

Re - M. E. D. P. Contract C B - 112.

Report of exploration work

I drove in to McKee Lake Dufferin trap Jan 26/77 with gasoline plunger, powder and associated equip.

Surface samples taken earlier showed the presents of Ag Cu Pb Ni Co. Silver assayed .09 to 2.0 oz across 12'. Now I put down a pit 9' at the bottom N. to S. 6' to 4' dept, 2' to 4' wide at bottom, to see if the grade would improve. Samples were cut in 2' sections over 6', and 1 section of 3'. Assays were lower grade than surface samples. A qty, calcite, vein was uncovered at the S. end of the pit under 3 to 4 ft of overburden in greenstone, schist. In Aug. 77 I cleaned the portion of the pit and sampled ^(#1). Also sampled across the above mentioned 9' ^(#2). Although these samples assayed very low grade, the possibility of discovering ore grade can not yet be discounted.

A local consultant geologist, familiar with the new concept of silver deposits in the Coiolt Camp, has offered to take a look at this property.

Some stripping was done on the N. boundary of Claim 477363. on a N. S. aligned fault, in green schist. Stripping was done 600' E. of the pit. Earlier samples taken here assayed .9 oz silver.

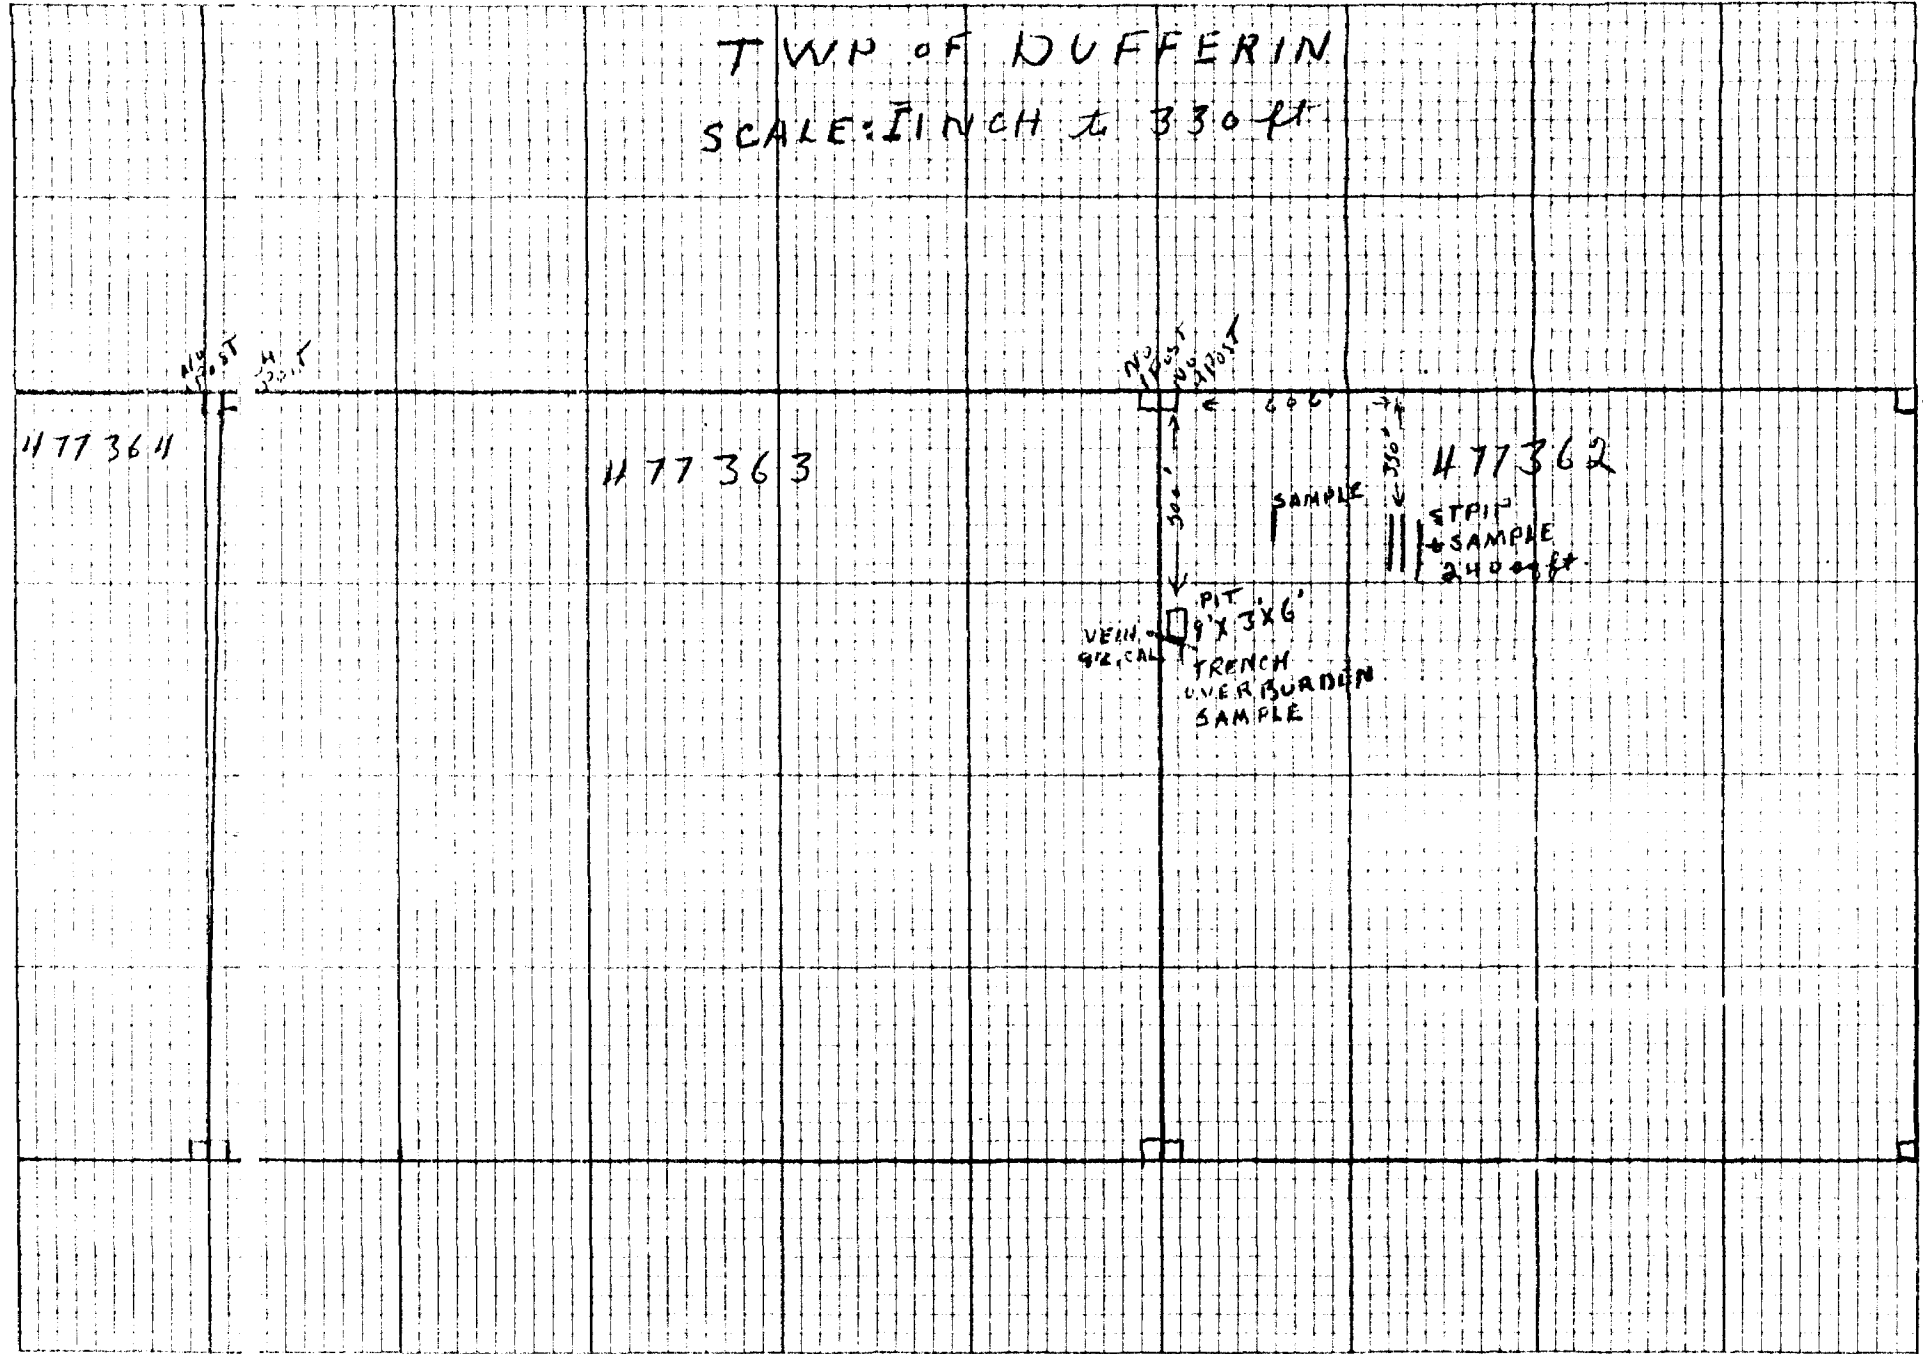

you have on hand assay & spec. reports
and some photo's, which I sent in earlier
and ask to have them returned.

Find enclosed, results of 2 assays, mentioned
above.

When the Geologist has examined this property,
probably in Oct. I will forward a report on
his findings.
