1993 Report

Re: Section 10 of Mining Act  
Regulations

(i) the two sections indicated on map  
has an outcrop Elevation of approx 40 ft to 75 ft

(iv) find enclosed copy of dates equipment  
& hourly rates

(v) in 1993 we checked with Mr. Ray Dexamme  
who said that line recutting was not to take place  
for a minimum of 5 yrs from date of registered  
claims.

(b) find enclosed detailed map 1:5000

(i) in 1993 surface stripping was limited to the two  
areas shown on map

(ii) the two areas used for surface samples  
in 1993 consisted of stripping each area  
approx 50' x 50'

(iv) Graphic bar scale included top right corner  
of map

(3) line survey & mapping: by Mr. Doug Magee O.L.S.

Brief report of Work-yr. 1993 only

After selecting these two areas we used equipment to clear access and strip surface of both areas approx 50'x50'

Drilling for dimensional stone samples lasted until we accumulated approximately 5 samples of approx 1 cubic meter

Which were processed by Kouri Granite  
Sudbury.

J. L. Lait

Mr. Steven B. Beneteau  
Kind enclosed copy of ASTM TEST  
dated Feb 6/95

Test results were well above ASTM Standards

Feb 23/95 I had a telephone conversation with  
Mr. Greg Hunt one of the engineers  
that performed ASTM test and he informed  
me that this type of rock would be  
ideal for trap rock and he was sure it  
would pass H-L-1. tests.

I checked with MTO Engineering Division,  
North-Bay + Toronto and they said there is  
a demand for this high quality rock.

by processing 100% of Material  
I'm sure it would make this  
venture (feasible) + (economical)

Thank You  
George

ATTENTION: Mr. George Lehaie

Dear Sirs:

### BUILDING STONE TEST

Below are the results for the test requested performed on the rock samples submitted to our office. These tests were undertaken according to ASTM standards as outlined in Volume 4.08.

The rock has been tentatively identified as a medium grained anorthosite. Anorthosite falls within the Granite Group according to the ASTM standard rock classification.

It should be noted that polished surfaces of the specimens indicate .25 to .50 percent sulphide mineralization. The mineralization occurs as anhedral to subhedral crystals less than 1 mm in size. This mineralization is of concern, as there may be a potential for oxidation of some or all of this mineralization. Additionally, found locally are discontinuous fractures with no apparent orientation. The fractures observed have a maximum length of 3 cm and an aperture of less than 1 mm. The fractures described have no apparent effect on the overall viability of the stone, as testing was well above ASTM minimum values. Test results are shown on the enclosed table.

Should there be any questions regarding these results, please do not hesitate to contact our office.

Yours truly,
