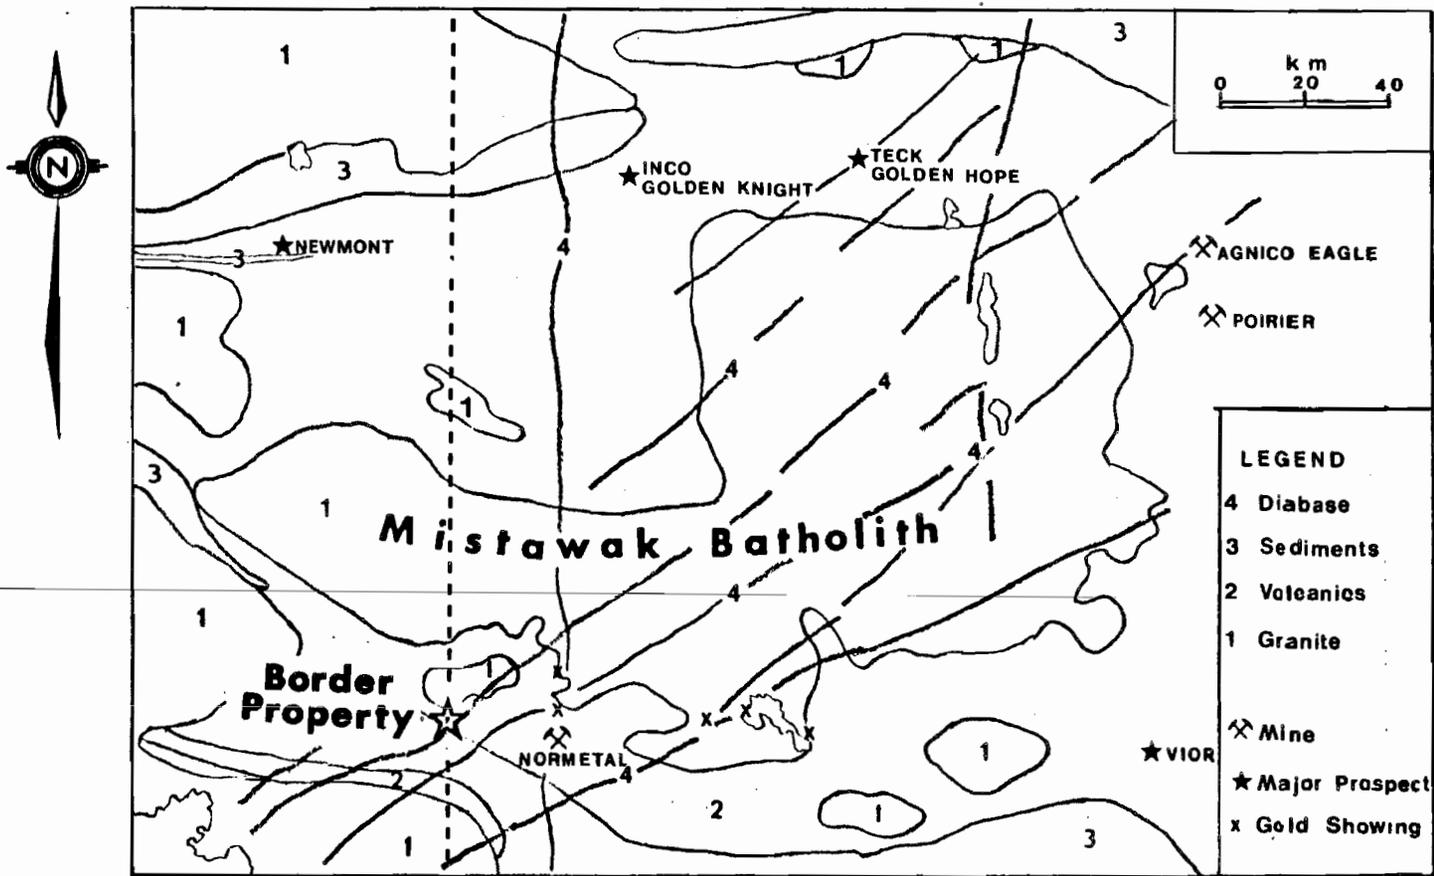

Charles W. Pegg. P.Eng..
