010

O.M.E.P. Administrator.

My program consisted mainly of stripping and trenching. A number of diabase dykes strike through the granite and migmatites (country rock). It is along the contact of these dykes that the mineralization occurs. Disseminated pyrite and chalcopyrite occur along these contacts. Assaying for gold, silver and copper indicates some non-commercial enrichment. Both Inco and Falconbridge have visited the property and expressed some interest.

Thank You

Harold V. Barry
