MAJOR AND MINOR MULTI-ELEMENT ANALYSIS
RESULTS, FROM TWO SAMPLES TAKEN ON THE
DOUBLE A PROPERTY

Abbotsford and Adair Townships,
District of Cochrane,
Province of Ontario

DECEMBER 10, 1985

RECEIVED

DEC 11 1985

MINING LANDS SECTION

2.5943

Avrom E. Howard, BSc, FGAC

In order to fulfill outstanding assessment requirements, and, to determine whether or not the sulphide horizon intersected at depth in diamond drill hole 84-002, drilled a year previous, is the stratigraphic equivalent of that seen in outcrop at LO+30W/O+20N, two samples, one from each location were taken for major and minor multi-element analysis. This work took place on August 30, 1985, was carried out by the author, and took approximately four hours to complete (some time was spent in locating the drill core storage site). The locations from which these samples were taken can be seen on the accompanying map, which is a photocopy of the pertinent quadrant of the geology map prepared following the completion of last years' field program. The outcrop sample is a chip section across approximately one metre on surface, and the drill core is half and quarter split core taken from between 270.0 - 280.0 feet.

The results obtained are somewhat inconclusive in that the two samples display as many differences as correlations, although both show minor iron enrichment. The outcrop sample also shows traces of copper and zinc, whereas these are essentially absent in the core sample. The whole rock results indicate a relative enrichment in Al_2O_3 , CaO, and Na_2O in sample 85-01 versus 85-02, but if this difference is the result of an epigenetic phenomenon, then it does not preclude both samples from being from the same original horizon. Most interesting and correlative, however, are the arsenic and gold values obtained. Trace gold, approximately 0.003 oz Au/ton converted from ppb, was obtained in both samples, along with elevated arsenic levels as well. These values are not only correlative, but are better than any obtained during the original program carried out last year, indicating perhaps that the emphasis at that time on quartz veins and zones of silicification was perhaps biased too strongly, having been based on a Detour Lake type model, and that perhaps it is the numerous sulphide zones occurring throughout the property that offer the best potential.

In conclusion, it can be stated that given the results obtained, and in consideration of the location of the two samples, they are both more likely than not from the same original stratigraphic horizon. More significantly, this and possibly other sulphide horizons situated within the property appear to possess potential as host/traps for gold, and any future work to be carried out on the property should concentrate on the accurate location and drill-testing of them.

Submitted Respectfully,
AVROM HOWARD & ASSOCIATES

Avrom E. Howard, BSc, FGAC

Dear Sir:

We received a Geological Survey and Data for Assaying on December 11, 1985, submitted under Section 77(19) of The Mining Act R.S.O. 1980 for mining claim L 737349 in the Township of Abbotsford.

This material will be examined and assessed and a statement of assessment work credits will be issued.

We do not have a copy of the report of work which is normally filed with your office prior to the submission of this technical data. Please forward a copy as soon as possible.

Yours sincerely,

S.E. Yundt

Dear Sirs:

RE: Geological Survey and Data for Assaying
submitted on Mining Claim L 737349 in
Abbotsford Township

Returned herein is the sample location plan (in duplicate). In order to complete your submission, the following information is required (in duplicate).

1. claim lines and claim numbers shown on sample location plan. ✓
2. key map showing location of claim in relation to township boundaries, etc. ✓
3. cancelled cheques or receipts as proof of payment for the \$139.00 expenditure credits claimed. ✓
4. complete geology report and maps to substantiate geology credits requested. ✓
5. complete enclosed "Man-days breakdown" forms for geology work. ✓

When submitting this material, please quote file 2.8720.

Notice of Intent
for Technical Reports

April 16, 1986

2.8720/498/85

An examination of your survey report indicates that the requirements of The Ontario Mining Act have not been fully met to warrant maximum assessment work credits. This notice is merely a warning that you will not be allowed the number of assessment work days credits that you expected and also that in approximately 15 days from the above date, the mining recorder will be authorized to change the entries on the record sheets to agree with the enclosed statement. Please note that until such time as the recorder actually changes the entry on the record sheet, the status of the claim remains unchanged.

If you are of the opinion that these changes by the mining recorder will jeopardize your claims, you may during the next fifteen days apply to the Mining and Lands Commissioner for an extension of time. Abstracts should be sent with your application.

If the reduced rate of credits does not jeopardize the status of the claims then you need not seek relief from the Mining and Lands Commissioner and this Notice of Intent may be disregarded.

If your survey was submitted and assessed under the "Special Provision-Performance and Coverage" method and you are of the opinion that a re-appraisal under the "Man-days" method would result in the approval of a greater number of days credit per claim, you may, within the said fifteen day period, submit assessment work breakdowns listing the employees names, addresses and the dates and hours they worked. The new work breakdowns should be submitted directly to the Land Management Branch, Toronto. The report will be re-assessed and a new statement of credits based on actual days worked will be issued.

Assessment Work Breakdown

Man Days are based on eight (8) hour Technical or Line-cutting days. Technical days include work performed by consultants, draftsmen, etc..
