MONCRIEFF-0014-A1, #2

**Legend**

relative gradient potentials  
station readings in millivolts per 100'  
background ± 50mv.

**Conclusions** since no graphite was noted, and since sulphides were noted on outcrops near A40 on highway 144 coinciding with a self-potential anomaly of -336 millivolts, sulphides are suspected as the cause of self potential anomalies on lines A to I from stations 35 to 50.
