

# Prospecting Report

Belfast Twp.  
Claim #51223122

This report identifies the prospecting work carried out in May of 2004.

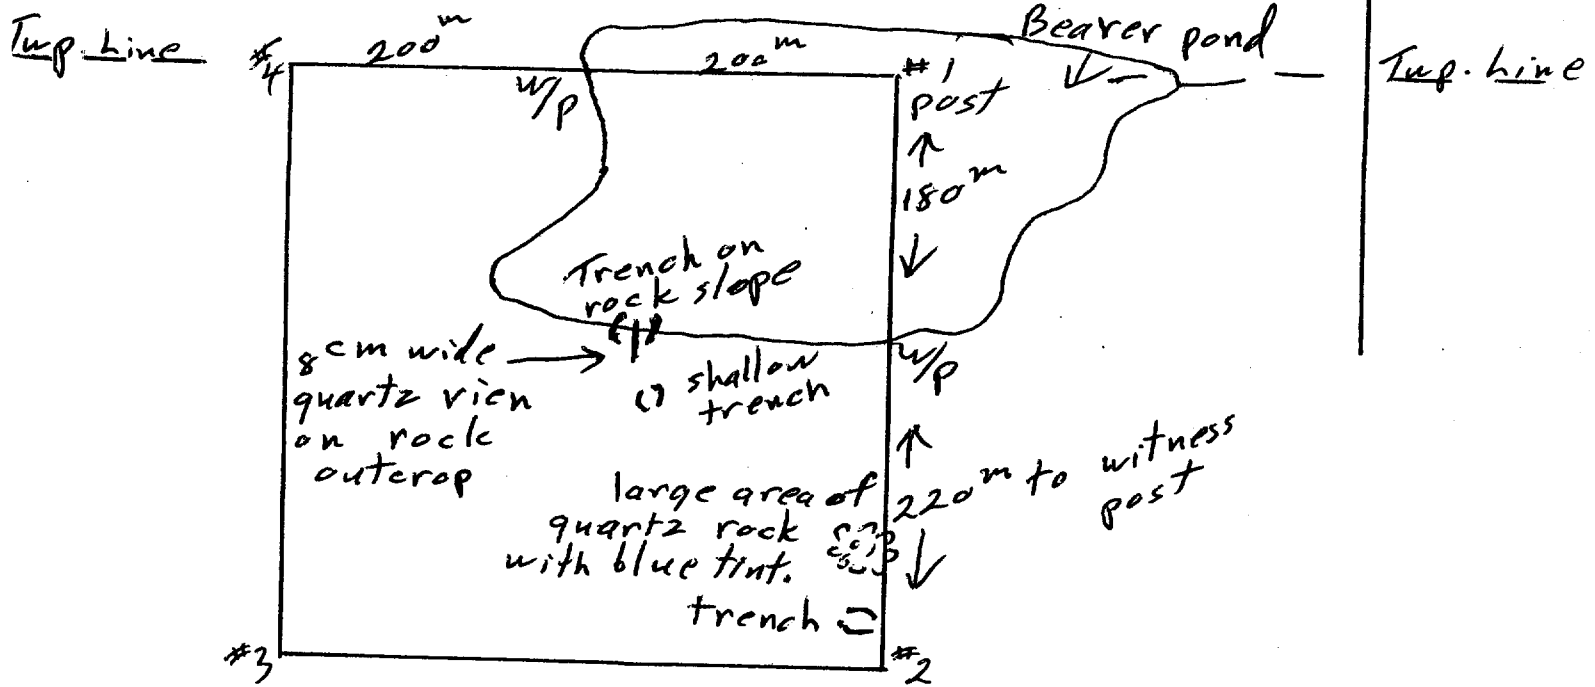

On 29 May 2004 spent a day cleaning leaves and woody debris from trenches previously identified on work reports. Examined and attempted to follow narrow quartz vein that previous assays indicated it contained gold. The vein appears to run in a south-east direction from where it is visible on the south shore of the beaver pond and in two shallow trenches to the south-east, one on this claim and one on the adjoining claim.

Searched east and north shore of beaver pond for any signs of quartz vein re-surfacing but none located.

On 30 May 2004 returned to this claim and spent the day walking in no particular pattern searching for any rock outcroppings. Many areas located but no particular mineralization found other than previously identified.

This claim is on a ridge that runs east and west along the north shore of Obabika Inlet of Lake Temagami. There are other quartz showings in the inlet area and this area was identified in the 1973 Temagami Land Use Plan as having moderate mining potential and again in a recent survey. A.W. The claim area is on a ridge that was logged and also swept by a forest fire. Very few large trees except for near the beaver pond. Very little exposed rock of any size except south shore of beaver pond where quartz vein located.
