MINERALIZATION INVESTIGATION
GUNTERMAN CLAIMS IN Twp. 130
(North of Massey)

c. 1955.
(from claim)
map

This group of nine claims S 73340 to 73348 inclusive, lies on the east side of Twp. 130 at the 4 mile post. They lie about a quarter mile west of the old Massey Tote road about 22 miles north of Massey.

The showing consists of a sparsely mineralized north-south trending basic dike which is more than 100 feet wide and several hundred feet long. It is sparsely mineralized with chalcopyrite and to a lesser extent with pyrrhotite. Traces of nickel are shown by the use of dimethylglyoxime.
