Sheet No.: 1

Logged by: Douglas Hunter, Doug Art Date logged: October 30, 1994

The borehole collar is located 100 m N and 80 m W of the #2 post.

This hole tested a large magnetic anomaly corresponding to the strike extent of the host rocks which contain the Cu - Ni deposit 250m to the northwest. Very local weak copper enrichment in gabbro without coincident anomalous nickel.

DRILL LOG Drill Program

Hole# SG-1-94 p.2

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
0-82'	Casing					Sand with the last few feet in boulders.
82-110.5	Felsic dike	Pale pink to salmon coloured.	Feldspar-phyric; 5-10% 1mm grains set in v.fn.gr. to aphanitic groundmass. Well foliated to banded at 20-25 degrees c.a. Tiny quartz lenses and 1cm veinlets parallel to banding. The structure resembles flow-banding seen in dikes of similar composition on surface.	Pink hematitic.		Very hard.
110.5-111.3	Calcite vein	Pale grey	Dark mafic volcanic fragments parallel to contacts at 20 degrees c.a.			
111.3-128.2	Mafic volcanic or possible dike.	Dark green, very fine grain.	Generally massive, fine grained, local foliation at 20-25 degrees c.a.			Tiny veinlets of felsic material resembling dike from 82-110.5
128.2-131.5	Tuff	Dark green	Distinctly bedded/laminated at 30-35 degrees c.a.			Some grey siliceous intervals.
131.5-142.4	Mafic, volcanic; possible dike.		As from 111.3-128.2 above.			Pink, feldspar-phyric dike 134.8-135.8 contacts at 20-30 degrees c.a.
142.4-163.4	Felsic dike		As described from 82-110.5 feet. Foliated/banded 25-35 degrees c.a.			Mafic volcanic inclusion or screen at 147.5-147.9. Contacts 20-30 degrees c.a.

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole# SG-1-94 p.3

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
163.4-181.3	Mafic volcanic	Fine grained dark green.	Massive and foliated sections (30degrees c.a.). Possible indistinct bedding 175-176. 176-177.6-Grey laminated felsic dike. 177.6-177.7-Fine grained feldspar-phyric dike.		Trace amounts of disseminated pyrite with chalcopyrite noted.	Sample 177.7-181.2
181.3-206.5	Feldspar porphyry.	Medium grey.	Porphyritic with 15-20% 0.5-3.0mm equant feldspar grains. Massive aspect, very distinct from pink felsic dikes in this respect.			
206.5-219.5	Felsic dike	Pink and grey.	As described from 82-110.5 and 142.4-163.4. Large scale colour banding marked by varying degree of hematization, foliation/banded at 25 degrees c.a.			
219.5-226.0	Intrusive breccia		30-40% mafic fragments in feldspar porphyry which in sections resembles closely the porphyry dike at 181.3-206.5. Fragments are dark green, v.fn.gr. and fn.gr. diabasic textured. Some fragments are pale green-bleached with conspicuous epidote and pale garnet. Generally very angular and aligned at 30 degrees c.a. Bottom contact banded and foliated at 20-30 degrees c.a.	Late epidote.	Trace pyrite.	219.7-224.7-Literally mixed in with the porphyry is pink, coarse grained and quartz rich material. Breccias of this type are closely spatially related the main Cu-Ni zone 250m to the northwest.
226.0-242.5	Felsic dike		As described above 206.5-219.5 feet.			

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG Drill Program

Hole# SG-1-94 p.4

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
242.5-247.3	Feldspar porphyry	Dark grey	Fine to medium grained with chalky white feldspar up to 5mm, really a subporphyritic texture. Also conspicuous are dark blocky relict pyroxene phenocrysts in the 1-3mm size range. A few fragments of fn. gr. diabasic textured gabbro noted, e.g. 242.9feet. Foliated 20 degrees c.a.			Gabbroic composition.
247.3-257.5	Felsic porphyry					
249.3-257.5	Mafic volcanic	Dark green fine grained.	Laminated at 5-10 degrees c.a. 255.7-257.5 bedding.		Traces of pyrite and chalcopyrite in fractures at 252.8 feet.	
257.5-276.8	Felsic porphyry	Light to medium grey-green.	Well foliated at 25 degrees c.a. throughout lower contact at 55 degree c.a.			
276.8-289.5	Mafic dike or volcanic.	Fine grained dark green.	Diabasic texture to 289.5 composite dike zone from 282.4-289.5.			282.4-289.5
289.5-314	Mafic volcanic	Fine grained, dark green.	289.5-314.4-Massive fine grained flow and coloured banded/foliated sections which could represent tuffaceous material.	Minor silicification.		Contact at 314 feet was chosen for textural change.

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole# SG-1-94 p.5

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
314-426.7	Mixed diorite-intrusive fragmental zone.	Dark green fine grained.	Highly variable texture, fine to coarse grained with a heterogenous hybrid appearance. Numerous dikes or distinct textural zones. Dark green ultramafic fragments and veinlets-dikes noted from about 406-409. Foliated/banded composite dike zone 409.1-411.2. Very fine grained (mylonite?). Banding at 35 degrees c.a. Laminated pyritic felsic tuff screen at 411.2-413 degrees c.a. Contents at 20 degrees c.a.	Late chlorite-calcite infilling brecciated gashes and small slips and faults, e.g. see 374-376 and 411.2-411.6 ft.	Trace pyrite in fractures and as disseminations.	This lithology is closely associated with the Cu-Ni zone 250m to the northwest. Weakly anomalous Cu here-see essays attached.
426.7-445.5	Intermediate dike	Fine grained, brown grey colour.	Weakly feldspar-phyric in places only very local relict textures preserved. Generally nondescript.		Traces of chalcopyrite noted on chloritic fractures.	Geochemically anomalous copper.
445.5-477.5	Tectonic breccia zone in felsic dike	Pale grey brown to brick red.	Fault breccia 445.5-451-Microfractured and cemented (calcite-epidote) pale brown dike. 451-466-Hematized breccia zone with best development of breccia from 451-456. 466-472.9-As from 445.5-451. 472.9-477.5 More chloritic section with conspicuous disseminated pyrite, foliated at 70 degrees c.a. 474.4-477.5 ft.	Hematite	Traces of fine grained disseminated pyrite in the orange hematitic sections.	Calcite veins at a shallow angle to c.a.
477.5-490	Volcanics	Medium green to brown.	Both mafic and felsic volcanics; siliceous brecciated (primary) section from 486-490.		Mineralized with conspicuous tiny fracture fillings of chalcopyrite.	

# FORT KNOX GOLD RESOURCES INC.

DRILL LOG -- Drill Program

Hole# SG-1-94 p.6

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
490-562.5	Composite mafic intrusion.	Fine grained, dark green.	Fine to medium grained with diabasic textured intervals-the same unit as logged from 314-426.7 ft. A coarse grained veinlet of anorthositic gabbro at 525.2 ft.	Weak epidote, the original texture is sometimes obscured.	Trace pyrite except in an inclusion of volcanic rock 520-521.4ft. Blebby chalcopyrite in a calcite vein at 559.5.	Milky quartz vein at 536.2-536.8. Conspicuously blocky from 520-536 ft.
562.5-618.5	Felsic pyroclastic	Pale to dark grey	Tuff and lapilli-tuff with some dark chloritic/chloritoid rich sections. Very cherty aphanitic white lapilli fragments. Brown spotted fine grained dikes 572.6-574.8, 592.1-593.3, 607.8-608.1. Diorite dike 611.5-612.5.	Minor chlorite/chloritoid (?)	Pyritic; 2-5% sulphide as fine disseminations and foliation parallel seams and irregular patches/aggregates of pyrite. Traces of galena, sphalerite and rare chalcopyrite.	No visible pyrrhotite or magnetite. Whole rock analyses attached. Anomalous Cu and Pb.
618.5-640.4	Mafic dike	Fine grained, dark green.	Very similar to diabasic textured sections in interval from 490-562.5 feet. Inclusion of tuff 625-628.6			Cemented calcite epidote breccia at 625 feet.
640.4-681.5	Diabase dike	Olive	Massive, medium grained with chilled margins well developed on both contacts.	Minor late chlorite in tiny seams and fractures.		Magnetic
681.5-697.5	Felsic dike	Grey to pink to salmon	Fine grained massive, very weakly porphyritic locally inclusion of mafic volcanic or mafic dike 689.6-690.6. Olive coloured feldspar porphyry 692.9-693.4 From 689.6-691.2 mafic volcanic and 690.6-691.2 tuff inclusions in screens.	Hematite-weak to moderate development.		

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole# SG-1-94 p.7

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
697.5-727.0	Mafic volcanic	Fine grained medium grey green	Weakly feldspar-phyric and locally amygdaloidal.	Moderate silicification, and conspicuous quartz epidote garnet in bleached areas of fractured and amygdule controlled alteration.	Traces of pyrite both in amygdules and as local fine grained disseminations.	716-721 Silicified mafic volcanics have also been logged on the southwest side of the gabbro anorthosite intrusive complex (DDH SG-8).
727.0-739.1	Mixed zone of siliceous tuff and felsic dikes	Medium grey	Feldspar-phyric, laminated felsic dikes at 727-728 and 732.8-734.5 cut fine grained banded tuff, this banding appears to reflect bedding at 25-30 degrees c.a. Fabric in dikes is also shallow to c.a.	Calcite and hematite in a fracture zone 727.2-728.0 feet.		
739.1-740.7	Felsic dike	Pink to salmon colour	Distinctly feldspar-phyric with feldspar up to 2-3mm. The section exhibits cataclasis with feldspar grains pulled apart and quartz-calcite injection veinlets.			
740.7-801.4	Mafic intrusion	Medium to dark green.	Fine to medium grain diabasic texture-fine grained upper contact. Generally massive aspect with local foliation evident at 50-60 degrees c.a. Contains 5-10% darker bands, patches and tiny veinlets of pyroxenitic material. Some conspicuous coarser grained pyroxene; overall very homogenous looking. 769.3-775.8-Laminated (subparallel to c.a.) feldspar-phyric dike and grey quartz vein material. 784.3-789.6-diabase dike	Late chloritized slips with calcite.	Contains traces of pyrite with no conspicuous magnetite.	No magnetic attraction.

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG - Drill Program

Hole# SG-1-94 p.8

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
801.4-1112.4	Diabase dike	Medium grey-green.	Fine grained with much coarser medium grained central portion. Massive with late chlorite-calcite slips (up to 1mm) throughout. Felsic dike inclusion at 805.4-806.5			Weakly magnetic Blocky at upper contact for about 6 feet.
1112.4-1117.9	Mafic Volcanic or dike.	Fine grained medium green.	Massive, with some brecciation at upper contact. Feldspar-porphyry at 1112.4-1113.		Trace of pyrite	1112.4-1117.9
1117.9-1152.8	Feldspar porphyry	Medium grey	Highly foliated at 25-35 degrees c.a. but conspicuous feldspar phenocrysts 1-3mm in size.			Intensity of foliation increase downhole. Contact drawn at the last appearance of phenocrysts.
1152.8-1169	Intermediate volcanic/tuff?	Coloured banded; grey-green to mauve.	Well foliated at 45 degrees c.a. Between 1166-1169 has a fragmental (tuffaceous) appearance.	Fine grained biotite rich bands and patchy sections alternate with pale green mottled sections.		
1169-1174.6	Volcanic (?)	Fine grained, pale green to pinkish brown mottled texture.	Tiny feldspar phenocrysts.			This looks like a highly altered volcanic rock. Lower contact sharp at 60 degrees c.a.
1174.6-1246.2	Mafic intrusion Diorite-gabbro	Dark green medium to coarse grained	Diabasic texture; coarse grained quartz rich patches and bands, irregular veinlets and more mafic pyroxenitic zones and bands. Possible pyroxenitic dikes. Felsic dikes-1227.5-1228.9 and 1229.9-1230.6 Diabase dike-1244.3-1245.0		Pyrite occurs as disseminations and in minute fracture fillings, varying from only a trace to 1-2% over short intervals. Traces of Cpy noted rarely. Conspicuous magnetite after 1220 feet.	Strongly magnetic-very magnetic-rich after 1220 feet. Units of this type with the distinct bluish quartz are also present in the nearby Cu-Ni-Pt Pd-Au zone.

# FORT KNOX GOLD RESOURCES INC.

DRILL LOG --- Drill Program

Hole# SG-1-94 p.9

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
1246.2-1348	Diabase dike	Medium green-grey	Massive, generally featureless with the exception of a few amygule-like structures up to 5mm across. Dike contacts 40 degrees c.a. 1249.7-1253.6-Inclusion of well mineralized, dark green, fine grained dioritic intrusion. Fine disseminations and aggregates of pyrite-about 5% by volume.			
1348-1406.3	Mafic intrusion; Diorite-Gabro	Dark green, Bluish green	Diabasic texture common in a section that varies from fine to coarse grain. Salient features include banding on a gross scale and irregular quartz-rich patches and veinlets cutting fine grained zones. Generally resembles closely the section from 1174.6-1246.2 above. Very massive with only hint of structure being the local banded appearance.		Disseminated and fracture filling pyrite; highly variable amount from trace to 5% over very short (0.2-0.5ft) intervals. Disseminated magnetite throughout.	Distinctly to strongly magnetic.
1406.3-1416	Feldspar porphyry	Pinkish grey to medium grey	About 5-10% blocky feldspar grains to 2mm common. There is a definite grain-gradation finer downhole to the contact at 1416.8. Contact 25 degrees c.a.			Granitic-composition likely.
1416.8-1418	Tuff	Medium green	Laminated, siliceous sediment/tuff. Lamination (bedding) at 15 degrees c.a.		Fine grained, dissemination pyrite.	

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole # SG-1-94 p. 10

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
1418-1582.7	Diorite-Gabbro	Medium green.	<p>Diabasic texture predominant with grain size, fine to medium to medium decreasing downhole. This is a composite intrusion which may exhibit gross, large scale banding. Very fine grained pyroxenitic zones noted. Also, leucocratic (anorthositic) veinlets-discreet cross cutting phase occur at 1466.1 and 1469.4 feet.</p> <p>1491-1521-Spotted texture due to pyroxene 'megacrysts' up to 1cm across set in a diabasic groundmass.</p> <p>1521-1559.6-Diabasic textured with local feldspar phenocrysts and pyroxene relict phenocrysts, patches and cross cutting veins carrying disseminated pyrite strongly magnetic. Coarse grained CLAG at 1555.1-1556 feet.</p> <p>1559.6-1567.9-CLAG and subporphyritic CLAG with dark fine grained fragments noted. Trace pyrite.</p> <p>1567.9-1582.7-Diabasic texture with local coarse cross cutting sulphidic pyroxenite and CLAG zones (dikes).</p>		<p>In general trace pyrite with 0.5 % to 1% over short sections.</p> <p>Trace chalcopyrite in calcite stringers at 1581 feet.</p>	<p>A few milky quartz veins and stringers without chlorite or epidote alteration. Disseminated pyrite in dark pyroxenitic zones is anomalous in copper.</p>
1582.7-1614.0	CLAG	Medium grey	<p>Coarse grained equigranular to sub-porphyritic anorthositic gabbro. Conspicuous quartz. A few dark fine grained fragments. Possible dike or screen of very fine grained material 1609.6-1611 feet.</p>		Trace disseminated pyrite	<p>This is the CLAG unit that hosts the mineralized, Cu, Ni, Pt, Au zone.</p>

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole# SG-1-94 p.11

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
1614-1627	Mafic intrusion	Medium green.	Medium green diabasic texture with dark sulphidic pyroxenitic and blue quartz patches segregations and veinlets.		Fine grained sulphide interstitial to coarse blocky relict pyroxenes.	
1627-1631.5	Volcanic	Pale green to grey-green	Vague fragmental character.		Trace pyrite.	
1631.5-1641.6	Mafic intrusion		Diabasic texture as above from 1614-1627 feet.			
1641.6-1653.3	CLAG		As described above from 1582.7-1614.0		Trace disseminated pyrite.	
1653.3-1658	Mixed zone of CLAG and diabasic textured gabbro		There appears to be fragments of fine grained diabasic textured rock in the CLAG as noted in sections above.	Minor epidotization with or without calcite veinlets and seams.		
1658-1900	CLAG		As described above from 1582.7-1614.0. A few fragments of fine grained diabasic textured gabbro. Fine grained late diabase dike at 1709.1-1713.5 feet. Contacts at 40 degrees c.a. Banded/laminated feldspar-phyric granitic dike 859.5-861.5. Contacts 70 degrees c.a.		Traces of pyrite except where there are small isolated veinlets of pyroxenite which carry 1-2% fine grained sulphide.	Generally massive undeformed.

DRILL LOG --- Drill Program

Hole# SG-2-94 p.2

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
0-75	Casing in gravel					
75-129	Mixed gabbo and pyroxenite	Medium to dark green	Breccia zone with pyroxenite cutting diabasic textured gabbro-fine to medium grained and with minor CLAG. Local shearing but overall this section is best described as an intrusive breccia.		Disseminated and fracture filling sulphide-1-5%. Minor pyrrhotite.	
129-157	Pyroxenite	dark green	Distinctive feature is blocky relict pyroxene crystals up to 1cm across. Also, this section contains some diabasic textured fragments and other dark fine grained aphyric pyroxenite. Diabasic texture. About 10% of this interval is mineralized pyroxenite.		About 10% sulphides as fine grained disseminations and net-textured wrapping around pyroxenes. Low content of pyrrhotite. Some chalcopyrite rich fracture fillings.	
157-167	Gabbro	Dark green	Diabasic texture. About 10% of this interval is mineralized pyroxenite.		1-5% total sulphide.	
167-182	Pyroxenite	Dark blue green	Massive with blocky pyroxene crystals (relief).		Low sulphide content	Magnetic
182-201	Mixed gabbo and pyroxenite		As described above from 75-129 feet. Fine grained well mineralized fragments set in a pyroxenite crystal rich groundmass.		5-10% total sulphides, locally conspicuous pyrrhotite and fracture filling chalcopyrite.	
201-215	Pyroxenite	Dark blue green	As described from 167-182 feet.			

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Hole# SG-2-94 p.3

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
215-237.7	Mixed pyroxenite and gabbro		Breccia with gabbro and anorthosite fragments set in well mineralized pyroxenite. Similar to other sections described above; eg; 182-201 feet.		About 10-15% total sulphide conspicuous cpy in fractures. Locally po appears to be predominant but pyrite is more common.	
237.7-244	Mafic dike	Dark blue green	Massive and feldspar phyric. Probable gabbroic composition.		Barren of sulphide	
244-268.1	Sulphide zone		Main sulphide zone; net textured with 40-50% sulphides and blocky pyroxene crystals 5mm in size and rock fragments including gabbro and anorthosite.		40-50% total sulphides; po rich and containing coarse fracture filling cpy.	
268.1-287	PCLAG and anorthositic gabbro	Medium grey	Sharp contact with PCLAG at 268.1 to 269.8 followed by medium grained anorthositic gabbro 269.8-280. PCLAG 280-287 feet.		No conspicuous sulphide.

# FORT KNOX GOLD RESOURCES INC.

DRILL LOG -- Drill Program

Hole# SG-3-94 p.2

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
0-80	Casing in gravel					
80-256.8	CLAG	Medium grey green	Massive, coarse grained equigranular anorthositic gabbro (CLAG). 118.5-119.5-inclusion of fine grained diabasic textured gabbro. 196.9-197.5-very feldspar-rich anorthositic dike.	Very local grey saussuritized zones associated with quartz stringers.		Very massive homogenous appearance, with local foliation over 1 foot sections at 50-60 degrees c.a.
256.8-296.5	Gabbro and pyroxenite.					
296.5-385.6	Mineralized zone		296.5-336.6-Mixed diabasic textured gabbro and mineralized pyroxenite. Fine grained, sheared pyroxenite cuts the gabbro. Cu-Ni values directly related to the amount of mineralized pyroxenite.  336.6-364.2-Distinct fragments of gabbro and anorthositic gabbro in mineralized pyroxenite. Pyrite rich-10% total sulphides.  364.2-385.6-Net textured sulphides in pyroxenite and fragmental pyroxenite. Total sulphides 30-40% with pyrrhotite predominant - much more than sections above. Chalcopyrite salient in fracture fillings.			
385.6-402	PCLAG	Medium grey green	Texturally distinct from the section 80.0-256.8 only by the porphyritic texture.			The mineralization occurs at a textural boundary in the CLAG/PCLAG

Logged by: DOUGLAS HUNTER, Douglas Hunter Date logged: Nov. 30, 1994

The borehole collar is located 200 m S and 80 m W of the #1 post.

The hole was drilled in order to test an off - hole pulse EM response resulting from surveying of nearby hole NG - 3 (1992). At a point about 40m below and 75m north of this off - hole anomaly a pyrrhotite rich zone containing graphite was intersected. This explains the geophysical anomaly. The pyroclastics and sediments here are anomalously high in their contents of Cu, Pb, Zn and Ag as they were in the nearby DDH NG - 3.

Deeper in the hole another thick section of felsic pyroclastics, argillite and cherty bedded tuff was intersected. Here there is 1 - 10% sulphide and coarse grained stringers/veins of Py and Po with conspicuous fine grained Gn and Sph. This section is highly anomalous in Pb, Zn and in a few samples Ag and Cu.

**Abbreviations:**

py - pyrite

po - pyrrhotite

gn - galena

cpy - chalcopyrite

sph - sphalerite

QFP - Quartz Feldspar Porphyry

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
678.3-711	Mineralized pyroclastic/ sediments (siltstone/argillite).	Medium to dark grey.	Tuff, lapilli - tuff. Bedded grey to charcoal grey argillite (graphitic in places), tuffaceous argillite, lapilli tuff, some beds feldspar +- quartz rich. Foliation/bedding 50 degrees c.a. 706-711. Black laminated argillite, containing 10 % sulphides; predominately po and py, but also conspicuous epy. Sulphide forms sub mm beds and occurs as extremely fine grained disseminations. The unit is graphitic in places (eg. 710-711) but also is very hard in other sections. Lamination at 55 degrees c.a.		Conspicuous sulphide with fine disseminated pyrite, pyrrhotite and reddish sphalerite. Traces of galena and chalcopyrite. Content of sulphide 0.5-3% with local foliation parallel lenses and stringers.	Mineralized zone containing the target conductor detected from bore hole EM surveyed of DDH NG-3 (1992)
711-717.1	Diabase dike	Pale brown to olive.	Fine grained, massive with late chlorite and calcite fracture fillings.		Very fine grained disseminated pyrite - traces.	
717.1-718.7	Felsic tuff					
718.7-731.4	Mafic volcanic or dike	Medium green, fine grained.	Numerous pale/bone coloured zones containing fiamme like fragments; tuff dikes in lava possible interpretation.			Very unusual. This unit not seen before. Highly fractured with quartz veins some containing coarse grained pyrrhotite.
731.4-758.1	Felsic pyroclastics	Medium grey	Tuff and lapilli - tuff. Hard/cherty with some fine cherty ash tuff beds. Conspicuous (1-2%) feldspar phenocrysts; also quartz eyes noted. Well foliated at 45-50 degrees c.a.		Fine grained disseminated pyrite (1-2%) Throughout.

The borehole collar is located 200 m N and 20 m E of the #3 post.

This hole was targeted on a magnetic anomaly which occurs along strike of sulphide mineralization in a geological environment favourable for VMS base metal mineralization. The anomaly has its origin in magnetite rich gabbro. No significant base metal mineralization was encountered.

W.R. Whole rock analyses.

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
0-18	Casing in sand and gravel					
18-44.3	Felsic volcanic	Bone to pale yellow brown	Coarse fragmental unit, possible flow. Large blocks up to 0.5 feet set in sericitic finer grained material. Weakly feldspar phytic; 1-2% 1mm blocky grains set in a cherty aphanitic ground mass. Well foliated at 45-50 degrees c.a.	Minor sericite in foliation in bands contrasting with white highly siliceous fragments.	Traces of pyrite as fine crystalline disseminations in darker chloritic, sericitic bands. Also noted locally in siliceous blocks.	Similar hard cherty unit was intersected in DDH NG-2 (1991) below 200m. WR 23-33 feet.
44.3-53.8	Mafic dike	Dark green, fine grained	Deformed, locally fractured with quartz filling. Gash-like fractures. Foliated locally, highly variable angle to c.a.		Locally pyrite in fractures.	Despite fracturing the core is not blocky.
53.8-101.1	Felsic pyroclastic	Pale yellow green	Lapilli-tuff/tuff breccia highly foliated, banded at average 50 degrees c.a. (45-55 degrees c.a.). Mafic dikes 54.7-55.1, 55.7-57.3, 62.8-64.3 (reddish biotitic).	Sericitic, much more than siliceous section above at 18-44.3 feet. Pink, salmon hematitic mottling and banding conspicuous spots after 87 feet.	Trace pyrite	Milky quartz veins 193.1-193.7 196.3-196.5 WR 77-87 feet.
101.1-109.4	Felsic pyroclastic Tuff/cherty tuff.	Medium green	Harder, cherty aspect and less sericitic than previous section. Brecciated 108.3-109.4.			Very hard cherty locally laminated appearance.
109.4-224.5	Diabase dike	Dark green to olive	Chilled upper contact at 70 degrees c.a./lower 80-85 degrees c.a. Late chlorite +-calcite fracture fillings.			Distinctly magnetic.

The borehole collar is located 50 m S and 20 m W of the #1 post.

The hole tested a broad I.P. anomaly, the source of which is an abrupt change in geology: from massive gabbro to pyritic bedded tuff.

Abbreviation:  
QC - Quartz-carbonate

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG -- Drill Program

Holo# 307-1 p.2

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
0-15	Casing in sand					
15-42	Hybrid-mixed gabbro and anorthositic gabbro (AGb)	Light grey-green	Intrusive breccia; dark mafic fragments set in a medium to coarse grained CLAG rock. Some diabasic textured gabbro fragments. The CLAG is locally porphyritic.		Pyrite is conspicuous mainly as fine grained patchy aggregates and local disseminations. Content tr.-0.1%.	Heterogenous aspect-very similar to host intrusive breccia at the Cu, Ni deposit 1km to the NW.
42-56	Gabbroic section	Medium to dark green.	Massive fine grained diabasic texture with highly siliceous quartz rich zones.	Greyish alterations and local silicification.	Chlotty conspicuous po, py, cpy in several places associated with blue quartz rich zones.	
56-98	Gabbro	Dark green	Massive diabasic textured coarse blocky relict pyroxene from place to place and pyroxene-blue opalescent quartz veinlets/patches. Local fabric-defined by compositional changes and foliation 35-45 degrees c.a.		Trace pyrite in fractures and as fine to medium grained disseminations in quartz-pyroxene veinlets.	A few bull quartz veins e.g. 56.5-56.7' and 59.9-60.1'.
98-108.2	Volcanic or dike	Dark green	Massive fine grained non-descript except locally at 105.3-105.5 where fine lamination/bedding is evident.		Fine pyrite on bedding planes in ash-tuff at 105.3-105.5.	Irregular fracturing with QC veining in several sections over 0.1-0.5 feet.

**FORT KNOX GOLD RESOURCES INC.**

DRILL LOG - Drill Program

Hole # 307-1-95 p.3

DEPTH	ROCK TYPE	GRAIN SIZE COLOUR	TEXTURE AND STRUCTURE	ALTERATION	MINERALIZATION	COMMENTS/ SAMPLE NO.
108.2-216.7	Gabbro	Dark green	Medium grained diabasic textured as from 56-98 feet. Very local hybrid/breccia CLAG-gabbro. A few feldspar-rich veinlets. Massive unfoliated. From 199.5-216.7 patches, veins and dikes of anorthositic gabbro and CLAG (e.g. 179.5-181'). Also, small porphyritic granitic dikelets; one of these is flow banded at 213.3-213.7'.	Minor patchy-fracture controlled epidote.	Trace pyrite with coarse py, cpy at 120'. Minor fracture controlled pyrite not significant content.	A few siliceous feldspar-phyrlic dikes 0.1' wide associated with strong fabric at 35-45 degrees c.a. Fine grained foliated/sheared 213.7 216.7'.
216.7-258.7	Mixed zone of dikes and volcanics	Medium to dark grey to green.	Banded, foliated zone of highly deformed dikes and minor volcanic-looks like a composite intrusion. Gabbroic and anorthositic composition, highly variable grain size. Feldspar grains flattened into foliation at 40-45degrees c.a.	Minor, local fracture controlled epidote.		Generally non-descript although there are some texturally well preserved dikes of CLAG, e.g. 220.1-222.3 and 224.6-226 feet. This zone marks a structure.
258.7-308.3	Gabbro	Medium to dark green	Massive, medium grained diabasic texture as described from 56-98 feet. Veinlets, patches and mixed anorthosite/gabbro sections.			Foliated, fragmental lower contact area from 305.7-308.3 at 65-70 degrees c.a.

Sheet No.: 1

Logged by: Douglas Hunter Douglas Hunter Date logged: Feb. 27, 1995

The borehole collar is located 50 m S and 20 m W of the #1 post.

This hole tested a narrow strong I.P. response. The hole contains negligible sulphides and the anomaly source is unknown.

I, Beim Banda (Print Full Name), do hereby certify that the above work credits are eligible under subsection 7 (1) of the Assessment Work Regulation 6/96 for assignment to contiguous claims or for application to the claim where the work was done.

Signature of Record Holder or Agent Authorized in Writing: Beim Banda Agent For INCO LIMITED Date: January 28, 1997

6. Instructions for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check ( ✓ ) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

Mining Act/Loi sur les mines

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minings Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adresser toute question sur la collecte de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 159, rue Cedar, 4<sup>e</sup> étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'oeuvre	15230	
	Field Supervision Supervision sur le terrain		15230
Contractor's and Consultant's Fees Droits de l'entrepreneur et de l'expert-consell	Drilling	78826	
	Assaying	6074	
	Core Sawing and Haulage	4747	89647
Supplies Used Fournitures utilisées	Supplies	1384	
			1384
Equipment Rental Location de matériel			
<b>Total Direct Costs Total des coûts directs</b>			<b>106261</b>

2. Indirect Costs/Coûts indirects

\*\* Note: When claiming Rehabilitation work Indirect costs are not allowable as assessment work. Pour le remboursement des travaux de réhabilitation, les coûts indirects ne sont pas admissibles en tant que travaux d'évaluation

Type	Description	Amount Montant	Totals Total global
Transportation Transport	Truck Rental	1013	
			1013
Food and Lodging Nourriture et hébergement	Food & Lodging	2768	2768
Mobilization and Demobilization Mobilisation et démoblisation			
<b>Sub Total of Indirect Costs Total partiel des coûts indirects</b>			<b>3781</b>
<b>Amount Allowable (not greater than 20% of Direct Costs) Montant admissible (n'excédant pas 20 % des coûts directs)</b>			
<b>Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs)</b>		<b>Valeur totale du crédit d'évaluation (Total des coûts directs et Indirects admissibles)</b>	<b>110042</b>

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Working Discounts

Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit

Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below

$$\frac{10531}{10531} \times 100\% = \$10,531$$

$$\frac{99511}{199022} \times 0.50 = 49,755$$

\$60,286

Certification Verifying Statement of Costs

I hereby certify that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown in the accompanying Report of Work form.

I, Landman I am authorized (Recorded Holder, Agent, Position in Company)

I make this certification

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation

2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

$$\frac{\text{Valeur totale du crédit d'évaluation}}{\text{Évaluation totale demandée}} \times 0,50 =$$

Attestation de l'état des coûts

J'atteste par la présente que les montants indiqués sont le plus exact possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de Brian Randa je suis autorisé (titulaire enregistré, représentant, poste occupé dans la compagnie)

à faire cette attestation.

Signature Brian Randa Date January 28, 1997

**LEGEND**

- Gb Gabbro-equigranular, medium to coarse grained
- D Gabbro-diabasic textured, fine to medium grained
- MD Fine grained mafic dike
- MV Mafic volcanic
- LD Late diabase dike
- DIB Diabasic textured gabbro/intrusive breccia may include ultramafic/pyroxenite
- DIBP May include pegmatic phase
- CLAG Coarse grained leucocratic-anorthositic gabbro
- PCLAG Coarse grained porphyritic phase
- FD Felsic dike-laminated/banded
- FP Feldspar porphyry dike
- ID Intermediate dike
- TP Felsic pyroclastics; tuff and lapilli tuff
- TS Tuff/sediment, dark coloured-bedded
- T Intermediate tuff

**Minerals**

- Py Pyrite
- Po Pyrrhotite
- Cpy Chalcopyrite
- Sph Sphalerite
- Gn Galena
- Pn Pentlandite
- Mag Magnetite
- Hem Hematite
  
- S Sericite
- Chl Chlorite
- C Carbonate
- Ga Garnet

**Structure**

- Bx Tectonic breccia
- BxQ Tectonic breccia with quartz veining
- Foliation/banding with core axis angle
