Plan of Magnetometer Survey 1:2500 Map Case

Plan of Geological Survey North Part 1:2500 Map Case

Plan of Geological Survey South Part 1:2500 Map Case

Introduction

Magnetometer and Geology Surveys were carried out over cut lines in the south-east part of Churchill Township extending into the north-east part of Asquith Township. The linecutting was carried out between July and November 1998. Surveys were carried out between August 1998 and May 1999 with some previous sampling in the fall of 1997.

Location, Access and Ownership

The property is located in the southeast part of Churchill Township, and northeast part of Asquith Township, Larder Lake Mining Division, District of Sudbury, Ontario. The claims are numbered : L1203500; L-1205547; L-1206517 to 1206518; L-1217520 to 1217521; L-1225464 to L1225466; L1225524; L-1226938; and L-1226987, comprising 41 claim units. They are recorded in the name of Skead Holdings Ltd., 28 Ford Street, Sault Ste. Marie, Ontario.

Highway 560, a secondary highway, passes just to the north of claim L-1203500 and through the northwest corner and bisects claim L-1217520. A bush road passable to 4-wheel drive vehicles passes through the west part of claim L-1205547 and east part of claim L-1206581. The claims are about 2 miles northeast of Shiningtree and 20 miles west of Gowganda.

Previous Exploration

There are no records of previous exploration on the claims. A few trenches were noted during the survey. Rock outcrop is extensive. Linecutting followed by a Magnetometer and Max Min EM Survey was carried out in 1996 - 97. This grid was extended and used in the present survey.

Topography

The claims consist of rocky outcrops with intervening gullies and low wet areas. The claims south of the highway are covered by birch, poplar and a few overmature white pines. The area north of the highway has largely been cut over fairly recently and has grown up to poplar and birch about six to ten feet high with rotting slash piles.

The geology of Churchill Township has been described by M.W. Carter in O.G.S. Report 190 and is also shown on O.G.S. Map 2510, a compilation map of the Shiningtree area. The area is underlain by early Precambrian volcanic, sedimentary and intrusive rocks. These rocks are overlain or intruded in places by middle Precambrian gabbros.

Mapping Procedure

A baseline was laid out at N45 degrees W-S45 degrees East from a point where the No. 1 post of L-1203500 lies on the south boundary leased Claim L-104641. Crosslines were laid out and cut perpendicular to the baseline every 100 metres. Lines were chained and picketed at 25 metre intervals. Linecutting on the northwestern part of the grid was completed in 1996 and 1997. In 1998 the baseline was extended to the southwest, additional crosslines were cut and some previous crosslines extended.

Magnetometer readings were taken with a Barringer GM-122 Proton Magnetometer at 12.5 metre intervals. Intermediate readings were also taken at 6.25 metres intervals in most locations where readings of greater than 250 gammas were noted at 12.5 metre intervals. The looping method was used for control of variation. In this method a base station is selected, and readings taken along lines describing a loop, arriving back at the starting base station in less than two hours. A second loop is then started using either the same base station or another which is tied to the previous loop. Readings are then corrected for diurnal variation by assuming a straight line variation in readings and correcting according to the time which is noted at each station. No correction was applied less than the accuracy of the base station readings.

The geological survey was conducted by traversing lines, noting geology and rock types where it could be exposed. Where overburden was thin, moss was pulled back or thin overburden dug into to obtain samples or view underlying rocks. As the line was traversed overburden depth was tested by driving the pointed end of a hand pick into the ground, if rock was struck an effort was made to dig to bedrock.

In general, areas considered as outcrop are fairly extensive, but usually covered by a mat of moss and trees or shallow overburden. Samples were taken from most outcrops found. Approximately 2 to 2.5 kilograms of rock was collected at each sample site and placed in a plastic bag with a location tag. Samples were transported back to Sault Ste. Marie, large pieces broken, cleaned of moss and dirt, examined and identified. A 5 to 8cm piece of each sample was placed in a small plastic bag with a location tag and retained for reference. The remainder of the samples was placed in a plastic sample bag to be sent for processing and analysis. Over 175 samples were collected, forty-three of which have been analyzed by ICP with aqua regia digestion for base metals and twenty for whole rock analysis by lithium borate fusion, nitric acid digestion to date. In addition samples collected in the fall of 1997 were analysed by various methods and a few samples have been checked for platinum group metals.

Discussion of Results

Magnetometer

The magnetics are quite variable with areas of relatively flat magnetics and narrow areas of sharply higher readings. The higher readings are believed to be caused by north trending diabase dykes. From this and magnetometer surveys by others to the south, the north trending dykes appear to be more numerous south of highway 560 than north of it. This is further complicated by gabbro intrusives which are variably magnetic.

The relatively flat magnetic area appear to outline areas of volcanics.

Geology

The geological survey gives an overview of the rocks on the property. It is presently incomplete as only some of the lines have been traversed. No significant mineral showings were found on the lines traversed to date. Minor amounts of sulphides, but no base metal sulphides were noted. Analysis did not show any significantly anomalous metal values.

The most interesting analysis showed extreme Na depletion in a highly sericitized and quartz flooded rhyolite from Line 3 NW to the NE of the baseline. Similar sericitized rhyolites were noted to the northwest on line 4 NW, 5NW and 11 NW. Further prospecting should be carried out to see if there are associated base metals.

May 28, 1999

Respectfully submitted,

R.A. MacGregor P. Eng.

ICP - .500 GRAM SAMPLE IS DIGESTED WITH 3ML 2-2-2 HCL-HNO3-H2O AT 95 DEG. C FOR ONE HOUR AND IS DILUTED TO 10 ML WITH WATER.
THIS LEACH IS PARTIAL FOR MN FE SR CA P LA CR MG BA TI B W AND MASSIVE SULFIDE AND LIMITED FOR NA K AND AL.

- SAMPLE TYPE: PULP Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

DATE RECEIVED: JAN 18 1999 DATE REPORT MAILED: Jan 22/99 SIGNED BY... D. Toye, C. Leong, J. Wang; CERTIFIED B.C. ASSAYERS

ICP - .250 GRAM SAMPLE IS DIGESTED WITH 10ML HClO4-HNO3-HCl-HF AT 200 DEG. C TO FUMING AND IS DILUTED TO 10 ML WITH DILUTED AQUA REGIA. THIS LEACH IS PARTIAL FOR MAGNETITE, CHROMITE, BARITE, OXIDES OF AL, ZR & MN AND MASSIVE SULFIDE SAMPLES. AS, CR, SB, AU SUBJECT TO LOSS BY VOLATILIZATION DURING HClO4 FUMING.

- SAMPLE TYPE: PULP Samples beginning 'RE' are Reruns and 'RRE' are Reject Reruns.

DATE RECEIVED: DEC 22 1997 DATE REPORT MAILED: Dec 24/97 SIGNED BY: C. Leong, J. Wang, D. Toye, C. Leong, J. Wang; CERTIFIED B.C. ASSAYERS

Section 65(2) and 66(3) of the Mining Act. Under section 8 of the Mining Act, assessment work and correspond with the mining land holder. Questions about this

Ministry of Northern Development and Mines, 3rd Floor, 933 Ramsey Lake Road, Sudbury, ON P1B 1J4

Instructions: - For work performed on Crown Lands before recording a claim, use form 0240.
- Please type or print in ink.

1. Recorded holder(s) (Attach a list if necessary)

Name	Skead Holdings Ltd.	Client Number	194597
Address	28 Ford St.	Telephone Number	705-949-4250
	Sault Ste Marie Ont P6A 4N4	Fax Number	705-949-2427
Name		Client Number	
Address	RECORDED	Telephone Number	
	JUN 02 1998	Fax Number	

2. Type of work performed: Check and report on only ONE of the following groups for this declaration.

<input checked="" type="checkbox"/> Geotechnical: prospecting, surveys, assays and work under section 18 (regs)	Physical: drilling stripping, trenching and associated assays	Rehabilitation
Work Type	Magnetometer, Geological Surveys	Office Use
Dates Work Performed	From 15 Day 10 Month 1997 Year	Commodity
	To 28 Day 05 Month 1999 Year	Total \$ Value of Work Claimed 9889
Global Positioning System Data (if available)	Township/Area Churchill, Asquith M or G-Plan Number G-3210, G-3206	NTS Reference
		Mining Division Faro Lake
		Resident Geologist, District Kuklana Lake

Please remember to:

- obtain a work permit from the Ministry of Natural Resources as required;
- provide proper notice to surface rights holders before starting work;
- complete and attach a Statement of Costs, form 0212;
- provide a map showing contiguous mining lands that are linked for assigning work;
- include two copies of your technical report.

3. Person or companies who prepared the technical report (Attach a list if necessary)

Name	Robert Mac Gregor	Telephone Number	705-949-4250
Address	28 Ford St Sault Ste Marie Ont.	Fax Number	705-949-2427

6. Instruction for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

Calculations of Filing Discounts:

JUN 2 1981

JUN 2 1991

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
 2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK

$\times 0.50 =$

Total \$ value of work done claimed.

Note:

- Work older than 5 years is not eligible for credit.
 - A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, Robert MacGregor, do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying

Declaration of Work form as

(recorded holder, agent, or state company position with signing authority)

I am authorized to make this certification.

Dear Sir or Madam:

Submission Number: 2.19530

Status

Subject: Transaction Number(s): W9980.00350 Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice. Allowable changes to your credit distribution can be made by contacting the Geoscience Assessment Office within this 45 Day period, otherwise assessment credit will be cut back and distributed as outlined in Section #6 of the Declaration of Assessment work form.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact Lucille Jerome by e-mail at lucille.jerome@ndm.gov.on.ca or by telephone at (705) 670-5858.

Yours sincerely,

A handwritten signature in black ink that reads "Blair Kite".

In all future assessment work submissions, please be more specific as to the dates worked in the field. If the information is not clear in the submission, you will be issued a 45 day to clarify your work dates.

NOTE: Future transportation mileage cost will be reduced to \$.30 per kilometre. The \$.30 rate is the set rate for OPAP submissions and is the allowable rate used for assessment work submissions unless you choose to file with total disclosure of the full costs incurred with supporting receipts. Only eligible costs will be allowed.
