

NORTH RIVER PROPERTY – Fraleck twp. Assessment report 2004, J. Brady

PURPOSE [of work program]

A] Diabase dykes located on east side of North River

1] To determine the mineral potential associated with narrow north-south striking diabase dykes located within claims 985162, 985163, and 985164 [map F] and 2] to relocate Magnetometer features previously identified in a survey by Norwin Geological Ltd. In 1983. [all trace of the grid associated with that survey is no longer identifiable] And 3] to perform soil testing [MMI]*over defined features.

B] To explore/expose the mineral potential of a narrow diabase dyke that trends SE across claim 3002860 and the NW part of claim 3002854 and also to explore/expose the contact of a diabase sill situated on claim 3002854 [maps C & F]

The methods utilized for the program are reconnaissance MAG/VLF; power and manual stripping/ trenching; sampling and assaying where indicated; and soil sampling {Mobile Metal Ions} – the rationale for the MMI sampling was due to extensive overburden encountered in the targeted areas.

PROPERTY: the mining claims listed above are part of a larger group of claims held by J.Brady of Sudbury, Ont.

LOCATION: claims 985162,63, 64 are situated in SE Fraleck Twp. And just on the east side of the north branch of the Wahnapitae river.

Claims 3002860 and 3002854 are located in central to SE Fraleck Twp. And are SE of the eastern shore of Fraleck lake. [GPS coordinates are shown on maps C and F]

ACCESS: from Sudbury, 37 km north via Hwy 69 N to Capreol; then Hwy 545 north for 7 km to the North River road; then NE for +/- 19 km-for a total of 63 km.

GEOLOGY: the brief descriptions [target areas] described above are taken from geological map 2212, part of Geological Report 91.

EXPLORATION/ WORK PROGRAM:

The attached work log provides a summary of the work performed [activity], dates, workers/ contractors and map reference locations.

CONCLUSIONS:-claims 985163 and 985164 –location map F –Plots F3 to F7 incl.- East side of river. Most of the Mag and weak Em features were attributed to changes in topography [swamp valleys] or differentiation of rock types [from intrusive to sedimentary horizon]. The responses at 97N and 99N are considered worthy of follow up since they would be situated entirely within the intrusive and are proximal to the ‘B’ sulfide showing –map ‘C’. No outcrop was available here for sampling and follow up will be via an MMI soil testing program.

Claim 3002854 –location map F –Plots F1 and F2, - west side of river. Lines 50N, 51N and 52N are all considered worthy of follow up as these lines occur at or near the

south contact of the diabase sill with the sediments. Subsequent power stripping and MMI soil sampling were employed in follow up since no outcrop was available for viewing/sampling.

**POWER STRIPPING & MANUAL MUCKING/CLEANING: -Location map 'C'-
--detail maps 2 to 6 incl.**

No attempt was made to power strip east of the river [Plots 3 to 7] due to the proximity of the river. The access trail was put in to transect the diabase sill on claim 3002854 and to follow directly over the SE trending narrow diabase dyke on claim 3002860 all the way to the SE shore of Fraleck lake. "Sounding" with scaling bars was employed to determine suitability for power stripping.

Detail maps 2 to 6 inclusive, outline trenches A to J. At trenches A, B, and C [map2] no cause for the Mag/ EM anomalies was found. At trench C, where we previously uncovered large fine grained diabase float pieces with considerable cobalt "bloom" along the fractures, the excavator could not reach bedrock. For trenches D to J, although we had previously found while prospecting, some rusty diabase float near the areas trenched, no significant sulfides or alteration was encountered.

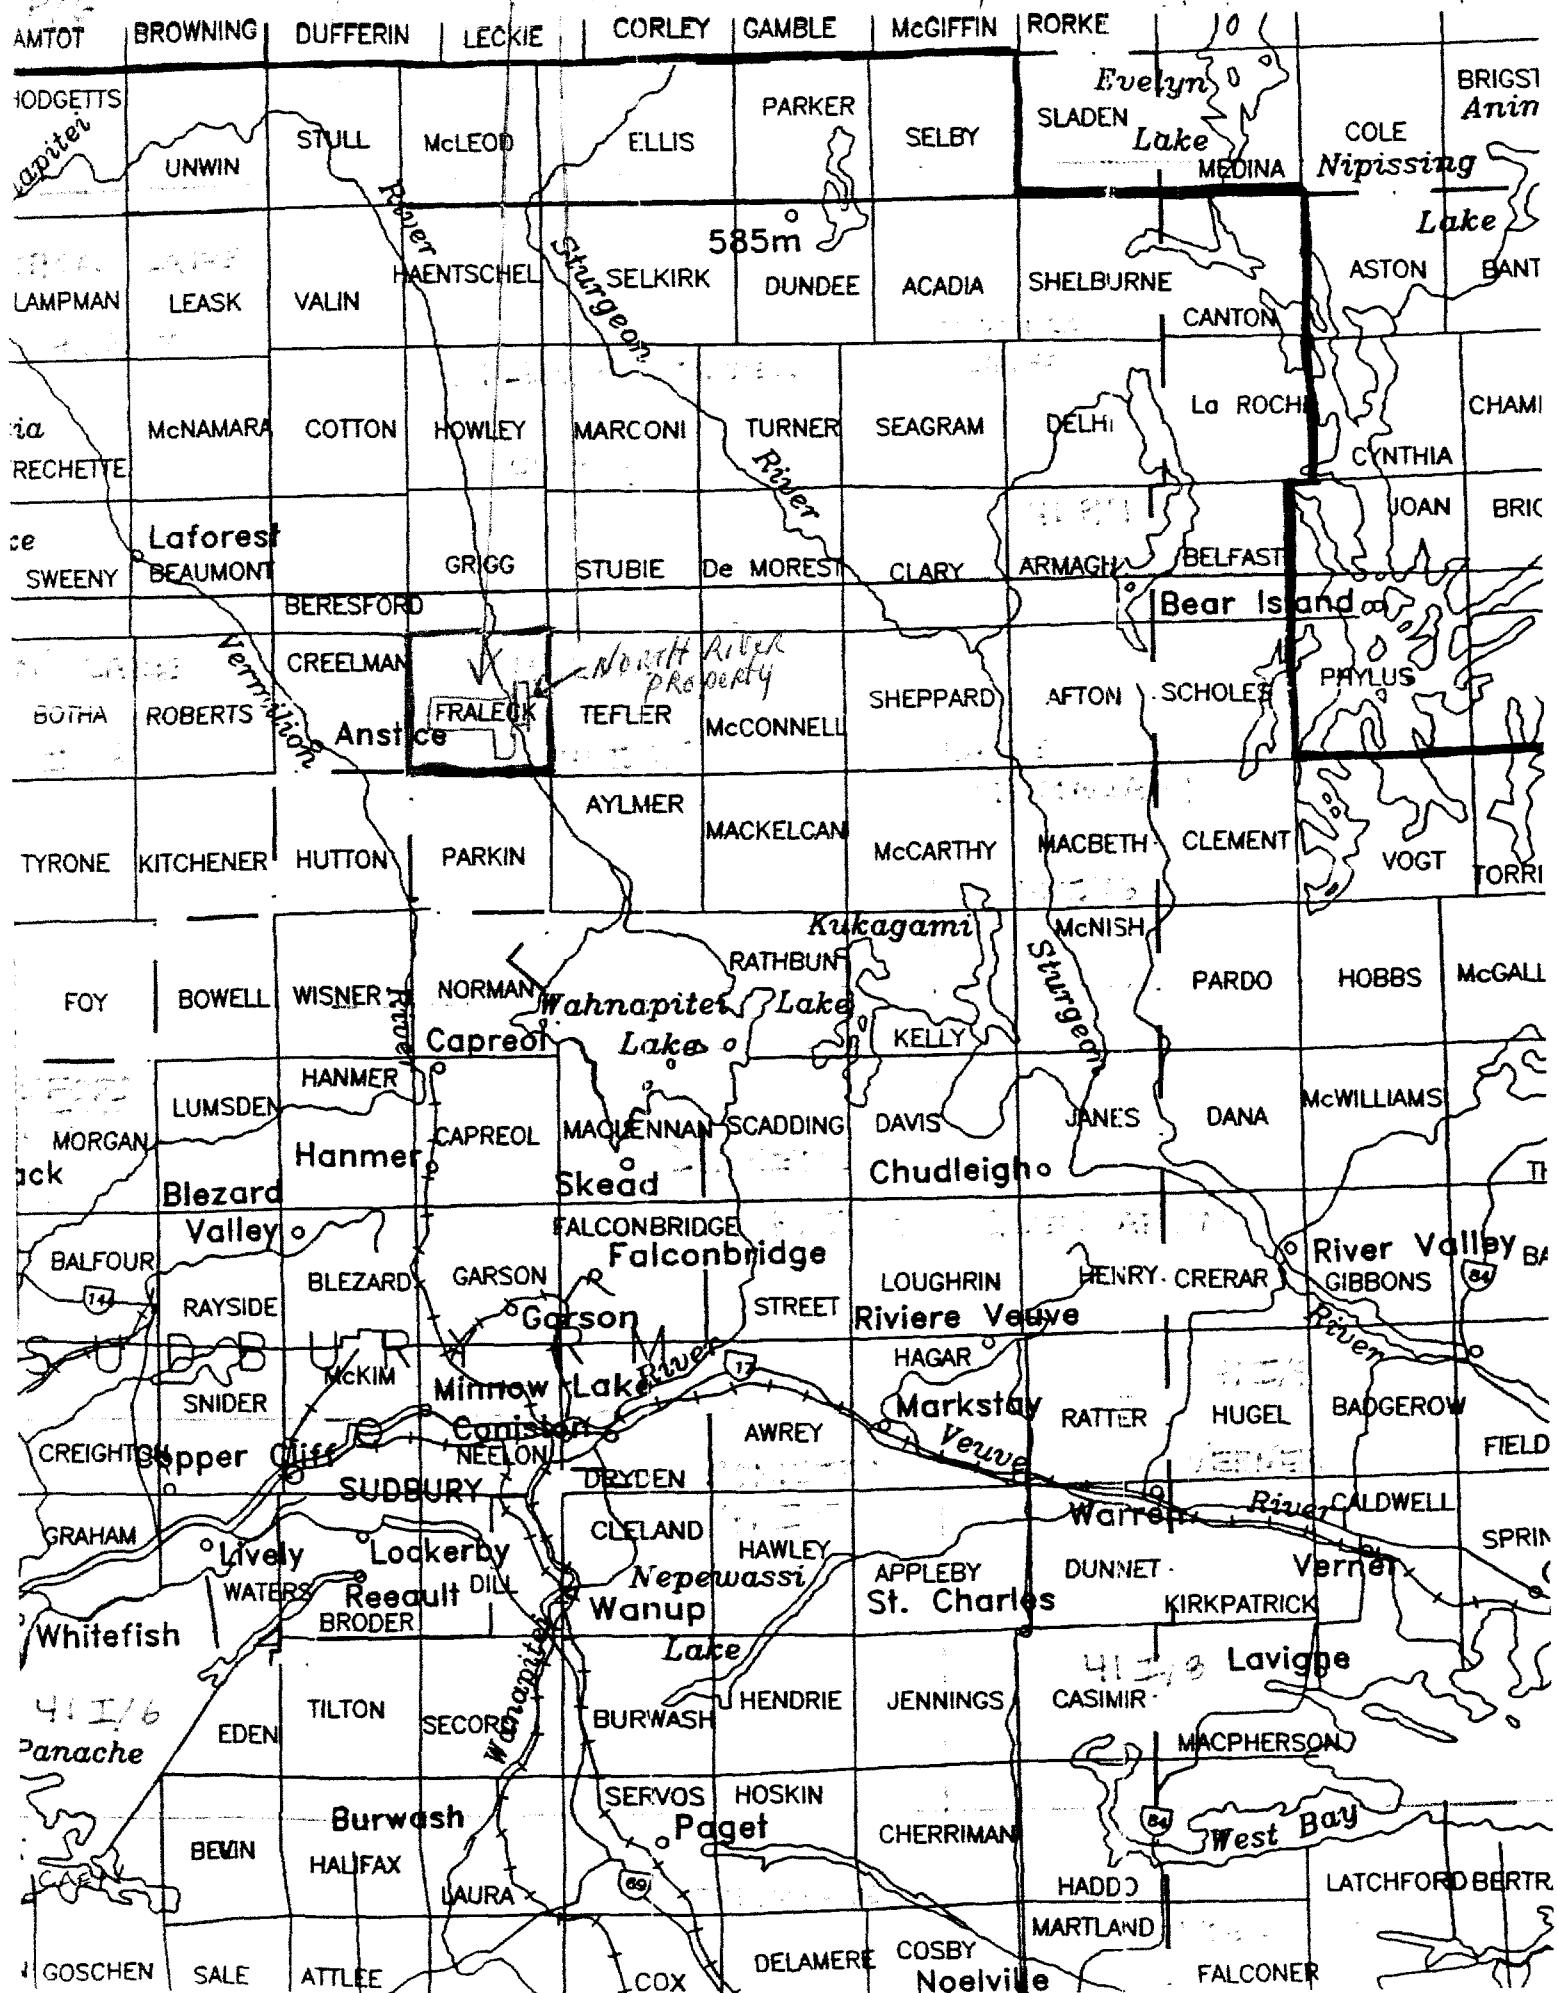

ROCK SAMPLE SITE: Location map 'C'; Detail map 1

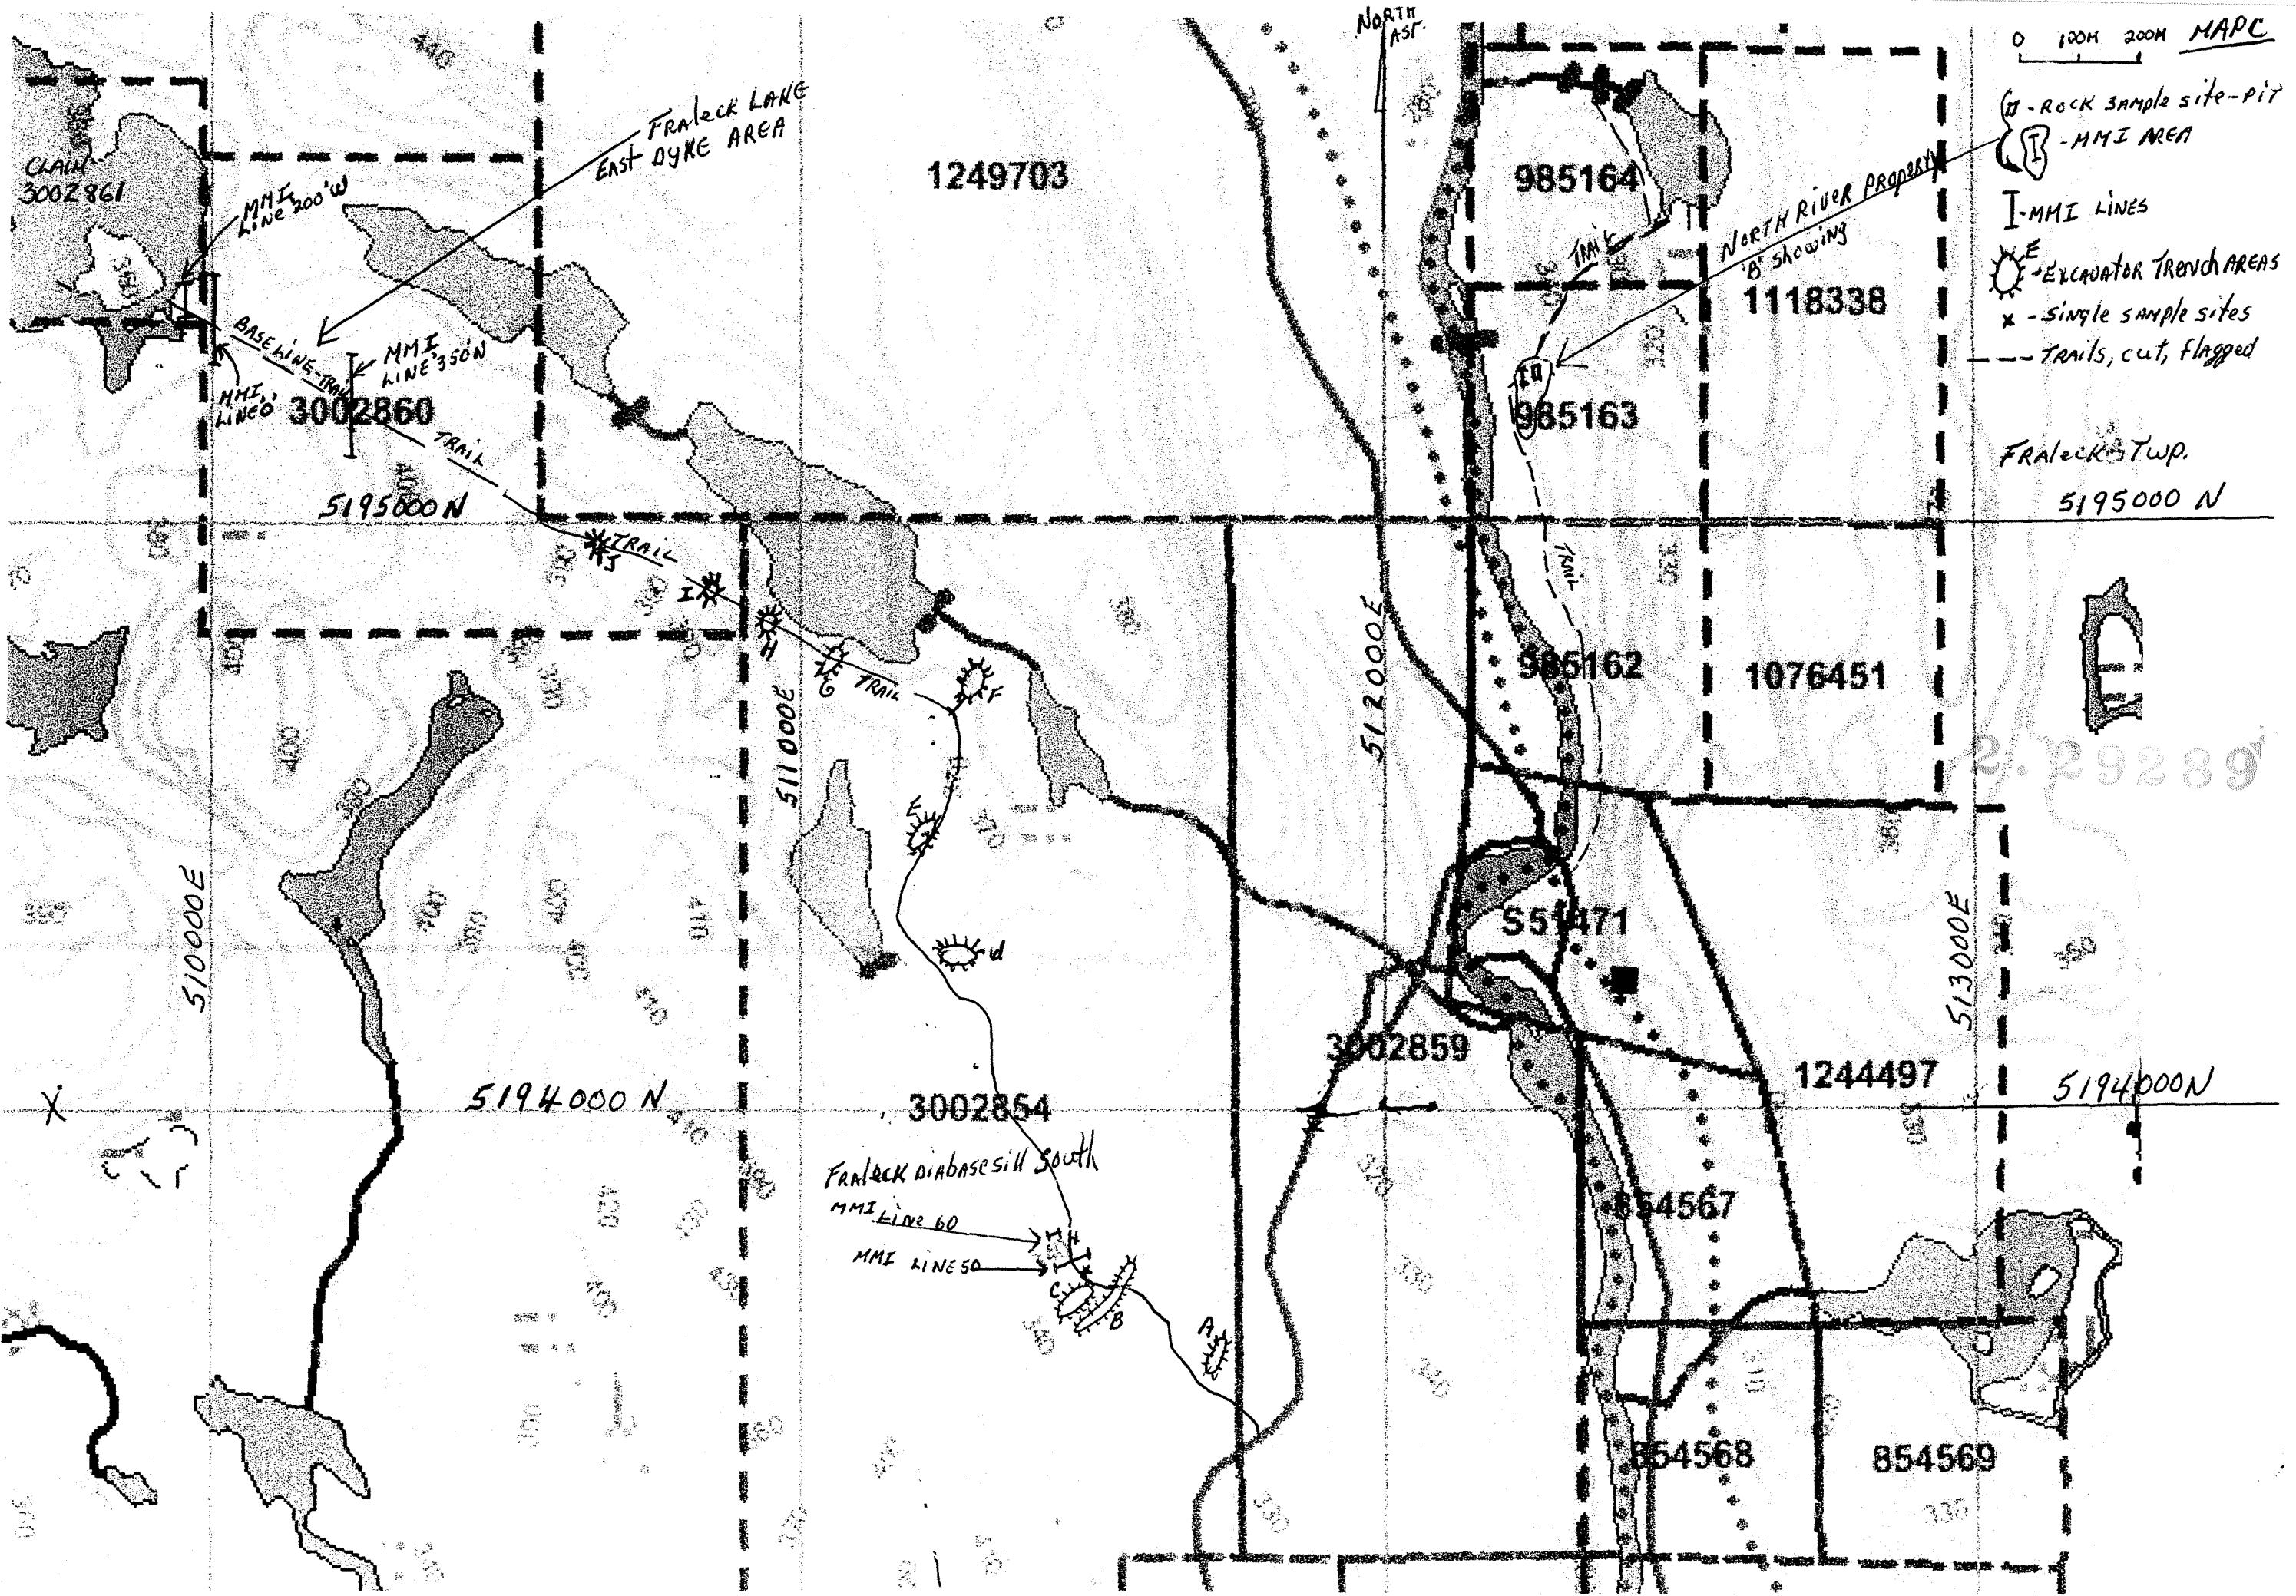

This was an old showing that had previously returned some very low values in nickel, copper. We scaled away the oxidized and broken rock and silt in order to properly channel sample the fresh rock. The assays are appended. The results showed a slight elevation in Pd -25 ppb and Au -211 ppb. More encouraging were Co -184 ppm; Ni - 708 ppm; and Cu - 8849 ppm.

Due to the extensive overburden cover or proximity to the North River [environmental concerns] additional geophysics and soil sampling will be considered in the future.

Dear Sir or Madam

Submission Number: 2.29289
Transaction Number(s): W0570.00267

Subject: Approval of Assessment Work

We have approved your Assessment Work Submission with the above noted Transaction Number(s). The attached Work Report Summary indicates the results of the approval.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

If you have any question regarding this correspondence, please contact STEVEN BENETEAU by email at steve.beneteau@ndm.gov.on.ca or by phone at (705) 670-5855.

Yours Sincerely,

A handwritten signature in black ink that reads "Ron C Gashinski".

This map may not show unregistered land tenure and interests in
land including certain patents, leases, easements, right of ways,
flooding rights, licences, or other forms of disposition of rights and
interest from the Crown. Also certain land tenure and land uses
that restrict or prohibit free entry to stake mining claims may not be
illustrated.
