1 INTRODUCTION

This report summarizes the ground geophysics programs performed on the Burntbush River property during 1989 and 1990.

These data have already been presented in interpreted form in the previous reports describing the drill programs undertaken in 1989 and 1990 (see Cogema Reference nos. 89-CND-47-02, 90-CND-47-01). However, the geophysical results have never been reported in map form exclusive of other (geologic, drill hole location, etc.) information. These are presented at this time to the government of Ontario for assessment purposes.

2 SURVEY LOCATION AND ACCESS

The Burntbush River project comprises 312 contiguous mining claims covering about 50 km² in the townships of Hoblitzell and Noseworthy, northeastern Ontario (see figure 1). It is located at approximately 90 km northwest of La Sarre and 20 km west of the Quebec-Ontario border.

Access to the area during the winter is relatively easy, by way of a winter road system extending north from Tomlinson Road (see figure 2). For linecutting contracts, access was gained simply by way of skidoos from Tomlinson Road.

3 DESCRIPTION OF THE 1989 FIELD PROGRAM

The main target area worked in 1989 was the western part of the property, west of the Burntbush grid as established in 1988 (see Cogema Reference no. 88-CND-47-02).

The first step was a linecutting contract awarded to Meegwich Inc. (of Rouyn-Noranda), in which the Burntbush grid was extended west to the western boundary of the property (total line kilometres of the new grid: 79.3). Lines were cut at 100m spacing and picketed at 25m intervals.

A magnetometer survey was carried out over the grid at 12.5m spacing. The instrument used was an EDA OMNI IV magnetometer. Diurnal variations were corrected using an EDA OMNI IV base station and, in addition repeat readings were taken at arbitrary stations during each survey day.

A horizontal loop electromagnetic survey was also undertaken, using the APEX Parametrics Max-Min I unit. At first, two lines were tested using 100m and 150m cable separations, and seven frequencies (220, 440, 880, 1760, 3520, 7040 and 14080 Hz). From these data, it was decided to do the production survey with 150m cable and with the 440, 1760, 7040 and 14080 frequencies.

The magnetics and HLEM surveys were performed by Val d'Or Geophysique Ltee (of Val d'Or)

4 DESCRIPTION OF THE 1990 FIELD PROGRAM

Following the very encouraging drill program performed in 1989, a much more substantial program of diamond drilling was undertaken in 1990 (see Cogema Reference no. 90-CND-47-01). Consequently, a more ambitious program of linecutting, line rehabilitation and ground geophysics was undertaken.

The old grids covering the shear zone (Burntbush west and Burntbush grids) were repicketed (total 129 km). In addition, a new grid was established to the east of the Burntbush grid (Burntbush grid east). New lines were cut at 100m spacing and picketed at 25m spacing (total 32 km). This work was contracted to Gerard Houle enr. (of Rouyn-Noranda) and was completed during January of 1990.

A magnetometer survey was carried out over the new Burntbush grid east at 12.5m spacing. The instrument used was a proton magnetometer GSM-19 from GEM system, with a 0.1 nT precision. Diurnal variation was corrected with a base station.

A horizontal loop electromagnetic survey was also undertaken, using the APEX Parametrics Max-Min I unit. This survey was performed over the Burntbush and Burntbush east grids (the Burntbush grid established in 1988 had previously been surveyed with VLF-EM but not with the Max-Min). A total of 104km was surveyed using 150m coil separation and 440, 1760, 7040 and 14080 Hz frequencies.

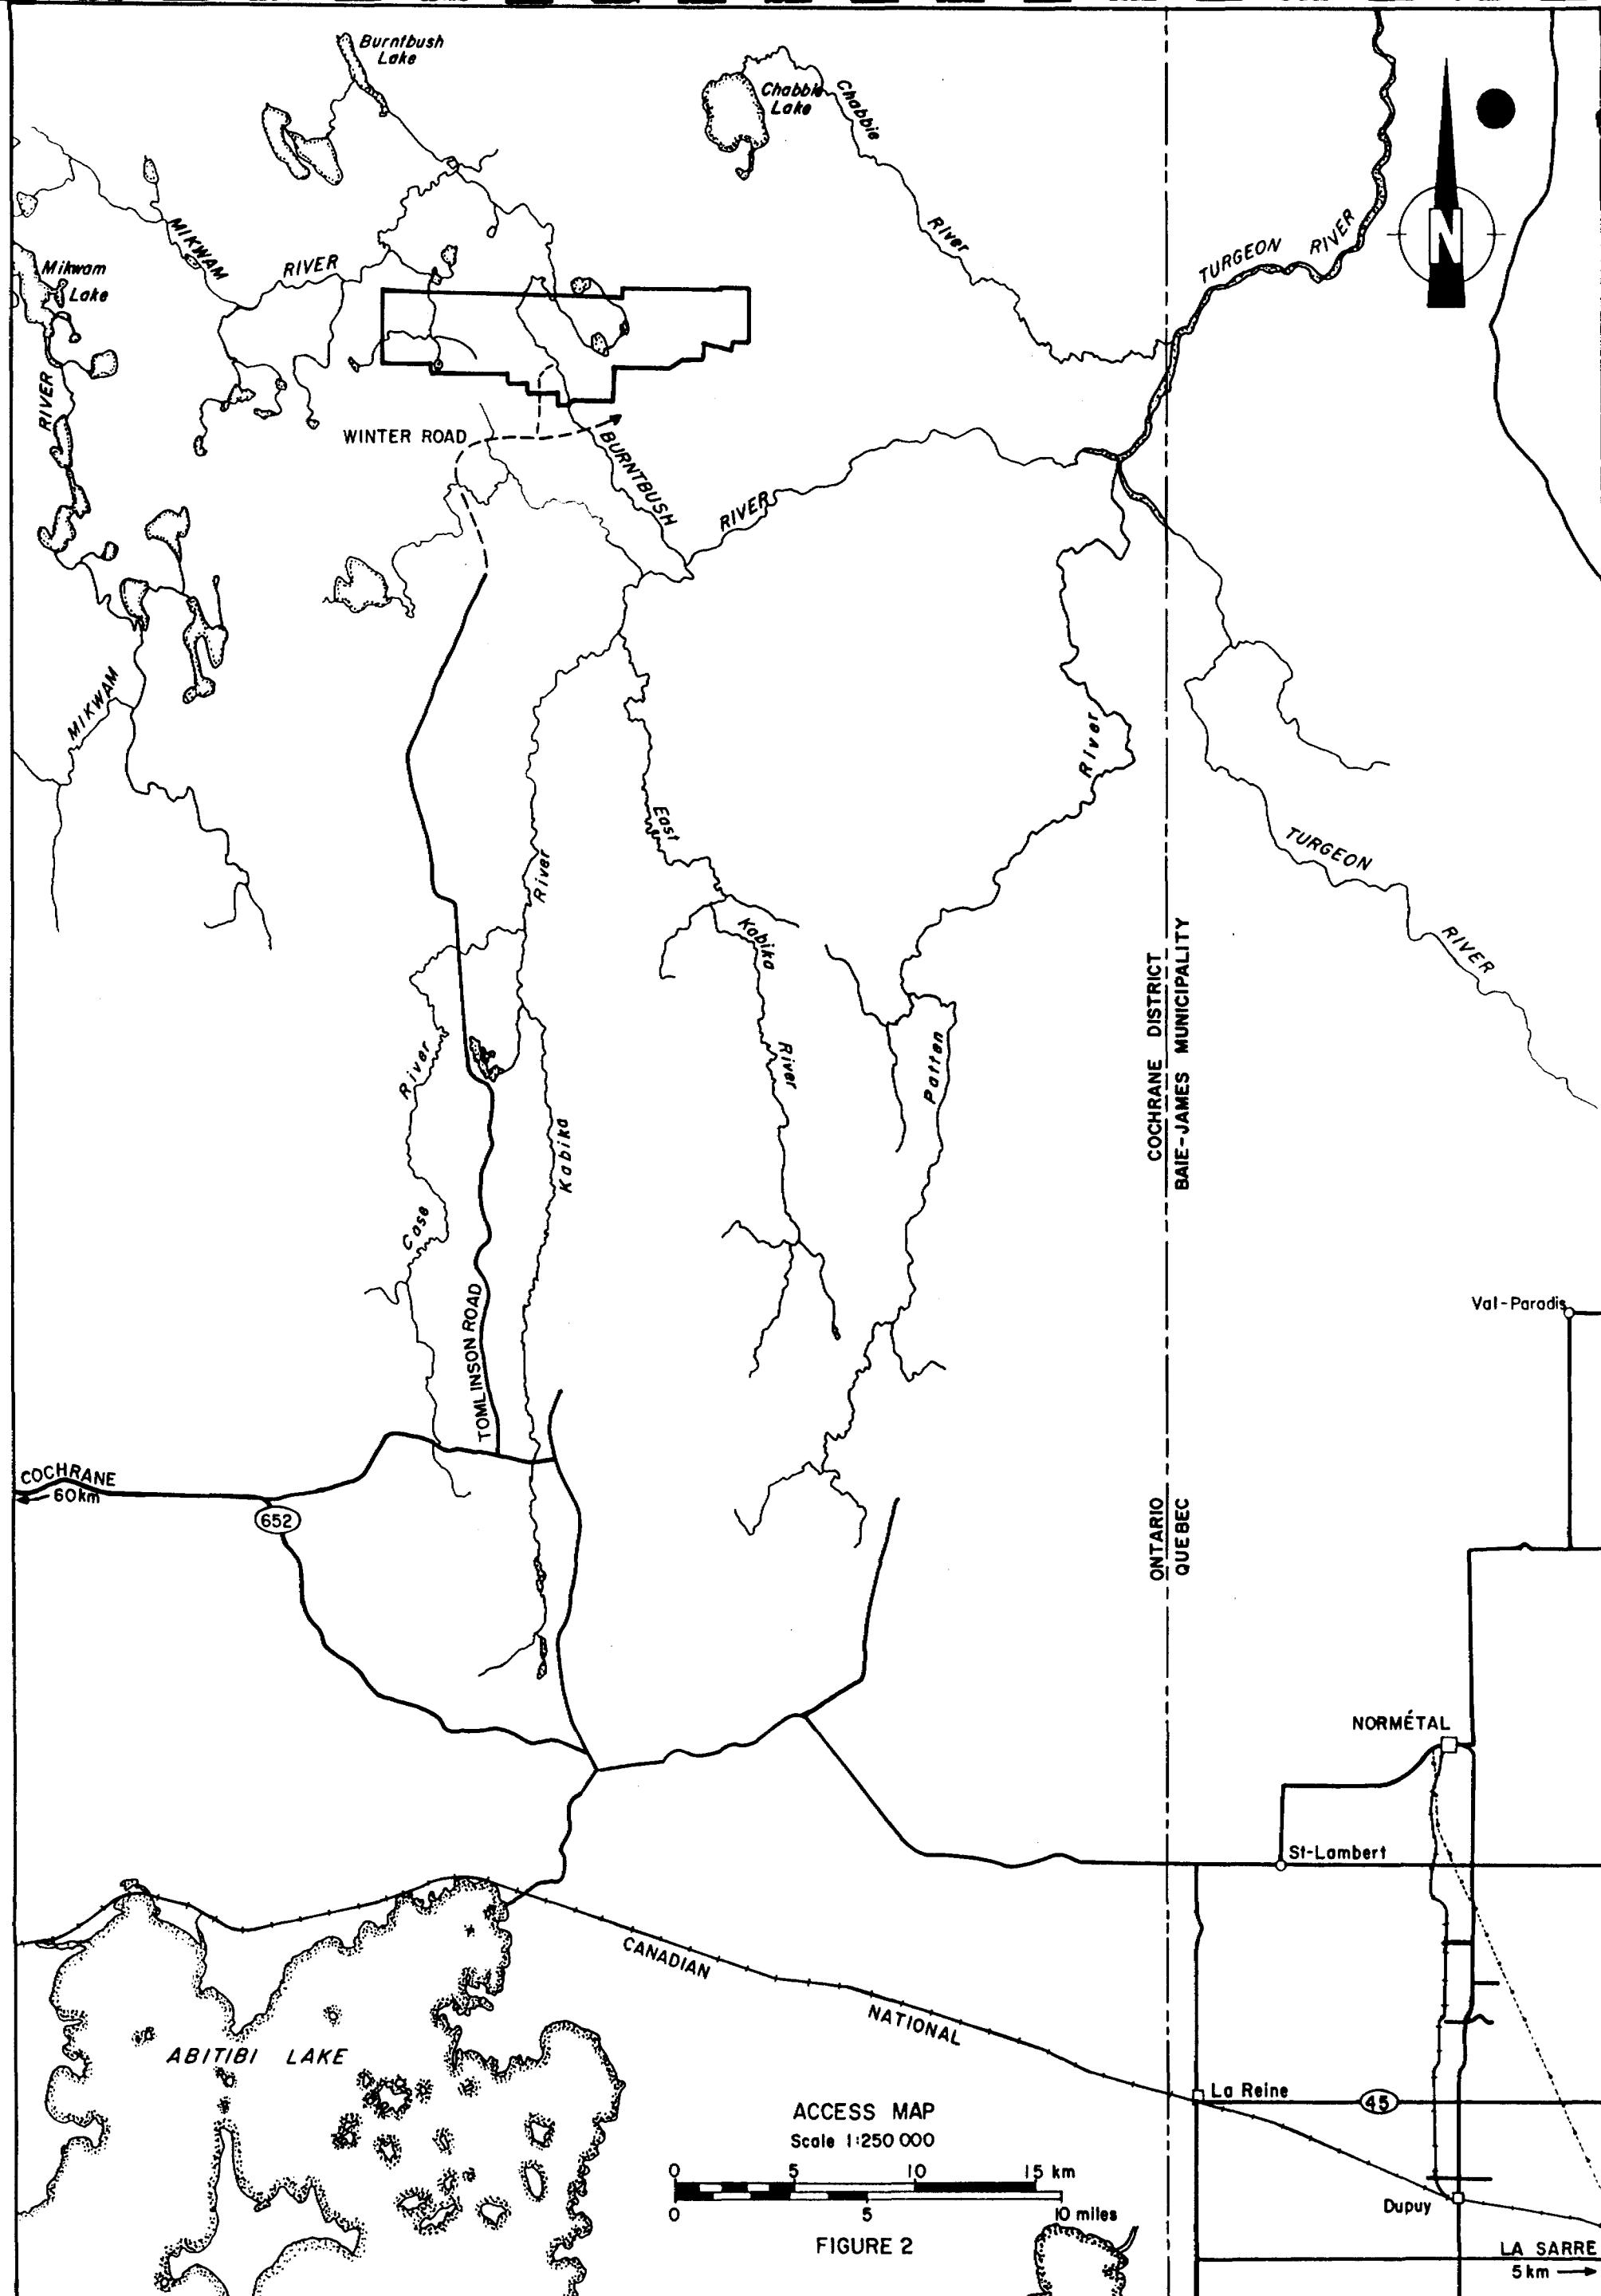

The magnetics and HLEM surveys were contracted to Robert E. Gillick and Associates Ltd. (of North Bay) and were completed between January 23 and February 1, 1990.

5 PRESENTATION OF RESULTS

The magnetics surveys of 1988, 1989 and 1990 have been levelled and are presented together in this report in the form of two map sheets at 1:10 000 scale.

Similarly, the Max-Min surveys of 1989 and 1990 have been presented together.

APPENDIX

APEX

MAXMIN I PORTABLE EM

The MaxMin I ground EM System is designed for mineral and water exploration and for geoengineering applications. It is an expansion of the highly popular MaxMin II and III EM System concepts. The frequency range is extended to seven octaves from four. The ranges and numbers of coil separations are increased and new operating modes are added. The receiver can also be used independently for measurements with powerline sources. The advanced spheric and powerline noise rejection is further improved, resulting in faster and more accurate surveys, particularly at larger coil separations. Several receivers may be operated along a single reference cable.

Mating plug in data acquisition computer and cassette unit are available for use with the MaxMin I for automatic digital data acquisition and processing. These units are covered in separate data sheet.

MAXMIN I SPECIFICATIONS:

Frequencies:	110, 220, 440, 880, 1760, 3520, 7040 and 14080 Hz, plus 50/60 Hz powerline frequency [receiver only].	Signal filtering:	Powerline comb filter, continuous spherics noise clipping, autoadjusting time constant and other filtering.
Modes:	<p>MAX 1: Horizontal loop mode [Transmitter and receiver coil planes horizontal and coplanar].</p> <p>MAX 2: Vertical coplanar loop mode [Transmitter and receiver coil planes vertical and coplanar].</p> <p>MAX 3: Vertical coaxial loop mode [Transmitter and receiver coil planes vertical and coaxial].</p> <p>MIN 1: Perpendicular loop mode 1 [Transmitter coil plane horizontal and receiver coil plane vertical].</p> <p>MIN 2: Perpendicular loop mode 2 [Transmitter coil plane vertical and receiver coil plane horizontal].</p>	Warning lights:	Receiver signal and reference warning lights to indicate potential errors.
Coil separations:	<p>12.5, 25, 50, 75, 100, 125, 150, 200, 250, 300, & 400 metres [standard].</p> <p>10, 20, 40, 60, 80, 100, 120, 160, 200, 240 & 320 metres [selected with grid switch inside of receiver].</p> <p>50, 100, 200, 300, 400, 500, 600, 800, 1000, 1200 & 1600 feet [selected with grid switch inside of receiver].</p>	Survey depth:	From surface down to 1.5 times coil separation used.
Parameters measured:	In-Phase and quadrature components of the secondary magnetic field, in % of primary [transmitted] field. Field amplitude and/or tilt of 50/60 Hz powerline field.	Transmitter dipole moments:	110 Hz: 220 Atm ² 1760 Hz: 160 Atm ² 220 Hz: 215 Atm ² 3520 Hz: 80 Atm ² 440 Hz: 210 Atm ² 7040 Hz: 40 Atm ² 880 Hz: 200 Atm ² 14080 Hz: 20 Atm ²
Readout:	Analog direct readouts on edgewise panel meters for in-phase, quadrature and tilt, and for 50/60Hz amplitude. [Additional digital LED readouts when using the DAC, for which interfacing and controls are provided for plug-in].	Reference cable:	Light weight unshielded 4/2 conductor teflon cable for maximum temperature range and for minimum friction. Please specify cable lengths required.
Ranges of readouts:	Analog in-phase and quadrature scales: $0 \pm 4\%$, $0 \pm 20\%$, $0 \pm 100\%$, switch activated. Analog tilt scale: 0 ± 75 grade. [Digital in-phase and quad. $0 \pm 102.4\%$].	Intercom:	Voice communication link provided for operators via the reference cable.
Readability:	Analog in-phase and quadrature 0.05% to 0.5%, analog tilt 1% grade. [Digital in-phase and quadrature 0.1%].	Receiver power supply:	Four standard 9V batteries (0.5Ah, alkaline). Life 30 hrs continuous duty, less in cold weather. Rechargeable battery and charger option available.
Repeatability:	$\pm 0.05\%$ to $\pm 1\%$ normally, depending on frequency, coil separation & conditions.	Transmitter power supply:	Rechargeable sealed gel type lead acid 12V-13Ah batteries [4x6V-6 1/2 Ah] in canvas belt. Optional 12V-8Ah light duty belt pack available.
		Transmitter battery charger:	For 110-120/220-240VAC, 50/60/400 Hz and 12-15VDC supply operation, automatic float charge mode, three charge status indicator lights. Output 14.4V-1.25A nom.
		Operating temp:	-40 to + 60 deg.C.
		Receiver weight:	8 kg, including the two integral ferrite cored antennas [9 kg with data acq. comp.]
		Transmitter weight:	16 kg with standard 12V-13Ah battery pack. 14 kg with light duty 12V-8Ah pack.
		Shipping weight:	59 kg plus weight of reference cables at 2.5 kg per 100 metres plus other optional items if any.
		Standard spares:	One spare transmitter battery pack, one spare transmitter battery charger, two spare transmitter retractile connecting cords, one spare set receiver batteries.

Specifications subject to change without notification.

Specifications

Dynamic Range	18,000 to 110,000 gammas. Roll-over display feature suppresses first significant digit upon exceeding 100,000 gammas.
Tuning Method	Tuning value is calculated accurately utilizing a specially developed tuning algorithm
Automatic Fine Tuning	$\pm 15\%$ relative to ambient field strength of last stored value
Display Resolution	0.1 gamma
Processing Sensitivity	± 0.02 gamma
Statistical Error Resolution	0.01 gamma
Absolute Accuracy	± 1 gamma at 50,000 gammas at 23°C ± 2 gamma over total temperature range
Standard Memory Capacity	
Total Field or Gradient	1,200 data blocks or sets of readings
Tie-Line Points	100 data blocks or sets of readings
Base Station	5,000 data blocks or sets of readings
Display	Custom-designed, ruggedized liquid crystal display with an operating temperature range from -40°C to +55°C. The display contains six numeric digits, decimal point, battery status monitor, signal decay rate and signal amplitude monitor and function descriptors.
RS 232 Serial I/O Interface	2400 baud, 8 data bits, 2 stop bits, no parity
Gradient Tolerance	6,000 gammas per meter (field proven)
Test Mode	A. Diagnostic testing (data and programmable memory) B. Self Test (hardware)
Sensor	Optimized miniature design. Magnetic cleanliness is consistent with the specified absolute accuracy.
Gradient Sensors	0.5 meter sensor separation (standard), normalized to gammas/meter. Optional 1.0 meter sensor separation available. Horizontal sensors optional.
Sensor Cable	Remains flexible in temperature range specified, includes strain-relief connector
Cycling Time (Base Station Mode)	Programmable from 5 seconds up to 60 minutes in 1 second increments
Operating Environmental Range	-40°C to +55°C; 0-100% relative humidity; weatherproof
Power Supply	Non-magnetic rechargeable sealed lead-acid battery cartridge or belt; rechargeable NiCad or Disposable battery cartridge or belt; or 12V DC power source option for base station operation.
Battery Cartridge/Belt Life	2,000 to 5,000 readings, for sealed lead acid power supply, depending upon ambient temperature and rate of readings
Weights and Dimensions	
Instrument Console Only	2.8 kg, 238 x 150 x 250mm
NiCad or Alkaline Battery Cartridge	1.2 kg, 235 x 105 x 90mm
NiCad or Alkaline Battery Belt	1.2 kg, 540 x 100 x 40mm
Lead-Acid Battery Cartridge	1.8 kg, 235 x 105 x 90mm
Lead-Acid Battery Belt	1.8 kg, 540 x 100 x 40mm
Sensor	1.2 kg, 56mm diameter x 200mm
Gradient Sensor (0.5 m separation - standard)	2.1 kg, 56mm diameter x 790mm
Gradient Sensor (1.0 m separation - optional)	2.2 kg, 56mm diameter x 1300mm
Standard System Complement	Instrument console; sensor; 3-meter cable, aluminum sectional sensor staff, power supply, harness assembly, operations manual.
Base Station Option	Standard system plus 30 meter cable
Gradiometer Option	Standard system plus 0.5 meter sensor

MAGNETOMETER FEATURES:

- True 0.1nT sensitivity, 0.2nT absolute accuracy, 0.01nT resolution.
- Hand-held, base station or remotely controlled operation.
- Gradiometer option.
- VLF option.
- Automatic label updating.
- Data collection and storage by depressing a single key.
- Automatic synchronization of base station and hand-held units.
- Large storage capacity: 3,800 readings standard, 30,000 optional.
- Base station capacity: Up to 170,000 readings (24hr operation at 0.5 second intervals).
- Automatic correction of diurnal variations while preserving original data.
- Full keyboard with tactile feedback.
- Large 4x20 alphanumeric display.
- In-field data recall.
- Remote control operation.
- Data print-outs, optional archiving on PC-compatible tape or direct transfer to a PC.
- Full diagnostics, error code stored with data.
- Automatic tuning, with manual override.
- Adaptable tolerance to high gradients.
- Very compact and light: 4.1 kg total weight, including batteries, sensor and staff. 3.2 kg in back-pack mode.
- Low power consumption: 2 Ws/reading.

SPECIFICATIONS

Resolution: 0.01nT (0.01 gamma).
Absolute Accuracy: 0.2nT.
Range: 20,000-120,000nT, autotuning, manual override.
Gradient Tolerance: Over 10,000nT/m.

OPERATING MODES:

Manual: Automatic storage of label, time and date, magnetic field, 3 sec. minimum interval.
Base Station: 3 to 60 sec. intervals standard, others optional time, date, magnetic field stored.
Remote Control: The same as manual but controlled through RS232C interface.

STORAGE CAPACITY:

Manual Operation: 3,800 standard, 30,000 optional; with 3 VLF stations 1,850 standard, 3,700 optional.
Base Station: 21,800 standard, 174,000 optional (24hr operation at 0.5 sec. interval).
Gradiometer: 3,200 standard, 26,000 optional; with 3 VLF stations 1,700 standard, 3,400 optional.
Power Consumption: 2 Ws per reading, up to 0.5W standby, less than 0.4mW when off.
Power Source: 12V 1.9Ah sealed lead acid battery standard, others optional.
Operating Temperature: -40 to +60°C
Storage Temperature: -70 to +65°C.
Input/output: 6 pin weatherproof connector, RS-232C, and (optional) analog output.
Dimensions: Console 223 X 69 X 240mm
Sensor staff 4 X 450mm sections
Sensor 170 X 71mm dia
Weight: Console 2.1kg
Staff 0.9 kg
Sensor 1.1kg
Standard Package: Console with batteries, harness
Sensor with cable, connector, Staff
Standard accessories: Charger, manual, case.

4- GROUND GEOPHYSICS RESULTS

4.1 Magnetics (see map 2)

The magnetics survey was carried out mainly over the metavolcanic lithodomain, but low magnetics signature in the northernmost part of the grid (Burntbush grid west) represents the southernmost portion of the metasedimentary lithodomain in this part of the project area.

Within the metavolcanics, three main units are distinguished, based on their magnetic signatures:

- * a northern east-west band about 1 km wide with generally low magnetic signature (but higher than in the metasediments) with elliptical to discontinuous linear higher magnetic trends;
- * a southern area of low magnetics which roughly corresponds to the Spade Lake porphyry;
- * a southern belt of higher magnetics response, into which the Spade Lake porphyry was intruded.

These three units correspond to units already described from the airborne survey (see section 2.4). The magnetics map produced from the ground survey differs slightly from the airborne map, but it probably introduces little or no additional precision, since line spacing of the two surveys is the same.

4.1 Electromagnetics

Before the HLEM production survey was started, two test lines were surveyed using two coil separations and eight frequencies. From these data, we chose a coil separation of 150m and four frequencies (440, 1760, 7040, 14 080 Hz) for the remaining lines on the grid (Burntbush grid west).

Interpreted conductor axes from the 440 and 1760 Hz surveys are shown on Map 2. EM profiles at 1760 Hz are shown on the drill sections (maps 4 to 13).

In the low magnetic (northern) subdivision of the metavolcanic lithodomain, several discontinuous conductors ranging in length from about 600 to 1200 metres have been identified with the survey performed at 440 Hz. Weaker responses at higher frequency suggest that these conductors may represent two more or less continuous horizons which extend across the entire grid. Additional weak, discontinuous responses are observed at 1760 Hz in the west, south of the main conductive horizons.

The westernmost conductor revealed by the 440 Hz survey is associated with an elliptical high magnetic anomaly, and may therefore be due to sulfide mineralization. The remaining conductors have no coincident magnetic anomalies. Furthermore, they generally transect the presumed volcanic stratigraphy at low angle. We interpret these conductors to be faults which are parallel to subparallel to the volcanic stratigraphy. Graphite content has been confirmed by drilling (H76-1, CC-1, BUR-17), but the discontinuous response at 440 Hz suggests that these faults are only locally graphitic.

West of Spade Lake, along the contact between the northern metavolcanic subdivision and the two southern units, a wide continuous anomaly is observed with the 1760 Hz survey, but which is not seen at 440 Hz. This anomaly corresponds to the Spade Lake shear in this area (see later).

East of Spade Lake, in the southern part of the metavolcanic lithodomain, a few short conductors of weak intensity are observed at 1760 Hz. The nature of these conductors is at this time uncertain; one of these was drilled in hole BUR-24 and the core shows no evidence of a conductive unit.

Results of surveys at 7040 and 14 080 Hz have not yet been fully interpreted and will be described at a later time.

3. SUMMARY OF WORK RESULTS PRIOR TO 1990

3.1 Summary of work and results, Pre-Cogema

Assessment reports show that several companies worked in the Burntbush River area searching for base metals from 1958 to 1982. Most of these programs involved airborne geophysical surveys, with ground geophysics over selected EM anomalies followed by diamond drilling.

Of these, the following companies drilled EM conductors which are located within the present limits of the Burntbush River property (figure 3):

i)	CONWEST (1958):	CW-1 to CW-7	(6 holes)	Just east of Burntbush River
ii)	NORANDA (1976):	H-76-1	(1 hole)	West part of property
iii)	GEOPHYSICAL ENGINEERING (1976)	CC-4 CC-1	(1 hole) (1 hole)	East part of property West part of property
iv)	DOME (1982)	165E-1, E-2	(2 holes)	North central part of property
Total			11 holes	

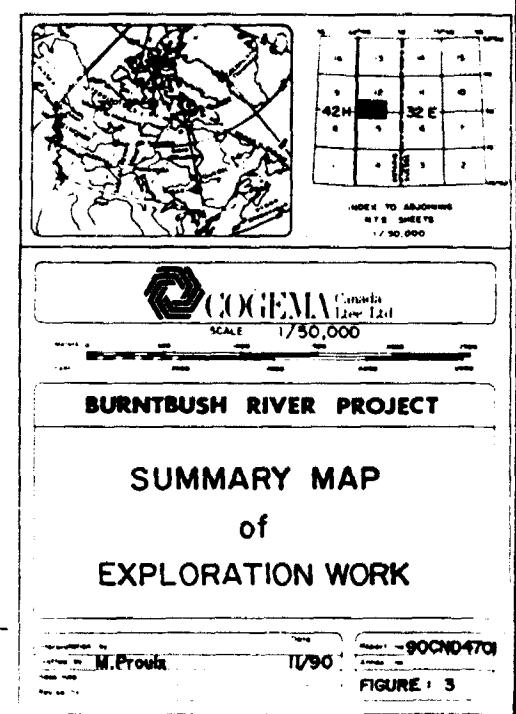

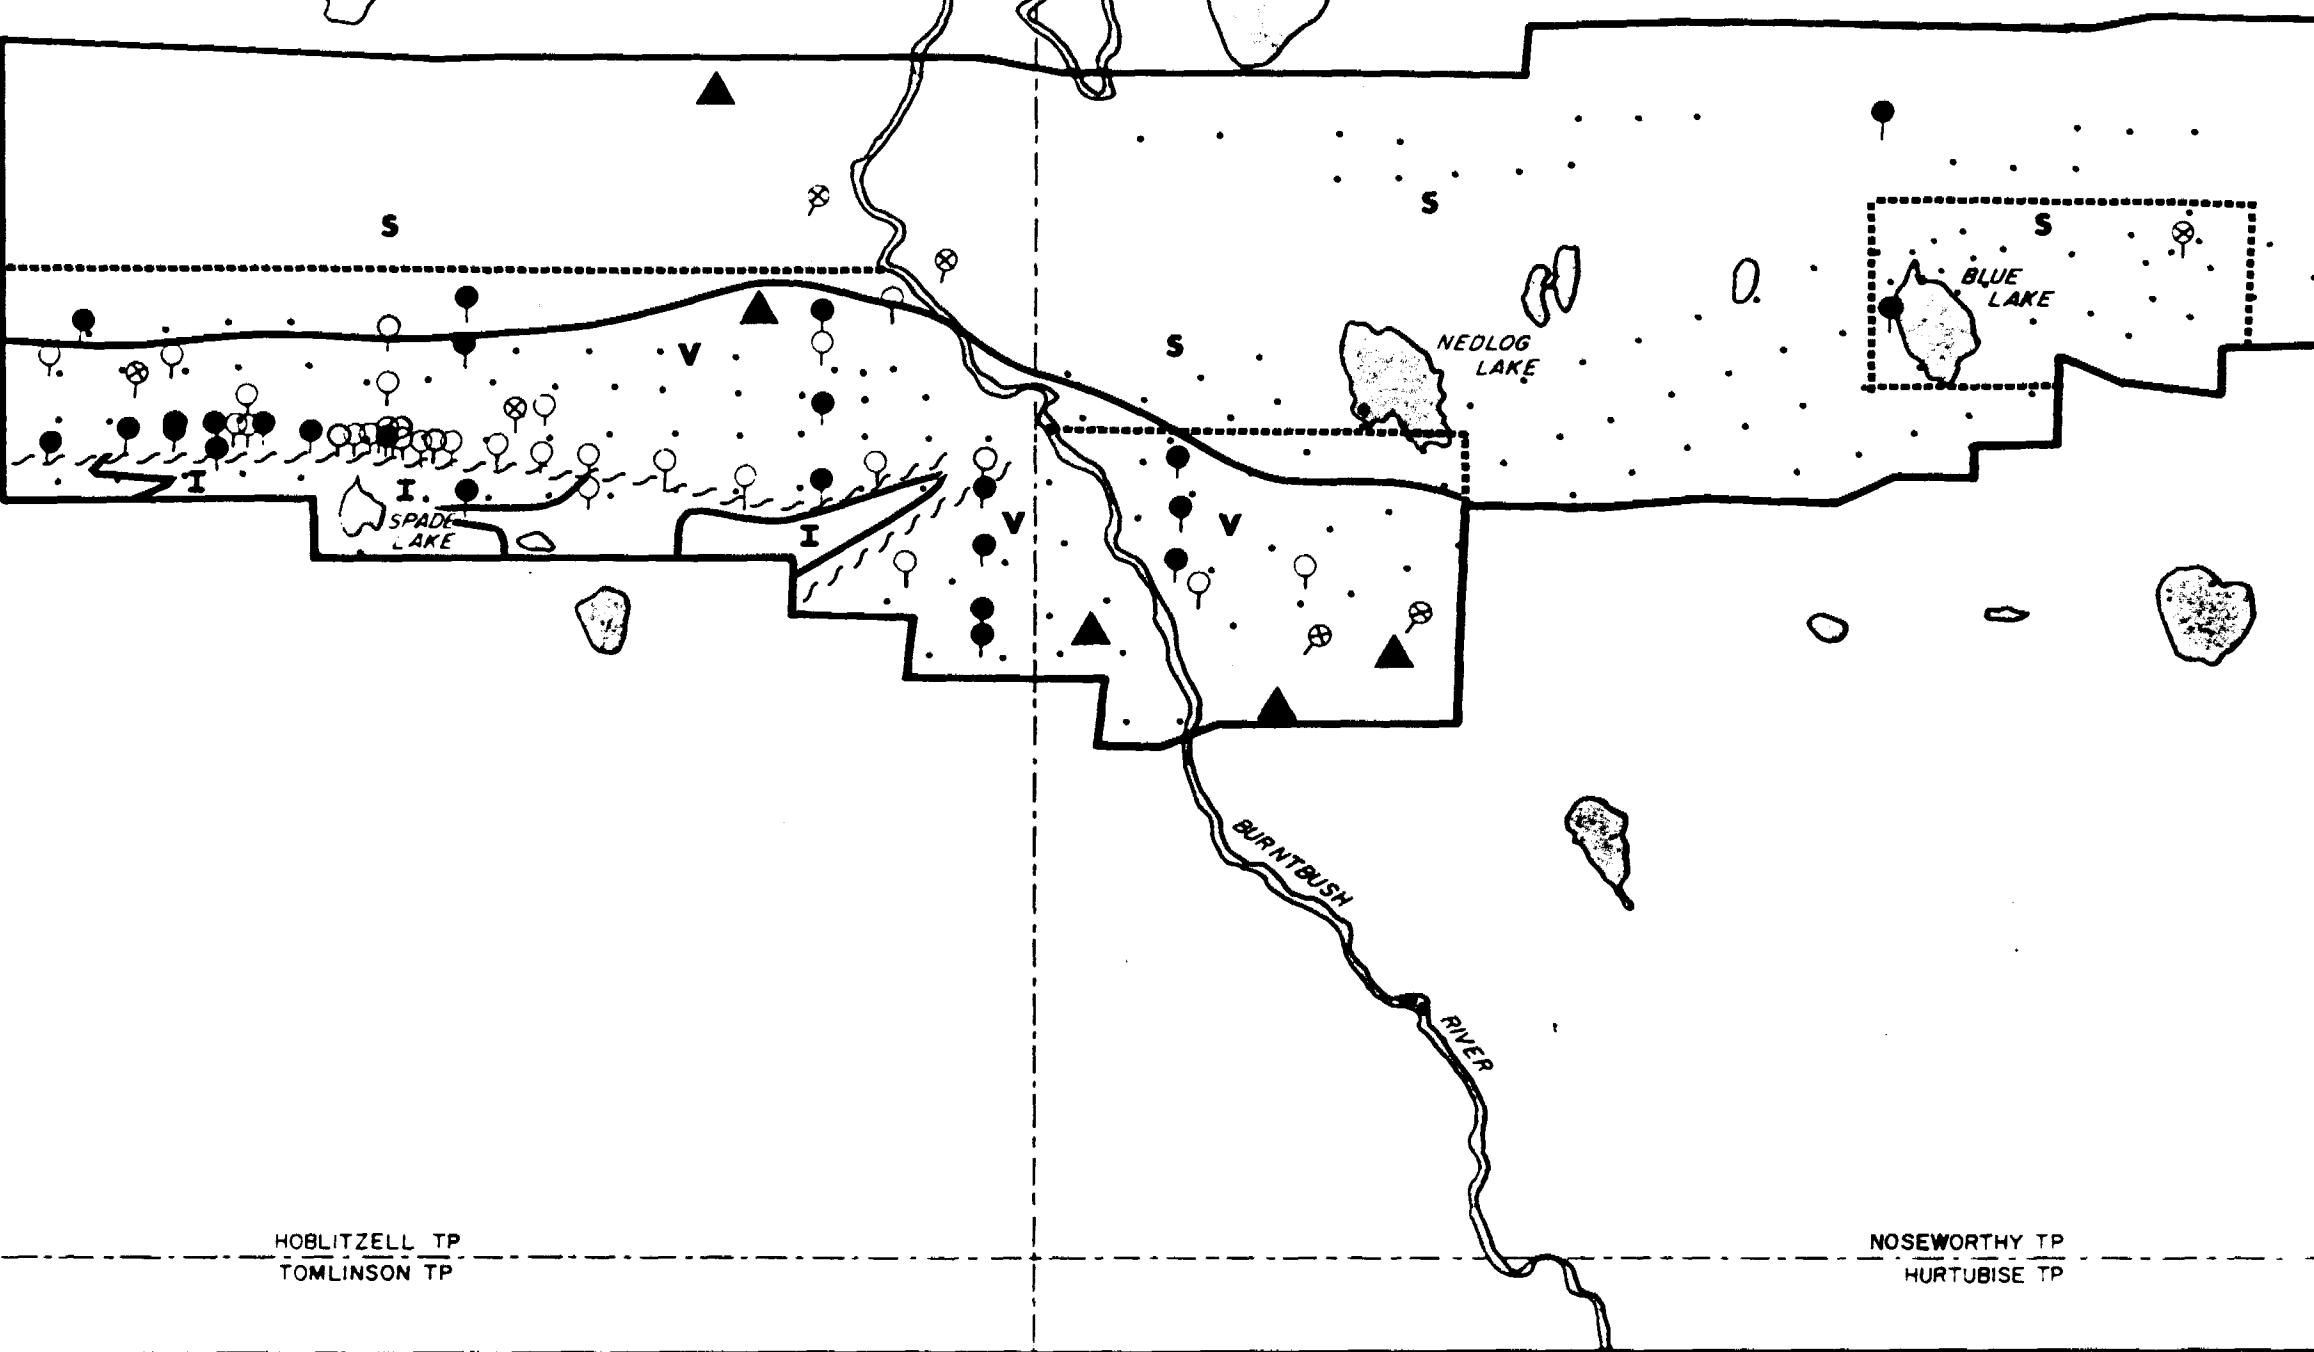

No significant results arose from that work. Most E.M. anomalies were explained by barren pyritic and/or pyrrhotitic horizon or graphitic rocks. It should be noted however that no gold analytical results are available for the Conwest and Noranda holes.

In 1984, the present property (excepting 12 claims held by Dome up until 1986) was staked for Ameritex Resources, who commissioned an airborne geophysical survey over the property (magnetics and VLF by Aerodat). Cogema Canada acquired the property in May 1986 from Ameritex.

3.2 Summary of work and results: Cogema 1986 to 1989

In 1986, the following work was performed:

- . 12 claims, previously owned by Dome, were added to the property;
- . geological traverses at 100 m spacing were performed to identify, map and sample surface exposures of bedrock;
- . five of the largest outcrop areas were mechanically stripped, and these were mapped and further sampled;
- . an airborne magnetics, VLF and frequency domain EM survey was flown at 100 m spacing by Dighem. This survey provided a larger coverage of the area and the EM survey lacking in the Aeorodat survey.

Results:

The property has very limited outcrop exposure. Geological mapping outlined several undocumented outcrops of which the most important were stripped (figure 3). This work provided the basis of the geological knowledge of the property. Several zones of shearing were outlined and a few localized gold anomalies discovered (up to 110 ppb Au in outcrop).

The magnetic survey results permitted the division of the property into a northern low magnetic metasedimentary domain and a southern mixed volcanic dominated domain of variable magnetic susceptibilities (figure 3). Several conductors were outlined by the E.M. survey.

In 1987, exploration work consisted of:

- . 133 reverse circulation drill holes (3,159 meters) concentrated in the southern half of the property as to cover the metasedimentary-metavolcanic contact (Casa-Berardi target) and the mixed metavolcanic domain (figure 3).

Results:

Study of the survey indicated that most of the lodgment till was removed or reworked by a later ice sheet readvance. An area near Blue Lake (figure 3) which contained significant gold in sands and gravel was selected as anomalous. The survey also provided bedrock samples throughout the property giving further insights of the geology of the area and provided valuable access roads.

In 1988, exploration work included:

- . 201 km of linecutting at 50 m line spacing over 2 grids:
 - Burntbush grid (central part of property)
 - Blue Lake grid (including anomalous area)
- . Ground magnetometer and VLF surveys over the grids.
- . 6 induced polarization dipole-dipole test lines, mainly over the Blue Lake grid (8 km).
- . 40 additional reverse circulation holes (758 meters) to complete the previous regional survey done in 1987.
- . 13 diamond drill holes (BUR-1 to BUR-13) for a total of 2,905 meters.

Ten (10) diamond drill holes were drilled along three fences in the south-central part of the property (Burntbush grid) where reverse circulation drilling indicated variable rock types and weakly anomalous gold values (up to 31 ppb) and where airborne magnetics results suggested probable structural (but also possibly stratigraphic) contacts of potential interest.

The remaining three holes were more widely distributed across the property. Two holes were drilled in the metasediments: the first to test a strong E-W magnetic anomaly in the northeastern portion of the property, the second to test an IP anomaly on Blue Lake grid near the anomalous reverse circulation zone. Finally, one hole (BUR-12) was drilled west of Spade Lake to test a magnetic contact where reverse circulation drilling had again indicated weakly anomalous gold values (up to 28 ppb in bedrock).

Results:

The most significant result of the 1988 campaign was the collaring of BUR-12 in a sheared, pyritic, gold anomalous shear zone which returned several sections with greater than 100 ppb Au distributed over a total width of 40 meters.

In addition, an anomalous zone a few meters thick was intersected in BUR-9 and isolated gold anomalies were outlined in BUR-5, BUR-10, BUR-11 and BUR-13.

In 1989, work performed included:

- . Western extension of Burntbush grid to western limit (79 km).
- . Magnetometer and Max-Min surveys (4 frequencies) over the grid.
- . 12 diamond drill holes BUR-14 to BUR-25 (2,433 meters).

Two main targets were tested:

- . The shear zone outlined by BUR-12.
- . The major contact of the metasedimentary and metavolcanic domains.

Results:

The main results of the 1989 drill program were:

- . The delimitation of a 40 to 100 meter thick auriferous E-W, north dipping shear zone first outlined in BUR-12 with a probable minimum strike length of 5 km from the western boundary to BUR-9.
- . The geochemically anomalous nature of the shear zone over its entire width (100 to 200 ppb Au) in the seven 1989 holes drilled in its western part including several subeconomic intersections $> 1 \text{ g/t Au}$ and one economic intersection in BUR-19: 7.90 g/t Au over 4.5 m.
- . The fact that the shear zone had not been drilled for a distance of 500 meters westward from BUR-19 and for 2.8 km eastward to BUR-9.
- . The absence of shearing or mineralization at the major metasedimentary-metavolcanic contact.

4. DESCRIPTION OF THE 1990 FIELD PROGRAM

The main objectives of the 1990 field program were to:

1. Follow-up at close spacing the economic intersection of BUR-19 (7.90 g/t Au / 4.5 m).
2. Continue testing the Spade Lake shear zone westward from BUR-9 and tracing it eastward from BUR-9 east of the Burntbush River.
3. Continue regional exploration to define other auriferous zones.

To attain these objectives, the old grids covering the shear zone (Burntbush west and Burntbush grids) previously cut in the winter, were repicketed (total 129 km). In addition, a new grid was established in the extension of the Burntbush grid east of the River (37 km). This work was contracted to Gérard Houle of Rouyn-Noranda. New lines were cut at 100 m spacing and picketed at 25 m intervals. A magnetometer survey was carried out over the new grid at 12.5 m spacing (32 km). The instrument used was a proton magnetometer GSM-19 from GEM system, with a 0.1 nT precision. Diurnal variation were corrected with a base station.

Since the Spade Lake shear zone can be traced as a high frequency HLEM conductor, a MAX-MIN 1 survey was performed over the new grid and the original Burntbush grid which had only been surveyed with VLF. A total of 104 km was surveyed using a 150 m coil spacing and 440, 1,760, 7,040 and 14,080 hz frequencies. E. Gillick of North Bay, Ontario was contracted for both the magnetic and HLEM surveys.

A diamond drill program comprising 30 holes totalling 6,353 meters was executed by Forage Mercier inc. of Boisbriand, Quebec. Table 1 summarizes drilling performed. Two unitized Long Year 38 drill rigs were used to extract BQ core in 10 foot runs.

A summary of all work performed in 1990 is presented in figure 4.

Table 1:

LEGEND

- New line cutting : 37 km
- Magnetometer survey : 32 km
- - - Line repicketing : 129 km
- Max-min I (4 frequencies) : 104 km
- 26 Diamond drilling: BUR: 26 to 55
30 holes (6353m)

Drill core was logged and sampled by Cogema's personnel. Footages were converted to meters and logging was performed at 1:100 scale. Samples were analyzed for Au, K₂O, Na₂O and where chalcopyrite was observed for Cu and Zn by X-Ral Laboratories of Rouyn-Noranda. Sample interval for Au, K₂O, Na₂O (Cu, Zn) was 1.5 or 1 meter except in areas of core loss. In addition, 0.5 meter intervals of various units were sent to Chimitec in Ste-Foy, Quebec for major elements, CO₂, Au and 33 minor elements analyses. Thin sections were taken from most of these samples. Results from thin section study and major and minor element geochemistry will be discussed in a separate report. Only an overview of the main results where pertinent will be presented in this report.

5. GROUND GEOPHYSICS RESULTS

Results presented summarize work done by Cogema's geophysicist Rodney Koch.

The new magnetic survey was leveled with previous surveys. The area under study which corresponds to the eastern portion the grid area and which falls mostly in the large mixed metavolcanic terrane is characterized by (map 1B):

- . A northern low magnetic domain which corresponds to the southern part of the metasedimentary domain.
- . A central portion with moderate magnetic relief similar to the band north of the Spade Lake shear zone further west.
- . A southern portion characterized by higher magnetics similar to the domain south of the Spade Lake shear zone further west.
- . A few thin N-S linear highs interpreted as Proterozoic diabase dykes.

Conductors outlined by the HLEM survey are also shown along with previously known conductors on the compilation map (map 1).

Briefly, the following results can be highlighted:

- . The high-frequency HLEM conductors defining the Spade Lake shear zone were not extended much further east than BUR-9.
- . A high frequency conductor corresponding to a magnetic high in the central east portion of the grid area is very similar in response to the long conductor straddling the major metasedimentary-metavolcanic contact and is interpreted as a stratigraphic horizon.
- . A few well defined strong to moderate bedrock conductors are present in the new grid area.

BURNTBUSH RIVER PROJECT
LISTING OF MAXMIN I AND MAGNETIC SURVEYS

Notes:

Column 1: line: - = west
+ = east

Column 2: station: - = south
+ = north

Columns 3 - 10: MaxMin I readings - 4 frequencies
in-phase rdg precedes out-of-phase rdg

Column 11: levelled magnetic readings
(background subtracted: -58 000nT)

Dear Sir:

RE: APPROVAL OF ASSESSMENT WORK ON MINING CLAIMS L 78921 ET AL. IN
HOBLITZELL AND NOSEWORTHY TOWNSHIP.

The Assessment Credits for Geophysics, section 14 of the Mining Act
Regulations, have been approved as of May 29, 1992.

The Assessment Credits for Report of Work W9280.00029 are as listed on
the original submission. The Credits for W9280.00030 are as listed on
the attached Assessment Credit form.

Please indicate this approval on the claim record sheets.

If you have any questions please call Clive Stephenson at
(705) 670-7251.

Yours sincerely,

Ron C. Gashinski
Senior Manager, Mining Lands Branch
Mines and Minerals Division

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark () one of the following:

1. Credits are to be cut back starting with the claim listed last, working backwards.
 2. Credits are to be cut back equally over all claims contained in this report of work.
 3. Credits are to be cut back as prioritized on the attached appendix.

In the event that you have not specified your choice of priority, option one will be implemented.

Statement of Costs for Assessment Credit

État des coûts aux fins du crédit d'évaluation

Mining Act/Loi sur les mines

Transaction No./N° de transaction

DOCUMENT NO.

W 9280 • 00029

Personal Information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minings Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adresser toute question sur la collecte de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 159, rue Cedar, 4^e étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'œuvre		
	Field Supervision Supervision sur le terrain		
Contractor's and Consultant's Fees Droits de l'entrepreneur et de l'expert-conseil	Type Linecutting 79.3km @ 220/km	17 446	
	mag 80.5km @ 80/km	6440	
	HLEM 80.5km @ 140/km	11 265	35 151
Supplies Used Fournitures utilisées	Type		
Equipment Rental Location de matériel	Type		
Total Direct Costs Total des coûts directs		35 151	

2. Indirect Costs/Coûts indirects

* Note: When claiming Rehabilitation work Indirect costs are not allowable as assessment work.
Pour le remboursement des travaux de réhabilitation, les coûts indirects ne sont pas admissibles en tant que travaux d'évaluation.

Type	Description	Amount Montant	Totals Total global
Transportation Transport	Type		
Food and Lodging Nourriture et hébergement			
Mobilization and Demobilization Mobilisation et démobilisation		1200	1200
Sub Total of Indirect Costs Total partie des coûts indirects			1200
Amount Allowable (not greater than 20% of Direct Costs) Montant admissible (n'excédant pas 20 % des coûts directs)			1200
Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs)	Valeur totale du crédit d'évaluation (Total des coûts directs et indirects admissibles)		36 351

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

Total Value of Assessment Credit	Total Assessment Claimed
36 351	x 0.50 = 18 175

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

Valeur totale du crédit d'évaluation	Evaluation totale demandée
	x 0.50 =

Certification Verifying Statement of Costs

I hereby certify:
that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown on the accompanying Report of Work form.

that as district geologist I am authorized
(Recorded Holder, Agent, Position in Company)
to make this certification

Attestation de l'état des coûts

J'atteste par la présente :
que les montants indiqués sont le plus exact possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de _____ je suis autorisé
(titulaire enregistré, représentant, poste occupé dans la compagnie)

à faire cette attestation.

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark (✓) one of the following:

- Credits are to be cut back starting with the claim listed last, working backwards.
- Credits are to be cut back equally over all claims contained in this report of work.
- Credits are to be cut back as prioritized on the attached appendix.

In the event that you have not specified your choice of priority, option one will be implemented.

Note 1: Examples of beneficial interest are unrecorded transfers, option agreements, memorandum of agreements, etc., with respect to the mining claims.

TO ACCOMPANY REPORT OF WORK DESCRIBING

CONTRACT GEOPHYSICS 1989, 1990

BURNTBUSH RIVER PROJECT

A: technical documents submitted to accompany two reports of work because 1989 work is eligible at 50% whereas 1990 work is eligible at 100%:

- * COGEMA Report no. 91-CND-47-02A
- * MAPS 1A and 1B to show location of grid relative to claims
- * pages 26-27 from COGEMA Report no. 89-CND-47-02 and pages 5-15 from COGEMA Report no. 90-CND-47-01 (these reports have been or will soon be submitted for assessment)

B: all north arrows are astronomic

C: statement of qualifications

I, John Learn, of Rouyn-Noranda, Quebec, do hereby certify that:

- * I am a geologist and have been employed by Cogema Canada Ltd. since 1982;
- * I am a graduate of Brock University (H.B.Sc. 1977) and McGill University (M.Sc.App. 1981);
- * I have been practising my profession since 1977;
- * I am a fellow of the Geological Association of Canada

and that I have an intimate knowledge of the work performed and described herein.

G-3513

This figure is a topographic map of a coastal area, likely a river delta or estuary. The map is oriented with North at the top. The vertical axis on the left represents elevation in meters (M), ranging from 46 M at the bottom to 54 M at the top. The horizontal axis at the bottom represents distance in kilometers (Km), ranging from 0 Km on the left to 10 Km on the right.

The map features several geographical features labeled:

- Soucie Cr.**: Located in the lower-left quadrant, near the 48 M elevation line.
- East Soucie Lake**: Located in the middle-left quadrant, near the 48 M elevation line.
- Lake**: Located in the center-left quadrant, near the 49 M elevation line.
- Soucie Creek**: A winding stream located in the lower-middle quadrant, flowing generally eastward.
- Burnt Bush**: A prominent feature in the upper-right quadrant, indicated by a dashed line and labeled text.

A legend is located in the upper right corner, enclosed in a dashed box. It contains three entries: "L" with a line symbol, "T" with a triangle symbol, and "S" with a square symbol.

NOSEWORTHY TOWNSHIP

This geological map displays the following key features:

- Geological Units:** Mikwom, Porphyry, West, and Little Porphyry.
- Mineral Occurrences:** Numerous points labeled with codes such as 891956, 891957, 891958, 891959, 891960, 891961, 891962, 891963, 891964, 891965, 891966, 891967, 891968, 891969, 891970, 891971, 891972, 891973, 891974, 891975, 891976, 891977, 891978, 891979, 891980, 891981, 891982, 891983, 891984, 891985, 891986, 891987, 891988, 891989, 891990, 891991, 891992, 891993, 891994, 891995, 891996, TOTAL FIELD INTENSITY MAGNETIC SURVEY
VERTICAL PROFILE SCALE (AMPLITUDE) 1cm=500 nt
POSITIVE TO THE EAST
BASE LEVEL AT 750 nt
BACKGROUND SUBTRACTED (-58000 nt)
SURVEY INSTRUMENT: E.D.A. OMNI IV
SURVEY BY: VAL D'OR GEOPHYSIQUE LTÉE

COGEMA Canada Inc.	
HORIZONTAL (DISTANCE) Scale:- 1:10000	
BURNTBUSH RIVER PROJECT	
PROFILES OF TOTAL FIELD MAGNETIC INTENSITY (WEST HALF)	
DRAWN BY:- R. KOCH DATE:- 13 NOV. 1991	SHEET 1 of 2
MAP No 3
