Notes:

DIAMOND DRILL HOLE LOG

DIAMOND DRILL HOLE 01

OFF SHORE MINES LTD.

Bearing N 20°W Dip 40° at collar, 28° at 800 feet.

Total depth - 830 feet EX tools throughout.

0 to 3' Casing

3' to 20': Acid agglomerate. Dark colored fragments, largely replaced by pyrite.

20' to 53': Fine to medium grained fragmental. Greenish color. Acidic, but less siliceous than agglomerate. Disseminated pyrite.

53' to 188': Acid agglomerate - highly siliceous. Pyrite with minor associated chlorite replacing fragments. 176-188 gradational from agglomerate to fine grained fragmental. Disseminated pyrite.

188' to 310': Mainly fine grained fragmental. Acid agglomerate. Acid groundmass, darker colored fragments.

310' to 518': Mainly rhyolite with minor fragmental. Disseminated pyrite to 510'. 490'-503' - fine grained fragmental  
496.5' - 497.5' Quartz vein, well mineralized with pyrite.

518' to 543.5' Fine grained light green fragmental.

543.5' to 718': Acid agglomerate. Altered and crushed zone at contact with minor quartz and pyrite.

718' to 830': Mostly fine grained acid fragments, locally chloritic minor acid agglomerate.

Hole, was drilled by the Canadian Longyear Contract Drillers during the winter of 1951-52. Core Logged by J. C. Frantz, Geologist for the Mining Geophysics Corp. Ltd. 11 Jordan Street, Toronto 1, Ontario.
