

DESCRIPTION OF STRIPPING/TRENCHING CLAIM 1211011 - PARKIN TWP JAN/03

- (A) Massive to semi massive coarse pyrite exposed in rock trench has a width of 15-20cm striking @ 90°. ^{For ± 3 metres} Adjacent to this massive "core", the rock has disseminated pyrite and occasional galena cubes for 70 to 80 cm on either side of the "core".
sample # 68857 - grab of diss. sulfides; # 68858 - grab of massive sulfides
- (B) Exposed barren, brecciated and carbonated limestone/sandstone
- (C) Occasional and "spotty" inclusion of galena crystals and minor pyrite in quartz stockwork within limestone/sandstone
sample # 68860 - grab of galena rich rock ± 10% sulfides
- (D) Some of the quartz veinlets in this trench are 10-15 cm wide whereas the average width of quartz veins is 2-3 cm. Very little disseminated sulfides but "spotty" blebs of galena and chalcopryite
sample # 68859 - grab ± 5% galena and ± 1% chalcopryite
- (E) The trench at this location exposed some rather spectacular small masses of galena crystals, with chalcopryite and pyrite, within the quartz stockwork and breccia. These fist sized "patches" produced the best results to date.
sample # 3785 - centre of trench - 20% galena; 2% chalco; 5% pyrite - grab
sample # 3786 - grab western edge of trench - 10% galena; 1% chalco; 2% pyrite
sample # 3787 - grab eastern edge of trench - 2% galena; .5% chalco; 1% pyrite

Trench (A) is within a carbonated quartzite/sandstone unit with little or no quartz veining or breccia. Trenches (B), (C), (D) and (E) are sunk within a carbonated and brecciated limestone/sandstone unit containing a quartz stockwork of quartz veining (1-5cm thick - striking E-W) and quartz "patches" with irregular finger or fist sized "patches" of the above noted sulfides. Submission Number: 2.24815
Transaction Number(s): W0370.00079

Dear Sir or Madam

Subject: Deemed Approval of Assessment Work

We have approved your Assessment Work Submission with the above noted Transaction Number(s) as per 6(7) of the Assessment Work Regulation. Only eligible assessment work is deemed approved for assessment work credit. The attached Work Report Summary indicates the results of the approval.

NOTE: The report has not been reviewed for technical deficiencies and reported expenses were not evaluated based on the Industry Standard.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

Although this submission has been deemed approved, the file was reviewed for technical content and we'd like to bring several points to your attention.

Section 65(2) of the Mining Act states that a mining claim holder shall file a report in the prescribed form of the assessment work done for the purpose of complying with the annual units of assessment work requirements of mining claims. Subsection 6(1) of the Assessment Work Regulation identifies the prescribed form to include:

- a) duplicate technical work reports,
- b) prescribed form (Declaration of Assessment Work form) and
- c) a statement of costs.

Section 10 of the Assessment Work Regulation (Physical Work), summarizes the technical information that is required when submitting work under that section. The section requires that a report be submitted and detailed maps of all workings. The information that was provided in this submission only briefly describes the nature of the rocks and mineralization exposed and provides the assay certificates. The information relating to the type of equipment used, the hours and dates that the equipment was used and the rates of all persons working on the property is not included in the technical report and will need to be included for all future submissions. Without the required technical information in these reports being provided, these future submissions will be deficient.

Several examples of acceptable physical work formats have been brought to your attention in the past and several discussions have taken place between yourself, me and the staff of the Geoscience Assessment Office. The Geoscience Assessment Office has issued several 45 day notices with similar deficiencies in the past resulting in a slight improvement in the quality of your submissions being received by the Ministry. The

processing of your assessment submissions is quite onerous on staff and time as the submissions usually are not within the regulatory frame work and costs are higher than Industry Standards costs on a regular basis.

If you have any question regarding this correspondence, please contact RON GASHINSKI by email at ron.gashinski@ndm.gov.on.ca or by phone at (705) 670-5840.

Yours Sincerely,

Ron Gashinski

Map Datum: NAD 83
Projection: UTM (8 degree)
Topographic Data Source: Land Information Ontario
Mining Land Tenure Source: Provincial Mining Recorder's Office

This map may not show unregistered land tenure and interests in land including certain patents, leases, easements, right of ways, flooding rights, licences, or other forms of disposition of rights and interest from the Crown. Also certain land tenure and land uses that restrict or prohibit free entry to stake mining claims may not be illustrated.
